Other SNA communications using FID 0, 1, 3, 4 and F transmissions are partially decoded for analysis by the HP 18186A and may be stored for more complete analysis by its sister product, the HP 18153A/4953, the vendor said.

The HP 18153A SNA analysis application for the HP 4953A protocol analyzer allows the user to monitor, capture and analyze data traffic anywhere on the SNA network, including host-to-host communications.

The testing tools can be employed anywhere SNA data flows over an SDLC link that uses any HP physical interfaces, including RS-232C, CCITT V.35 and RS-449.

The HP 18186A is priced at $600, and the HP 18153A is priced at $750.

HP is located at 1820 Embarcadero Road, Palo Alto, Calif. 94303.

Data Switch offers matrix switch

Product allows isolation of faulty components

NORWALK, Conn. — Data Switch Corp. has announced the Model 2810 integrated digital matrix switching and analog access and sparing system, said to allow isolation of faulty components and lines.

The product reportedly can operate as a standalone switch for small central sites or can be located at a remote site in conjunction with the company's XY-Max Model 2840 switch. According to a spokesman, the Model 2810 handles any combination of up to 64 RS-232/CCITT V.24 lines, up to 14 CCITT V.35 lines and up to 64 two- or four-wire telephone lines.

Analog upgrades of up to 128 lines are available.

The Model 2810 is controlled either by a local CRT terminal or through Data Switch's Configuration Management System (CMS) control console, the vendor said.

As many as 16 Model 2810s located anywhere in a network can be centrally controlled through CMS, the company reported. CMS stores up to 1,000 network configurations predetermined by the user.

CMS is also said to enable time- and event-sensitive switching.

Time-sensitive switching allows users to instruct the switch to reconfigure equipment and line interconnections automatically at a certain time and date and to smooth traffic loads at peak hours. Event-sensitive switching causes the switch to reconfigure when it senses a failed line or component, the vendor said.

The Model 2810 also support IBM diagnostic modems.

Data Switch said that the basic price for a Model 2810 that supports 64 digital lines and 64 analog lines is $49,100. The digital-only model costs $24,300, and the analog-only model that supports 64 telephone lines costs $28,900. The product is scheduled for August availability, according to the vendor.

For additional information, Data Switch is located at 444 Westport Ave., Norwalk, Conn. 06851.

WESTWOOD COMPUTER CORPORATION

COMMUNICATIONS

NET from page 45

transition put the company at risk? How long is the transition? For a modem, it could involve a few hours of downtime; for a new network, it could take months or years to implement. Is there a good transition plan?

- *Business risk*. Is the new component likely to be a risk because it uses totally new technology, existing technology but new products or a new company?
- *Network control*. Is the new component amenable to rational network control? Does it add to or detract from network control?
- *Cost-effectiveness*. Is the new component cost-effective? Have several vendors been contacted? Is there a more cost-effective way to approach the problem?
- *Stability*. What is the technological stability of the product? Does the component affect the viability of the existing network?
- *Interoperability*. How well does the new product integrate with the existing network at the technical, management and vendor level? Does it create compatibility problems?
- *Growth*. How does the new component affect the growth capability of the system? Does the new product peak out at some level — ports, memory, addresses, throughout — beyond which it is not possible to expand?
- *Capitalization*. What is the cost of the component? Should one lease or buy?
- *Vendor parity*. Does the new component imply an increase in the total number of vendors that serve the communications network? Does the component have to be embedded within the domain of another vendor's equipment?
- *Accountability*. Are the accountability issues, such as cost assignment, management and maintenance responsibilities and security, clearly defined for the new component?
- *Measurability and reporting*. Can the added component be measured by way of various norms to ensure things such as proper grade of service or response time? Are MIS reports available, where applicable, for the new component?
- *Competitive edge*. Given the additional effort and cost to install the new component, does it now make the network better? Does it give the organization a business edge over its competitors?

AT&T from page 46

AT&T has a product line comparable to Wang's line. Why purchase Wang's VS line when the 3B line is already positioned against it? Integrating the two lines would be a difficult task.

Perhaps AT&T should be more interested in Sperry Corp. AT&T has expanded its product line from microcomputers to superminis. Yet, a glaring hole exists at its high end where IBM reigns supreme. Analysts have predicted that Amdahl Corp. products will fill that hole. The two companies have a close relationship. A closer relationship would make economic sense.

A year ago, a wide-eyed AT&T entered a new market. A disappointing year has changed the company. It now understands the challenges it faces. For better or worse, IBM owns great chunks of the computer market.

IBM's moves to acquire Rolm Corp. and invest in MCI Communications Corp. have demonstrated that Big Blue is ready, willing and able to move swiftly into AT&T's turf. Before AT&T can talk about challenging IBM, it has to demonstrate the same type of management mettle.

In August, 128,000 MIS/DP executives can stop saying *"What we have here is a failure to communicate."*

There's a world full of computers out there. And everyone's trying to make them talk to each other.

The trouble is, there are so many technologies, so many products, so many promises, MIS/DP management isn't sure which way to turn.

In the August 26th issue of *Computerworld Focus* on Networks, we'll help them cut through all the smoke with a complete issue devoted to the topic of networking. Which gives you an ideal advertising forum if you've got a relevant product, service or strategy. Because you'll be surrounded by truly topical, informative editorial.

We'll take a look at LANs, PBXs and long-haul satellite technologies, as well as packet networks and teleconferencing. We'll call on experienced users to give us accounts of their own trials-by-fire. We'll ask industry experts to evaluate future directions and advise on the paths that are most likely to be successful for users. And we'll evaluate the products and strategies designed to link desks and offices and buildings and cities into a single integrated system.

So if you want to reach Computerworld's 128,000 paid subscribers, plus bonus distribution at important Fall '85 trade shows, the answer is simple. Get your ads in focus. *Computerworld Focus*. The August 26th issue. But hurry, closing is July 19th.

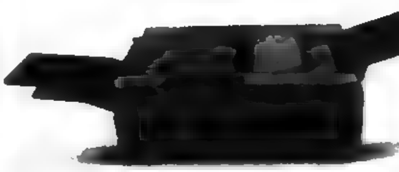
Xerox
Telecopier 495-1



Xerox
Telecopier 295

In 25 seconds the Xerox Telecopier 495-1 will deliver high resolution copies of your documents by telephone anywhere in the world.

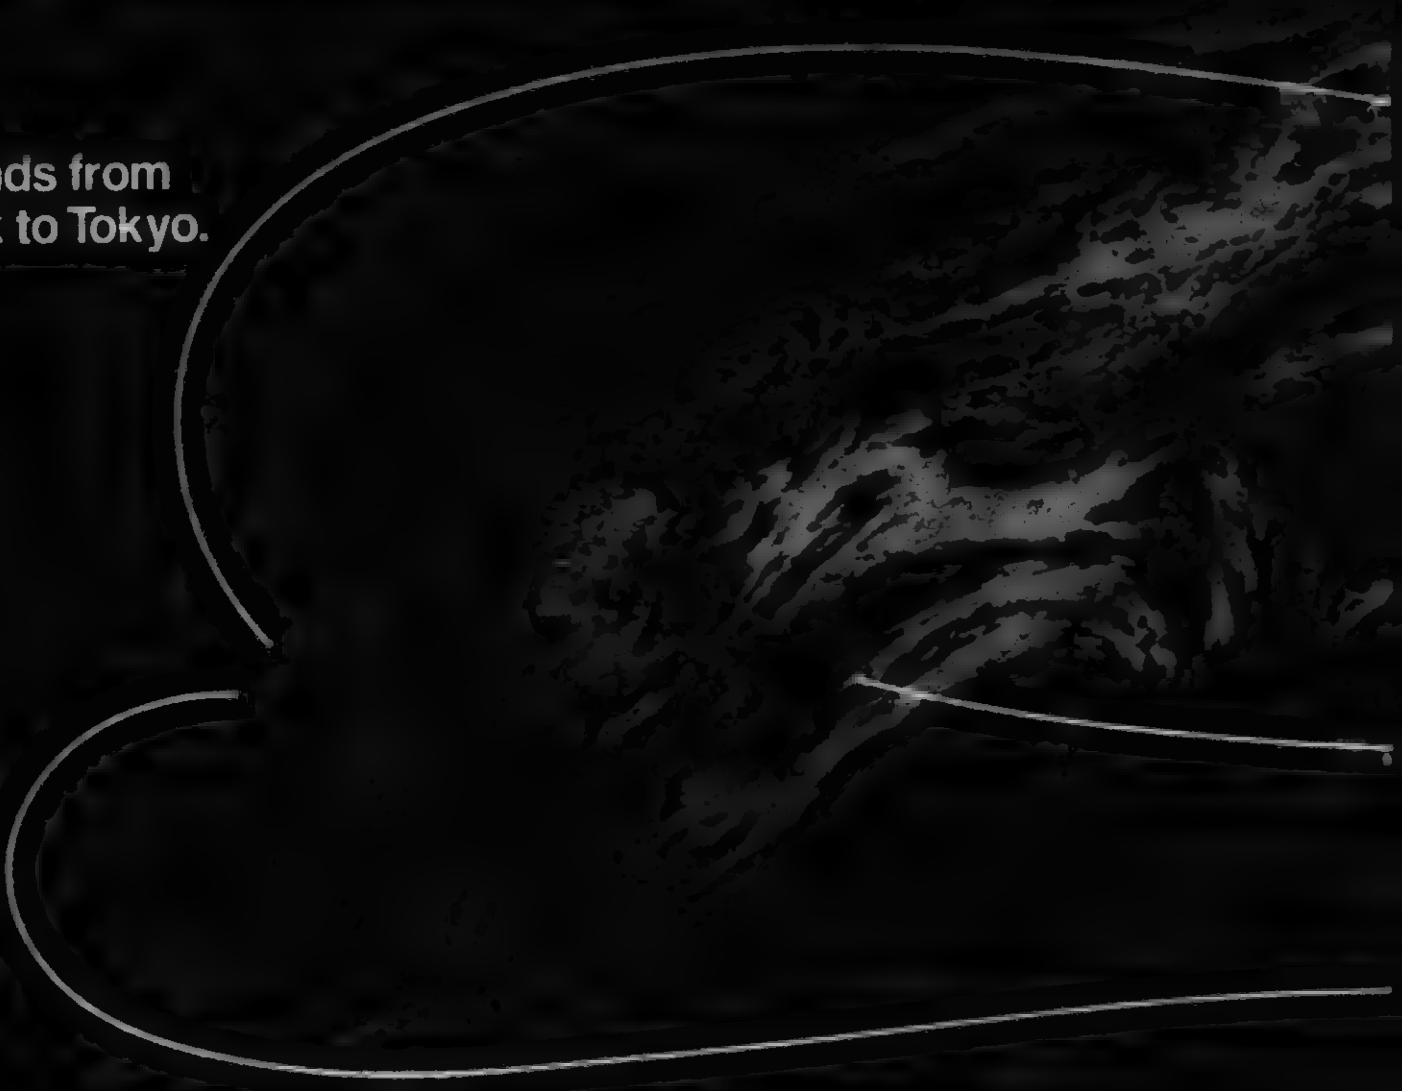
It gets your whole message across. Signatures, graphics, charts, even photographs are handled by the Telecopier 495-I's digital technology—perfect for high volume centralized telecopier operations.

The 495-I can do even more. It can be linked to your Xerox or IBM PC via FaxMaster software. Together they are the ultimate time and money saver in facsimile communications.

The Xerox 495-I using FaxMaster is highly automated and simplifies distribution with a few

Around the world in 25 seconds.

25 seconds from New York to Tokyo.



keystrokes. It stores documents electronically, can forward messages automatically, and acts as an electronic mail terminal. Remote users can even call a FaxMaster hub and retrieve documents stored in their mailboxes. And it keeps a meticulous accounting of every activity, delivery, and pickup, worldwide.

FaxMaster automatically dials the numbers. If it reaches a busy signal, it will continue down the distribution list, then redial until it gets through. It can even transmit to multiple locations at night or on the weekend when phone rates are lowest.

With the G1/G2 analog compatibility option, the Xerox Telecopier 495-I can communicate with slower speed facsimile terminals. The RS-232-C option lets it convert and print ASCII encoded information from many other computers.

Xerox also offers a desktop digital facsimile terminal, the Xerox Telecopier 295. It's easy to operate, and will transmit your entire message in 25 seconds or less.

Both the 495-I and 295 are compatible with other makes of facsimile terminals, and workstations that are part of Team Xerox.

To find out more about what Xerox Telecopiers and FaxMaster can do for your office, call us at 1-800-TEAM-XRX, extension 66, or fill in and send the coupon below.

We can make a world of difference.

Xerox Corporation, P.O. Box 24, Rochester, N.Y. 14692

Cray slices $1 million off solid-state storage tag

By Donna Raimondi
CW Staff

MINNEAPOLIS — Cray Research, Inc. has slashed $1 million off the price of its top-of-the-line Solid-State Storage Device (SSD) and unveiled a $3 million model of the SSD.

In addition to announcing the middle-of-the-line SSD, which is said to offer 512M bytes of random-access memory, the company also increased the performance and dropped the prices of two other models in the SSD product line.

The SSD products are high-speed storage devices designed to complement the Cray X-MP supercomputer's multiprocessor architecture, a spokesman said. The devices can be used for temporary storage of system programs.

The SSD units are said to be field upgradable from the smallest to the largest sizes. The newly announced version is software compatible with earlier models, the company said.

The top-of-the-line 1.024G-byte model introduced in 1984 and originally priced at $5 million has been reduced to $4 million. A 256M-byte model introduced in 1982 and previously priced at $3.28 million is now available for $2 million, a spokesman said.

Improvements and price cuts on the SSD line are primarily a result of the incorporation of higher density MOS technology, a spokesman said. The primary enhancement is an increase in the memory bandwidth. The SSD's maximum burst transfer rate is now 27G bit/sec.

More information is available from Cray Research, 608 Second Ave. S., Minneapolis, Minn. 55402.

DG minis get controllers

MOUNTAIN VIEW, Calif. — Spectra Logic Corp. has released disk and tape controllers for Data General Corp.'s Eclipse and Nova minicomputer systems. The four controllers are said to allow the integration of any storage module drive (SMD)-compatible device.

The controllers support 2.5M byte/sec. data transfer rates. Standard emulation of more than 150 different DG disk drive subsystem configurations is said to be supported. Optional software support is included for DG's AOS and AOS/VS operating systems for those exceptions when a disk drive cannot be mapped for maximum capacity.

Because of the emulation capability of the controllers, disk drives such as those offered by Ampex Corp.; Control Data Corp.; Fujitsu America, Inc.; Century Data Systems, Inc.; and NEC Information Systems, Inc. can be configured to use the maximum formatted disk capacity possible, while operating at the 2.5M byte/sec. transfer rates, the vendor said.

The 27-Plus, which interfaces with the burst multiplexer channel or the data channel, costs $5,300. The 120-Plus, which connects to the data channel, costs $4,500. The 17-Plus interfaces with the burst multiplexer channel and is also priced at $4,500, and the 210-Plus for the data channel bus costs $3,700.

More information can be obtained from Spectra Logic, 297 N. Bernardo Ave., Mountain View, Calif. 94043.

Xerox offers automated mail system

PASADENA, Calif. — Xerox Corp. has announced a model of its Xerox Message Processor system that can print, collate and distribute narrative messages automatically with or without operator intervention. The system is for use in large telecommunications centers handling time-sensitive messages. It interfaces with Data General Corp. Eclipse minicomputers, the vendor said.

The Xerox Message Processor 500 (XMP 500) is said to be based on the company's 10 series copier/duplicators. The system is the first 10 series system to use a laser printer, the vendor said. The unit has an average printing rate of 70 page/min and features optional two-sided printing and automated stapling. It reportedly can deliver messages to as many as 300 different message addresses. Additional printers and sorters can be included as message processing requirements grow.

The XMP 500 prioritizes incoming messages for printing and prints those with higher precedence first, the vendor said. Once printed, messages are automatically deposited into their respective message bins.

The unit includes the central communications processing controller, a Winchester disk storage subsystem, electronic laser printers for message output, sorter bins for message routing and a communications interface.

Depending upon the mainframe computer used in the telecommunications center and the system configuration ordered, an average XMP 500 will cost from $650,000 to $750,000, and deliveries will begin in the third quarter of 1985.

AT&T marketing strategy: A failure to communicate?

HARD TALK
Tom Henkel
CW Senior Editor

For a company that many speculate had the strongest chance of giving IBM a run for its money in the computer business, AT&T seems to be a slow learner when it comes to meeting IBM on its strongest turf, the marketing game.

AT&T has just bungled another product announcement with an overhelping of confusion and uninformed company representatives. As with previous announcements, it is still difficult to get information out of AT&T because the people appointed to answer questions about new products don't seem to understand them fully. Many basic questions have to be relayed to a hierarchy of people within AT&T.

AT&T's inability to pull off a press conference is, by no means, a fatal flaw. But it does seem to be part of an underlying issue: On the surface, AT&T says it is ready to do business in the highly competitive systems marketplace, but there seem to be remnants of the sluggish, bureaucratic and monopolistic Ma Bell that appear to be hampering AT&T's effectiveness in a very intense business.

The company's June 24 announcement of more than 30 products stood in stark contrast to a similarly large announcement by IBM a week earlier [CW, June 24]. IBM made its announcement armed with an impressive package of product literature that, if one took the time to read through 237 pages of specifications, completely described what IBM had announced.

AT&T released a mishmash of specifications, many of which had no apparent relevance to the announced products. Furthermore, much of the information that AT&T released was incomplete.

Models were mentioned, but no attempt was made to indicate what was included with these models or how they differed. AT&T said it improved the performance on its 3B5 product line but could not explain how it accomplished this feat or by how much performance was increased. It said prices on the 3B2/300 were cut by 20% but could not say what the old prices were. The list goes on.

AT&T was clearly unprepared for its latest announcement. In a marketplace where a company's success is becoming increasingly dependent on its sales and marketing prowess, AT&T seems to send its new products off on the wrong foot.

It has been a little more than a year since AT&T formally jumped into the commercial systems marketplace. While the firm seems to have done all right in selling other products to end users, it has made little headway in competing with entrenched vendors in the systems marketplace. For example, it has sold a handful of its high-end 3B20 machines to a tiny group of users and has only had marginal success in selling its smaller systems.

The unfortunate thing is AT&T may actually have some decent products to sell. But who knows? The company does not seem able to explain its current product lineup adequately, nor does it appear to have the foggiest idea of where it is going in the future. What is worse, the firm seems arrogantly unwilling to make changes to its current marketing approach.

AT&T will never be able to match the master of marketing, IBM, as long as it continues with its current haphazard techniques. There are too many good products and good marketing and sales people in the business today for AT&T simply to sit back and wait for users to line up at its door begging for information about the AT&T product line.

SYSTEMS & PERIPHERALS

TURNKEY SYSTEMS

■ Vector Automation has announced an addition to its Cadmax family of computer-aided design and manufacturing systems.

The Cadmax-IIB includes dual microprocessors with 1M byte of memory each, a 31M-byte disk drive and a 2.5M-byte floppy disk subsystem. The system features a 4096- by 4096-pixel resolution display and two-dimensional design and drafting software.

The Cadmax-IIB costs $46,000.

Vector Automation, Village of Cross Keys, Baltimore, Md. 21210.

PRINTERS/PLOTTERS

■ General Business Technology has announced two line printers for the IBM System/34, 36 and 38 processors.

The printers are said to feature operator-changeable bands of 48-, 64- and 96-character sets. The 3310LP prints at 450 line/min using the 48-character band set, 375 line/min using the 64-character set and 280 line/min using the 96-character band set. The 3320LP doubles the print speed of the 3310.

The 3310LP printer costs $8,800, and the 3320LP costs $12,500.

General Business Technology, 1891 McGraw Ave., Irvine, Calif. 92714.

■ Interface Systems, Inc. has released an IBM 3270-compatible printer that is said to support IBM programmed symbols and APL/Text and connect to an IBM Personal Computer.

The ISI 468 can print seven colors and also provide compatibility with the IBM 3287 and 3287-2C four-color printers. It can be directly plugged into any IBM 3274 control unit, 3276 control unit display station or 4300 CPU, the vendor said. Users are not required to have color software or color displays to print in color; through data input procedures, users of monochrome displays can print with ISI 468's color character printing.

The standard 468 costs $4,950, and a 468 II model, which corresponds to the IBM 3268-2C and 3287-2C, costs $6,450.

Interface Systems, 5855 Interface Drive, Ann Arbor, Mich. 48103.

■ Infoscribe, Inc. has released its Model 800 professional demand document printer for printing multipart, preprinted forms on microcomputers.

The dot matrix Model 800 prints to within 1/20th of the tear-off bar, which is said to allow immediate tear-off of the document so the next one can be printed on. It prints at 200 char./sec. for draft quality, 100 char./sec. for correspondence and 40 char./sec. for near-letter quality and has graphics printing resolution of either 72 by 72 dot/in. or 144 by 144 dot/in. The model is said to print six-part carbon or carbonless paper forms, and it comes with either a serial or parallel port.

The unit costs $1,895 with discounts for volume purchases.

Infoscribe, 1808 Michael Faraday Court, Reston, Va. 22090.

GRAPHICS SYSTEMS

■ Infodetics has announced a graphics workstation for use with its Computer-Assisted Document Management and Control system.

The full graphics workstation features 512K bytes of memory; a 16-bit processor; scroll, pan, highlighting and zoom functions; and the ability to rotate three-dimensional models. An optional drawing change capability allows authorized users to make changes to display images, the vendor said.

The basic system includes the processor and 512K bytes of memory, an I/O controller and a 35.6M-byte Winchester disk drive. A 1M-byte floppy disk drive is optional.

Prices range from $44,000 to $59,000, depending upon configuration.

Infodetics, Suite 200, 1360 S. Anaheim Blvd., Anaheim, Calif. 92805.

■ Disc Instruments, a Honeywell, Inc. subsidiary, has announced its Dial Set multimodality manual graphics input device that allows users of large computer-aided design and manufacturing equipment with serial ports to vary all perimeters of a three-dimensional graphics drawing.

The device contains a digitized microprocessor-controlled terminal that can be used in conjunction with Disc's Series T500 three-axis trackball device, which provides systems with an X, Y and user-definable third axis for the rotation of 3-D figures as well as for zoom.

The Dial Set capability is available in blocks of four, eight, 12 and 16 dials. It uses either an RS-232C or standard transistor-transistor logic serial connection and has a transmission speed of 9.6K bit/sec. or an optional speed of 4.8K bit/sec.

The basic system — consisting of a microprocessor, an output interface, four dials and 250 lines of firmware code — costs $450 each in quantities of 100. Extra dial module sets cost $110/pair (two dials), in quantities of 100.

Disc Instruments, 102 E. Baker St., Costa Mesa, Calif. 92626.

■ Lundy Electronics & Systems, Inc. has announced a trio of graphics products, including a three-dimensional raster graphics workstation, a stand-alone graphics workstation and a Tektronix, Inc. 4027-type graphics terminal.

The Ultragraf III 3-D raster graphics workstation is said to feature local intelligence for rotation, scaling, translation and perspective functions. It displays up to 256 colors from a palette of 16.7 million colors and is said to permit multiwindow operation with single-pixel addressability. The workstation connects to Digital Equipment Corp.'s VAX-11 series machines, Prime Computer, Inc.'s 2250 minicomputer and Control Data Corp.'s Cyber 1810 computer.

The Lundy 2000 is a stand-alone

DEC micros ruggedized

MAYNARD, Mass. — Digital Equipment Corp. introduced ruggedized versions of its microcomputer systems and terminals for use in industrial environments. The RT950 series includes factory-hardened versions of the MicroPDP-11, MicroPDP-11/73 and Microvax II computers in protected enclosures.

The companion RT200 video terminals are DEC's VT200 series terminals packaged inside air-vented enclosures.

The entry-level MicroPDP-11/23 system features 512K bytes of memory without storage peripherals and costs $9,975. Another MicroPDP-11/23 system includes the same memory and an 11M-byte hard disk and a dual 400K-byte floppy drive. It costs $14,250. A MicroPDP-11/73 model with 512K bytes of memory, a 31M-byte hard disk and dual 400K-byte floppy disk drive costs $18,250. The Microvax II-based system features 1M byte of memory, a 31M-byte hard disk and a dual 400K-byte floppy drive. It costs $19,975.

The terminals include the RT220 monochrome text terminal with a 12-in. screen that costs $2,995, the RT240 12-in. monochromatic terminal for $4,995 and the RT241 13-in. color terminal that costs $5,995.

DEC is located in Maynard, Mass. 01754.

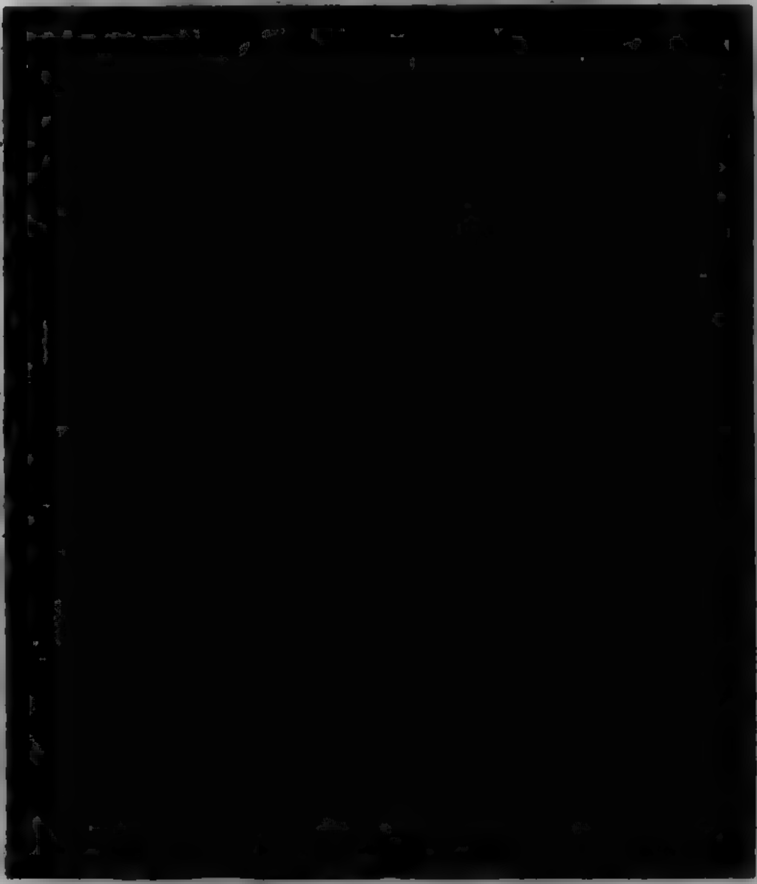
To Be Successful In Information Management, You Need More Than Just The Right Connections.



Connectivity. The buzzword of the year. Everybody's talking compatibility, multi-user interfaces, and integrated applications.

Well, excuse us, but it's about time. Datapoint has been delivering integrated information processing and office automation systems for more than 15 years. You see, we discovered a long time ago that people really gain productivity when computing power is distributed. Because the real power of business computers is access to information—wherever it is, whenever you need it.

It's more than a matter of stringing cable. The goal is deceptively simple. You and your people need desktop access to the information and the software and hardware tools you use to do your job. Even more important than choosing the right connections is how you use those connections. Managing information flow. Controlling data access. Allocating shared resources. Integrating applications. These are the tasks that will determine the success of your information management system.

And here's where Datapoint comes in. Take our Resource Management System.® The heart of the Datapoint® ARC® local area network. In fact, the Resource Management System is the first operating system designed specifically to take advantage of the power of local area networking. And it's at least a generation ahead of all the others.

Powerful Resource Management. Powerful enough to integrate the most complicated data processing applications with the most commonly used office automation tools. Of course, all this sophistication is totally transparent to your users. From any desktop workstation, they simply select the tools they need to make them more productive. Even if that workstation happens to be an IBM®-PC.

Flexible Resource Management. You can add, shift or remove workstations, peripherals, and software applications without bringing the rest of the system down. Without reprogramming. And, most importantly, without affecting your users' productivity.

The right connections—and more. From our pioneering efforts in distributed data processing to the world's leading local area network, the secret to the Datapoint success story is this unique combination of technological innovation with a singular focus on business productivity. If you're looking for the right connections in information processing—and more—call us toll free at 1-800-334-1122.

graphics workstation that runs under either or both Microsoft Corp.'s MS-DOS or Digital Research, Inc.'s CP/M operating systems. The system is said to emulate Tektronix, Inc.'s 4010 terminal so that the user can add color.

The GTC-327 graphics terminal is said to provide the capabilities of the Tektronix 4027 terminal. It is said to display 640- by 480-pixel resolution and eight simultaneous colors on a 14-in. monitor.

The Ultragraf III costs $45,995. The Lundy 2000 is priced at $21,900, and the GTC-327 costs $4,200.

Lundy Electronics & Systems, One Robert Lane, Glen Head, N.Y. 11545.

■ **Chromatics, Inc. has released a color graphics display system that supports Digital Equipment Corp. VAX machines under DEC's VMS operating systems and Sun Microsystems, Inc. workstations under AT&T's Unix.**

The CX 1536 Colorgraphic Display System was designed for command, control, communications and intelligence; artificial intelligence; simulation; and computer-aided design, manufacturing and engineering applications, the vendor said.

The system employs a two- and three-dimensional display list architecture.

The system has a 1,536- by 1,152-pixel, 60Hz noninterlaced color monitor and is programmed through a graphics kernel system package.

The basic system, which includes four single-buffered image planes, 512K bytes of display list memory, CX 1536-resident firmware including the GKS emulator and a DEC VT100 terminal emulator, costs $34,995.

Chromatics, 2558 Mountain Industrial Blvd., Tucker, Ga. 30084.

POWER SUPPLIES

■ **Dynatech Computer Power, Inc. has released a version of its Powerhouse uninterruptible power supply that will accommodate up to 300W of power and is said to provide protection for business and industrial applications such as microcomputers, computer peripherals and video products.**

The Powerhouse 300 provides surge and outage protection and has a typical transfer rate of 1 to 4 msecs, transient-free switching and five to 15 minutes of uninterrupted power, the vendor said.

The Powerhouse 300 costs $595.

Dynatech Computer Power, 4865 Scotts Valley Drive, Scotts Valley, Calif. 95066.

■ **Bipac Power Systems has released its EDS200-1 switching power supply for hard disk-based systems and peripheral memory storage devices that would be connected to a mini-based system.**

The EDS200-1 is a four-output supply with a main output of 5V, 15A with a 20A peak. The unit has second and third outputs of 12V to 15V with 2A of current on both outputs.

The fourth output is 24V, 2A with a 4A peak, the vendor said. The unit is said to have a minimum holdup time of 40 msec at nominal input voltage and maximum output power.

The units cost $157 apiece in OEM quantities, the vendor said.

Bipac Power Systems, 3131 S. Standard Ave., Santa Ana, Calif. 92705.

■ **NJE Corp. has added a dc-to-dc single-output switch mode model to its MK power supply series that provides output from 500W to 1,500W.**

The MK Series DC Input was designed for telecommunications applications where equipment is operating off of 48V station batteries and in equipment requiring battery-backup circuitry. Input levels can range from 42V to 56V dc and the output is isolated from the input.

The dc-to-dc switcher meets the Federal Communications Commission's Electromagnetic Interference/Radio Frequency Interference requirements. Features include overvoltage, overcurrent and thermal protection, remote sensing, inhibit capability, short-circuit protection and soft start.

The dc-to-dc switcher costs $1,060 in quantities of 100.

NJE, P.O. Box 669, 339 Culver Road, Dayton, N.J. 08810.

BOARD-LEVEL DEVICES

■ **EMC Corp. has introduced 4M-byte and 8M-byte memory cards that are reportedly compatible with Digital Equipment Corp.'s VAX-11/780 and VAX-11/785 computer systems.**

The EMC VX-4MB-780 and the EMC VX-8MB-780 use 256K-bit chips and can be used in any VAX machine that accepts either DEC's MS780-E or EMC's 780 memory system.

Using the 4M-byte arrays, the 11/780 can be configured with up to 64M bytes of memory, the vendor said.

The VX-4MB-780 costs $9,100; the VX-8MB-780 costs $16,000.

The company also announced that it will give 100% credit for owners of EMC's 1M-byte and 2M-byte arrays, the vendor said.

EMC, 12 Mercer Road, Natick, Mass. 01760.

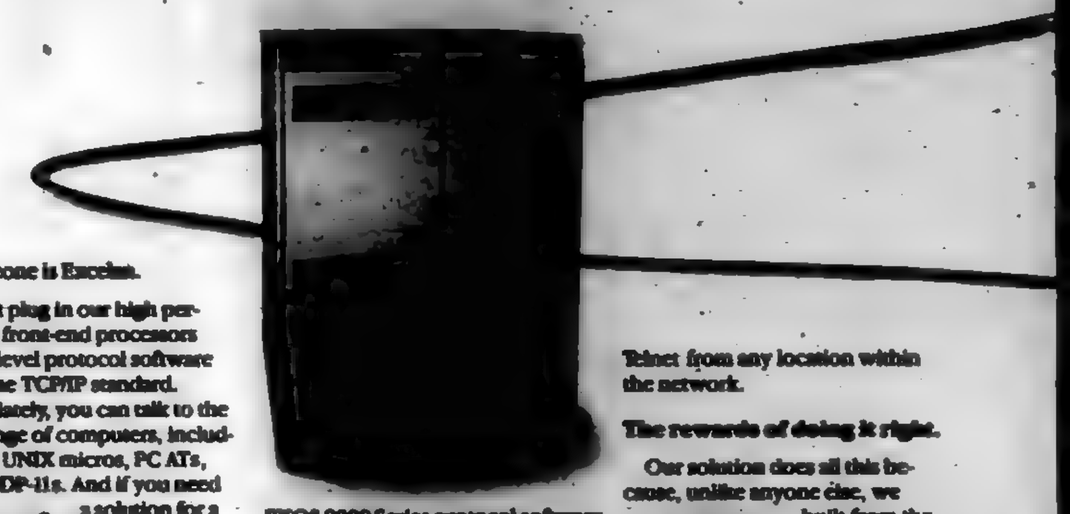
AUXILIARY EQUIPMENT

■ **Atlantic Research Corp. has announced several new features for its Interview 4600 Data Analyzer for testing circuits.**

Additional features include func-

You'd think someone would finally straighten out the Ethernet interoperability tangle.

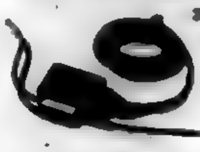
Someone has.



The Someone is Excelan.

You just plug in our high performance front-end processors and high-level protocol software built on the TCP/IP standard.

Immediately, you can talk to the widest range of computers, including VAXs, UNIX micros, PC ATs, PCs and PDP-11s. And if you need a solution for a custom system, we'll put it together for you faster than anyone.



With an Excelan solution, you can get absolutely everything you need, all the way from the transceivers to the application software. Off the shelf.

Total interoperability?

In a word, yes.

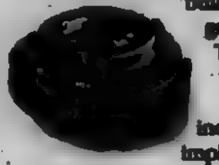
Our EXOS 200 Series front-end processors work with all standard buses — Multibus, VMEbus, Q-Bus, Unibus and PC-Bus. Our EXOS 8000 Series protocol software covers the most popular operating systems —Sys V, Xenix (or any UNIX), VMS, PC/DOS, and RSX-11.

Further, you don't have to compromise your system performance and delivery time just because of your proprietary bus or operating system. Our technology transfer program can put our solution to work for you fast. Just like it already has for many of our customers.

Together, our hardware and software give you total connectivity. So you can transfer files between computers with FTP and remotely log into any system with Telnet from any location within the network.

The rewards of doing it right.

Our solution does all this because, unlike anyone else, we built from the ground up.



That means we can offer you the industry's best implementation of communication technology for current and emerging standards.

For example, where we zeroed in on software issues, the real bottleneck in performance and flexibility, the results were impressive. Our commercialized TCP/IP is the most robust, field-tested version there is, with support of all ISO layers, 4.2 BSD functionality, FTP, and Telnet.

*VAX, PDP-11, Q-Bus, Unibus, VMS, and RSX-11 are trademarks of Digital Equipment Corporation. UNIX and Sys V are trademarks of AT&T Bell Laboratories. Multibus is a trademark of Intel Corporation

tions for automatic callback; automatic configuration of the tester and data display; unattended remote control, data reanalysis; up to 16 states in one test; eight triggers, which perform 120 separate diagnostic events; a terminal mode to allow it to act as an asynchronous terminal for field applications; four counters; and a 32K-byte CRT data buffer.

The unit costs $4,200.

Atlantic Research, 5390 Cherokee Ave., Alexandria, Va. 22312.

■ Nicolet Instrument Corp.'s Digital Test Division has announced an Intel Corp. 8086 emulator, a logic analyzer and a digital test station.

The Nice 8086 emulator was designed to be used for system development, troubleshooting, debugging or testing. The emulator measures 3½- by 5½-in., is 1-in. thick and features hardware breakpoints, overlay random-access memory, Intel and Tektronix, Inc. Hex upload and download function, program histographs and is to be run in maximum mode only, the vendor said.

Target system interface is via a 40-pin cable assembly or a 40-pin adaptor plug. The unit can be plugged directly into a target system's processor board. An RS-232-compatible interface allows the emulator to talk to most terminals and modems, the vendor said. It costs $1,250.

The company also released an OEM 50-MHz, 16-channel also, 1,000-word analyzer called the NPC 400 for $3,995. It features parallel, serial and General-Purpose Interface Bus monitor recording, a menu system, timing and state displays, trigger functions and recording speeds up to 11.92K bit/sec.

The DTS 8000 Digital Test Station is modularly expandable and features plug-in subinstruments for state, timing, waveform, time tag, emulation and pattern generation. It features software for the development of digital microprocessor-based electronic instruments. Depending upon configuration, the test station is priced from $20,000 to $45,000.

Nicolet Instrument, Digital Test Division, 201 Fourier Ave., Fremont, Calif. 94539.

■ Eventide, Inc. has announced the Eventide intelligent buffer/spooler for use with Hewlett-Packard Co.'s desktop computers. The product is said to allow simultaneous operation of a plotter and printer on an IEEE-488 standard interface bus without tying up the host processor.

The Expressway is said to route data intended for different peripherals automatically so that more than one peripheral, such as a printer and a plotter, can operate simultaneously. The Expressway uses a Motorola, Inc. 6809 8-bit internal and 8-bit external microprocessor.

The Expressway accepts data at speeds of up to 20K byte/sec. The product has three ports and either 256K bytes or 1M byte of main memory.

The Eventide Expressway is priced at $1,295 for the 256K-byte version and $2,495 for the 1M-byte version. The product is scheduled for June availability.

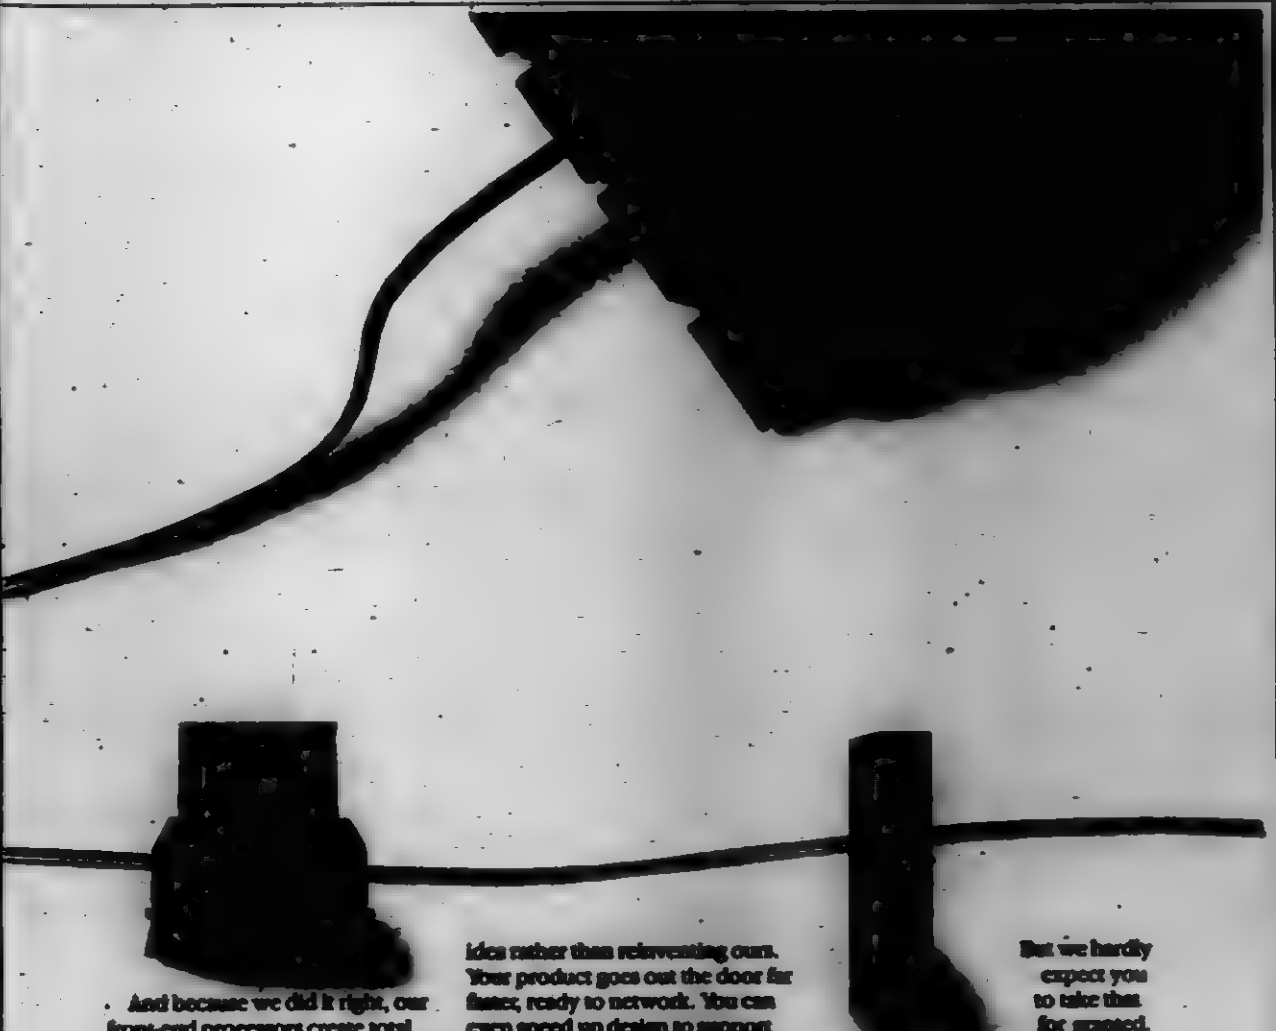
Eventide, One Alsan Way, Little Ferry, N.J. 07643.

■ Datacopy Corp. has announced a version of its Series 600 Electronic Digitizing Cameras that capture photographs for electronic publications and drawings for computer-aided design.

The Model 620 and the Model 620F, which features a built-in focus and framing aid, have a maximum resolution of 3,456 by 4,472 pixels by 8-bit picture elements, the vendor said.

The Model 620 costs $11,950, and the 620F costs $13,950. The units are available with copy stand, lighting system, power supply, personal computer interface software and Datacopy's Word Image Processing System software for $14,950 and $16,950 respectively.

Datacopy, 1215 Terra Bella Ave., Mountain View, Calif. 94043.



And because we did it right, our front-end processors create total connections between computers without disturbing them at all. That not only gives you blinding network speeds, it saves host CPU cycles, too. Your net throughput is close to 1M bps.

In short, our implementation approach can quickly support even the most difficult connections between multiple vendor hardware, multiple operating systems and backplanes and even multiple protocols and links.

OEMs, VARs and End-users: Consider the possibilities.

If you're an OEM or VAR, plugging in our off-the-shelf solution lets you spend time inventing your idea rather than reinventing ours. Your product goes out the door far faster, ready to network. You can even speed up design to support distributed function applications.

And if you're an end-user, you can finally solve the New Tech/Old Tech dilemma. Once you install an Excelan solution, you can quickly install any of the latest LAN technologies. So no matter where OEMs take the LAN future, you can go there, too.

In popular opinion: Popular.

If you want to know how well our solutions work, just ask around. Our installed base of front-end processors for Ethernet systems is the world's largest. They're proven, field-tested, thoroughly debugged, and monotonously reliable.

But we hardly expect you to take that for granted. So we also offer the industry's biggest warranty — one year on boards, full support of software.

Having offered you all this, we'd like to offer you everything else. Call us at 408-945-9526. We'll give you full details on how Excelan solutions can work wonders for you. And we'll try to answer all the knottiest questions you can think of.

After all, if we can't untangle them, who can?

EXCELAN

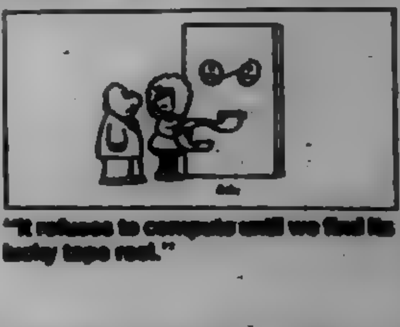
Apollo unwraps dual-density tape drive

CHELMSFORD, Mass. — Apollo Computer, Inc. has introduced a dual-density tape drive, the Model MSD6250, for use with the company's Domain local-area network-based workstations and server processors.

The MSD6250 can read or record data at 6,250 byte/in. in a group code recording format and 1,600 byte/in. in a phase-encoded format.

The tape drive can be used as a shared resource in a Domain local-area network and can be used with Apollo's DSP80 and DSP80A server processors, the monochromatic DN460 workstation and the color DN660 workstations. Available immediately, the MSD6250 costs $26,000 with a monthly maintenance fee of $175. The vendor is located at 330 Billerica Road, Chelmsford, Mass. 01824.



"It refuses to compute until we find its lucky tape reel."

Retail contacts key to firm's success

By Edward Warner
CW Staff

DALLAS — The days of the ever-changing organizational chart, known by employees as the "chart du jour," are over for the market research firm Future Computing, Inc. Gone too are the offices in a suburban shopping mall, to which the firm had moved after it outgrew its founder's spare bedroom.

Today, five years after its founding, Future Computing occupies the entire top floor of a Dallas office building. In the view of Future Computing's chairman, Egil Juliussen, such success is not so startling; the firm's founder, he said, had the forethought to focus the firm's efforts on only one growing area — personal computing — and to leverage her contacts within personal computer retailing to gain data on their sales. The firm's founder and president is his wife, Portia Isaacson.

Future Computing's success is largely due to a good relationship with the personal computer retailer, Juliussen said. Retailers, he explained, "had a warm spot in their hearts" for Isaacson, an early personal computer retailer herself who had provided other neophyte dealers with much advice. Many of Isaacson's contacts, he noted, later became respondents in the twice-a-year Future Computing survey of retail stores, a survey now done monthly.

Retailers had a good reason to fill out the questionnaire, besides liking Isaacson: In return for completing the form, they received a copy of the results and learned for themselves what products were selling best nationwide. More important, because the stores were independents, the manufacturers were at last presented with a way of learning their retail sales figures — and those of competitors.

While Future Computing claims to be the first to do regular surveys of retail stores, it no longer has personal computer market research all to itself. Such firms as Infocorp, Cupertino, Calif.; Dataquest, Inc., San Jose, Calif.; and the Newton-Evans Research Co., Ellicott City, Md., all now cover aspects of personal computing.

When it makes its sales pitch to potential clients, Juliussen said Future Computing can point to a string of accurate predictions going back to its announcement of the impending demise of the first personal computer, the Mits Altair. Other occasions when the firm was on target include its prediction of bright futures for both the Apple Computer, Inc. Macintosh and the IBM Personal Computer, shortly after the birth of the two machines.

Juliussen wrote Future Computing's first report on the personal computer, titled "Billion Dollar Babies," shortly after he joined the firm in June 1981. He still

Downturn's effects stretch coast to coast

Ex-Wang workers consider options

By Clinton Wilder
CW Staff

CHELMSFORD, Mass. — A brief three months ago, the idea of attending a job fair was unthinkable to Clara Currier. The 36-year-old programmer in the corporate MIS department at Wang Laboratories, Inc. had been with the formerly fast-growing office automation company for almost five years and had envisioned a lifelong career there.

"Until March, I would tell people I worked for the most prosperous, most secure computer company around," Currier said. "I thought I'd be there until I was 70, when I would retire to the Wang old-age home, which I figured they would probably have by then."

Instead, Currier was spending a rainy Friday morning looking for a new job at

Beating layoffs a matter of skills

By Kathleen Burton
CW West Coast Bureau

Systems and field engineers and other highly skilled workers who have been dismissed in the current computer industry slump are most likely to find new employment quickly, according to placement specialists and industry executives.

"Unskilled manufacturing laborers and white-collar workers in sales have the most difficult time after a layoff," said Michael Eisenacher, a labor consultant in San Jose, Calif. The most easily rehired are secretaries, who can go to a broad diversity of firms, and systems and field engineers, whose services can transfer as the industry's needs shift, Eisenacher said.

"If you are an engineer or a technician, you can walk out the door of a company

Hardware surplus blamed for slump

By Kathleen Burton
CW West Coast Bureau

MENLO PARK, Calif. — At an analysts meeting earlier this year, an Intel Corp. vice-president summarized the semiconductor market with a slide. On it were written two words: "Business stinks."

It was an apt summary of the condition of the Silicon Valley today. Only a year ago, this Northern California complex of semiconductor, microcomputer and other electronics companies was regarded as a showpiece of the American economy.

But in the past year the downturn has been sudden and dramatic. Scarcely a week goes by without once high-flying firms announcing staff cuts, cost cutbacks, plant shutdowns or poor financial results. Intel has implemented two rounds of lay-

Rule No. 1: It never rains bad news; it pours.

Thus begins the list of McClellan's Laws at the end of former Salomon Brothers Vice-President Stephen McClellan's 1984 book, *The Coming Computer Industry Shakeout.*

At no time have events followed the rule more closely than in the last few turbulent weeks, with Wang Laboratories, Inc., Apple Computer, Inc. and Data General Corp. biting down hard on the proverbial bullet with massive layoffs, shutdowns and other assorted loss cutters. Meanwhile, successive Mondays have found *The New York Times* and *Business Week* blasting the same front page message from the computer industry to the world: slump.

The explanation of McClellan's primary precept goes on to say, in effect, that things will get worse before they get worse. "When you first hear bad news about a company, always expect more of the same to follow. What you first heard is usually only the tip of the iceberg," McClellan wrote.

That logic has held true with Wang, where a simple mandatory July vacation grew quickly into 1,600 layoffs, and with Apple, where another production shutdown was followed in short order by 1,200 pink slips and cofounder Steve Jobs' swift kick upstairs to the guru's office.

The pattern does not bode well for the employees of Hewlett-Packard Co., enjoying their enforced vacations this month.

Nor does it foreshadow good news for the folks at Digital Equipment Corp., where attrition shrinkage and frosted discretionary spending have been in effect, and word has it that the company is pointing out that its record of no layoffs is a tradition, not a policy.

IBM, too, seems to be itchy. After President John Akers' June announcement that Big Blue is depending on a strong fourth quarter to post any growth at all this year, the company appeared to try and kick-start its own recovery (independent of the industry's) with the recent spate of price cuts and new products like the System/36 PC.

In short, the overused term "downturn" is no longer a strong enough word to describe what is going on. This industry is in a recession, and when it recovers, which it will, it is not going to look the same.

The list of industry casualties will continue to grow. As Prime Computer, Inc. Chief Executive Officer Joe Henson pointed out to reporters in a recent informal session, when the top four floppy

Congress OKs revised export act

WASHINGTON, D.C. — The U.S. House and Senate recently passed and sent to President Reagan a revised Export Control Act that the president is expected to sign.

The 1979 version of the law expired two years ago but was kept in force by presidential declaration while a vigorous debate raged among advocates of stricter enforcement of high-technology exports to prevent the diversion of exports to Soviet bloc countries.

The revised export bill sets new standards to determine the availability of products overseas, so U.S. firms can export more easily. U.S. industry has mounted a campaign to loosen restrictions on export licensing, which it charged took too long and resulted in lost sales.

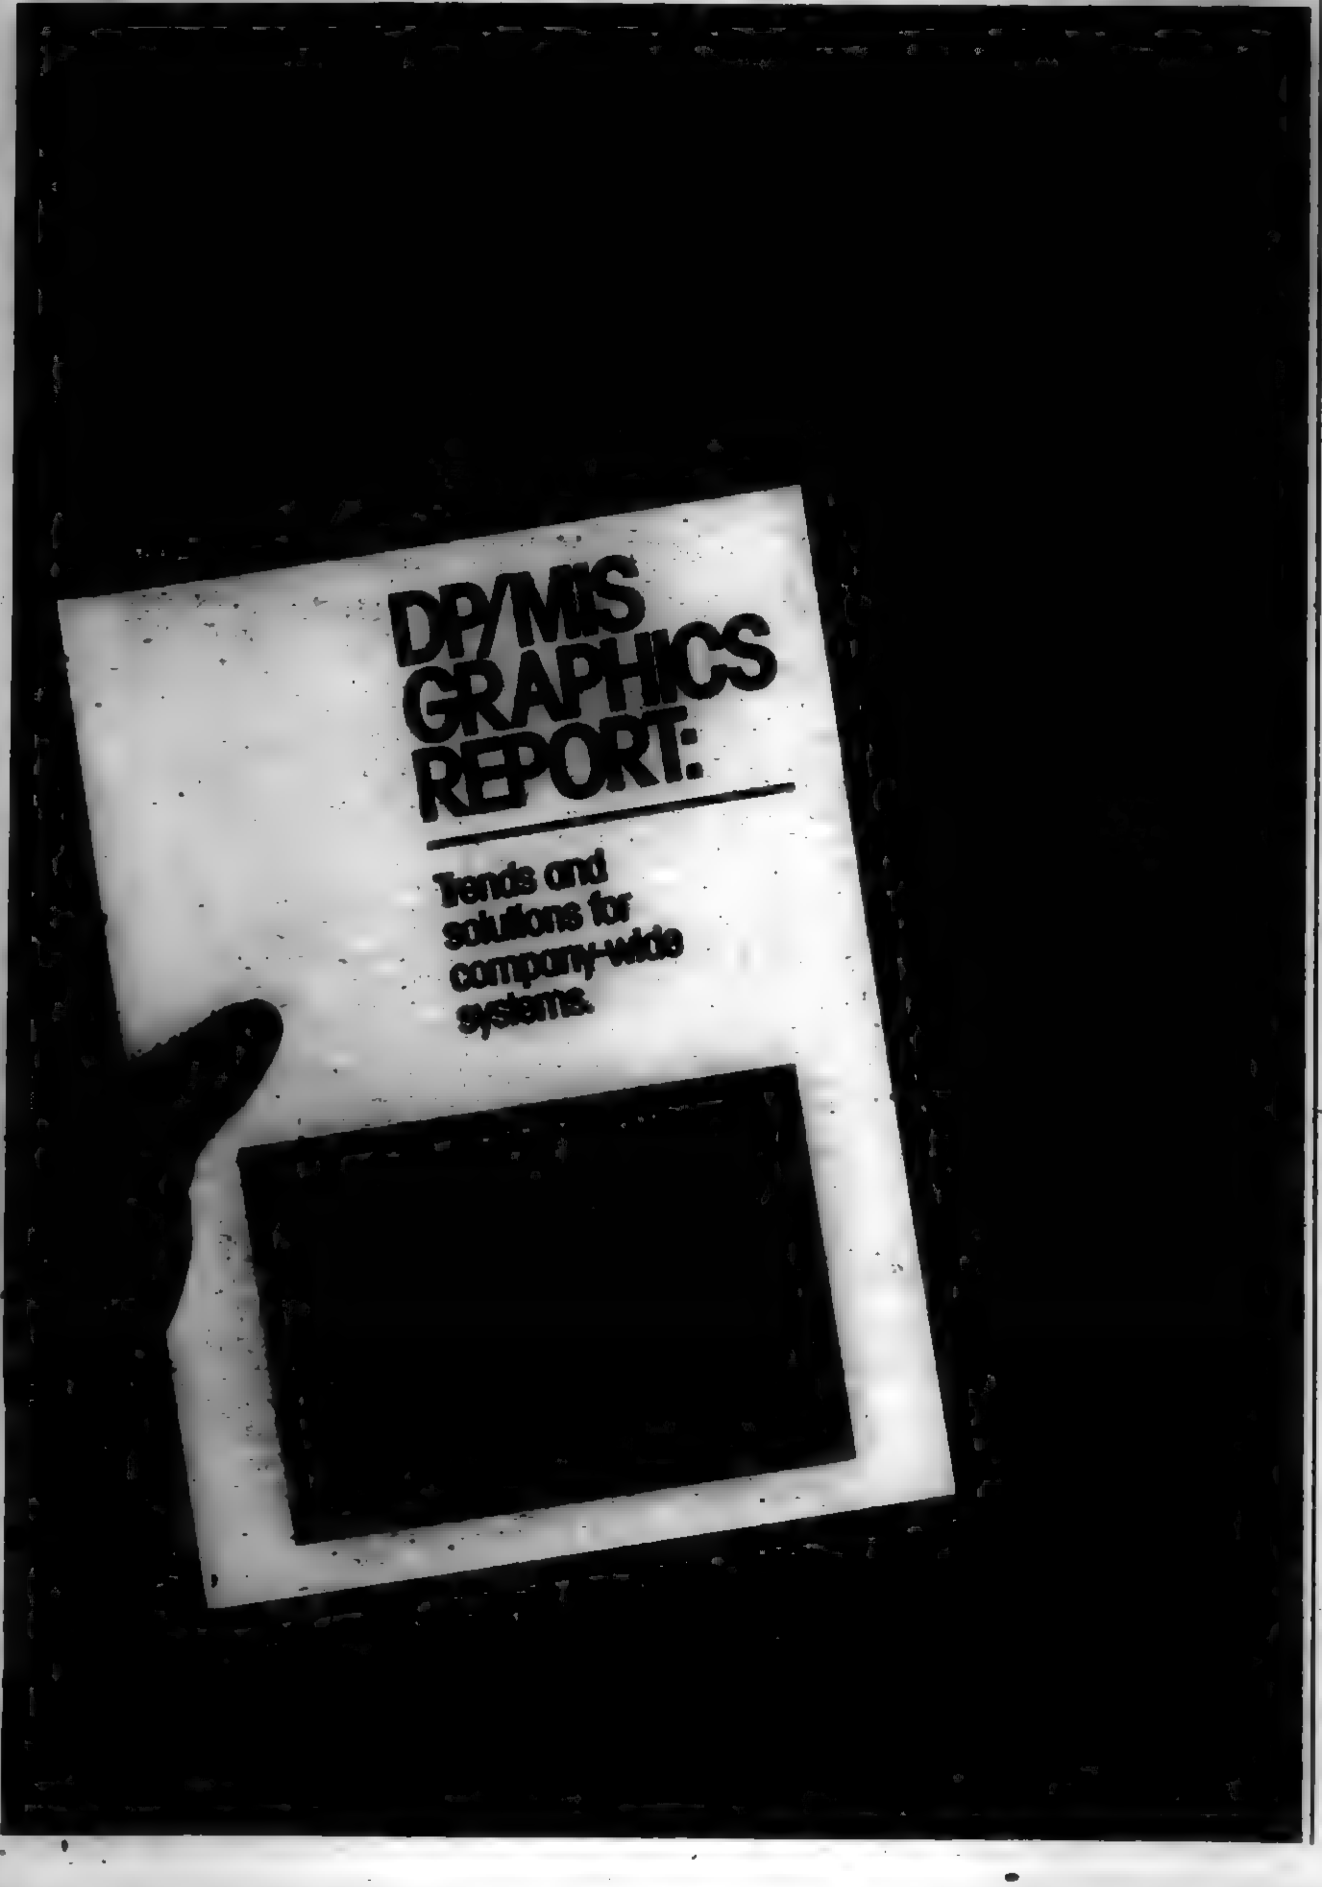
President Reagan has given the Department of Defense the power to review license applications, and the new law adopts the regulations spelling out the coordination of export license review that currently exist between the Department of Commerce and the Defense Department.

License categories

New license categories are created by the export bill. Validated licenses for multiple exports are created, of which there are two types. There is a distribution license that permits multiple exports to non-Soviet bloc countries and is based on a Department of Commerce review of the destination and the intended user or receiver of the products. Defense will slowly be able to review this category.

The other is a comprehensive operations license, which permits multiple exports of high-tech goods by firms to their subsidiaries and other business partners that have "defined relations" with the exporter. Internal company controls will be examined by the Commerce Department to ensure that diversions to Soviet bloc countries are thwarted.

The bill would establish an Undersecretary of Export Administration and Office of Foreign Availability in the Commerce Department, increase penalties for illegal exports or transfers of restricted technology and spell out the working relationship between the Commerce Department and the U.S. Customs Service, which is legally charged with enforcing the laws dealing with export/import.



Miniscribe's CEO resigns

LONGMONT, Colo. — Miniscribe Corp. recently announced that Roger Gower, president and chief executive officer of the firm since last November, has resigned.

Gower's responsibilities will be assumed temporarily by an office of the chief executive, consisting of Q. T. Wiles, chairman of the board of both Miniscribe and the investment firm of Hambrecht & Quist, and other executives of Hambrecht & Quist.

The San Francisco-based investment firm headed by Wiles was the lead investor in a venture capital group that provided Miniscribe with $20 million in financing this past April.

[illegible]

Q. How can a superior modem [illegible] in any telecommunications [illegible]?

A. The primary purpose of a [illegible] is to move information to end [illegible] and thereby improve their [illegible]. And a superior modem can [illegible] performance of your network [illegible] four areas: It can make your [illegible] reliable. Give your end users [illegible] response times. Minimize the time [illegible] your people spend on network [illegible]. And a superior modem can [illegible] you money in line charges.

Q. What makes a superior modem?

A. As you know, a modem converts a data stream into a signal that can be sent (usually over a phone line) from Point A to Point B.

Now that may sound simple enough, but there are a number of variables in that seemingly simple scenario. Such as, what's the distance between Points A and B? What's the line between the points? What's the condition and stability of the line? And many, many more. The point is, each variable carries technical implications that affect the design of the modem. And simply stated, a superior modem enjoys a superior design.

Q. Be specific. How can a superior modem save my company [illegible]?

A. Let's face it, modems are a [illegible] expensive part of your telecommunications network. Chances are, line charges are. If you design a modem that can transmit more reliably, then that modem can begin to affect your line charges. Every time a modem has a "hit," or an unsuccessful transmission of data, the data must be retransmitted, slowing down response time. The net effect is a reduction in the amount of information carried by the network.

If you use superior modems that give fewer hits, you'll have lower line costs per data unit transmitted and better throughput. Better throughput translates into time and cost savings.

Q. Can a superior modem correct the problem of faulty lines?

A. A superior modem can go a long way toward compensating for poor line [illegible] these [illegible] modems [illegible] in the [illegible] case.

[illegible] Modem, for [illegible], utilizes a coding [illegible] with an advanced [illegible] that [illegible] the largest [illegible]. The result is that the reliable 9,600 bps modem can operate very effectively over unconditioned lines. Now imagine all the line conditioning charges you won't have to pay your common carrier.

[illegible]

There are a number of [illegible] reasons why you should [illegible] IBM's line of 2,400, 4,800 and 9,600 bps [illegible] modems. Not the least of which is that we've recently announced two new modems—the IBM [illegible] and [illegible]—which feature lower prices, smaller packaging and improved serviceability. And like all IBM modems, they can fully utilize IBM's Communication Network Management capability.

The New IBM Modems

	IBM [illegible]	IBM [illegible]
[illegible]	[illegible]	[illegible]
[illegible]	[illegible]	[illegible]
[illegible]	standard	standard
[illegible]	[illegible]	

[illegible]

What's more, we've also recently lowered the prices of the IBM [illegible] Modems by as much as [illegible] percent. And there are also volume discounts available. If you're looking for modems that offer reliability, [illegible] and user productivity and are competitively priced, talk to your IBM marketing representative.

Data base libel decision termed 'blow to info industry'

By Glenn Rifkin
CW Staff

In what one legal expert termed "a blow to the information industry," a controversial libel decision was handed down recently by the U.S. Supreme Court. In a 5-4 ruling, the court upheld a jury decision against the Dun & Bradstreet Corp. for libeling, via a computerized economic data base, Greenmoss Builders, Inc., a Vermont developer.

In upholding the Vermont jury's decision, the high court has ruled that the First Amendment protects for libel statements only in "matters of public concern."

Though the court did not define matters of public concern, the implication is that in libel cases that are not of public interest, private individuals or corporations may collect punitive damages along with compensatory damages for libel without proving malice or reckless disregard for the truth.

This alters the precedent established by the court in the 1974 *Gertz v. Robert Welsh, Inc.* decision.

The Greenmoss case originated in July 1976 when Dun & Bradstreet erroneously reported in its electronic online data base "Business Information Reports" that Greenmoss had filed for bankruptcy.

In fact, it was a former Greenmoss employee who had filed for bankruptcy; a 17-year-old high school student reviewing bankruptcy records in Vermont for Dun & Bradstreet had incorrectly reported the material. Greenmoss sued Dun & Bradstreet for punitive damages of $300,000 and compensatory damages of $50,000 and won in a decision upheld by the Vermont Supreme Court.

Decision seen as ominous

Though most experts agreed that the ruling's implications were as yet unclear, the decision was considered ominous by news organizations and the information processing industry.

Peter Marx, an attorney with the Boston law firm of Goulston & Storrs, representing the Information Industry Association, said the decision has put a heavy burden on electronic publishers, credit reporting services, computer data base producers and newsletter publishers by not defining "matters of public concern."

"These organizations are so varied and go to such focused audiences that it's going to be a lot easier to say whether something published in *The Wall Street Journal* is a matter of public concern than something coming out of the Dow Jones News Retrieval Service, even if it's the same information," Marx stated.

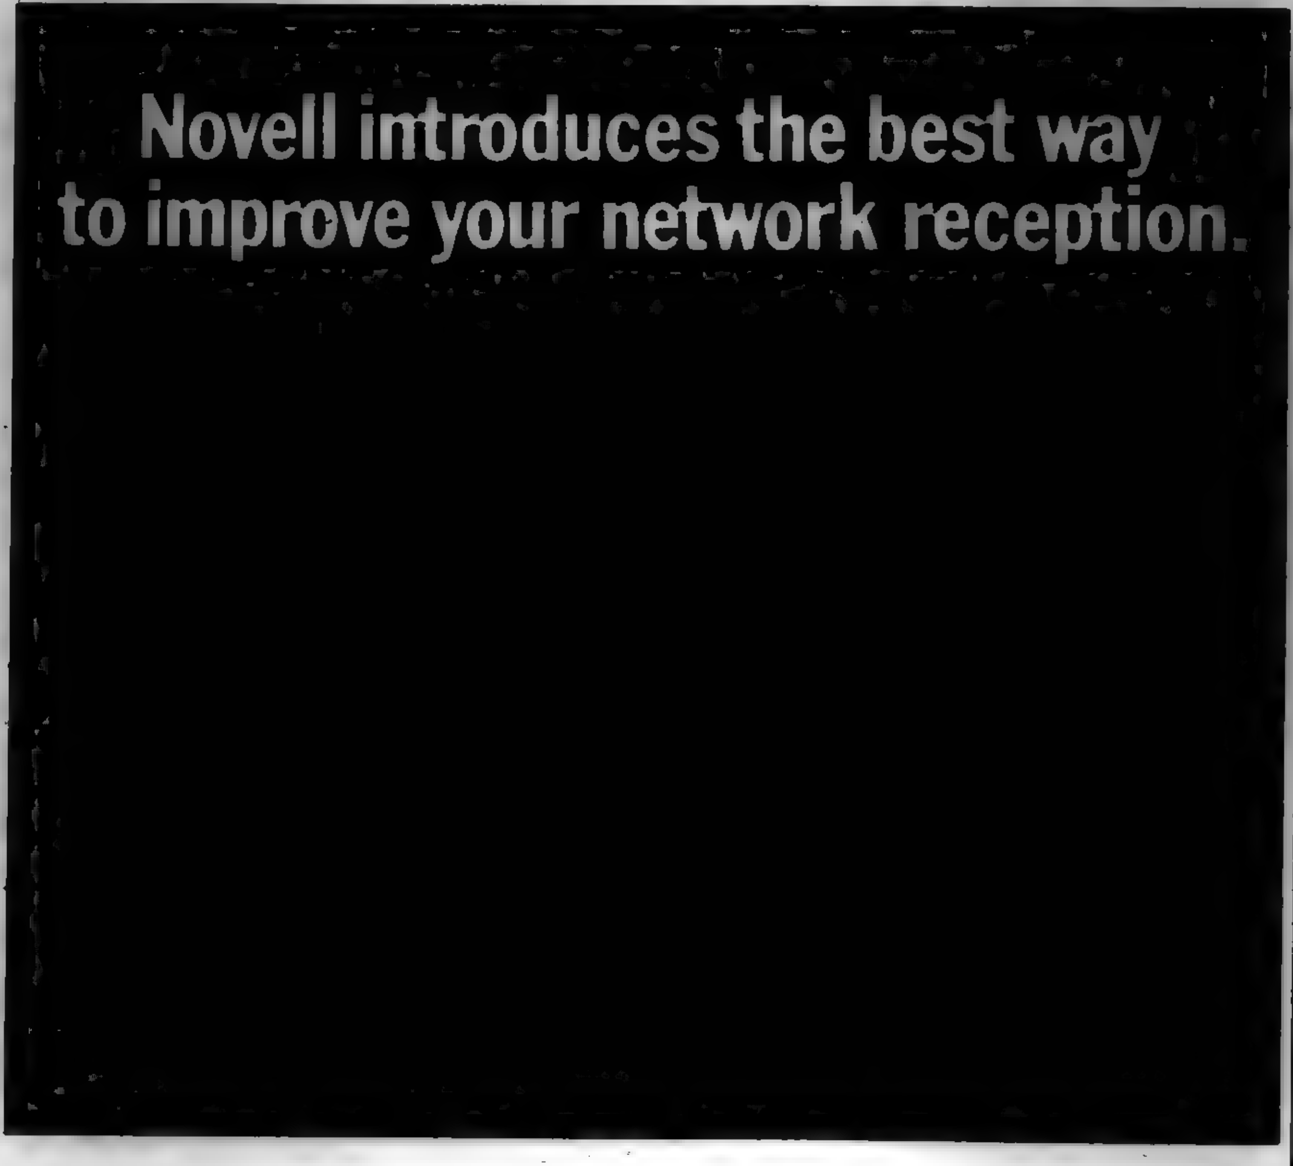
According to Marx, the ruling may serve to stifle the growing information industry by forcing smaller firms to become so careful that they stunt their growth. Those who heed the dangers risk being sued and forced out of business.

Dun & Bradstreet responded to the verdict in a press statement that said, "Business information services are of great value to the commerce of the nation, and, thus, activities of an information supplier should not be unduly inhibited by the fear of libel judgments based on occasional, unintentional error."

"This decision illustrates the difficulties these organizations face trying to build 21st century information businesses within a 19th century legal system," Marx said. "The law still hasn't come to grips with how to handle these new technologies in these contexts."

Ironically, the high court did not decide the case based on the issue of whether an organization was considered media or nonmedia a major point in the Vermont Supreme Court decision.

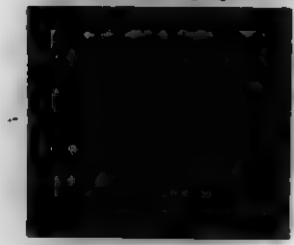
Many following the case had anticipated the U.S. Supreme Court to follow suit. By ruling out that distinction as a criteria, the court implied that it will treat both media and nonmedia groups the same under libel law.



Novell introduces the best way to improve your network reception.

In a relatively short time, the local area network (LAN) market has attracted a host of suppliers. Each has a LAN system to sell. And each is fighting for a proverbial piece of the LAN pie.

Amid all those LAN contenders, only one company is out to make all LAN systems perform better. Only one company offers high-powered LAN operating system software that improves the performance of every major LAN system on the market. Only one company is finishing the job the other LAN makers begin.



The company is Novell. The company's solution is NetWare.

NetWare performs.

How good is NetWare? In recent benchmark tests conducted by Novell as well as Belmont Laboratories, NetWare significantly improved the performance of every LAN system tested.* In fact, NetWare currently runs on 24 different LAN hardware systems, outperforming the original software for every one.

Serving all LANkind.

Whichever LAN hardware you choose, NetWare is the LAN software designed to get the most out of your network. When it's time to improve the reception your network gets from those who use it every day, plug into NetWare. It's from Novell, the people dedicated to serving all LANkind.

Run with the fast crowd

FAST PERFORMANCE
In the race for fast execution speed, Philon FAST/Compilers are the runaway leaders in the UNIX™ waters for the 68000 and VAX™ environments. With the benchmarks to prove it. That's why so many top computer professionals don't need to think twice about the Philon advantage.

FAST FLEXIBILITY
Not just top speed. But true portability, made possible by a common intermediate code and hardware-independent modular architecture so unique, it's patent pending. Plus broad language compatibility, so you can speed up programs written under less efficient compilers.

FAST CASH
Now you're thinking FAST, and you realize the profit edge we can give your business. Faster programs. Greater sales potential. More productivity. And the ability to move existing applications to a broad range of popular machines.

Want more? Philon is taking the lead with thorough, clearly-written documentation. Unmatched customer support, including toll free FAST/HELP. And an exhaustive Quality Assurance program that ensures compiler reliability.

FAST INFORMATION
Call us today at 1-212-807-0303. Or write to Philon, Inc., 641 Avenue of the Americas, New York, NY 10011. Telex 550288.

Chip firm petitions to curtail dumping by Japanese

Tariff would double prices

BOISE, Idaho — Micron Technology, Inc., a 900-employee semiconductor firm based here, recently filed the U.S. chip industry's first petition to prevent dumping, or selling below cost, by Japanese chip makers.

If successful, the petition would impose duties on imported 64K-byte dynamic random-access memory (RAM) chips that would nearly double the cost of the chips in the U.S.

To impose the 94% duties sought by Micron Technology, the U.S. Commerce Department must find that the seven defendants are selling 64K-byte dynamic RAM chips below cost, and the U.S. International Trade Commission must rule that Micron's sales have been hurt by the practice.

The petition alleges predatory pricing by Fujitsu Ltd., Hitachi Ltd., Masushita Electric Corp., Mitsubishi Corp., NEC Corp., Oki Ltd. and Toshiba Ltd. Micron Technology charged that the production cost of a 64K-byte dynamic RAM chip is $1.36 and that the Japanese vendors' chips are selling for as little as 70 to 75 cents in the U.S.

Micron Technology's action is the strongest import-curbing move to date by a U.S. chip maker. The San Jose, Calif.-based Semiconductor Industry Association (SIA) recently called for an effort to equalize U.S. vendors' share of the Japanese chip market and the Japanese market share here but did not call for import restrictions.

Micron Technology attorney Larry Grant declined to directly comment on why his firm chose to pursue a stronger remedy than the SIA to shore up U.S. firms' declining share of the domestic chip market. Last month, Sunnyvale, Calif.-based Advanced Micro Devices, Inc. and a leading U.S. trade official verbally charged Hitachi with dumping 256K-byte erasable programmable read-only memory chips [CW, June 17].

Ashton-Tate revenue, profits jump

CULVER CITY, Calif. — Citing strong sales of its Dbase III and Framework microcomputer software packages, Ashton-Tate recently reported that its 1985 first-quarter revenue more than doubled and posted an almost fifteenfold increase in profits from the year-earlier period.

Sales for the quarter ended April 30 were $24 million, compared with $11.2 million in the first quarter of 1984. Profits soared from $149,000, or 2 cents per share a year ago to $2.3 million, or 25 cents per share.

Ashton-Tate President and Chief Executive Officer Edward M. Esber Jr. said international sales of the firm's products increased significantly in the past year, particularly in Europe and Japan. During the quarter, the company signed distribution agreements in Japan and Australia.

Ashton-Tate has also announced its intention to purchase the remaining 85% of outstanding stock of Forefront Corp., the developer of the Framework integrated software product now marketed by Ashton-Tate.

IBM's best efforts are now going into Macintosh.

Macintosh and IBM PC software. Compatible at last, thanks to MacCharlie, a rather innovative coprocessing system.

And imagine the consequences.

Nearly 10,000 IBM PC software programs designed for general business and specific applications in real estate, insurance, law, medicine, banking, etcetera, can now join forces with Macintosh's own popular programs.

And, the myriad of IBM PC-compatible software adopts Macintosh's many beloved features, including desktop utilities such as the clipboard and the calculator.

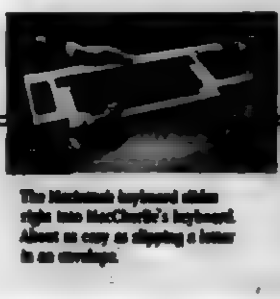
In addition, MacCharlie allows IBM PC and Macintosh data files to be exchanged. Talk about flexibility.

But the good news gets better.

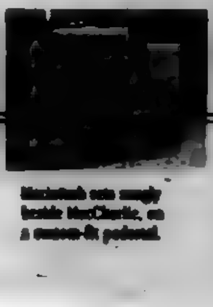
You see, MacCharlie delivers hardware compatibility, as well. For example, IBM letter-quality printers can be easily used with Macintosh.

Furthermore, MacCharlie now allows Macintosh to perform virtually any networking an IBM PC can perform. Even to the extent of tying in with IBM mainframes.

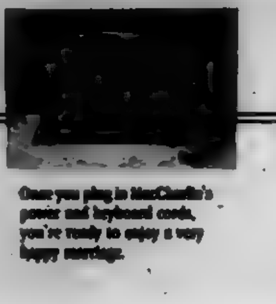
In other words, your networking capability goes beyond the Apple family.



The Macintosh keyboard slides right into MacCharlie's keyboard. About as easy as slipping a letter in an envelope.



Macintosh sits snugly beside MacCharlie, on a custom-fit pedestal.



Once you plug in MacCharlie's power and keyboard cords, you're ready to enjoy a very happy marriage.

HUNT

from page 57

Wang's management development center here, where the company hosted a one-day job placement fair. Like many of her colleagues among the 1,600 Wang employees laid off last month [CW, June 10], Currier found her faith in the strength of the computer industry had been shaken by the downturn of 1985.

"I still want to work in corporate MIS with IBM or Wang equipment," she said. "But I think it's time to get away from computer companies. In eastern Massachusetts, they're talking about how the industry won't be doing well for the next two years, at least."

'I'd rather stay in high tech'

"I could go back to banking, but I'd rather stay in high tech," said David Lops, a laid-off Wang revenue analyst. "[Before joining Wang] I had done financial analysis on the oil industry, when [the industry] collapsed. Now I'm faced with the same thing. The economy controls the fate of a lot of companies, and I feel very inferior to those forces right now."

Lops, 28, said Wang's layoff announcement came as a total shock: "Heavy rumors had been going around, but when they announced the July production shutdown [CW, April 1], we were reassured there would be no major layoffs. That's what really got me. I was really devastated ... I always thought the computer world was where you want to be."

"I haven't found anything here [at the job fair] yet," said Lamont Alford, 47, a five-year manufacturing supervisor at a Wang printed-circuit board production facility. "The company is making a very good effort to help us out, though. I think it's just a matter of time, but [my new job] might not be as close to home as I'd like."

Some 30 Massachusetts and New Hampshire companies attended the Wang job fair to collect resumes and conduct brief initial interviews with the newly available Wang employees. Although most represented were electronics-related firms such as GTE Corp., General Electric Co. and Analogic Corp., computer vendors were limited to Prime Computer, Inc. and Apollo Computer, Inc.

'Have to give Wang credit'

"We've slowed down somewhat, but not as much as others," said Hank Vezina, an Apollo human resources manager seeking to fill research and development engineering positions. "I have to give Wang credit — not many companies would do something like this. But it's still a tough way to find R&D engineers, because most go through agencies. Of the 1,600 Wang employees laid off, 400 to 500 at the most will come through here."

Since announcing the layoffs, Wang has also converted a former training facility in Burlington, Mass., into a job counseling center to teach interviewing techniques, help with resume preparation and offer job leads.

Other firms with massive layoffs, such as Data General Corp., have instituted similar programs after suddenly finding themselves in the job placement business.

Televideo sales dip 46%

SAN JOSE, Calif. — Televideo Systems, Inc. recently announced a loss for the second quarter as sales plummeted 46% from the year-earlier period.

The company announced a loss of $678,000 for the quarter, or two cents per share, compared with profits of $5.6 million, or 14 cents per share in the same period a year earlier.

Revenue dipped to $26 million, from $48.4 million in the second quarter of 1984. That compares with a similar first quarter, when sales dipped to $26.7 million, compared with $43.2 million during the same period a year earlier.

How does it happen? As easily as slipping on penny loafers.

In mere moments, MacCharlie combines the best features of the world's premier personal computers.

And despite the fact that it turns one computer into two, MacCharlie adds but a handful of square inches to Macintosh's physique.

In short, one of life's most perplexing decisions—whether to buy a Macintosh or an IBM PC—can now be made with the greatest of ease.

Ask for MacCharlie at your local computer store. Suggested retail price for the 256K single disk drive model is only $1195, and just $1895 for the 640K dual disk drive version.

REHIRE

from page 57

one day and have five offers to choose from a week later," claimed Don Turnley, a service and maintenance engineer for large systems at Amdahl Corp. in Sunnyvale, Calif.

Though two of the companies he has worked for in the past three years have closed their doors, Turnley said he has never missed a day of work. When Storage Technology Corp. closed its Santa Clara, Calif., research operations in 1984, more than 100 companies sought the laid-off employees. He had four job offers before the division closed, Turnley said.

According to Turnley, some of his fellow engineers move from company to company like high-tech migrant workers, following the highs and lows of the industry.

But rehiring also can depend on the worker's geographic location, according to analysts. In areas with a high proliferation of electronics firms, like California's Silicon Valley and the Boston and Minneapolis areas, the chance of getting rehired is relatively good, said Rika Pirani, a California state labor market analyst.

The job market in the Silicon Valley is still growing, Pirani said. "The large number of microwave, software, telecommunications and defense firms in the area means there are still 40 pages of want ads in the Sunday paper," she said.

Growth in high-technology sectors is also apparent in the Boston area, noted Chris Anderson, a spokesman for the Massachusetts High Technology Council, Inc. in Boston. In spite of recent layoffs at computer systems manufacturers in the Boston area, other companies in that area are actively hiring. These include software companies and computer-aided design and engineering workstation manufacturers, Anderson said.

But, he warned, the hiring boom may be temporary. If the computer industry slump continues, more companies will institute hiring freezes, and new hiring will plunge.

Data General Corp. in Westboro, Mass., is providing its 1,050 laid-off workers in the U.S. with a two-day employment seminar staffed by an outside placement firm and with individual counseling sessions using outside trainers, said Steve Hobbs, corporate employment manager for the company.

"We have found that employees are usually pretty angry at the company, and it's important that outside employment counselors staff the outplacement centers," Hobbs said.

Control Data Corp. in Minneapolis, which laid off an undisclosed number of workers in June, is attempting to reassign the employees to temporary jobs inside the company and eventually move them to permanent CDC jobs, a spokesman said. Of 1,000 employees laid off at CDC last September, only 11 were terminated, he said.

Some people just ask for trouble.

Isn't it amazing just how many people go around looking for trouble?

Why, we're willing to bet there are people in your DP department this very minute flirting with disaster.

They're running the risk of a JCL error, a network breakdown, or some other equally unpleasant catastrophe bringing the whole kit and caboodle to a screeching halt.

When all they have to do to keep things running smoothly is use one of our incredibly efficient software programs.

JCLCHECK™ software catches all JCL errors. And gives you complete, on-line validation and concise diagnostics. Plus full documentation on a job stream or entire production system, suitable for insertion in the run book.

The ProDict™ program puts time on your side. It's an automatic, on-line dictionary of all your production jobs, data sets and programs, that can save you the hours, days, even weeks now spent manually searching listings.

NetCheck™ software takes the stress out of taking control of your CICS network. It lets you organize your network into manageable groups with easy-to-remember names. It also lets you bring up the network in just minutes. And troubleshoot problems in seconds. So things get done faster, with you in control of your network — instead of the other way around.

All in all, our software programs offer a reliable, long-term solution for making life in the DP department a lot less troublesome.

Still, some people are destined to find these things out the hard way.

To that we can only add, better them than you.

Yes, I want to stop living dangerously. Send me details on:
☐ The JCLCHECK program.
☐ The ProDict program.
☐ The NetCheck program.
☐ Have a representative call me.

SLUMP

from page 57

disk drive vendors by themselves have enough capacity to meet the current market demand, some of the more than two dozen players in the overcrowded marketplace are going to get squeezed out.

But the long-term impact of the slump of '85 will be even more significant for the Wangs, DGs and other companies playing in many markets. The growth rates and profit margins of the last five years simply will never be repeated. The firms that emerge from this slump in the best shape will be those that successfully lower their break-even points and become the true "lean and mean" firms that everyone likes to say they are.

In the good old days ("old" being relative, since the phrase applies to December 1984), "high tech" was virtually synonymous with economic prosperity, job creation and nothing less than the hope of the future. Steelmill America was dying, the experts said, but the computer industry would rescue it with a boom that would last forever.

It's a shame so many people swallowed the hype and forgot that not even computer technology could outwit the most simple of economic principles — supply and demand. This year has brought a strong dose of reality to some success-bloated companies. It has shown that high tech is not so different from any other industry — where the winners are the smartest, best-managed and most realistic companies.

FUTURE

from page 57

oversees production of the reports and supervises Future Computing's research, while Isaacson runs the business side of the company and works one to one with client companies. Both hold doctoral degrees — he in electrical engineering, she in computer science — and each, according to observers, plays a complementary role in Future Computing's leadership. She is dynamic, he more reserved, according to those who know them.

Future Computing's 1,000 clients make up a "who's who" of the personal computing business and include such giants as IBM, Hewlett-Packard Co. and Apple. For anywhere from $7,500 to $100,000, clients get a package of services that usually includes consulting and telephone access to the company's researchers, explained Ken Orton, vice-president of sales and marketing.

Other services include seven newsletters; the monthly Storeboard report, a survey of 800 retail outlets; seminars and forums; and perhaps the most unique service of all, testing of personal computer hardware and sofware for compatibility with the IBM Personal Computer. The firm's testing lab has a staff of seven, and "almost all of the [personal computers] on the market today have been through [it]," Orton said.

One client, Infocom, Inc., a Cambridge, Mass.-based personal computer software firm, values Future Computing's data and advice. According to Richard Ilson, an Infocom senior scientist, "Our chairman has found them useful and has given Future Computing feedback when he hasn't found [it] useful."

Future Computing's research is done on the basis of forecasting off the current sales trend — but with a twist. The firm creates a model of the adoption curve of that product and fits the curve against the trend line. If the product is near the end of the adoption curve, for example, no amount of sales in previous years will offset the curve's impact on Future Computing's bleak expectations.

It was this method, Julitussen said, that brought Future Computing to within 5% of the mark when it predicted 1983 sales for the home personal computer market would hit $5 million. Unpredictables can enter into the equation, though; for 1984, using the same method in same market, Future Computing was off by 35%.

The adoption curve allows Future Computing to go out on a limb occasionally; for instance, it has predicted that laptop portable personal computers will be a hot-selling item in 1990, though they are presently selling slowly. The firm's willingness to fly in the face of conventional wisdom — when the data warrants — has won it headlines, most recently for a report that concluded that 50% of all personal computer software in use in business was pirated (see story below). That survey, according to the man who supervised it, Joe Curry, represented a departure for Future Computing.

While previous studies had been based for the most part on data gained from retail store surveys, the software piracy study was based on responses of 13,000 end users. Curry said that Future Computing will place "more emphasis on end-user research" in future reports.

Speaking more broadly, Curry, who headed the firm's surveys and statistics group, said that Future Computing is evolving toward the use of "more statistical rigor" in its research. That does not mean that testing for accuracy was lax in the past, he added. In February 1984, Curry said, he became the first statistician hired by the firm. He worked there only 14 months, leaving to join an Idaho-based software development company.

While he was with Future Computing, Curry recalled, the corporate culture was marked by rapid growth. "Just about every day the company would change," he reminisced. Curry's observation was confirmed by analyst Tod Court. During the early years of the firm, Court recalled, the company was growing rapidly, and "jobs were changing real fast" — so quickly, in fact, that the printed outline of the corporate hierarchy became known as the "chart du jour."

Rapid growth, slow growth

Those were the days, roughly from 1981 to 1984, when the firm was gobbling up office space in the Richardson, Texas, shopping mall to which it had moved after it outgrew the spare bedroom at Isaacson and Julitussen's home. In that time, the company reorganized from five groups into three: personal computer products, distribution and markets.

According to Curry, growth has slowed considerably in the last eight months, a result of the slowdown in the computer industry as a whole. The boom times made the comments of Future Computing researchers grist for the mills of such publications as *The New York Times* and *Fortune* magazine. Aware of his firm's power to influence public opinion, Julitussen said he has alerted his employees that they are "playing with fire" when they air a controversial statement without substantiation.

Looking back, Julitussen said his only regret is that he failed to tell the makers of IBM Personal Computer clones to get into niches in the vertical personal computer market. Nearly all of the clone makers attended the research firm's forums on the Personal Computer, he explained, and all were angling for the limited shelf space in retail stores. Several of them have since fallen on hard times, as their dash for shelf space failed.

One year ago this month, McGraw-Hill, Inc. purchased Future Computing for an undisclosed sum. While reluctant to talk about his firm's new parent, Julitussen did admit that it is "a lot better banker than what we used to have."

Previously, he said, bankers would scratch their heads when approached for loans by the research firm; the bankers did not understand how so much value could be tied up in a research project, and they tended not to view data as suitable collateral.

Pressed for cash to expand into new lines of business, Future Computing turned to a Dallas real estate financier for the more than $40,000 needed to fund each of the research firm's industry forums. The sale agreement reportedly permits Isaacson and Julitussen to run the research firm without interference for four years.

THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

6A11-4175

DOWN

from page 57

offs totaling almost 2,000 people.

Examples of struggling companies are plentiful. Six months ago, Sunnyvale, Calif.-based Advanced Micro Devices, Inc. lavished $700,000 on a massive Christmas party for employees. This summer, four-day workweeks are the order of the day.

This downbeat story is being echoed throughout the valley. National Semiconductor Corp. announced a 1,300-person layoff. Apple Computer, Inc. laid off 1,200 workers, closed three plants and revamped its marketing strategy. Hewlett-Packard Co., the valley's blue-chip firm, reported a 12% earnings drop for the latest quarter, compared with last year.

"It's the worst downturn ever," said O. Ralph Finley, a senior vice-president at Dataquest, Inc., a market research firm in San Jose, Calif. According to Finley, many valley semiconductor firms, especially hard hit by the recession, have resorted to desperate measures. Some have delayed posting order cancellations until the third quarter in an attempt to inflate this quarter's earnings estimates. Others have flatly refused to pay their bills until later in the year.

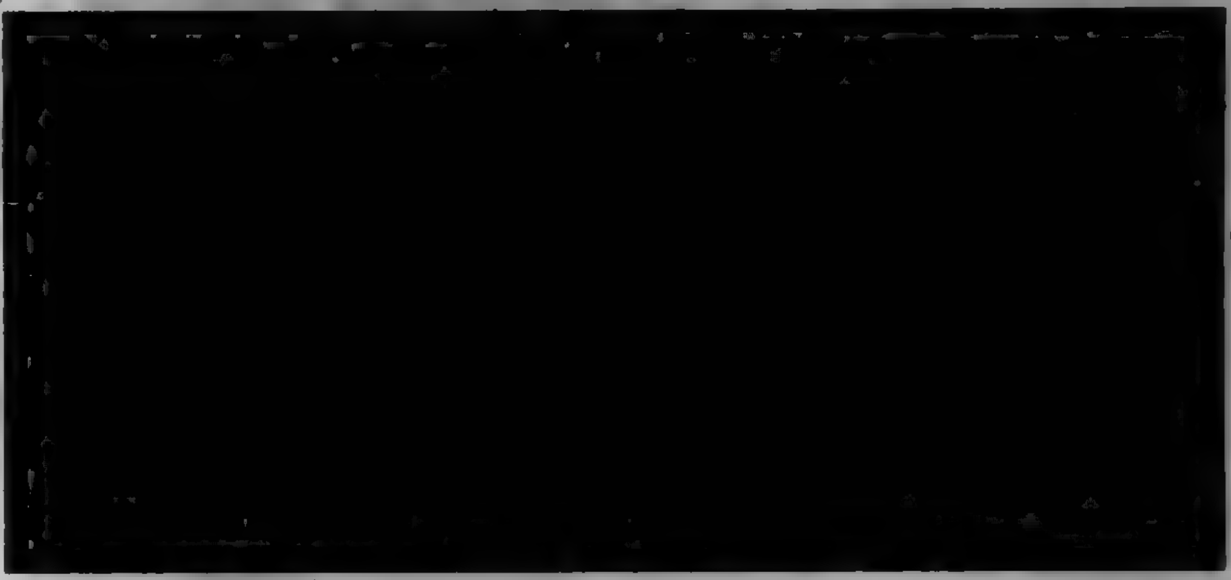
The sluggish sales of micros are a major factor in the industrywide downturn, said Aaron Goldberg, director of microsystems services at Santa Clara, Calif.-based International Data Corp. The personal computer industry slump is due primarily to the oversupply of computer hardware, which lacks sufficient networking capability, applications and trained users to make the equipment live up to its potential, he explained.

According to Goldberg, it may take the industry several years to recover from a shakeout fueled by an entrepreneurial outpouring of funds in 1982 and 1983. Most venture capital companies underwrote firms that merely produced variations of each other's products, and now, "the shakeout bloodbath is just starting," he said.

Micro firms have not been the only ones to suffer. HP, one of the valley's oldest electronics firms, has seen slumping financial performances across many areas of its business. According to Dean Morton, HP's chief operating officer, current troubles are caused by a reaction to the unrealistic user demand in 1984, amplified by the long-term effects of the strong dollar internationally.

"It's a difficult balancing act to try to be fair to employees, investors and the products themselves," Morton said, referring to sweeping cost-cutting measures instituted by the company in an attempt to avoid layoffs. On the optimistic side, however, he said sales of several HP products, such as the HP 3000 Series 37 mini and several personal computer peripherals, have not been affected.

Michael Murphy, editor of the "California Technology Stock Letter," a San Francisco-based investor newsletter, predicted that there will be an upturn after Labor Day but mostly for well-established firms like IBM and Apple. Personal computer sales, which doubled for several years, are expected to increase only 30% this year, but "sales would have to be up 200% to keep all the smaller personal computer-related companies in business," he said.



Now playing on the Forte Network:

Forte PJ™ The soft-loaded 3278/79 emulator for PCs. A powerful core product with IBM® compatible file transfer support. You can add mainframe graphics, 3270PC and more features as you need them.

Forte 3270PC™ A smarter desk on a disk. The power of IBM's 3270 PC with a simple software upgrade of the Forte PJ. You can "hot key" between host and mainframe windows, and do up to four concurrent file transfers.

ForteNet™ CMS-TSO host software with menu-driven transfers of binary and text files in either direction. Considered one of the industry's fastest software packages.

ForteGraph™ The first link to put IBM mainframe graphics on the PC. Add it to Forte PJ. Supports GDDM,® SAS/GRAPH® and TELLAGRAF,™ and IBM's host file transfer support.

ForteGraph (for IRMA)™ The graphics power of ForteGraph for IRMA™ users. Plus compatibility with ForteNet host file transfer software.

ForteLink SNA™ A remote 3274 controller in your PC. Handles up to five concurrent sessions. Like PJ, it supports TopView® and ForteNet file transfers.

ForteCall TTY™ 3278/79 emulation for remote ASCII terminals. Just dial into your PC to reach the mainframe via PJ.
FortePrint™ Software for PJ that turns your PC printer into a 3287.

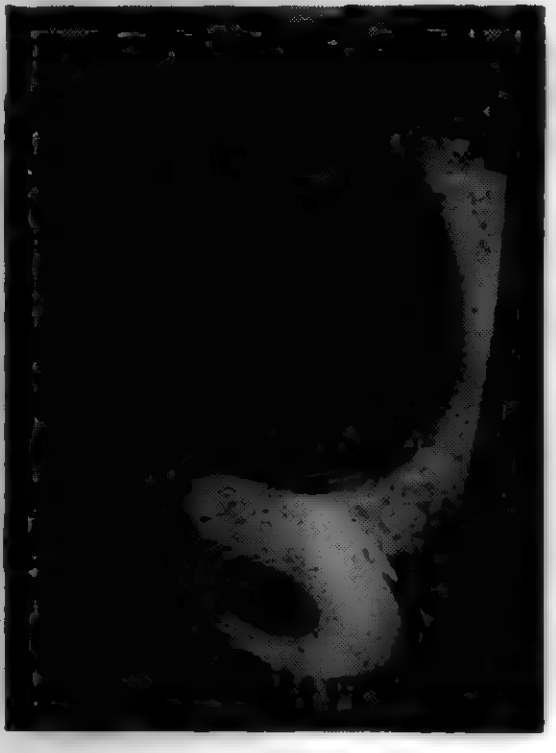
Field Systems Support Managers Customer Service



Achieve all your career goals in one move... Join Perkin-Elmer

Perkin-Elmer's Data Systems Group is a leading designer/manufacturer of state-of-the-art 32-bit minicomputers, processors, and peripherals widely used in commercial, scientific, and industrial applications. Here you will have ongoing opportunities to apply your knowledge and experience to maximum advantage—AND GROW!

In fact, planned expansion of our operations has created exceptional opportunities in our Regional Customer Service Offices in Chicago, IL; Los Angeles, CA; and New York City for Field Systems Support Managers.

At these choice locations, you will be responsible for managing, hiring, training, and assigning software and systems support engineers to meet customers post-sales needs. Our clients need support in the scientific, commercial, and data communications areas.

Positions require a BSCS degree and 8-10 years computer systems field support/software engineering experience that includes 3 years in a supervisory or management capacity.

These opportunities with our Fortune 300 Company are accompanied by excellent starting salaries and a comprehensive benefits package that includes profit sharing, stock purchase, medical/dental, and retirement plans.

For immediate consideration, please send a current resume, salary requirements, and location preference to: Manager of Human Resources, The Perkin-Elmer Corporation, Data Systems Group, 40 Pine Street, Neptune, NJ 07753.

An Equal Opportunity Employer

PERKIN-ELMER

OFFICE AUTOMATION ANALYST

Your Word Processing Expertise Is The Key To This Opportunity

An opportunity is now available for an Office Automation Analyst in the Information Systems Division of the Miller Brewing Company. This is an excellent position for an independent, knowledgeable achiever.

You will be responsible for analyzing office information systems and making recommendations for the transference to automation. Following the feasability study you will design and implement automated systems to fill particular user's needs. Training the users on the hardware and software that support the newly automated systems will complete your key responsibilities.

The successful candidate will have 3 or more years solid experience on Word Processors, Personal Computers, and departmental mini-computers. Knowledge of software including LOTUS Symphony, Multi-plan and PC-DOS is helpful. Good inter-personal skills are highly important as you will be working closely with a wide variety of employees. Some travel is required.

If you are very comfortable with automated systems and possess good communications skills this may be the opportunity for you. We offer excellent salary and fringe benefits. For immediate consideration send your resume, in complete confidence, to: Terry Gardner, Dept. #9022-85,
MILLER BREWING COMPANY,
3939 W. Highland Blvd.
Milwaukee, WI
53201.

Employing and promoting equality today and tomorrow.

Imagine exploring the boundless capabilities of a 350,000-element sensor for solid-state imaging. What an exciting time to work at Kodak.

Solid-state imaging is an exploding technology. And Kodak is in the vanguard with an experimental 350,000-element solid-state sensor array. Its capabilities make it possible to record, store, enhance, manipulate, project, and produce hard copy with resolution, clarity, and impact generations beyond other such devices. What an exciting time to be working at Kodak.

Come, help us discover more high-tech excitement.
If you're determined to expand your horizons into new worlds of high technology—this is the time and this is the place. We need imaginative, motivated EEs, CSs and solid-state physicists. We can put your talents and experience to work immediately—in an environment that encourages initiative, recognizes ingenuity, and rewards contributions. If you're ready to accept the challenges of our fast track in high tech, send your resume to Personnel Resources, Dept. DCPW, Eastman Kodak Company, Rochester, NY 14650.

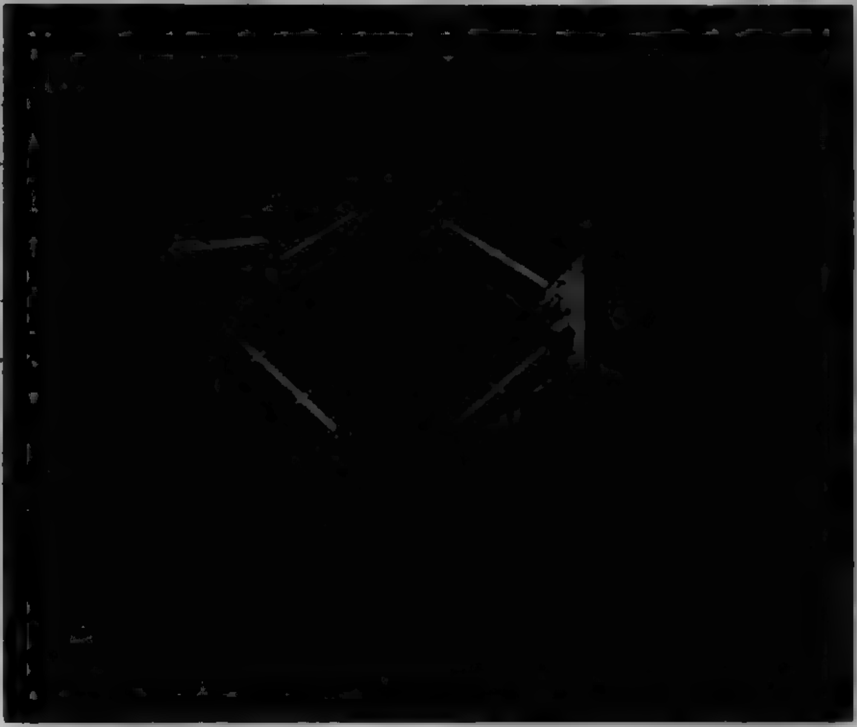
Telecommunications Opportunities with Boeing



For years, Boeing has been an industry leader in advanced technology, with a worldwide reputation for innovative design, engineering, integration, and management. We've developed one of the largest and most sophisticated privately managed telecommunications networks in the world. And now we're applying this expertise to assist other corporations and government agencies in designing, installing, and operating their own networks.

We have openings in Seattle, WA; Vienna, VA; Huntsville, AL; and Harrisburg, PA for telecommunications professionals with the following skills to work on voice, data, video, message and integrated networks:

- Network Traffic Analysis, Modeling and Simulation
- Network Architecture and Topology Development
- Detailed Network Design
- Transmission System Engineering
- Local Area Network Technology and Design
- Cabling and Wiring Systems Design and Implementation
- Central Office Systems Design and Engineering
- Equipment Evaluation and Selection
- Network Installation and Operation and Maintenance
- CCIS Database Systems
- Integrated Network Management System Development
- Data Communication Protocols and Standards
- Project Engineering Management

Boeing provides an attractive compensation and benefits program and a thriving professional environment. To investigate a telecommunications career with us, send your resume including salary history in complete confidence to:

MICRO-TO-MAINFRAME and DATA COMMUNICATIONS

DIGITAL COMMUNICATIONS ASSOCIATES, INC., is a leader in the design, manufacturing and marketing of highly sophisticated products for high-speed multi-host to terminal networks and for micro-to-mainframe communications.

Strong growth dictates extensive needs in several key areas of software engineering, technical support, technical writing, and computer operations. DCA needs people with 2+ years experience in the following areas of expertise:

- **SOFTWARE DESIGN ENGINEERS:** protocols, packet switching, modems, multiplexers, or other C language programming for real-time communications systems; experience needed in initial design, enhancements and modifications, or in software verification and diagnostics of hardware design; appropriate degree.
- **HARDWARE DESIGN ENGINEERS:** will design circuit boards, create firmware, and purchase components (power supplies, chips, etc.), to create modules or complete products. Some software knowledge required. Need solid experience in printed circuit board design; appropriate degree.
- **APPLICATIONS ENGINEERS:** customer interface, systems specifications, site planning, overseeing installations, and network troubleshooting; need experience with voice/data networks (both hardware and software), solid understanding of distributed DP, muxing, etc., and ability to work with multi-vendor networks. Atlanta, Houston, Denver, San Francisco, Los Angeles (no relocation).
- **SYSTEMS MANAGER:** manage in-house computer systems for engineering design. Handle systems fine-tuning, allocation of CPU, disk space, etc., hardware/software installation, and some utilities and software development tool programming. Need solid VAX/VMS or 68000-based UNIX/C experience; degree preferred.
- **TECHNICAL WRITER:** need 1+ year writing specifications and documentation for hardware and software. Knowledge of data communications highly preferred. 4 year degree preferred.
- **MICROSYSTEMS ENGINEER:** will work closely with customers and users on DCA's micro-to-mainframe products. Need 2+ years in user support, operations, or programming of IBM mainframe systems with specific knowledge of TSO, CICS, CMS, MS-DOS, RS-232 interfaces, etc. Excellent communication skills are needed. Atlanta, Chicago, New York City, San Francisco (no relocation).
- **SALES:** need 2+ years selling mainframes, minis or data communications equipment. Need proven expertise in over 100% quota sales and systems versus component selling approach. Expansion openings in major U.S. cities.

DCA offers a professional, yet relaxed work atmosphere, competitive salary and bonus, excellent benefits including major medical and dental coverage, eligibility to participate in tax-free retirement plan, profit-sharing, and as of this month, brand new corporate facilities in North Atlanta with in-house health club!

If qualified and interested in any of the above positions, please send resume and salary history to:

HONEYWELL

As a contributing member of a team of Programmers and Programmer Analysts, you will be involved in the development, implementation, and support of a large scheduling and production system based on Honeywell DPS-6 environment utilizing COBOL. Preferred candidates for these positions will possess three or more years' experience and will have a good working knowledge of DM-4.

HEWLETT-PACKARD

If you have a current Hewlett-Packard background in a business application environment utilizing COBOL, we may be your ticket to a career opportunity in Florida! Upon joining our team, you'll be a member of a small EDP support team and involved in the enhancement and modification of our company's MIS applications.

We are located in the Florida Space Coast Resort area, where you will earn a nationally competitive income while paying NO state or local income taxes—AND enjoy the generally lower cost of Florida living. If you are qualified in either of the above areas, and you wish to further explore these opportunities, please call Don Culik collect at (305)-[illegible]-2070 during normal working hours or send your resume for immediate consideration.

The Next Generation Technology Will Be Born At Sperry In Atlanta

Sperry's all-out commitment to our new Software Technology Center in Atlanta requires that we bring together "Software Craftmasters" to work in a one-of-a-kind facility equipped with every resource they'll require. These high-powered professionals will be taking on the biggest challenge the industry can offer — to create a new world of operating systems software for Sperry's most advanced computers. The finest creative talent will have the opportunity to work in this technology-transfer organization that will bring together research advancements in software — from engineering through product development.

At Sperry's new Atlanta Software Technology Center, you will be working in a "pure" and flexible R & D environment that is highly conducive to original conceptual thinking and future career development. You will also enjoy all the cultural, recreational, professional and social advantages of living and working in the South's most exciting city: ATLANTA. We invite you to join and grow with us in one of the following areas:

SOFTWARE ARCHITECTURE & PROGRAMMING

Join a team of recognized achievers performing key creative work in design and implementation of state-of-the-art operating systems for Sperry's premier computer line. These positions require 6-7 years of experience in operating systems design and development. Working knowledge of IBM-MVS, VM or XA is preferred. Message-base systems and operating system security knowledge would be a definite plus.

SOFTWARE ENGINEERING & PRODUCTIVITY

A thorough background in software and software development is a prerequisite for working in the technology-transfer organization that brings together research advancement in software engineering for product deployment. An advanced degree in computer science or a related field is preferred.

Our rewards will back up our commitment — Sperry's career packages will exceed your expectations for every aspect of your future, both personal and professional. To discuss these unique opportunities at the Atlanta Software Technology Center, call Michael Wiest TOLL FREE at 1-800-328-0236, or send your resume to: Professional Staffing, Department MDW4B, Sperry Corporation, P.O. Box 64942, MS 4973, St. Paul, MN 55164. An Equal Opportunity Employer M/F/H/V.

JOIN THE "LEAGUE'S" LEADING D.P TEAM

The U.S. League of Savings Institutions is the largest, most dynamic and sophisticated trade association in the financial industry. The sophistication comes from a commitment to DP that includes an IBM 4341 DOS/VSE environment and a top-flight team of experienced DP professionals involved in an exciting program of new development, system upgrades, and career growth in the following areas:

TECHNICAL SUPPORT MANAGER – Key leadership opportunity for an experienced DP Manager to provide technical support planning and supervise DBA and Systems Software Programming activities. Requires 6+ years DP experience in applications, operations, technical support, and management. Must be familiar with IBM 4341 mainframe system using DOS/VSE, VM, CICS, VSAM, POWER, COBOL, and Assembler languages. Database experience preferred.

SR. SYSTEMS ANALYSTS – Will develop new systems, upgrades and user documentation, analyze package interface, train users, and perform some coding/debugging activities. Requires 8+ years DP experience including 6+ years as Systems Analyst plus knowledge of purchased software packages and modifications. Experience on IBM mainframe, using DOS, command-level CICS, and Databases.

SR. PROGRAMMER ANALYSTS – Requires 3-5 years experience as a Program Analyst with background in software packages including use of IBM mainframe with DOS/VSE; 4+ years command-level CICS, DOS, JCL and VSAM, also required.

Join us for the challenge, change and expansion ahead. It's an exciting time for us, a great career for you! Send your resume, indicating salary requirements and position of interest, to: **Karen Stokes, U.S. LEAGUE OF SAVINGS INSTITUTIONS, 111 E. Wacker Drive, Chicago, IL 60601.** An equal opportunity employer m/f/v/h.

INTERGRAPH:

We've Become The Definitive Word In Interactive Computer Graphics

Our creative application of systems that can be used from design through manufacturing has solved problems for businesses, large and small. It's been INTERGRAPH's ability to respond with leading edge products for an ever-changing workplace that has spearheaded our leadership role. If you have an interest in being with the trendsetter in interactive computer graphics, join us now in one of the following opportunities:

APPLICATIONS ENGINEERING

Individuals will be involved with the marketing of applications for multi-axis NC machines to various industries. Must have knowledge of APT or COMPACT II, and we prefer a B.S. in Engineering with applicable experience.

FIELD SERVICE ENGINEERING

A minimum of 2 years experience in the maintenance of computer systems and peripherals; disk drive and VAX experience a plus. Training in the field of interactive graphics provided at our Huntsville headquarters. Positions available nationwide.

SOLIDS MODELING

An excellent opportunity for a key professional in R&D with a background in applied mathematics and experience in solids modeling from a software development point-of-view. Knowledge of B Rep Representation is preferred over CSG. Along with a minimum of 2-3 years experience, applicants should have an M.S. or PhD in Applied Mathematics.

SOFTWARE ENGINEERING

Requires B.S., M.S. or PhD with solid background in Pascal, Fortran, or "C" and good understanding of VAX operating systems. VMS or UNIX knowledge and background as Project Engineer or Lead Engineer highly desirable. Applicants should possess skills in one of the following applications: • Mechanical Design, • Robotics, • Numerical Control, • Plant Design, • Civil/Structural Engineering, • Architecture, • Kinematics. Responsibilities will involve development of software applications for interactive graphics.

INTERGRAPH offers salaries commensurate with education/experience, a full complement of company benefits, and unsurpassed professional growth potential. If unable to call or visit with us in Chicago, please send confidential resume and salary requirements to: Matthew Brown, INTERGRAPH CORPORATION, Dept. CW-101, One Madison Industrial Park, Huntsville, AL 35807. An Equal Opportunity Employer, M/F/H/V.

INTERGRAPH

SYSTEM 38 DP PROFESSIONALS

We are Chief Industries, Inc., a diversified, expanding manufacturer headquartered in Grand Island, a progressive community of 40,000 in Central Nebraska. Our rapid growth has created the following challenging opportunities in our data processing department.

MIS DIRECTOR: Will direct operation and administration of all DP functions. Must be able to develop and establish department standards and procedures, coordinate staff efforts to maintain and upgrade current system, and guide efforts in design and implementation of new systems. This is a top level position requiring strong management skills.

SYSTEMS ANALYST: Will develop, manage, and maintain systems design for specific projects. Responsibilities will include project coordination, defining solutions, and scheduling user departments. Ideal candidate will have System 38 and financial reporting experience.

MICROCOMPUTER PROGRAMMER/ANALYST: Unique opportunity to assist corporate and divisional IBM PC users in hardware and software selection, system set-up, and operation. Experience in operating system command, telecommunications, and Basic programming required. Accounting applications and IBM mainframe file transfers a real plus.

PROGRAMMERS: 2 positions available to meet growing demands. At least 2 years experience with System 38 using RPG III and COBOL required, preferably in a manufacturing environment.

For bright, energetic individuals who want to join our team and share the rewards, we offer excellent salary and benefits in a professional business environment. Our community offers clean air, quiet neighborhoods and friendly people. For consideration, send resume, including salary history, to:

MIS Opportunities

Racal-Milgo's position as a growing world leader in the design, development, manufacture and marketing of data communications equipment has resulted in our expanding need for MIS professionals.

We currently house both a Univac 1100/61 system and an IBM 3083 system. The IBM environment (MVS/XA) offers new development challenges using the following tools: Cullinet's IDMS, IDD, ADS-ONLINE, OLQ, Culprit TSO/SPF, ROSCOE/LIBRARIAN, Sync-Sort and much more.

The ideal candidate will have experience working in progressive DP departments where a database management system is used (DMS 1100, IDMS, IMS, TOTAL). Bachelor's degree in Computer Science or Business is preferred. We currently have the following positions available:

SYSTEMS PROGRAMMER — Univac 1100 — You must have a minimum 2 years' experience in the maintenance, generation or enhancement of 1100 series software. Additional knowledge of CMS and TELCON is desirable. Familiarity with OS1100 operating system preferred.

DATABASE ANALYST — IBM 3083 — The qualified individual will have a minimum 2 years' experience in the generation and maintenance of IDMS and related Cullinet software. You must be familiar with sound database design principles. Some experience working with Cullinet application software is desirable.

Racal-Milgo offers excellent salaries, complete company benefits, including 3 weeks' paid vacation, 100% paid tuition, life/medical/dental insurance, and one of the most pleasant working environments at our beautiful new Corporate Headquarters in Harrison Park. For confidential consideration, send your resume, including salary history to:

ACT PROGRAMMER/ANALYST
ACT Information Systems Division

Opportunity in Iowa City offices of The American College Testing Program (ACT) for experienced data processing professional. Emphasis on systems design, programming, data management/processing and documentation of small-to-medium scale systems. Relevant bachelor's degree; professional programming/systems experience; or equivalent combination of education and experience. Requires knowledge of PL/1, SAS, MVS environments. Knowledge of micro-based systems desired.

Competitive salary. Exceptional benefit program and work environment. To apply, submit letter of application and resume to Personnel Services, ACT National Office, P.O. Box 168, Iowa City, Iowa 52243. Application deadline July 22, 1985.

ACT IS AN EQUAL OPPORTUNITY/AFFIRMATIVE ACTION EMPLOYER

MANAGER DATA PROCESSING SERVICES

The Newspaper Advertising Bureau is a sales, research, marketing and promotion organization that has served member newspapers and the advertising community since 1913. We are funded by over 1,600 newspapers and offer an excellent foundation on which to build a rewarding career.

We are seeking a highly motivated individual to direct the design and implementation of a comprehensive data base management information system, utilizing an IBM System 38 as well as microcomputers.

The desired experience should include a degree in information systems (or equivalent), a minimum of two years experience in System 38 operations, RPG II expertise, mainframe/microcomputer interface, and word processing.

If interested, please respond via resume only, which must include your recent salary history and requirements to:

Vice President
Finance and Administration
Newspaper Advertising Bureau, Inc.
1180 Avenue of the Americas
New York, N.Y. 10036
NAB is an equal opportunity employer.

CLASSIFIED ADVERTISING ORDER FORM

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16".) Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available/and billed in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

Ad size desired: ____________________

BIDS & PROPOSALS

**NEW YORK CITY TRANSIT AUTHORITY
NOTICE OF SOLICITATION**

Contract 4A6951 RFP Proposal Closing Date September 6, 1985 at 4:30 P.M. Local time. SYNOPSIS: [illegible] for the purpose of furnishing, delivering, installing and [illegible] a computer [illegible] charting system for the Revenue Department. Notice is hereby given that sealed proposals will be received by the New York City Transit Authority at 25 Chapel Street, Brooklyn, New York 11201 in Room 1041 daily from 9:30 A.M. to 4:30 P.M. Monday thru Friday. Proposals delivered on the closing date will be accepted at 25 Chapel Street (Room 1041) until 4:30 P.M. local time on September 6, 1985. Site tours must be taken by July 31, 1985 and a pre-proposal conference has been scheduled for 2:00 P.M. on August 5, 1985 at 25 Chapel Street, Room [illegible], Brooklyn, New York 11201.

Minority Business Enterprises will be given full opportunity to submit proposals and will not be subjected to discrimination on the basis of race, religion, color, sex or national origin in consideration of award.

RFP documents can be obtained at the Solicitation Counter, [illegible] floor, New York City Transit Authority, 25 Chapel St., Brooklyn, New York 11201 from 9:30 A.M. to 2:30 P.M. Monday-Friday excluding holidays. Requests can be made in writing, in person, or by phoning [illegible] at (718) [illegible]. This document is available at no charge.

Compliance with all applicable Affirmative Action, Equal Opportunity, and Minority Business Enterprise conditions is required. A full description of these and all other provisions is included in the bidding documents.

$99 HARDWARE!

WHY PAY $450 TO $3000 FOR A REPORT BINDER?

For years we've supplied our customers with an efficient, inexpensive binder. And for years, they have asked "why don't you market these binders?" OK, so now we're in the binder business.

ABOVE: Good visibility — 30¢ per report.

ABOVE: Nylon post binder — data is lost in gutter — cost $4 each.

We supply a hardwood binder — plus:

- Materials for 25 professionally bound reports.
- Simple, illustrated instructions.
- A miniature report as an illustrated guide.

CLASSIFIED ADVERTISING ORDER FORM

Computerworld's Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap. (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16") Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us.) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

OUR NEWEST SOFTWARE TOOK $20 MILLION TO DEVELOP, 5 YEARS TO WRITE AND WE'RE GIVING IT AWAY.

No, we're not crazy. And no, we're not joking.

We're Management Science America, Inc. The largest independent applications software company in the world. And by Jan. 27, 1986, we plan to give $20 million worth of our newest software to over 2,000 of our customers. Instantly making it the industry standard for fourth generation technology.

If you're particular about what you get for free, here are the particulars.

We call this technology Information Expert.™ Because it allows all your software systems to carry on intelligent conversations. With one another. In English. And thanks to our data dictionary, nothing will ever sound like Greek.

For end users, our system makes it easy to design reports. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides a fourth generation language that your data processing staff can use for applications development. So you can do in minutes what used to take hours. Or do in hours what used to take days.

It even allows borderless retrieval of information. That way, you can get all the information you need. Not all the information you don't need.

Why are we giving all this away? It's part of our customer support policy. And if that doesn't sound familiar to you, you should obviously become familiar with us. MSA.

Datapro survey: Strong demand for mainframes

By Tom Henkel
CW Staff

DELRAN, N.J. — For mainframe users, last year was time to replace aging processors with newer technology systems.

A recent survey of 937 mainframe users, conducted by Datapro Research Corp. here, revealed that most respondents had installed new mainframes in the past year. The survey asked users how long their current mainframes had been installed. On the average, the users' responses indicated that time period to be less than 10 months.

[redacted]

Of the group polled, users of National Advanced Systems Corp. mainframes made the most recent additions to their shops; NAS' systems were an average of 6.2 months old. Sperry Corp. mainframes ranked as veterans, with an average system age of 10.7 months. Users of other vendors' systems had similar responses, with Burroughs Corp. users responding 9.6 months, Honeywell, Inc. users 9.7 months, IBM users 9.3 months and NCR Corp. users 9.9 months. A catchall group of other mainframes posted an average system age of 12.9 months, Datapro said.

Missing from the survey were Control Data Corp. and IPL Systems, Inc. A Datapro spokeswoman said that of the 6,000 mainframe users who were sent questionnaires, CDC and IPL users failed to submit the five required responses. Furthermore, she said, Digital Equipment Corp.'s Decsystem line and the now-defunct firm, Magnuson Computer Systems, Inc., were eliminated from the 1985 survey.

Highlights of the Datapro survey include the following:

■ On the average, more users chose to

DEC enhances link to Disoss

By John Dix
CW Staff

MERRIMACK, N.H. — Digital Equipment Corp. last week enhanced its compatibility with IBM's Distributed Office Support System by adding the ability to exchange revisable documents with IBM environments.

The External Document Exchange with Disoss software runs under VMS on systems ranging from the VAX-11/725 to the VAX 8600. It complements DEC's Disoss Document Exchange Facility, announced last October, which enables users on a Decnet network to read but not revise Disoss documents.

Together the products enable DEC users

Software vendors now feel pinch

By John Gallant
CW Staff

Last week, Applied Data Research, Inc. announced that it expects to report a loss for the second quarter of 1985, its first quarterly loss in two years.

For Martin Goetz, president of the Princeton, N.J.-based systems software company, ADR's flagging midyear performance came as something of a surprise. Just three months earlier, ADR had reported first-quarter revenue up nearly 60% and an increase in profits of more than 70%, compared with the first quarter of 1984.

Goetz, like many industry observers, thought the slump that slammed hardware makers spared large systems software vendors. But the software sector is finally beginning to feel the effect of that slowdown. While the news coming from the software industry front is not as grim as recent tidings from the hardware arena, the coming months are likely to bring reduced profit and revenue growth. The need for drastic cost-cutting measures is not yet evident, but such moves may be necessary if the impact of the slowdown is amplified.

"We thought the software industry was going to remain unaffected until about a

PRODUCT SPOTLIGHT

Power of AT, clones wooing initial users

By Edward Warner
CW Staff

Ten years ago, a desktop computer operating at 1 million instructions per second would have crushed the desk on which it rested. Such a machine, a mainframe like IBM's 370/168 Model 3, would also have cost more than $1 million.

Today, that same raw power is available with an IBM Personal Computer AT, weighing less than 40 lb and priced at $3,999 in its basic version.

Nearly 10 years after the birth of personal computing, the IBM Personal Computer AT and compatible machines mark how far computer technology has come. Running a 16-bit, 6-MHz microprocessor — the Intel Corp. 80286 — and offering optional 20M-byte internal hard disks, these machines are roughly three times as fast as the IBM Personal Computer yet run most Personal Computer software. The AT and compatibles can support several users, turn their hard disks into local-area net file servers and, with the right operating system, potentially address 16M bytes of random-access memory.

Although some pioneering users are breaking ground with the AT as a multiuser machine or as a local-area network server, most users are being drawn to the AT and its clones because the machines are speed demons offering high-capacity storage.

As a result, the AT and compatibles have remained single-user, stand-alone micros running the same business software as their predecessors. Developers said software that exploits this new-generation hardware is lacking because of the limits of IBM's PC-DOS (see story page 16). Industry analysts, meanwhile, said the dearth of multiuser systems arises from the lack of software to run under IBM's PC Xenix, the AT's multiuser operating system.

The biggest reason is likely that users want nothing more than a faster Personal Computer. At the New York headquarters of Merrill Lynch, Pierce, Fenner and Smith, Inc., for instance, 100 ATs are meeting the needs of "a lot of people who use heavy spreadsheets [and who] were complaining [about] how long it took to compile them," reported Carol Bass, manager of personal computer support. "They zip through their spreadsheets now," she added.

Elsewhere in Manhattan, at the headquarters of Home Insurance Co., Anthony S. Graffeo, senior vice-president of information systems, reported that the firm's personal computer users

Credit card scam laid to DP workers

By Mitch Betts
CW Washington Bureau

DENVER — Two computer operators at a firm here that issues credit cards last week agreed to plead guilty to participating in a crime ring that created about 40 fraudulent credit cards and ran up charges of $50,000, U.S. prosecutors said.

Assistant U.S. Attorney Frederic S. Stephens said that Ella L. Johnson and Carol L. Pena, data entry operators at Consumer Retail Services, Inc., agreed to plead guilty to computer crime and credit card fraud charges after discussions with federal authorities. The defendants could not be reached for comment.

A federal grand jury here recently indicted seven people in the alleged credit card scheme, which operated from November 1984 to April 1985, according to the indictments. The computer center issues Citibank Goodyear Silver Card credit cards for use in Goodyear Tire & Rubber Co. retail stores, prosecutors said.

Prosecutors alleged that the computer operators repeatedly assigned new account numbers to themselves and associates and issued credit cards. They allegedly used the credit cards to purchase merchandise up to the credit limit and then altered the computer records to send the bills to fictitious addresses.

"This went on for several months before it was discovered," one prosecutor involved in the case said, adding that the center has since tightened its security. At the time of the alleged offenses, this prosecutor said, the center did not check whether each account created in the computer had matching credit applications and approval forms.

The indictments, filed in U.S. District Court here, contain charges based on the Computer Fraud and Abuse Act and a credit card fraud law, both enacted by the U.S. Congress last year. Under the Computer Fraud and Abuse Act, it is a misdemeanor crime to gain unauthorized access to data bases containing financial data protected by the Right to Financial Privacy Act.

Johnson, Pena and James R. Murray were charged with the computer crime, as well as with distributing and using fraudulent credit cards. The other defendants, Daris Espy, Daniel E. James, Stephen Bien and Michael D. Huntington, were charged with credit card offenses and, most have agreed to plead guilty, Stephens said.

Editorial leadership changes at CW

Terry Catchpole has been named editor in chief and Sharon Frederick executive editor of *Computerworld* newspaper.

Catchpole succeeds John Whitmarsh, who has served as editor in chief since 1981 and who resigned July 12 for personal reasons. Frederick replaces Rita Sheor who left the company after five years to pursue new business opportunities.

Catchpole has 12 years of editorial experience at a variety of publications. Since 1983, he has been editorial director of *Business Computer Systems*, a monthly magazine for corporate computer managers published by Cahners Publishing Co. He also was responsible for the start-up of another Cahners publication, *PC Products*, and served briefly as editorial director of that magazine.

Before his entrance into computer publishing, Catchpole was editor in chief of *Boston Magazine*, an award-winning city monthly, and held a number of editorial staff positions with Playboy Enterprises, Inc. in Chicago. His articles have appeared in periodicals from *National Lampoon* to *National Review*, and he has both written and edited books on subjects ranging from the political activities of organized labor to a forthcoming history of sports at Harvard University.

Catchpole's computer-related activities also include election to the board of directors of the Boston Computer Society, the nation's largest computer-user organization, and volunteer publisher of the society's bimonthly magazine, *Computer Update*.

Executive Editor Frederick is also joining *Computerworld* from the staff of Cahners' *Business Computer Systems*, where she has served as managing editor since 1983. Previously, she was a senior editor at *Inc.* magazine and associate editor at *Electronic Business*. At the latter publication, she won the prestigious Jesse H. Neal award for feature writing.

IT'S INEVITABLE. EVERY COMPANY WILL NEED A RELATIONAL DATA BASE TO COMPETE.

"Miss Elliot, it's inevitable every company will need a relational data base to compete. Can you please find out what a relational data base is?"

When corporate management needs information, the last thing they want are excuses. Or explanations, no matter how logical they may be.

But what else can you do when the data base you're using doesn't let you get to that information quickly. If you're lucky enough to get to it at all.

The solution, of course, is a relational data base. A data base that lets you give management the information they need, the way they need it, when they need it.

ADR/DATACOM/DB® is the only relational data base management system that lets you give management access to all the company information. Because the data base they use to manage the company is the same exact data base the company uses to operate. And ADR/DATACOM/DB does it without sacrificing performance.

ADR/DATACOM/DB lets managers use relational query languages like ADR/DATAQUERY,® decision support systems like ADR/EMPIRE® and, with ADR/PC DATACOM,® even their own personal computers to get the information they need themselves.

And programmers can use powerful productivity tools like ADR/IDEAL,® our 4th generation application development system, to create applications quickly and turn data into strategic information.

ADR/DATACOM/DB allows system changes to be made quickly and easily. So it gives your company the flexibility to compete in a changing business world.

And, most important of all, ADR/DATACOM/DB still delivers the performance production demands. In fact, it is the only relational data base management system being used for high volume production applications.

It's inevitable every company will need a relational data base because it removes the barriers that separate management from the information it needs.

And ADR/DATACOM/DB is the relational data base that does it best.

For more information about the inevitable, mail us the coupon. Or call 1-800-ADR-WARE.

Software execs weigh slump's impact on their firms

It is sometimes said that where you stand on an issue depends on where you sit.

That aphorism holds true for the top executives at three of the leading large systems software firms. Whether the executives believe the computer industry slump has affected software makers in general depends in large measure on their perceptions of how it has affected their particular firm.

Management Science America, Inc. (MSA), the Atlanta-based applications software leader, announced in April a first-quarter loss of nearly $3 million. But Dennis Vohs, MSA's executive vice-president, said the loss is typical of the firm's first-quarter performances and is not related to the slowdown.

"We are the largest vendor of applications. But even with our size, the level of activity in the software market today exceeds our capability to keep up," Vohs said. "The slowdown in hardware deliveries has not affected us. If a potential customer has cut back on capital spending, we will go after someone else who has not slowed spending. There is still a tremendous demand for software."

But at Applied Data Research, Inc., which expects its first quarterly loss in two years (see story page 1), the outlook is different. President Martin Goetz said he believes the long arm of the slump has finally reached the software industry.

'There has been a general belt-tightening'

"We will make up for the loss in the second half [of 1985]," Goetz said. "But delayed sales and price cutting by our competitors are both signs that the slowdown has reached software companies. There has been a general belt-tightening. Customers are being more careful in justifying a purchase."

Robert Goldman, president of Cullinet Software, Inc., which recently trimmed its first-quarter growth projections, said the slowdown has impacted vendors. But Goldman feels a variety of profit and growth opportunities still exists.

"I would have to agree that there has been some impact," Goldman said. "But certainly less than in the hardware area. Capital expenditures have slowed, and buyers are somewhat more careful. The sales cycles are longer, there is more caution, and, in some cases, purchases require higher approvals. But users are really looking for a good return [on investments], and software can still provide that."

— John Gallant

SLUMP

from page 1

month ago," Goetz told *Computerworld* last week. "We had forecast a small profit for the second quarter. But our June sales were significantly less than expected. We now believe that the general decline is starting to hit the software industry. [Cullinet Software, Inc.] said that earlier, but we did not see it. We are seeing that impact now."

What Cullinet said about a month ago, according to President Robert Goldman, was that its first-quarter growth would be lower than initially forecast. Rather than falling within the 40% to 50% growth range predicted for the entire fiscal year, first-quarter growth was slated to be between 30% and 40%.

Westwood, Mass.-based Cullinet's previous fiscal year ended with profits and revenue up 50%, although the fourth-quarter profit dipped below 50% for the first time in several quarters.

Stephen McClellan, vice-president of New York-based Merrill Lynch, Pierce, Fenner and Smith, Inc., said Cullinet's revised growth prediction was the first indication that the industry slowdown was beginning to affect vendors.

Selling cycle is lengthening

"The impression that the slump is not affecting software companies is changing," McClellan said. "It is not just affecting Cullinet and ADR. Other companies are sending signals that the selling cycle, especially for bigger ticket items, is lengthening. Over the next 12 months, we will see growth slowing."

But where the slowdown has meant layoffs and losses for hardware vendors, software companies may only have to adjust to reduced revenue and profit growth, most analysts said.

"Users are not buying as aggressively as they did in 1983 and 1984," said Peter Cunningham, president of the Mountain View, Calif.-based market research firm Input, Inc. But he said Input has predicted that the software and services sector will still grow at a rate between 25% and 30% this year.

"You have to remember that 1983 and 1984 were absolutely incredible years," Cunningham said. "You had this massive rebound from the major slowdown that had started in 1980. What is happening is that growth rates are getting more realistic. That is not a slowdown but an adjustment to a more normal rate of increase. Unfortunately, a lot of these companies do their forecasting using their sales force as an indicator. They are overly optimistic."

Scott Smith, vice-president of Stamford, Conn.-based Gartner Group, Inc., agreed. "Overall, the outlook is very healthy. If deals get pushed out a little bit, it is not the end of the world. Users are still looking at new applications, and in-house development is tremendously more expensive than buying a package. The growth in the business is there. It may be 25% and not 35%, but that is still a very healthy rate."

Smith and other analysts said that those vendors marketing high price tag products, such as data base management systems, will be affected more severely by the capital spending belt-tightening and lengthened sales cycles that accompany the slowdown. Cullinet and ADR, both of which have made large gains in the DBMS marketplace, have already felt the impact.

Thus, said Damian Rinaldi, director of International Data Corp.'s Software and Services Information Program, the large systems software market will become more competitive, and vendors will begin eyeing each other's turf.

'Could be a nasty period'

"The next year will be a time of consolidation," Rinaldi said. "If the vendors are not effective in positioning themselves for this slump, it could be a nasty period. Things are tougher than usual, and it will require a greater management effort to come out whole."

But Input's Cunningham said software vendors must be cautious in trimming hiring, training and development costs in reaction to the slump. "Those costs will have a negative impact on profitability in the short run because the revenue growth will not be quite as strong as it has been.

"But hiring and development plans cannot be turned on and off. If the vendors try to yo-yo around with development right now based on quarterly fluctuations in orders, they could be in pretty deep trouble."

TURBO

Why are SYBACK & SyncSort CMS the fastest things on no wheels?

(More technology in the tank!)

Call (201) 568-9700.

Arrange a test drive.

You say you've always had very simple tastes? All you ever wanted was the best?

Well, step into our showroom and kick a few tires! We'll show you two programs that are the Ferrari and Lamborghini of VM programs.

- **SYBACK – the world's fastest and most maneuverable backup, restore and copying program;**
- **Syncsort CMS – the world's fastest and most maneuverable VM/CMS sort program.**

What makes 'em so special? Well . . .

(1) TURBO PERFORMANCE: Have you ever stepped down on the gas in a dangerous driving situation and discovered . . . nothing? Well, that'll never happen to you with these two vehicles.

Both are equipped with our special brand of "software turbocharging." We call it FBT, which stands for Fluid Buffering Technique. Our competitors call it something else.

We discovered FBT one dark and rainy night when we were trying to find a way to speed up the movement of data in sort programs. After crying "Eureka," we applied it to our OS and DOS sort programs. The results were . . . wow!

Now we've carried that bright idea over into VM dump-restores and sort programs. And the results are still wow! Compared to any other backup or sort program clogging the nation's VM thruways today, SYBACK and SyncSort CMS will save you up to:

- **50% in Elapsed Time;**
- **45% in VTime;**
- **55% in TTime;**
- **75% in SIOs.**

So who needs all that speed? You do. If you want to optimize your VM operations, stay out of needless DP traffic jams, and make the boss happy with your throughput.

Here's what happened to one large government agency: Their backup operations used to require a full 24 hours to complete. Then they installed SYBACK. Now their backup takes — are you ready? — one-half hour!

(2) EASY HANDLING: SYBACK and SyncSort CMS are among the most flexible, user-friendly programs ever produced by anybody anywhere. That's one reason programmers love 'em. And where does it say that backup and sort operations have to be hard to be good?

(3) "MISTER SOFTWRENCH" SERVICE: We've got the best pit crew in the business. More than 85% of all customer requests are resolved within 24 hours.

If you'd like to put a little high technology in your VM tank, give us a call. We might even take your used VM dump-restore or sort program as a trade-in!

William McGowan

The telecommunications industry was stunned late last month when MCI Communications Corp. acquired Satellite Business Systems (SBS) from IBM and Aetna Life & Casualty Co. in exchange for IBM acquiring a 16% equity interest in MCI. The pending agreement appears to be one more giant step forward for MCI's colorful chairman, William G. McGowan, in his 17-year battle to untangle AT&T's hold on the long-distance carrier business.

The alliance has provided MCI with the immediate benefits of prestige among potential corporate clients and the financial backing of one of the world's largest and most profitable corporations. IBM has the option to acquire 30% of MCI, and some analysts speculate IBM may someday swallow MCI totally, as it did Rolm Corp. In a recent interview with Computerworld *staff writer Clinton Wilder, McGowan explored the immediate and potential benefits of association with IBM and the impact on his firm's long-time adversary, AT&T.*

With the IBM-SBS partnership, what can MCI now offer to large corporate MIS departments that you could not before?

We actually started in 1981 to plan to offer the larger, more sophisticated user digital networks — such as sophisticated packet switching networks. [We knew] it would take us a while to put it in place, but we started back then.

It was clear in 1982, with the divestiture announcement, that the time to do it was now. So we started putting in digital overbuilds on all of our microwave systems, and we started putting in fiber-optic systems. We said in 1981, "no more analog switches; only digital switches." Eighty-five percent of our ports now are digital.

So we put in place a system that we're just now starting to offer — a high-speed packet-switch network for corporate use — which we'll customize and put in place. We did it for ourselves last year and for [Security Pacific National Bank] so far this year. We offer [Security Pacific] a virtual private-line network — voice and data.

So we're in a position to [offer these types of networks]. I think the advantage we have right now with the combination is that [IBM has] — more than we have — a technical engineering capability to support that kind of thing for many, many more customers. So [IBM] gives us a lot more depth . . . maybe doubling or tripling or quadrupling the technical competence and capability we have.

Is the idea of "cradle-to-grave" data and communications services from IBM a realistic concept for the future?

It's less probable than it was before. [IBM] did have a subsidiary that they had full control of with 60% [ownership], and now they've backed away from that. I don't think [IBM feels] the need . . . to offer [these services] . . . for those customers who wish to have them. I don't think [things have] changed.

With SBS, IBM could serve someone who said, "I want to have someone come in and do this whole thing. I don't know how you guys are going to do it, but I want it done and handed to me on a platter." [MCI] will be there to do that, but we'd be there to do it anyway. If those customers say they have something for bid, a Rolm or IBM or [Northern Telecom, Inc.] will say, "Who am I going to do it with as a partner?" Well, that won't really change. Basically, we'll do our share, [AT&T] will do their share; we'll charge our rates, and they'll charge theirs.

But I don't think [the demand for single-vendor service] will ever be the case for most users. Our industry is clearly moving away from the experienced buyer/inexperienced management situation because communications managers are experienced. It's taken data processing 30 years to do it, where it will take [the communications field] five — it takes everything five now instead of 30 — to move from the experienced manager/inexperienced boss over to the experienced organization. A Security Pacific, [Westinghouse Corp.] or [Citibank N.A.] . . . really doesn't need that hand-holding, education, support that the inexperienced buyer does. They do need absolute assurances that you know what the hell you're doing. And they need to have proof that your commitments are fulfilled, that your plate isn't overfilled and they won't get slipped over to the side of it.

See McGOWAN page 7

MCGOWAN

from page 6

I think this [MCI-IBM partnership] will help them in that regard. For all of the large users that we've had — really, at the beginning of the company, we were selling to large users — for all those years, we maintained them and supported them, but we really didn't go out and try to expand that. We had other things that were more directly attributable to our life.

But you will be doing that now?
We started about a year or so ago. We've added now several hundred people [to do that] . . . and gave all of our divisions two criteria for structuring themselves. They all have completely separate national account marketing, because it is an entirely different sale. And the second thing was an entirely separate customer service group, separate from sales. [That's because] if you tell a salesman he's got a quota, he'll put all his resources there and customer service suffers. So all seven of [MCI's divisions] have those separate entities, and we've done very well — a tremendous amount of orders.

I think this [IBM partnership] will improve the process, but I also think it will bring us more quickly over to the more sophisticated networks.

What new technologies can you now pitch to those large corporate accounts?

The first phase is that we'll see the typical corporation going into a digital environment — mixed voice/data, predominantly voice, some of them exclusively [voice]; they'll talk about 1.544 megabits [per second], but you'll find if you ever look into that, you really have a voice network.

Once you start moving into the digital world, we're talking about bit streams of 405 megabits with fiber. We'll be fully converted to 810 [megabits] before the end of 1986, and I know that we're moving to 1,620 megabits.

It's going to get to the point where a lot of the tricky stuff, such as bandwidth compression, is not going to be needed for a long time. The sheer pipe size is getting so enormous; why should you go through those shenanigans when you've got such massive quantities? Increased value in communication breeds more communication breeds more communication.

You see more and more articles about [corporations] using these disciplines as a competitive weapon and as a way to differentiate between [you and] your competitor and as a way to make a profit. Once you start seeing articles like that, you know you're really going to see [the telecommunications market] go. As that starts, you're going to truly get mixed networks.

Right now, we've been fairly well limited to the long-distance segment, completing our switches and so on. But the local phone companies know they have to get in on the act or they're going to lose out. So now they're starting to say, "Sure, we'll install fiber, we'll give you T1, we'll do this." We're interfacing now with damn near every one of those companies.

Now the customer, back through us to the local phone company, is starting to put together a PBX or front-end processor or whatever you want to call it. I try to tell everyone this is not a phone (pointing to a telephone). It's no more a phone than the man in the moon. It's a terminal. I don't do anything here, I just instruct something else down there to do something. The "phone" doesn't exist anymore.

As you start moving into that environment — and that's going to happen very quickly — all of a sudden it really becomes the digital world. I don't really care if you digitize it in my mouthpiece or on my seventh floor. Once you're there, you're into a completely intermixed, heterogeneous world of communication where it all is digitized. We digitize everything. When you think about it, it's kind of crazy — we've been digitizing everybody's communication now for eight years, and on both ends of it we convert it back to analog, just to get you through the switch.

The thing that's going to be interesting is, internationally, what is going to happen to the position of the MIS guy. Once an organization starts saying, "With all the data processing, computing capabilities I have, why don't I do like other people and use them as a way to make money?" Once that happens, then the world changes. It really does.

Where is MCI positioned to take advantage of these fundamental changes?

We're not going into an information age or an information economy; we're bringing in the information technologies now as a vital part of the way we do everything. Of the top 100 organizations that we've identified as our potential biggest buyers, 80 were industrial . . . as we've seen with [General Motors Corp.] That's how you become more efficient in manufacturing. You have to use the information technologies.

What we are is just like the transportation system. Instead of goods, we are the transportation system for all the information in the country. And just like the transportation system, all the dirt roads had to be replaced with a new infrastructure. Well, we have to do that.

[The old Bell system network] was only satisfactory for voice conversation. But for every other application, it's either way too big or way too small. If I'm working here (pointing to microcomputer) — it's terrible, the company standard is an IBM [Personal Computer] and I'm on a [Kaypro Corp. micro] up here — [I'm transmitting at 1,200 bit/sec.], but most of the time when I travel, I'm on a workstation with 300 [bit/sec.]. So what the

DISOSS from page 1

to search for documents filed in an IBM host-based Disoss library and access them to read or edit. Conversely, DEC users can now create documents using DEC word processing programs — such as WPS-Plus and DECDX — and file them in a Disoss library to be read or revised by other DEC or IBM users.

Gives DEC the lead

This capability "gives DEC a significant lead over competitors like [Data General Corp.] and [Wang Laboratories, Inc.] in delivering meaningful bridges to IBM mainframes," according to William F. Rosenberger, director of strategic planning with the Yankee Group, a Boston-based research and consulting firm.

EDE with Disoss builds on DDXF, which, as part of Digital's Decnet/SNA gateway product set, is said to provide for the two-way transfer of data between DEC machines and systems within IBM's Systems Network Architecture (SNA).

DDXF provides DEC environments with Disoss library functions — analogous to a real library of documents — and distribution services, which pass documents among different machine types. DDXF performs, among other things, the format conversions needed to exchange final-form documents between DEC and IBM environments.

EDE with Disoss enhances this capability by enabling users to revise documents created or accessed from a DEC environment. This software is said to conform to IBM's Document Interchange Architecture and Document Content Architecture using LU6.2, an SNA convention for peer-to-peer communications capabilities.

Documents within an IBM Disoss library can now be transformed into DEC WPS-Plus or DECDX documents that can be read or revised. Similarly, documents created under these DEC word processing programs can be sent into Disoss as revisable or final-form documents.

The Disoss implementation "looks very clean," Rosenberger said of the product. "The degree of compatibility is extensive."

One advantage of the DEC implementation is that "DEC added their own Disoss menus and user interfaces so DEC users would feel comfortable and familiar with what they are seeing," according to Andria Rossi, associate editor of Seybold Publications, Inc.'s "Seybold Report on Office Systems," a monthly industry report. "That's not always the case and certainly not the case with IBM."

Both final-form and revisable-form IBM documents are accessed through EDE menus. For simplicity these menus can be further integrated into the company's All-In-One office information system. Using All-In-One commands, "EDE with Disoss lets users search for, retrieve, file, edit or delete documents residing in an IBM host document library," DEC reported.

Future acceptance

Although the installed base of IBM's Disoss is small, according to Rosenberger, he said he believes Disoss compatibility is critical for companies selling departmental systems because its future acceptance is expected to be high.

"It's quite important that DEC show and deliver this type of bridge to IBM mainframe Disoss environments," he said.

Beside Decnet/SNA DDXF, users who want to implement EDE with Disoss must have Decnet VAX and the firm's Decnet/SNA Gateway and Gateway Access Routines. The gateway appears to the IBM Disoss host as a Type 2 Physical Unit within SNA. It can reportedly support multiple simultaneous Disoss sessions.

EDE with Disoss, which is available now, costs $3,000 to $4,500, depending on the VAX configuration.

When bundled with the other components required, the implementation will cost between $27,000 and $45,000.

DEC is headquartered in Maynard, Mass. 01754.

MCGOWAN from page 7

hell am I doing on a 4-KHz circuit?

So what we are going to be is the provider of the transportation system for that [data communication]. We have more customized services — the MCI Mail system, packet switching — we'll have all of those bells and whistles. It's going to be a good combination together [with IBM], because [AT&T] has one basic technology, and we have them all. And you really need a mixture. So we'll be very much helped in that regard.

How do you continue to argue for regulation of AT&T, given IBM's presence?

The day before we made the announcement, IBM had 60% control of a long-distance carrier. The day after, they had 16% control. So they've always been here. But I think a more relevant point is that we believe that [AT&T] should be deregulated — but they should be when there is viable and sufficient competition in there to truly say that the customers do have some choice, and that [AT&T] can't use their monopoly power as a monopolist.

For example, if they were deregulated, and they said the rates from Boston to anywhere else are going to be quadrupled tomorrow, our Northeast division would really smile a lot because we know we'd get a lot of calls and a lot of customers. But we also know that after three or four days of calls, we'd have to say, "No more." Because we couldn't handle them. A few other guys, I guess, have some capacity and they'd be carrying some, but they couldn't handle very much. Now what happens to the 85% or whatever that's left? They'd have to pay four times as much.

The proof of it is that there isn't sufficient capacity out there. [AT&T says] they have 400 competitors. That's not true; 396 of them are using their service. You call that a competitor? It's who has the capacity, what sufficient share is there of the market — I think the [Federal Communications Commission] should start gradually deregulating. I don't see a problem with that, but you've got to recognize realistically that the time is not now.

Will equal access meet the September 1986 target date?

It will, I think, for two main reasons. The [U.S. Department of Justice] has made clear and explicit instructions to each of the [former] Bell operating companies about their failure to do what they should have done to date, and about the requirements that they do it, and to come out very quickly with the information.

They also have been investigating AT&T about some of their conduct and appear willing to act on that. I don't think I should say any more that they're crooks, but they misappropriated our customers in the hundreds of thousands. So I think that [equal access will meet the target], and these next couple of years are clearly the most important in the life of this industry.

In places where there is true equal access now, how have you done in terms of market share?

We get somewhere between 10% and 15% of the market; we get more in customers, perhaps, but in dollars, which is more significant, 10% to 15%. Since we're at five [percent of the overall market], it's not that tough.

Does IBM's affiliation help you in that market share battle?

Not in the short term. But you have to succeed in our industry in two things. One has to succeed in the large fiscal arena. Not only is [IBM] a very big customer in terms of dollars, but it is the leading edge of what you have to constantly be, which is better and better. And you also have to be successful in mass merchandising, because you still have the system which doesn't wear out by usage, and you like people [calling] at night and on weekends, for example.

Clearly, we've done fairly well in mass merchandising. We started to do all right with large users, and it's going to accelerate that. Obviously the affiliation has a rub-off, a cachet. There are people out there who are saying, "There's a whole bunch of people out there. Which ones can I have confidence in?"

But I don't find that any different from our affiliation with [American Express Co.] and with [Sears Roebuck & Co.] For a certain group of people, American Express is just fine. And even with Sears, they have a fabulous reputation with an enormous number of people, maybe not hugging the East or West Coast, but in the rest of this country. Our affiliation with them, I think, helps too. And this [IBM] affiliation will help. There are certainly a number of people who have strong feelings there too.

After the $400 million IBM funding for the first three years, how do you see the IBM fiscal stream proceeding? Is there a chance of the funding stream drying up?

We specified $400 million just so we had some number; [IBM hasn't] said that there's a limitation on it, nor have they said there are any guarantees beyond that. But one of the reasons we did it — and they didn't resist it at all — was that I wanted to have forward funding. We've always been that way. I guess living through a period when we had a negative net worth of $6 or $7 million, and we owed the banks $100 million, made us more conservative than most companies.

Ever since then, we've always funded ourselves in advance. We've never used short-term borrowing to fund long term. We have $800 million in cash in the bank today. I saw where we were listed in *Dun's Review* as the 84th in the U.S. of any corporation for positive cash flow.

The ownership maximum was not at all resisted by [IBM]. They're free to go out in the marketplace and purchase, but how much they own is certainly going to depend upon the equity attached to the $400 million; and that's a floating percentage based on the market at that time. I calculated it at [an MCI stock price of] $12.50. If they converted at that price, it was 26.1%.

I don't see this place changing. [IBM's] not interested in any affiliation that the other people aren't interested in.

You have to understand, I need stockholders. Preferably wealthy, preferably understanding of what we're doing here — not in three-month or six-month programs but longer term. Preferably capable of staying power, preferably capable of giving us more money when we need it and preferably, if possible, helping us in other aspects of our business. And they fit all of those.

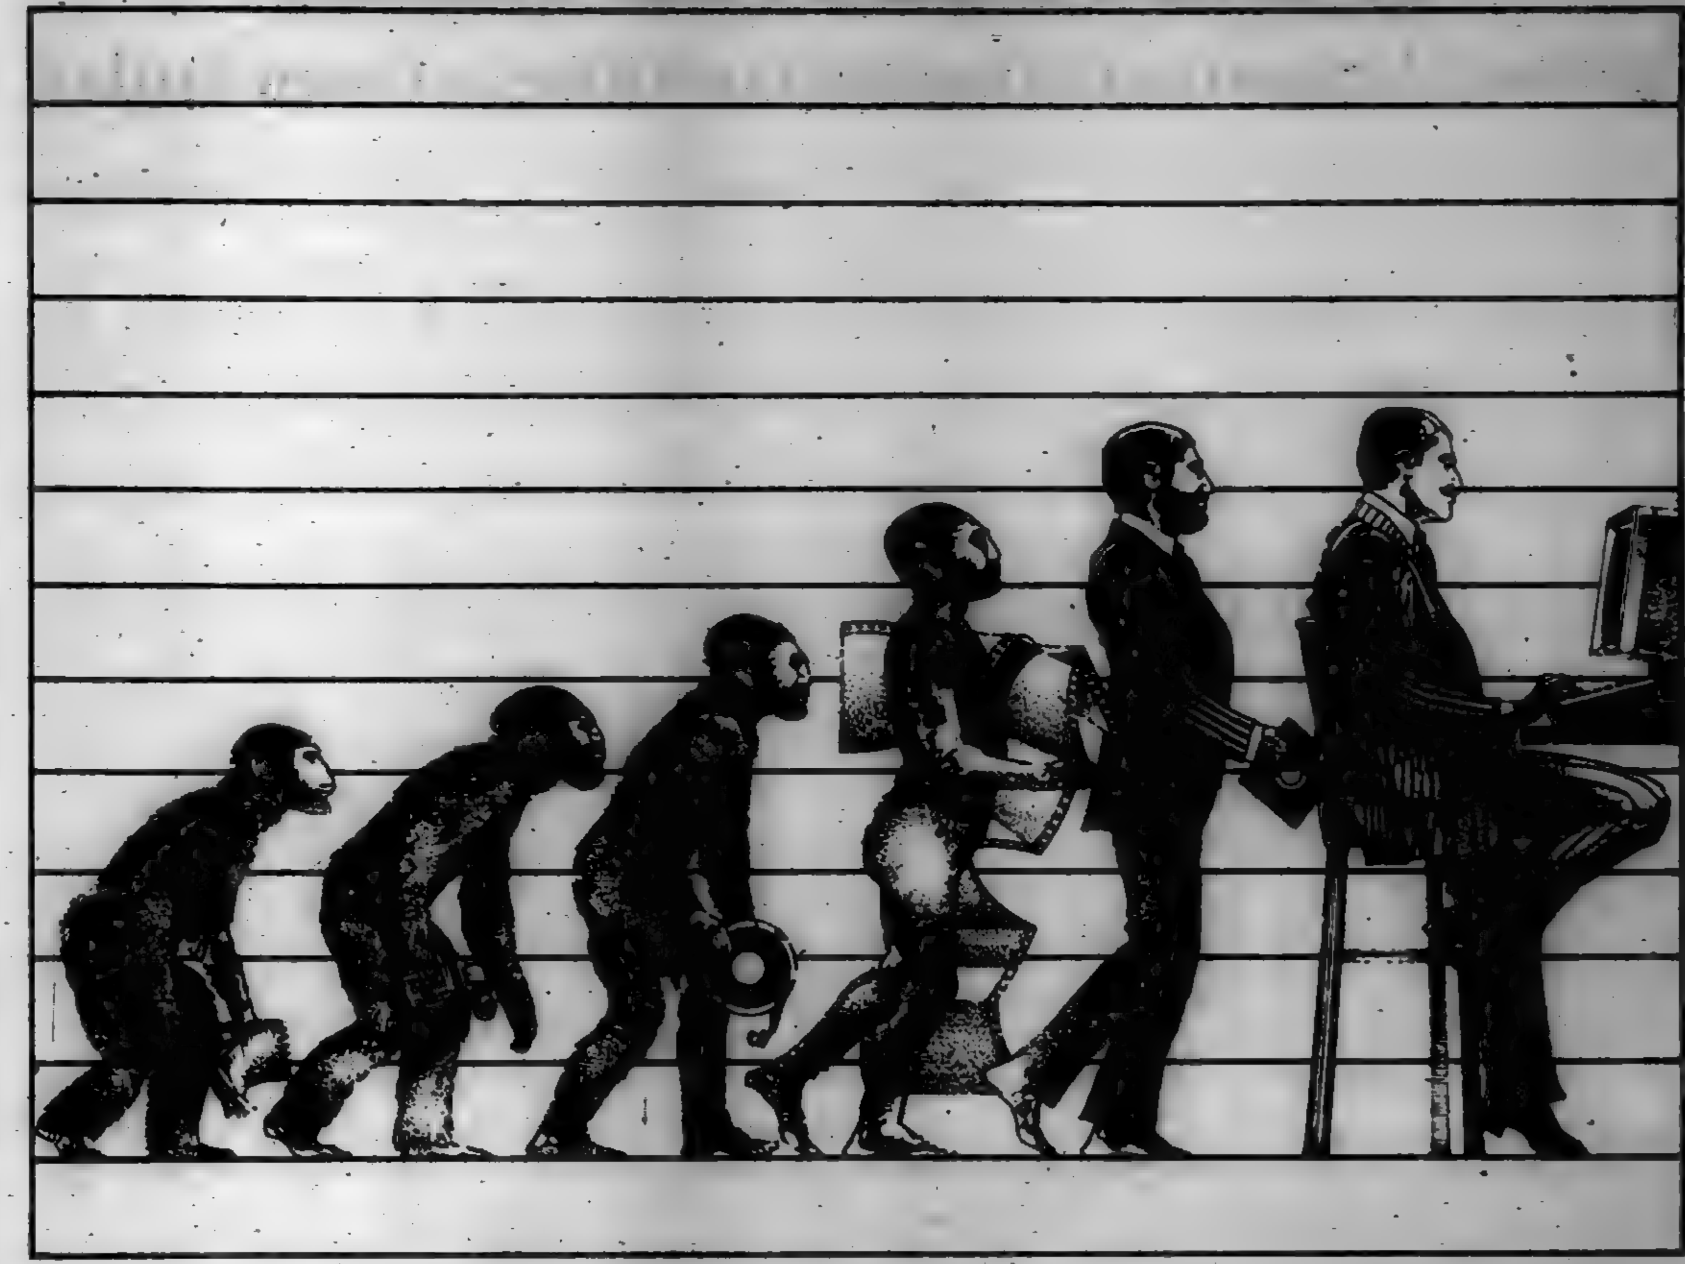
A HISTORY OF DECISION SUPPORT SOFTWARE



Comshare's System W goes beyond up-to-date.

A 1970's business modeling system with bolted-on data management capabilities is as up-to-date as a wax tablet and a stylus. And about as effective at lightening DP's workload.

Comshare has put $10 million and 18 years DSS experience into the extraordinary System W. And along with System W, we've also provided the software facilities you need to do a professional job of servicing your end-user needs.

For example:

With System W's integrated data management and File Power, you can set up data acquisition sequences including interfacing to corporate and external data in a variety of forms. File Power is the built-in response to the user's most often asked question, "How do I connect to the data?"

And with Distributed W, you have compatible micro DSS software with integrated telecommunication that sends files and models both ways asynchronously or synchronously. And System W operates on IBM mainframes with VM/CMS and MVS/TSO giving you flexibility as your operating system plans change.

Our Commander Learning Station gives end-users the latest in computer-based training on an IBM PC. Courses are available for System W as well as generic courses on how to model and use VM/CMS.

There's more. But System W is, simply, the best choice for decision support on IBM computers for excellent ease-of-use and integration. It's popular with end-users. Plus, it's easy to install, operate and interconnect with your DP architectures.

We started from scratch. System W is engineered to take full advantage of new technology. It's not an upgrade of an old product straining to keep up with the times. System W is as up-to-date as tomorrow.

For more information, call Chris Kelly at Comshare toll-free: 1-800-922-SYSW (in Michigan call: 313-994-4800). Or simply mail your business card to: Comshare, P.O. Box 1588, Ann Arbor, Michigan 48106.

Boeing Computer taking lead in office net standards

SEATTLE — Boeing Computer Services Co. is trying to do for office networks what General Motors Corp. is attempting in the factory: forge a set of specifications out of international standards that equipment suppliers can incorporate to ensure compatibility with other vendors' machines.

Although this would seem to be the goal of standards, fully specified standards do not yet exist. Even those subsets that are specified offer options that can render various implementations incompatible.

It was this fact that encouraged GM to create the Manufacturers Automation Protocol (MAP), a set of specifications that suppliers of factory automation equipment must conform to if they want to sell to GM. Other manufacturers can specify MAP compatibility to ensure that the systems they procure can communicate.

Boeing Computer wants to do the same thing for local networks in the office through the development of its Technical Office Protocol (TOP), according to Sheldon Blauman, Boeing Computer's manager of network architecture planning.

Boeing Computer and GM have been working together on these specifications since their joint demonstration at last year's National Computer Conference (see story below). The companies have formed a joint steering committee and will cosponsor a similar demonstration in November at the Society of Manufacturing Engineer's Autofact factory automation show in Detroit.

Like MAP, TOP incorporates, where possible, the ratified portions of the International Standards Organization's seven-layer Open Systems Interconnect (OSI) network reference model.

TOP and MAP are similar in their conformance to the fourth, or transport, layer of the OSI model. This layer is used to create virtual circuits between devices and ensures that data is delivered in order and uncorrupted. The specifications differ, however, above and below this common mid-layer, Blauman said.

Differences below the transport

Happy returns: IRS heads off computer fiasco rerun

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — The Internal Revenue Service is taking steps to ensure that this year's computer fiascoes, which delayed the processing of tax returns for several weeks, will not happen again next year.

According to IRS Commissioner Roscoe L. Egger, the IRS plans to acquire additional computer capacity at IRS service centers, provide additional training for programmers and conduct a complete review of computer operations.

"Taken together, these efforts are the start of what will be a continuing process to make certain we avoid the problems faced by taxpayers this year," Egger said at a recent congressional hearing.

The processing delays occurred because of problems with a modernization program that replaced aging computers with newer Sperry Corp. 1100/84 multiprocessors and converted 1,600 IRS programs from assembly language to structured Cobol [CW, April 15].

Specifically, the computer problems included slow Cobol programs, bugs in applications and operations software and numerous glitches in 48 heavily used tape drives, according to Thomas Laycock, assistant IRS commissioner for computer services.

The result of the processing problems was a multitude of reports about angry taxpayers and legislators and demoralized IRS workers. Also, the IRS had to pay 13% interest on late refunds.

IRS caught up to 1984 processing rate

At the latest congressional hearing on the episode, held June 21, Egger reported that the IRS had caught up to its 1984 pace of processing tax returns. "This achievement has been reached only through the effort and dedication of literally thousands of IRS employees who have worked nights, weekends and holidays to reduce and finally eliminate the backlog we faced early this year," he testified.

Egger said the most important lesson the IRS learned from the experience is that "despite careful planning and scale-model testing, you cannot know how a high-volume data processing system will work until you actually place the high volume on the system."

IRS officials stressed that the antiquated IRS hardware — 10 to 16 years old — had to be replaced. "We expected problems from the conversion, and we experienced somewhat more problems than we anticipated," Egger said. "But, there simply was no alternative to the replacement of the aging equipment," he said.

Egger apologized to U.S. taxpayers for the frustration they experienced and added, "Frankly, this year has been frustrating for us as well."

One legacy of the 1985 tax season may be skepticism about IRS computer capabilities, at a time when the IRS supports greater reliance on computers for tax processing. At a recent hearing on the Reagan administration's tax reform proposal, one legislator questioned whether the IRS could handle the proposed return-free tax system, in which the IRS would use its computers to calculate income taxes for more than half the nation's taxpayers.

"I am concerned that if we add additional burdens [to the IRS computers] we are going to blow a fuse somewhere," commented Rep. Richard T. Schulze (R-Pa.).

Egger explained that the return-free system would require a big investment in new equipment, including document scanners, to compute income taxes based on data supplied by employers and other parties.

TOP

from page 10

layer include the type of local network specified.

The first document outlining TOP — to be followed by a second Boeing Computer document giving actual TOP specifications — will show the intended use of IEEE 802.3 Ethernet-type local networks, as well as 802.4 broadband token-passing bus networks, probably used in a backbone capacity, Blauman said. MAP uses only the latter type.

Other differences

Above the transport layer, the network architectures differ in the applications supported, reflecting the different needs of factory and office networks.

Boeing Computer, for example, supports the OSI file transfer protocol, which is still under development.

While GM is also said to support that protocol, it has developed another protocol that is optimized for process control environments — streamlined to provide the needed speed — which the company is pushing to get standardized.

Case facilitates development

Applications development in either environment will be facilitated with the Common Application Service Element (Case), an OSI tool. Blauman said Case is a set of common subroutines that can be incorporated into an application to give it the proper hooks into a network architecture.

After TOP basics are aired and understood, Blauman said, Boeing Computer will address controversial areas where problems need further defining.

The first TOP document will, for example, talk about the CCITT's X.400 messaging standard. That recommendation, according to Blauman, needs to be upgraded to incorporate better management.

Other needs that must be addressed by standards, he added, include graphics, revisable text, data base management and operating systems for certain applications.

TOP's clout

The clout behind TOP is Boeing Computer's purchasing power. The company has, by rough count, 25 to 30 IBM processors running the size gamut from 4300s to 3084s.

Other machines include Control Data Corp. and Cray Research, Inc. processors and a slew of minicomputers.

To date, the company has used this clout to encourage equipment suppliers to provide it with machines that are compatible with IBM's Systems Network Architecture (SNA). SNA, Blauman said, is a fact of life.

In the future, Boeing Computer will require office systems to be compatible with TOP and will require suppliers of factory devices to conform to MAP.

OSI protocols

MAP and TOP will eventually be interconnected with internet protocols specified within OSI, a capability that will be demonstrated for the first time at the Autofact show.

Both specifications come under a grand strategic plan called the Boeing Network Architecture (BNA). Started in 1979, BNA is based on SNA and charts all of the company's communications efforts, was started in 1979.

Aside from the office and factory automation, part of the goal of BNA is to provide common data access that will require all of the company's data base management systems to talk together, according to Martin Ritchie, Boeing Computer's manager of network applications development.

Boeing Computer is one and a half years into this five-year project.

Another BNA goal is to provide for distributed applications where an application can, through the network, find the resources it needs to complete a task, Ritchie said.

Within BNA, TOP will point to the segments of standards Boeing will use in office communications, Blauman said.

SERIES/1 EDUCATION
EDX AND CF

For the benefit of those users who are unable to attend the standard Series/1 courses provided by IBM, SSCP is now offering a complete curriculum of Event Driven Executive (EDX) and Communications Facility (CF) education. The classes are conducted at our education center, located in the San Francisco Bay Area. For the convenience of the larger user, we also provide onsite education at the customer's location.

SSCP offers:

- Curriculum prepared by former IBM Series/1 education specialist
- Small class size for individualized attention
- Courses ranging from basic operator training through advanced programming and systems internals workshops
- Hands-on labs designed to help your Series/1 staff reach a high level of EDX and CF expertise quickly
- Classes conducted at SSCP Education Center or at customer location
- Excellent availability
- Reasonable prices

Cincom announcements stretch applications software

By John Gallant
CW Staff

CHICAGO — Cincom Systems, Inc. today is expected to unveil a major release of its manufacturing system, three additional packages for its manufacturing and financial software series plus other enhancements to packages in its Business Control System series.

Cincom is slated to announce the new and enhanced applications at a news conference during the 1985 National Computer Conference (NCC) here.

The Cincinnati-based vendor has built a reputation on the strength of its systems software offerings, but the announcements will continue the company's expansion of its applications software line. The product launchings will include the following:

- Release 5 of Control:Manufacturing, Cincom's closed-loop manufacturing control system.
- Cost Management and Lot/Serial Number Traceability modules for Control:Manufacturing.
- An enhanced version of the Purchasing module of Control:Manufacturing.
- An Accounts Payable module for Control:Financial, Cincom's financial information system.
- An enhanced version of the Accounts Receivable module of Control:Financial.

According to a Cincom spokeswoman, Release 5 of Control:Manufacturing, which is available for IBM mainframes and Digital Equipment Corp. VAX processors, includes enhancements that make it a foundation for the added Cost Management, Lot/Serial Number Traceability and Accounts Payable modules. The system is integrated with Cincom's data base management system, fourth-generation language and decision support products.

In addition, Release 5 allows displays and updates developed with Cincom's Mantis applications development system to be added to user menus and accessed through transactions or programmed function key activity. The capability allows Mantis to be used to customize displays and updates or to add others.

The spokeswoman said the text management facilities incorporated in the system's Purchasing module have been repackaged as part of the basic system control component. The enhancement allows users to maintain internal and external related text and associate text data with any key or record within the data base.

The Shop Floor Control component of Control:Manufacturing has been enhanced to support tasks including production scheduling based upon an operation-level yield/scrap factor, definition and reporting of rework operations, definition and reporting against secondary resources and optional percentage-complete reporting. Control:Manufacturing costs between $100,000 and $400,000.

The Cost Management module of Control:Manufacturing is integrated with related Control:Financial modules and is made up of three components that provide cost control by tracking, accumulating and reporting standard and actual costs and detailed variances. The components include Cost Roll-Up and Audit Process, Inventory Accounting and Production Accounting. The module costs between $25,000 and $65,000.

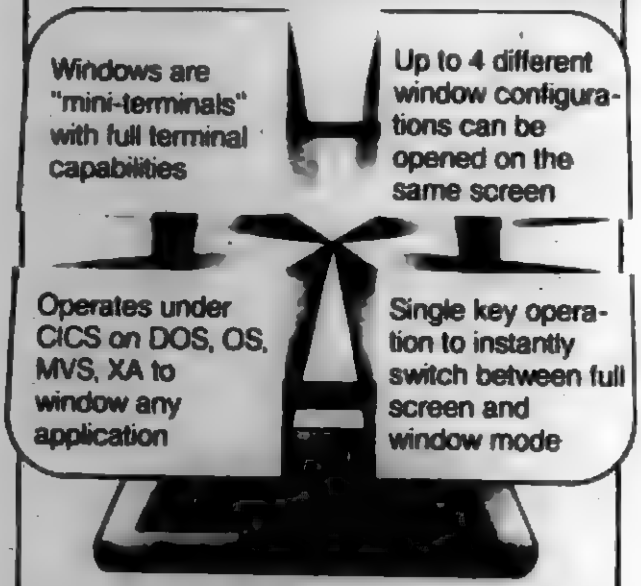
According to the spokeswoman, the Lot/Serial Number Traceability module is designed to aid users in meeting material and procedures record-keeping requirements. It will be available in October and will cost between $12,500 and $30,000.

The added Accounts Payable module for Cincom's Control:Financial system reportedly gives users the ability to process payments quickly and accurately with reduced clerical effort. It costs between $30,000 and $80,000.

Enhancements to Control:Manufacturing's Purchasing module are said to improve support for blanket purchase orders and requisition approval. It costs between $25,000 and $65,000. The enhanced Accounts Receivable module of Control:Financial now provides multiple organization support, real-time credit management, flexible cash application, customer grouping and cash forecasting and aging capabilities. It costs between $30,000 and $80,000.

Cincom Systems can be reached through P.O. Box 11189, 2300 Montana Ave., Cincinnati, Ohio 45211.

WINDOWS ON YOUR MAINFRAME TERMINAL
CICS-WINDOWS



Windows are "mini-terminals" with full terminal capabilities
Up to 4 different window configurations can be opened on the same screen
Operates under CICS on DOS, OS, MVS, XA to window any application
Single key operation to instantly switch between full screen and window mode

- ***Window facilities on every 327X terminal without any changes to your hardware or software***
- *Work with 2, 3, even 4 transactions simultaneously without losing valuable time switching back and forth between applications*
- *Increase productivity by having needed information instantly available on the same screen, including: other applications, menus, help screens, prior transactions, editors, notepads, etc.*

FCC denies building occupants right to access spare cabling

WASHINGTON, D.C. — The Federal Communications Commission said last week that local telephone companies are not required to let building occupants use spare wire pairs found in many buildings.

The International Communications Association (ICA), which represents large users of telecommunications systems, requested that the FCC grant users the right to use spare cable pairs, as well as the right to see telephone company wiring plans. Wire installed before the FCC deregulated customer premises equipment two years ago is owned by local telephone companies.

The FCC said it will not require a telephone company to make spare cables available in a building, declaring that the issue was similar to a previous attempt by users who wanted access to conduit space.

In an earlier ruling, the FCC refused to require AT&T and the regional holding companies to make conduit space available to users, saying that it would be impossible to write a tariff that avoided discrimination if there was not enough space in the conduit.

However, the FCC last week said users of large telecommunications systems who are in sole possession of buildings have the right to obtain from local telephone companies the complete wiring plans that serve telephone, voice and data equipment.

The ICA request refers to the large amount of existing wiring that is currently under an FCC plan to remove it from the rate base by accelerated depreciation. All new wiring is currently paid for by the telephone company and recovered from users through installation fees.

An FCC spokeswoman pointed out that telephone companies could provide the information on spare cable pairs in a building by their own volition. The spokeswoman said the FCC was concerned that use of the wire would harm other building services.

The FCC said it agreed with ICA that the telephone company must establish a clear distinction point between a customer's equipment and wiring and the telephone network when a single customer is the sole possessor of a building containing complex intrasystem wiring.

The FCC found that giving users rights to access existing wiring is not useful unless telephone company records and plans are made available. The telephone companies opposed the effort by ICA to be given access to wiring plans, noting additional record keeping and privacy concerns would be raised.

Sytek to introduce PC Network-compatible interface

MOUNTAIN VIEW, Calif. — Sytek, Inc. today will announce a local-area network headend that is compatible with IBM's PC Network and is designed to support very large personal computer nets. The product handles up to 1,000 nodes at distances of up to three miles in any direction, Sytek said.

Designed as an enhanced functional replacement for the PC Network's Translator Unit, the Sytek 6050 Network Translator is the first in the Sytek 6000 family of PC Network-compatible products for large microcomputer networks, according to Executive Vice-President Ken Biba. The family reportedly will extend Sytek's Localnet architecture, allowing broadband micro nets to coexist on a Sytek cabling system with Localnet 20 terminal-to-host networks.

Localnet 20 is Sytek's main product, and the company has installed more than 800 of them, some of which support more than 3,000 nodes. Co-developer of the IBM PC Network, Sytek also supplies IBM with network interface cards for that network.

Future Sytek 6000 family products will "enhance the PC Network in other ways," Biba said. Among these, he listed "interfacing to other networks, common shared services, common file systems and perhaps distributed applications."

Biba noted that the IBM net was designed for customer installation and is limited to 72 nodes and 1,000 feet. Sytek will offer a turnkey service for large microcomputer networks based on the 6000 family, handling all aspects of network design and installation, the company said.

The IBM/Sytek broadband personal computer net is a carrier-sense multiple access with collision detection system operating at 2M bit/sec. Net performance should not degrade unacceptably on a 1,000-node net seeing typical usage, Biba said. "In most applications, we find, the load on these nets is very small," he added.

The Sytek 6050 reportedly can coexist on a cable system that supports other services such as voice, video and data. The product offers adjustable gain, permitting micro networks to operate on non-Sytek broadband systems, according to the company.

The 6050 is said to work with single- and dual-cable systems and to connect to a branching-tree topology so that a single node can fail without affecting the entire network. The product is said to support industry-standard IEEE channel spacing.

One 6050 headend is required per network. It costs $4,100 and is scheduled for shipment in September.

More information is available from Sytek at 1225 Charleston Road, Mountain View, Calif. 94039.

Firm drops IBM charge

ENGLEWOOD CLIFFS, N.J. — Syncsort, Inc. announced last week it will not pursue the deceptive practices complaint against IBM that it lodged earlier this year [CW, April 22] with the Federal Trade Commission (FTC). Syncsort said IBM's June release of an updated version of DFSort [CW, July 1] resolved performance claims that Syncsort had alleged were deceptive.

IBM disputed Syncsort's interpretation of the June release.

Syncsort President Aso Tavitian said the company did not formally withdraw its complaint, but informed the FTC that "the benefits of further action, in [Syncsort's] judgment, will be relatively marginal."

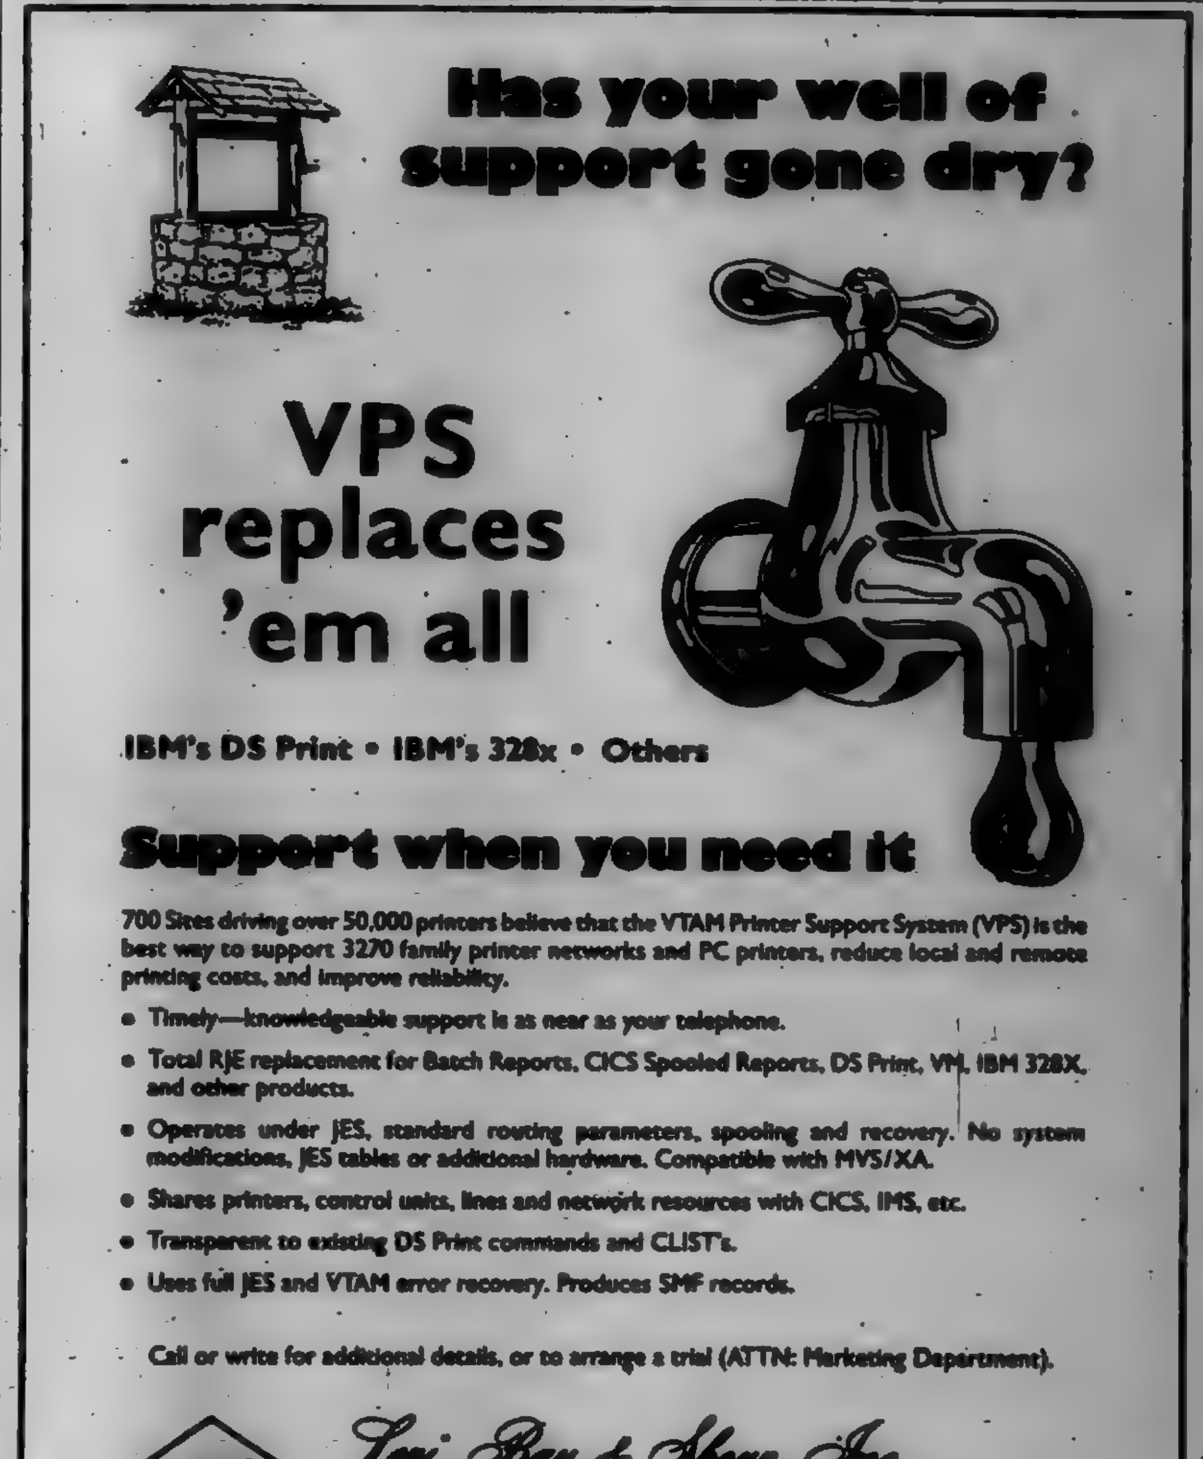
The company developed and markets a sort utility for use on IBM mainframes built on the IBM 370 architecture and claims that 70% of users running IBM's MVS and MVS/XA operating systems have installed its product in preference to IBM's DFSort Release 6..

In February, IBM announced DFSort Release 7 and, Syncsort charged, attributed "significant performance improvements over Release 6" to microcoded 370/XA instructions called Sorting Assists. Syncsort charged in its April 16 complaint to the FTC that the performance upgrades were due to the allocation of up to eight times the additional memory space to operate Release 7 as had been used for Release 6.

In mid-June, IBM released a large number of product announcements, including DFSort Release 7.1, a maintenance version of Release 7. In the latest announcement, IBM said Release 7 performance improvement "is realized through the automatic acquisition of additional virtual storage." Regarding microcoded instructions, IBM said in June, "Release 7 offers further potential performance benefits . . . through the use of the 370/XA sorting instructions."

Syncsort's Tavitian called the June announcement "a thinly veiled retraction" of the February claims.

An IBM spokesman said the June announcement unveiled additional performance improvements and expanded function and was not a response to Syncsort's charges.



Has your well of support gone dry?

VPS replaces 'em all

IBM's DS Print • IBM's 328x • Others

Support when you need it

700 Sites driving over 50,000 printers believe that the VTAM Printer Support System (VPS) is the best way to support 3270 family printer networks and PC printers, reduce local and remote printing costs, and improve reliability.

- Timely—knowledgeable support is as near as your telephone.
- Total RJE replacement for Batch Reports, CICS Spooled Reports, DS Print, VM, IBM 328X, and other products.
- Operates under JES, standard routing parameters, spooling and recovery. No system modifications, JES tables or additional hardware. Compatible with MVS/XA.
- Shares printers, control units, lines and network resources with CICS, IMS, etc.
- Transparent to existing DS Print commands and CLIST's.
- Uses full JES and VTAM error recovery. Produces SMF records.

Call or write for additional details, or to arrange a trial (ATTN: Marketing Department).

Who will emerge alive from the AT-compatible jungle?

Analysts predict the survivors

By Edward Warner
CW Staff

First there was the IBM Personal Computer AT with its high-speed microprocessor, optional 20M-byte hard disk and a lock built into its case. Then came the Kaypro Corp. 286I, introduced in March, and later that month, the Texas Instruments, Inc. Business-Pro. Soon after, like the jungle at dawn, the personal computer market was alive with the cries of at least a dozen AT-compatibles, all screeching "buy me!"

But the jungle is ruled by the laws of Darwin, and if IBM is expected to sell 175,000 ATs in 1985, a figure which is three times more than all the AT-compatible vendors combined, who else will survive?

Analyst Norm Dewitt, director of the Personal Computer Industry Service for Dataquest, Inc., a San Jose, Calif.-based research firm, picked three products to make it — two offerings from Compaq Computer Corp., both reportedly faster than the AT itself, and the highly expandable Business-Pro, which he said "will give end users quite a bit of confidence that [their machines] can grow."

The majority of those prowling the AT-compatible jungle were already manufacturers of IBM Personal Computer compatibles; they were forced into the AT market when IBM slashed prices on its low-end machines.

Now, the very survival of some compatible vendors is tied to their AT clones, according to analyst George Colony, president of Forrester Research, Inc. in Cambridge, Mass.

Kaypro, in particular, "bet the company on [the 286I]," Colony said.

As in the Personal Computer-compatible market, the AT work-alikes will have to offer IBM compatibility and added value, in that order, according to Colony.

Compatibility is important, he said, because IBM is shifting gears to emphasize Intel Corp. 80286-based Personal Computers, the next of which will be the PC2.

Next year, 55% of all IBM Personal Computers sold, he predicted, will incorporate the 80286, and the clone makers had better be compatible or they will not survive.

For reasons of compatibility, as well as speed, Colony, Dewitt and other observers have picked the two Compaq 80286-based machines, the Deskpro 286 and the Portable 286, as likely winners. Colony noted, however, that the TI Business-Pro will likely fail for its lack of compatibility.

As for added value, there is no question that the compatible vendors think they have it. Three vendors, Compaq, Corona Data Systems, Inc. and Televideo Systems, Inc., boast machines that can run at both the AT-standard 6 MHz speed and at 8 MHz, which reportedly offers up to 30% greater processing speed.

> "
>
> *Now, the very survival of some compatible vendors is tied to their AT clones.*

Another vendor, ITT, offers two different speeds, that of the AT and the 4.77 MHz of the Personal Computer line. The latter feature reportedly would give the ITT Xtra XT full compatibility with the Personal Computer's software base, something even the AT cannot claim.

For expandability, the Business-Pro holds the edge with a whopping 14 expansion slots in its chassis. On pricing, it is Kaypro's 286I, retailing for roughly $1,000 less than the AT.

Ultimately, though, the Big Blue cat that stalks this market jungle may have the last growl — IBM could repeat its price cutting, this time at the high end.

That is, in fact, what some AT dealers say they have done in the face of growing stocks of ATs. Computertown, of Salem, N.H., for example, now offers a hard disk-equipped AT for $900 less than the suggested retail price.

The clone makers' other concern, though a bit more farfetched, is that IBM will kill the AT in order to avoid cannibalizing sales of other Personal Computers.

Adherents of this scenario include Corona Data Systems President Robert Harp, who is reported to have said in an interview that the AT is destined to be "wiped out" by the PC2, a machine that other analysts in addition to Colony expect to be based on the Intel 80286 chip.

Replacing the AT

Another believer is analyst Amy Wohl, president of Wohl Associates, Bala-Cynwyd, Pa., who has said she believes "IBM may bring out a product that replaces [the AT] before IBM's friends [the clone makers] are able to take hold in the market."

Colony disagreed. IBM, he said, is likely to introduce a high-end 80286-based Personal Computer, one more powerful than the AT. But, he added, the AT itself is no flash in the pan.

Meanwhile, back in the jungle, the makers of AT compatibles are waiting for a chance to pounce on the share of the AT market that IBM fails to gobble up. But, they wait uneasily.

The Solution.

Dial-Up 3270

LineMaster An intelligent device for dial-in access to your mainframe 3270 Bisync line.
LineMaster is a communications watchdog which keeps a line in service until a user dials in.

- For any remote 3271/4/6 line—up to 19.2K baud
- Compatible with any 3270 BiSync emulator including microcomputers.
- Connects between modem and mainframe
- Installs in minutes.

Intel's 80286 chip: A cut above

While it may run most of the software written for its older brother, the Intel Corp. 80286 microprocessor is a world apart from the Intel 8088 microprocessor that powered the IBM Personal Computer to market dominance.

For one thing, the 80286, upon which the Personal Computer AT and compatibles are based, contains over 100,000 transistors, the basic building blocks of a microprocessor. The Personal Computer's 8088 contains 29,000 transistors.

The 80286 also features a faster timing speed, a 16-bit data bus — the Personal Computer has an 8-bit bus — and handles data by pipelining it. In pipelining, the 80286 handles data retrieval, decoding and execution in separate chambers arrayed sequentially.

As the next instruction is retrieved from memory, the instruction previously retrieved is decoded in the pipeline's midsection, and the instruction just decoded is executed at the pipeline's end.

All together, these features spell speed; the AT reportedly is two to three times faster than the Personal Computer.

Beyond speed, the 80286 chip includes such other features as the ability to operate as a true multiuser processor and the ability to address up to 16M bytes of memory.

It can also partition some of that additional memory into a virtual disk, from which data can be retrieved almost instantly.

The 80286 is not without its problems, however.

Digital Research, Inc. has said that it found an incompatibility between its forthcoming Concurrent DOS-286, an operating system for the 80286, and the chip on which it will run.

According to a Digital Research spokesman, Intel has acknowledged the problem and will begin deliveries of a corrected version of the chip, perhaps as early as this year.

Intel is otherwise understandably proud of the microprocessor. In the company's annual report, the 80286 is referred to as "a stunning technological and financial success."

— **Edward Warner**

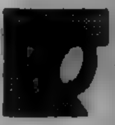
AT from page 1

have found their prayers for more storage answered by the enhanced version of the AT, which includes a 20M-byte disk. Of the roughly 200 Personal Computer ATs that his department has placed with users, 95% of them have been enhanced ATs.

Graffeo said Home Insurance is using Personal Computer ATs, rather than any of the AT compatibles announced in recent months, simply because IBM was the first to offer such a machine. The AT debuted in August 1984, and it was not until March 1985 that the first of the compatibles, the Kaypro Corp. 286i, arrived. Since then, at least a dozen others have premiered.

The compatible makers know from the history of the IBM Personal Computer that being a simple look-alike, without added value, will get them nowhere. Compaq Computer Corp., the most successful Personal Computer-compatible maker, is seen by analysts to have ensured the success of two AT compatibles by offering greater speed than the AT and optional built-in tape backup. Other AT compatibles, such as Texas Instruments, Inc.'s Business-Pro, have emphasized expandability, and still others, such as the 286i, push their prices (see story page 14).

The stark reality facing the clone makers, however, is that corporate users who once braved reports of faulty AT hard disks and waits of up to several months still want to get their hands on a Personal Computer AT [CW, Dec. 17]. According to a survey by Newton-Evans Research Co., an Ellicott City, Md., research firm specializing in the computer industry, 85 out of 91 businesses using personal computers planned to buy additional micros this year — from IBM — and four out of five wanted at least one AT.



Although most ATs are in use as fast, high-storage stand-alones, some pioneers are taking the machine into new territory, a region where the distinction between micro and mini blurs.

For example, New York Commodity, a small New York import/export firm, acquired its sole AT specifically for multiuser operation, according to Marcia Kaufman, the secretary who oversees the computer's use. The machine will be used to support two additional users on terminals, the maximum that PC Xenix allows on the AT. Kaufman said the company had hoped to have the machine running six months ago but that projection was stymied by a lack of off-the-shelf Xenix software. A part-time programmer has been hired to develop software specifically for the firm.

The AT's 20M-byte disk also makes the machine attractive for another use often served by a mini — acting as file server to a local-area network. The headquarters of both Merrill Lynch in New York and Manufacturers Life Insurance in Toronto are testing ATs as part of their shakedown tests of an IBM PC Network-based local-area network. The Manufacturers Life local-area network supports two ATs, four Personal Computer XTs, a Hewlett-Packard Co. Laserprinter and an HP plotter. The Merrill Lynch local-area network uses the AT as its central server, accompanied by a 10M-byte Bernoulli Box cartridge disk drive system from Iomega Corp.

One way in which the AT and its brethren have yet to rub elbows with minis, though, is in internal memory. Although the chip can address up to 16M bytes of memory, IBM's PC-DOS limits the AT to addressing directly no more than 640K bytes. PC Xenix can support more than 1M byte of RAM, but users have not rushed to use it.

Those who develop software for PC-DOS, meanwhile, are awaiting the release of PC-DOS 4, reportedly planned for next year. Expected somewhat earlier is Digital Research, Inc.'s Concurrent DOS 286. Both operating systems reportedly will support multitasking and multiuser capability for PC-DOS applications — as well as a breakthrough of the 640K-byte barrier. When that barrier falls, developers, such as Richard Rabins, president of Alpha Software Corp., said they expect to see 80286-based machines with hard disks running futuristic software packages using artificial intelligence technology.

Until then, much of the power inherent in the AT and its compatibles will remain untapped.

CONTROL.

AT compatibility hinges on hardware

Compatibility with the IBM Personal Computer AT is not just a question of the read-only memory (ROM) Basic I/O System (Bios), according to a spokesman for a supplier of compatible systems software.

In addition to Bios, which acts as an assistant to the operating system, a compatible maker needs to copy the basic layout of the Personal Computer AT's internal hardware, including the motherboard, according to Richard Levandov, marketing vice-president at Phoenix Software Associates Ltd. Systems software compatibility can be obtained through porting Microsoft Corp.'s MS-DOS operating system and other systems software, he continued.

A Norwood, Mass., firm, Phoenix Software has made a business of what Levandov called "emulating the IBM [Personal Computer] environment," and 15 of the AT-compatible makers have licensed the Phoenix ROM Bios alone.

Systems software modifications are essential, Levandov explained, because compatible makers receive only an OEM adaptation kit without the machine-dependent portions of the operating system when they buy an MS-DOS license from Microsoft.

For hardware compatibility, Phoenix licenses designs for a motherboard and advises clients on how to complete a basic hardware layout — which is harder than it sounds.

Levandov likes to tell of how the president of a personal computer manufacturer called recently to say that his company had just run off 500 AT-type motherboards and now wanted to pick up Bios to cinch their compatibility.

"I said, by the way, did you use the [National Semiconducter Corp.] 80250 communications controller?" Levandov recalled. "That gets them every time. He said, 'Oh, no, we used the [Signetics Corp.] 8251.' I said, 'That means that [Lotus Development Corp.'s] Symphony's not going to run, [Microstuf, Inc.'s] Crosstalk's not going to run, [Hayes Computer Products, Inc.'s] Micromodem software's not going to run.' "

The best-known issue of compatibility, however, remains Bios. IBM defends Bios well, as evidenced by the successful copyright infringement suits it brought against Eagle Computer, Inc. and Corona Data Systems, Inc., both makers of Personal Computer compatibles.

As Levandov explained it, Phoenix had a head start on development of its AT ROM Bios because it was able to use a lot of the code from the Bios it had developed for the Personal Computer.

As with the development of its Personal Computer-compatible Bios, Levandov said, the AT-type Bios was written by four programmers who had not seen IBM's published Bios specifications. The programmers were given a list of what Phoenix Bios should do, and when they finished, their work was compared with the IBM specifications to make sure it was sufficiently different, he said.

In the end, the pursuit of compatibility turns upon itself: The AT is not totally compatible with the Personal Computer line. The microprocessors used in the Personal Computer and in the AT operate at differing clock speeds and their architectures use 8-bit and 16-bit data buses, respectively. Only two of the card slots in the AT's expansion chassis support the 8-bit bus of the Personal Computer, thus limiting the number of Personal Computer cards that can be inserted into the AT.

The greater compatibility question, though, is one of software. Early in the AT's life, there were several popular programs, including Ashton-Tate's Framework, that did not run on the machine. Since then, most software developers have issued AT-compatible versions of their programs as necessary.

Other programs, such as Datasheet from Interactive Data Corp. of Waltham, Mass., lose some functionality when running on the AT. Datasheet user George Mellman, a Merrill Lynch Pierce Fenner & Smith, Inc. executive in Boston, said he relied on Datasheet for analyzing stocks on the Personal Computer. He said he found that on the AT the software will not transfer files to his Lotus 1-2-3 spreadsheet. Datasheet, he said, is "really useless on the AT."

— Edward Warner

Software developers steer clear of IBM AT

Although the IBM Personal Computer AT was greeted by the cheers of corporate users craving speed for their spreadsheets, the machine holds other potential, particularly the ability to run programs in up to 16M bytes of random-access memory (RAM).

That potential remains largely untapped, and the situation may not change anytime soon because many important software firms have held off on developing packages specifically for the AT.

According to developers, the lion's share of the problem stems from the AT's operating system, IBM's PC-DOS 3.1, which will not work in the AT's protected address mode, the machine's gateway to what can become up to 16M bytes of RAM.

PC-DOS is limited to addressing directly no more than 640K bytes of RAM. In addition, according to consultant Alan Finger, president of Cytek, Inc. of Andover, Mass., PC-DOS "takes advantage of nothing in the [Intel Corp. 80286]" chip on which the AT is based, including the ability to support multitasking and multiuser operation at the chip level.

Developers could still write PC-DOS applications that use the protected address mode, but the applications would run so sluggishly on the AT that they would be useless, said Mike Loftus, systems software marketing manager for Digital Research, Inc. The sluggishness, he elaborated, would arise because "the [PC-DOS] calls would have to be handled by an exception handler" that would spend considerable time routing calls to the proper location.

Developers who write applications that run slowly on the AT but address its larger memory would encounter an additional problem. The AT, in their view, is not selling well enough to warrant going out on such a limb.

IBM, as always, is releasing no sales figures, but analyst George Colony, president of Forrester Research, Inc., estimates that between 200,000 and 230,000 ATs will be sold this year. Colony, however, predicts that all Personal Computers to come out of IBM in the next year will use the Intel chip.

Until that actually happens, Richard Rabins, president of Alpha Software Corp., said he believes it "could be dangerous" for developers to write programs that only run on the AT. At Bellevue, Wash.-based Microrim, Inc., President Wayne Erickson agreed, saying, "We really try to avoid things that, from a hardware standpoint, limit our market."

Neither Microrim, the developer of the Rbase 5000 data base management package, nor Alpha Software Corp., publisher of the Electric Desk integrated package, nor Forefront Corp., author of Ashton-Tate's Framework integrated package, are doing development work for the AT-class machines, the companies said.

That could all change, however, with the release of a new version of PC-DOS, expected to be called Version 4, or with the arrival of Digital Research, Inc.'s (DRI) forthcoming Concurrent DOS-286 operating system. Both operating systems reportedly will debut in the next 12 months and are expected to support the additional addressable memory on the AT in addition to such functions as multitasking, according to DRI's Loftus.

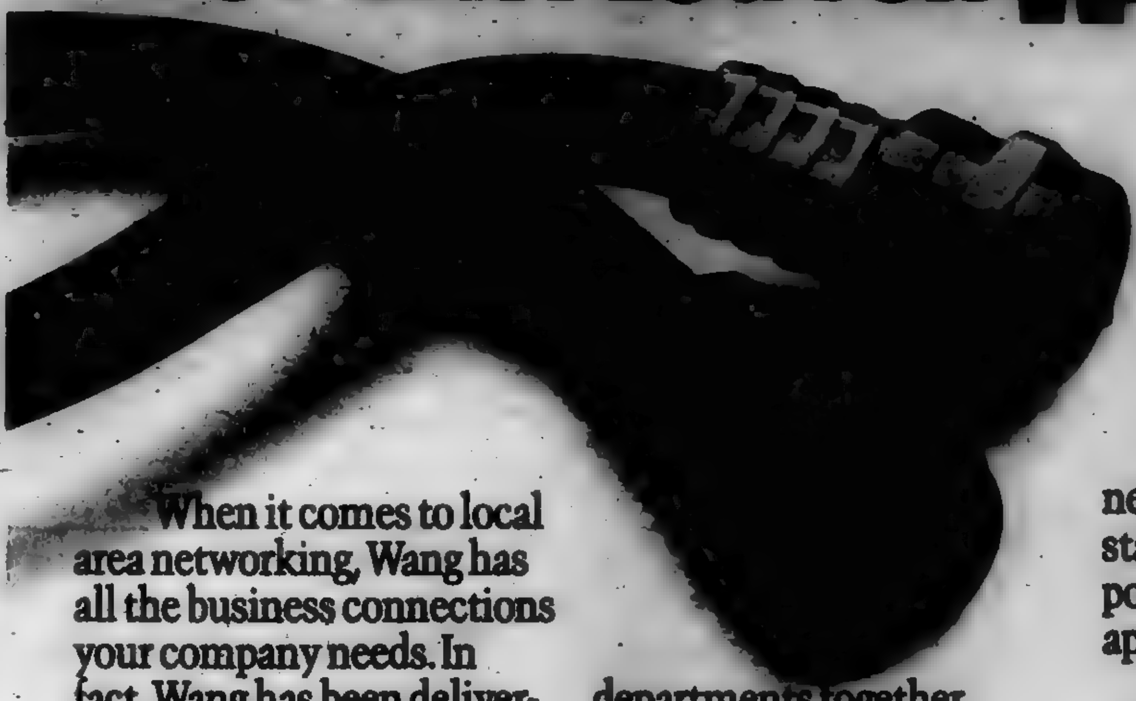
Concurrent DOS-286, he said, will let users run PC-DOS applications in the AT's protected mode. Concurrent DOS-286 will ship to OEMs, such as AT-compatible makers and software developers, in the fourth quarter. Microsoft, meanwhile, declined comment on any products it might have under development.

Were the 640K-barrier to fall and high-memory, high-speed applications to become possible, developers might begin using such memory-hungry technologies as artificial intelligence, according to Robert Firmin, president of Javelin Software Corp. Such AI-based software, the Cambridge, Mass., software developer said, could include expert systems and a new generation of easy-to-use software that adjusts to the skill level of the user.

For an idea of what that future would be like, consultant Finger suggested that one "picture [Lotus Development Corp.'s] 1-2-3 with 1G byte of address space [in virtual memory]."

— Edward Warner

MORE THAN 50,000 USERS HAVE PUT IN A PLUG FOR WANGNET.



When it comes to local area networking, Wang has all the business connections your company needs. In fact, Wang has been delivering their LAN system to businesses, both large and small, since 1981.

It's called WangNet. And today it's helping over 50,000 users keep pace with their ever-increasing communications needs.

WangNet ties your business together–today.

WangNet permits the concurrent exchange of text, data, graphics, electronic mail, and video at a rate of up to 10 megabits per second. And it can tie all of your organization's departments together, whether they're in one building or divided among several.

Because WangNet's dual broadband cable is installed much like electrical wiring, adding on new computer equipment is as easy as plugging in a lamp. So whatever networking needs arise, you'll be well prepared to meet them with WangNet.

The architecture is wide open.

Best of all, because WangNet is an open LAN, it allows you to tie most major office systems together. WangNet offers a transparent interconnection for over 300 switched or dedicated telecommunications channels, the IBM 3270 workstation-to-controller transport, and most video applications.

Considering all the information that's inundating today's office, there's no question that local area networking is a technology whose time has come. And with 50,000 people putting in a plug for WangNet already, the question is—isn't it time WangNet came into your business?

Get the facts.

To receive a copy of our latest WangNet brochure, call 1-800-225-9264. Or write to the Wang Business Executive Center, One Industrial Avenue, M/S 5413, Lowell, MA 01851.

WANG

We put people in front of computers.

XEROX

The next wave is coming. And no business or business person will be able to ignore it.

It's called Artificial Intelligence. It is simply a smarter way of using knowledge, by combining the power of a computer with the symbolic, intuitive reasoning of people. This means leveraged decision making that leads to higher productivity.

Team Xerox

The Xerox AI System uses our 1108 or 1132 workstations, Interlisp-D software and our unique LOOPS knowledge engineering tool, which allows for exploratory programming while minimizing the constraints encountered in conventional coding.

For example, the Xerox AI System can become an "expert system." Programmed both with data and judgement sensitivity gathered from several experts in a given field, the program can make recommendations and suggest actions with a relatively high accuracy rate.

Xerox AI Systems are working in medicine, finance, electronics, manufacturing and transportation, for a wide variety of major corporations, government agencies and universities. And it's available now.

Because Xerox has a 15-year head start in Artificial Intelligence, we've been able to reduce your initial cost to reasonable levels. And still back you with the service, training and after-sales support you expect from Xerox.

So you can put your toe in the water, without getting in over your head.

The Xerox AI System is also Ethernet compatible and an integral part of Team Xerox, a wide array of products, people and support services to meet your information needs.

GAITHERSBURG, Md. — Horror stories about security problems with computer passwords abound, from anecdotes about passwords taped to terminals to a case where a computer had the same password (test) that it had when it was uncrated years before.

But government researchers say that, despite the horror stories, passwords can provide ample security if managed and handled properly.

The National Bureau of Standards (NBS), through its Institute for Computer Science and Technology, recently completed a two-part publication that provides guidance on password systems. One part is a mandatory standard for federal agencies — the Federal Information Processing Standard 112 — which sets minimum requirements; the appendix provides guidance for additional security.

> ”
>
> ***Government researchers say that passwords can provide ample security if managed and handled properly.***

"While the effectiveness of passwords has often been questioned, primarily because they can be easily forgotten or given to another person, they can provide reasonable deterrence to unauthorized access if properly handled by [users] and if properly stored and processed in the password verification system," the NBS document said.

The NBS recommended that the computer security officer develop a comprehensive program that covers 10 components of a password system:

- Composition.
- Length.
- Lifetime.
- Source.
- Ownership.
- Distribution.
- Storage.
- Entry.
- Transmission.
- Authentication period.

The federal standard provides only a bare minimum of security, the NBS document indicated. For example, it requires the following:

- Passwords must be at least four characters long and composed from a set of at least 10 characters — such as the digits 0 through 9.
- Passwords must have the shortest practicable lifetime, with a maximum lifetime of one year.
- Any passwords included in a new system when it is delivered, transferred or installed must immediately be changed.
- Users who create or select their own passwords must be instructed to select a randomly generated password or to select one that is not related to their personal identity, history or environment.
- Personal passwords must be distributed in such a way that only the intended owner may see or obtain it.

The stringency of the requirements in each category should match the sensitivity of the computer system's data, the NBS document stressed.

The standard accommodates the use of four-digit personal identification numbers (PIN) for financial transactions, but the NBS document warned that a PIN "can be found in a few minutes" by a hacker. A better composition, the NBS said, has the letters A, B, C, D, E, F and the 10 digits. Passwords made of all letters encourage users to select names, nicknames or other common words.

In theory, the longer the password, the better. But the NBS acknowledged that longer passwords take longer to enter, have more chance of error when being entered and may be more difficult to remember.

"The length range should include a number of lengths, probably five to eight characters, and the composition should be a large set so that a high level of security can be provided easily," the NBS concluded.

The NBS warned that the security officer should not require that the password for each user be unique.

The guidelines also advised against the use of random-number generators commonly available in statistical software, because the sequence of the random numbers they generate is predictable.

When passwords are distributed to users in writing, the user should be instructed to memorize it and then destroy it or return the written password to the security officer with a signed receipt, the NBS said.

Preventing someone from seeing a password as the user types it is a difficult task, the NBS conceded. The NBS suggested several remedies, from masking the password on the screen to having the user shield the keyboard from view.

Copies of the NBS document, "Federal Information Processing Standards Publication 112, Password Usage," can be ordered from the National Technical Information Service, Springfield, Va. 22161.

We've Heard Rumors That The Guys At H-P Are Experimenting With A Way To Make Their LaserJet As Smart As Our SmartWriter.™

You can't blame them.

There's a chance their customers will think they've gotten the most intelligent, most versatile desk-top-size, non-impact printer on the market.

When, in fact, they may not have heard about ours. The remarkable QMS® SmartWriter.™

Whoops! This could lead to some very embarrassing questions, such as:

"Will your LaserJet Printer support QUME,® Diablo,® Epson,® and ANSI X3.64 escape sequences? The SmartWriter will,

"Does it have more than the two standard fonts I already know about? The SmartWriter has seven.

"Does it support a parallel interface? The SmartWriter does.

"Will it intermix fonts on a line or a page without expensive options?

"Will it reverse image or boldface fonts?

"Will your LaserJet Printer support overlays, draw lines and boxes, subscript and superscript?"

We can hear their answers now: "Uh, no." "Not really." "Not quite yet." "Sort of." "Almost. Can you wait just a few years?"

Well, you could do that.

In fact, you could wait a long, long time for the guys at H-P® to come up with something that's got as much brain power as a QMS SmartWriter.

Or you could go ahead and get a QMS SmartWriter. Right now.

Call us at (205) 633-4300. Or write us at P.O. Box 81250, Mobile, Alabama 36689. And we'll give you a lot more information. No rumors this time. Just facts.

QMS®
QUALITY MICRO SYSTEMS
WHERE IMAGINATION LEADS™

[illegible]

WE CHALLENGE ALL COMERS TO A LASER BATTLE.

DIGITAL'S NEW LN03 IS FAST AND AFFORDABLE.

Until now, laser printers fell into the category of pure science fiction for most applications. Those that could handle even a modest work load cost more than the moon and stars. And those that were affordable just couldn't keep up with a busy office.

Now there's Digital's new LN03. The most productive laser printer you can buy for less than $7000. A lot less. In fact the LN03 costs little more than half that. Yet it leaves every laser printer in its price range in the dust.

For pure speed, nothing in the price range can beat the LN03. At 8 pages per minute – or 333 cps – it can handle the volume of a busy office with ease.

It also prints true compound documents, with business graphics and text on the same page, in a single pass. And it prints on virtually any cut sheet paper, including overhead transparencies. All of which makes it ideal for almost any multi-user environment.

IT WON'T WASTE YOUR TIME.

The LN03's real edge in speed and productivity comes from its paper-handling capacity. With 250 page input and output trays, the LN03 can print thick documents – pre-collated – without reloading. Try that with any other laser printer in the class and someone will end up changing the paper 10 times or more, reverse collating every page by hand, and babysitting the entire process. Which is counter-productive to the whole idea of office automation.

BETTER QUALITY THAN LETTER QUALITY.

The LN03 also gives you advantages over daisywheel and dot matrix printers, too. Because one LN03 can do the job of the two conventional printers you're probably using now.

In fact it can do *more* than *both*. For a lot less money.

For starters, it forms characters precisely with 300 x 300 dot resolution. Characters that are not only far cleaner than your dot matrix printer, but even better than your letter quality printer. You may actually have trouble telling the difference between text that's been printed on the LN03 and text that's been professionally typeset. In fact the LN03 characters are so well formed, they're recognized by Optical Character Readers with no problem at all.

To give your documents a professional appearance, the LN03 lets you pick and choose from a virtually unlimited variety of typefaces, sizes and styles. And they've all been developed especially for the LN03 by Compugraphic Corporation, the world's recognized authority on computer-generated typefaces.

Two resident typefaces give you no fewer than 16 different sizes, styles and pitches, while optional ROM cartridges let you add just about any face or font you might consider. Including your own custom designed faces. You can even down-line load your own character set or custom-designed graphics fonts to print your logo, letterhead or forms. If you like, the LN03 can print sideways, down the length of the paper as well as across, to accommodate spreadsheets, compiler listings, graph captions or other special effects.

In short, the LN03 gives you a remarkable combination of print quality and versatility. So every piece you print makes a great impression.

FASTER AND MORE FLEXIBLE THAN DOT MATRIX.

The LN03 doesn't stop with better-than-letter-quality quality. It also gives you the advantages of dot matrix printing. And then some.

At 8 pages per minute, the LN03's speed approaches that of a line printer. The fact is, it's faster than both your dot matrix and daisywheel printer working together.

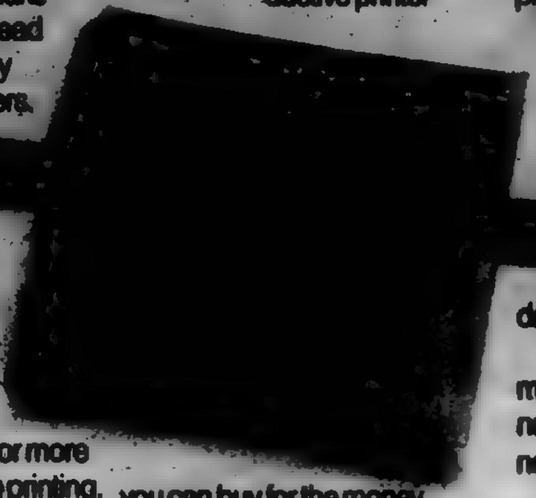
Crisp business graphics are a snap. And unlike either of your conventional printers, the LN03 can mix graphics and true letter quality on a single page. In a single pass.

Noise is a barely audible 55 dB. Far quieter than any impact printer. No louder than your copier. So the LN03 won't distract and annoy workers even in an open office.

The LN03 will even make transparencies for overhead projectors. Try that on any of your printers.

Finally, the LN03 is one of the least expensive printers you can own, with a cost-per-page of just 3.2 cents. That's a savings of 20% or more over dot matrix printing. And substantially more compared to your daisywheel printer.

So, an LN03 really makes a lot of sense. You get better economy. More flexibility. Additional capabilities. A professional look. Which makes the LN03 the most productive printer you can buy for the money.



BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

The LN03, like every Digital hardware and software product, is engineered to conform to an overall computing strategy. This means our products are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy from desktop to data center.

For more information, and the name of your nearest Terminals Representative, call 1-800-DIGITAL, extension 703. Or write Marketing Communications Manager, Terminals Business Unit, Digital Equipment Corporation, 129 Parker Street, Maynard, Massachusetts, 01754.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

from page 1

buy, as opposed to rent or lease, their systems. That trend was a slight increase for some groups of users, but a more dramatic increase for others. For example, in Datapro's 1984 survey, 50.54% of IBM users polled said they purchased their systems, while 49.46% either rented or leased systems. In 1985, 52.22% said they purchased their systems, while 47.51% either rented or leased. Users of NCR mainframes marked a more dramatic switch to purchasing hardware. In 1984, 53.19% purchased CPUs and 46.81% rented or leased. This year, 71.97% said they purchased their mainframes and 28.03% rented or leased them.

■ Nearly all the users polled were generally pleased with their systems. Asked whether their system did what they expected, an average of 96% of the users said it did. Furthermore, a strong majority said they would recommend their systems to others. In fact, some vendors seemed to make significant progress in improving users' opinions of their systems. For example, in 1984, 89.87% of Sperry mainframe users said they would recommend their system to others. This year, 98.33% were willing to make that recommendation.

> ***IBM's aging 3030 line of mainframes increasingly is being viewed as obsolete by users.***

■ IBM's aging 3030 line of mainframes increasingly is being viewed as obsolete by users. In 1984, 91.67% of users were willing to recommend 3030 series systems to others. This year, in the wake of IBM's newly announced 3090 series processors, only 71.43% of 3030 users were willing to recommend 3030s to others — the largest decline of any system line listed in the survey. Furthermore, in 1984, none of the users polled said they would not recommend the 3030 line. This year, 28.57% gave the 3030s a "no" vote — the most resounding "no" vote in the survey.

But while many IBM users appear to have written off the 3030 series, the 3090 announcement does not appear to have shaken users' confidence in IBM 3080 series processors.

The 3080 line, which many industry watchers believe will be severely affected by the 3090 line, still rated high marks. For example, 95% of 3081 users said they would recommend the system to others. Likewise, 96.73% of 3083 users and all 3084 users would recommend their systems.

■ Based on Datapro's overall satisfaction rating — a combination of categories including such factors as reliability, service, software and technical support — the major mainframe vendors are in a dead heat for keeping users satisfied. On the average, all the users polled rated their overall satisfaction with their systems as above average.

The Datapro report, titled "User Ratings of Computer Systems," costs $29.

The report is available from Datapro, located at 1805 Underwood Ave., Delran, N.J. 08075.

CALL FOR PAPERS

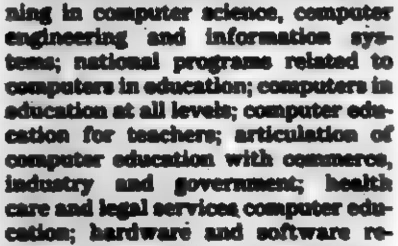
SEVENTH NATIONAL EDUCATIONAL COMPUTING CONFERENCE (NECC '86)

San Diego, June 4-6, 1986

People interested in participating in Necc '86 are invited to submit papers or proposals for sessions, workshops and projects.

The following are general areas of interest: computer science, computer engineering and information systems education; computer use in the physical sciences, mathematics, social sciences and humanities; curricula planning in computer science, computer engineering and information systems; national programs related to computers in education; computers in education at all levels; computer education for teachers; articulation of computer education with commerce, industry and government; health care and legal services computer education; hardware and software resources and their administration; computer-assisted testing and computer-managed instruction; computer literacy and societal impact; computers in educational research; computer education and job opportunities for the handicapped; administrative data processing in education; computer-based education; organizational dynamics in the computer-related professions; self-assessment programs and continuing education; accreditation and certification programs; and computer service courses and facilities.

Papers should be typed, double-spaced and are not to exceed 15 pages. Each paper should begin with an abstract of one page or less. Submit all program proposals and papers by Nov. 1, to Necc '86, University of San Diego, School of Education, Alcala Park, San Diego, Calif. 92110.



"I fed the computer the data I want for the ideal boss and it shorted out."

45,000 BUSINESSES NATIONWIDE DEPEND ON DIEBOLD QUALITY CARE. ISN'T IT TIME YOU COMPARED?

Diebold has been effectively satisfying customers' service needs for over 125 years.

Today over 45,000 businesses rely on Diebold to provide maximum product availability through effective maintenance services. With over 2,700 service personnel strategically located nationwide, Diebold has the technical expertise and experience to provide comprehensive service to satisfy your needs and those of your customers.

Add to that nearly 400 service offices covering all 50 states plus Puerto Rico, a computer-based network for parts inventory and distribution, and a highly skilled Technical Support organization, and you begin to see why Diebold® Quality Care™ offers you a unique opportunity to sell more by expanding your products' service offerings immediately—utilizing Quality Care as a third-party supplier for your customers' local, regional or nationwide service needs.

If the idea of one-source service appeals to your sense of efficiency, you owe it to yourself to learn more about Quality Care—at no obligation. Write Director of Marketing, Customer Services Group, DIEBOLD, INCORPORATED, P.O. Box 8230, Canton, OH 44711. **Or, for faster response, call 216-489-4110.**

DIEBOLD QUALITY CARE

Putting you in touch with the future.

Software AG Users
spell it out...Datapro™ survey
rates ADABAS

E-X-C-E-L-L

SOFTWARE AG
[illegible]

E-N-T!

ADABAS does it again—and we're not surprised!

The results are in! Datapro Research Corporation asked systems software users to rate their data base management systems. And, Software AG users rated ADABAS "Excellent!"

Exactly the same thing happened in an earlier survey when Data Decisions asked users what they thought. For the third year in a row, ADABAS went right to the top of the list as the highest ranked DBMS for the IBM mainframe. And NATURAL was a top contender for best fourth-generation language.

Together, ADABAS and NATURAL make an unbeatable team!

At Software AG we don't believe in surprises. We believe in providing our users with the most powerful software tools available anywhere. And that's the proper plan for the world leader in advanced systems software.

So, if you want the facts about systems software, just ask our users. For starters, send us the coupon below and we'll rush you the official Datapro DBMS report. Or call us at 1-800-336-3761. (In Virginia and Canada, call 1-703-860-5050.)

Rush me the facts.

Urisa announces six winners of 1985 Esig awards

By [illegible]
CW Staff

MCLEAN, Va. — The Urban and Regional Information Systems Association (Urisa) has granted six Exemplary Systems in Government (Esig) Awards for 1985.

Winners of this year's awards include the following:

■ New York, for its Street Lighting Interactive Maintenance system, which identifies and consolidates multiple complaints from the same location; determines the contractor responsible for the repair; and groups work orders by geographic proximity. The system, which was said to have increased the efficiency of work crew dispatching and resulted in significant annual savings to the city, was a joint development by the city's departments of General Services and City Planning.

> *The awards were based on a system's benefits to both government and citizens and its sophistication.*

■ San Diego's Water Utilities Department, for an automated Work Assignment Order system that was said to have streamlined the work of the water department, which is responsible for operating, maintaining and repairing mains, valves, pump stations and other facilities.

■ Ottawa's Lands Directorate, for the 20-year-old Canada Land Data Systems geographic information processing system, which, according to Urisa, was designed with such foresight that it has prospered under the direction of a number of different agencies and ministries over the years. The system is said to improve continually and evolve to meet a broad range of data analysis and resource management applications well beyond the original expectations.

■ Dallas — a city that issues more than 60,000 building permits per year — for a building inspection system that allows home owners or contractors to use their tone-generating telephones as data entry terminals to request a building inspection any time of the day or night. The system, developed by the city's Department of Data Services, links the city's mainframe computer with the public telephone network.

■ Fort Collins, Colo., for using handheld meter reading devices to reduce reading-to-billing time and to produce management reports. At the end of the workday, the reading device is brought to the computer department and electronically attached to the computer system to transfer the information to a computer file. This is a special award given in recognition of the efforts of a small city in the use and application of computer technology in the workplace.

■ Toronto, for a Central Property Register that contains 12 files ranging in scope from information describing taxes and ownership to information on the number and species of city-owned trees.

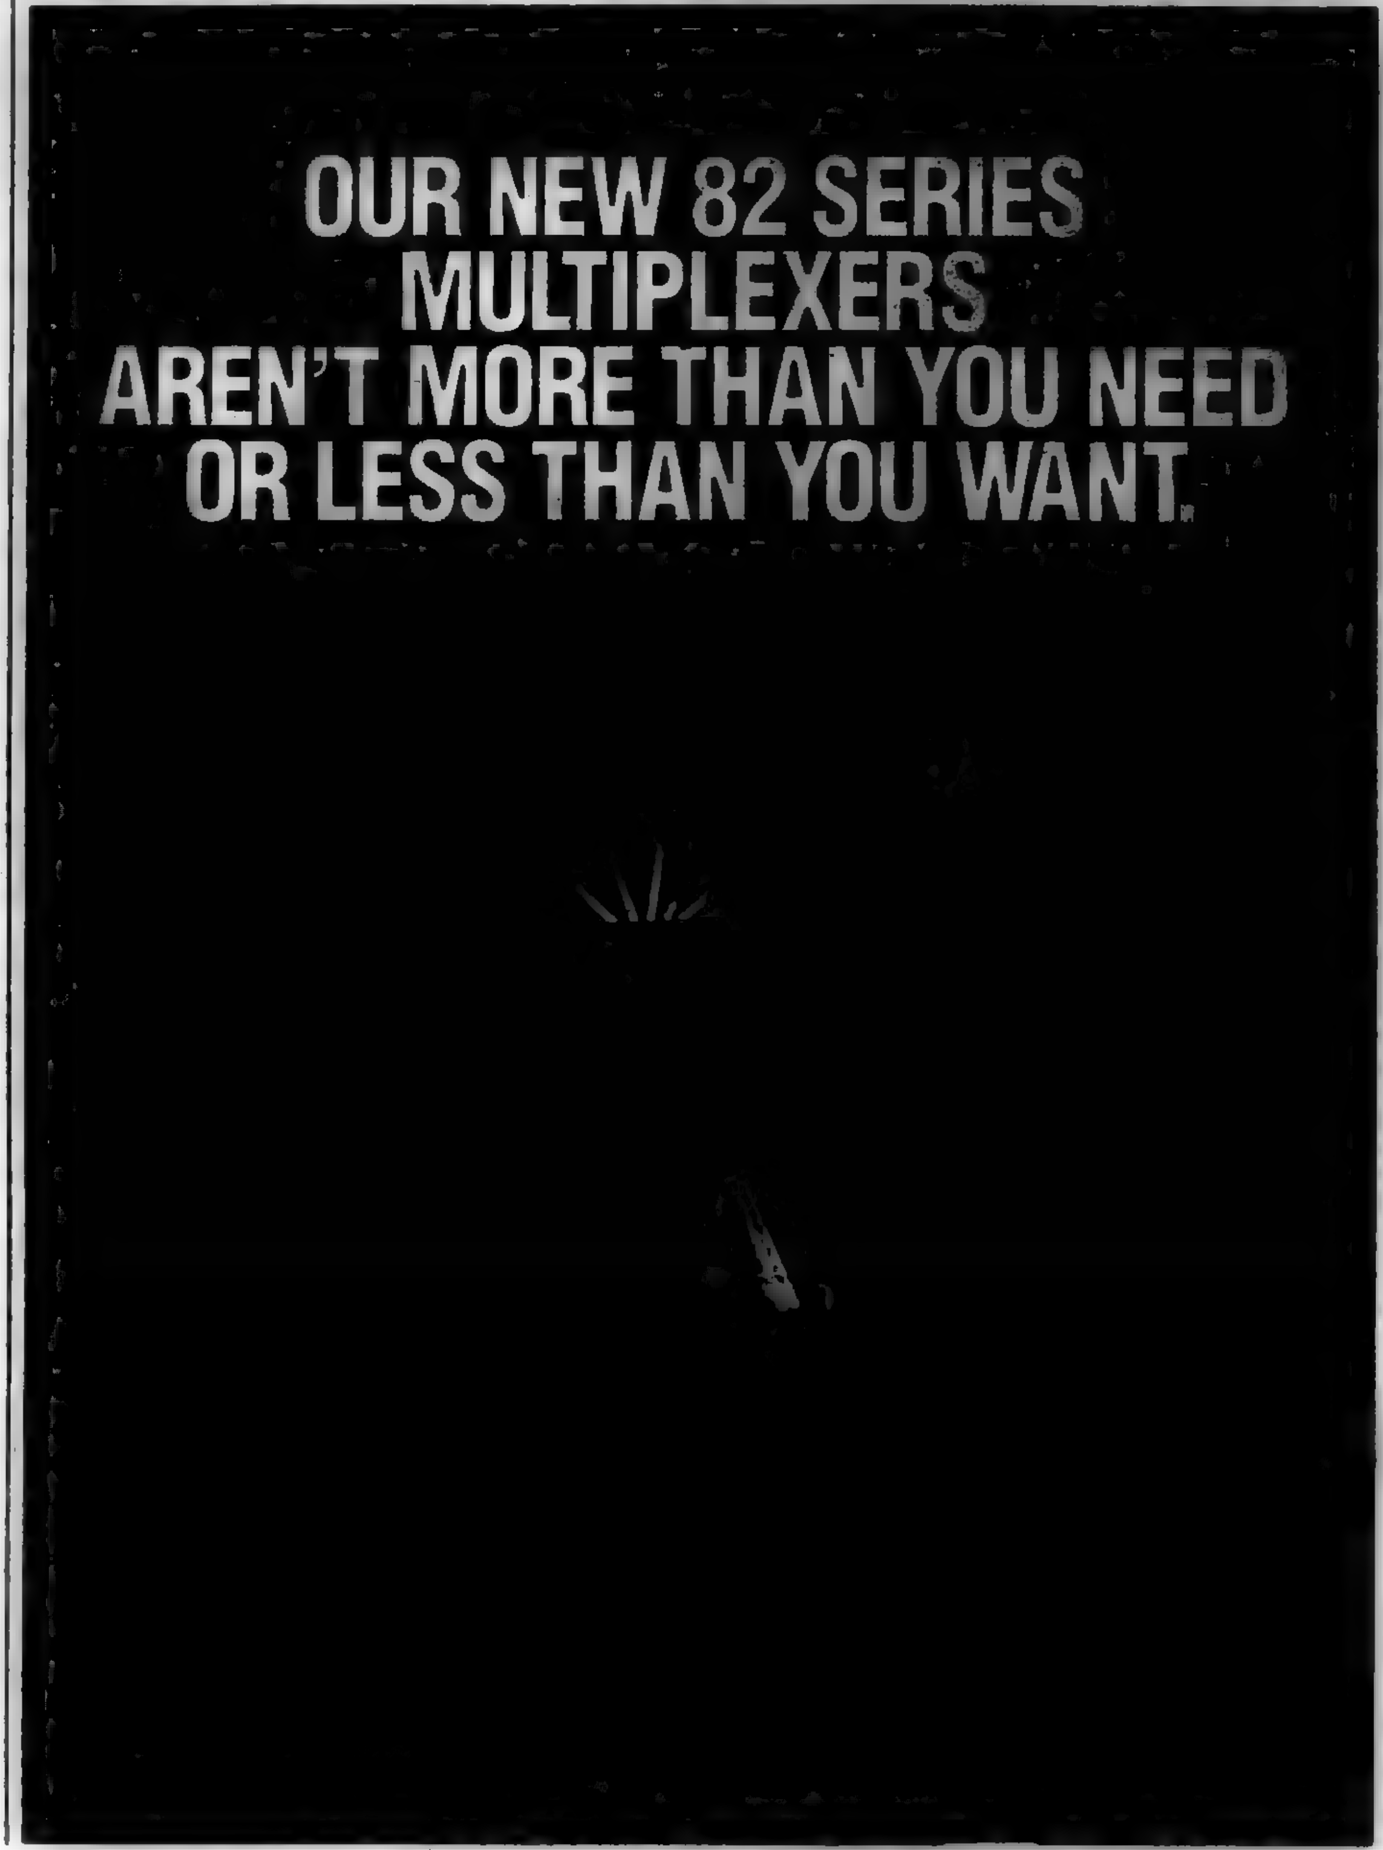
All of the information files are accessible on-line through the use of the street or municipal address.

The awards — given out annually by Urisa — were based on a system's benefits to both government and citizens and a system's sophistication in light of previous accomplishments in the field, according to a Urisa spokesman.

The winners were chosen from a group of 28 submissions from the U.S. and Canada, according to the spokesman.

The awards will be presented July 31 at Urisa's annual conference to be held in Ottawa.

Additional information can be obtained from Urisa, Suite 300, 1340 Old Chain Bridge Road, McLean, Va. 22101.



OUR NEW 82 SERIES MULTIPLEXERS AREN'T MORE THAN YOU NEED OR LESS THAN YOU WANT.

MCI rate restructuring cuts cost of calls over 200 miles

WASHINGTON, D.C. — MCI Communications Corp. recently announced that it will restructure its analog private-line rates, effective Sept. 1. The new rates will mean price reductions for users of the service where distances exceed 200 miles. The reductions will apply to the portion of service supplied by MCI.

The reductions range from 2% on a 220-mile circuit to 34% on a 2,000-mile circuit. Rates on circuits less than 200 miles will rise an average of 4%, MCI said. Overall, the company said, its private-line analog service rates will drop by 12%.

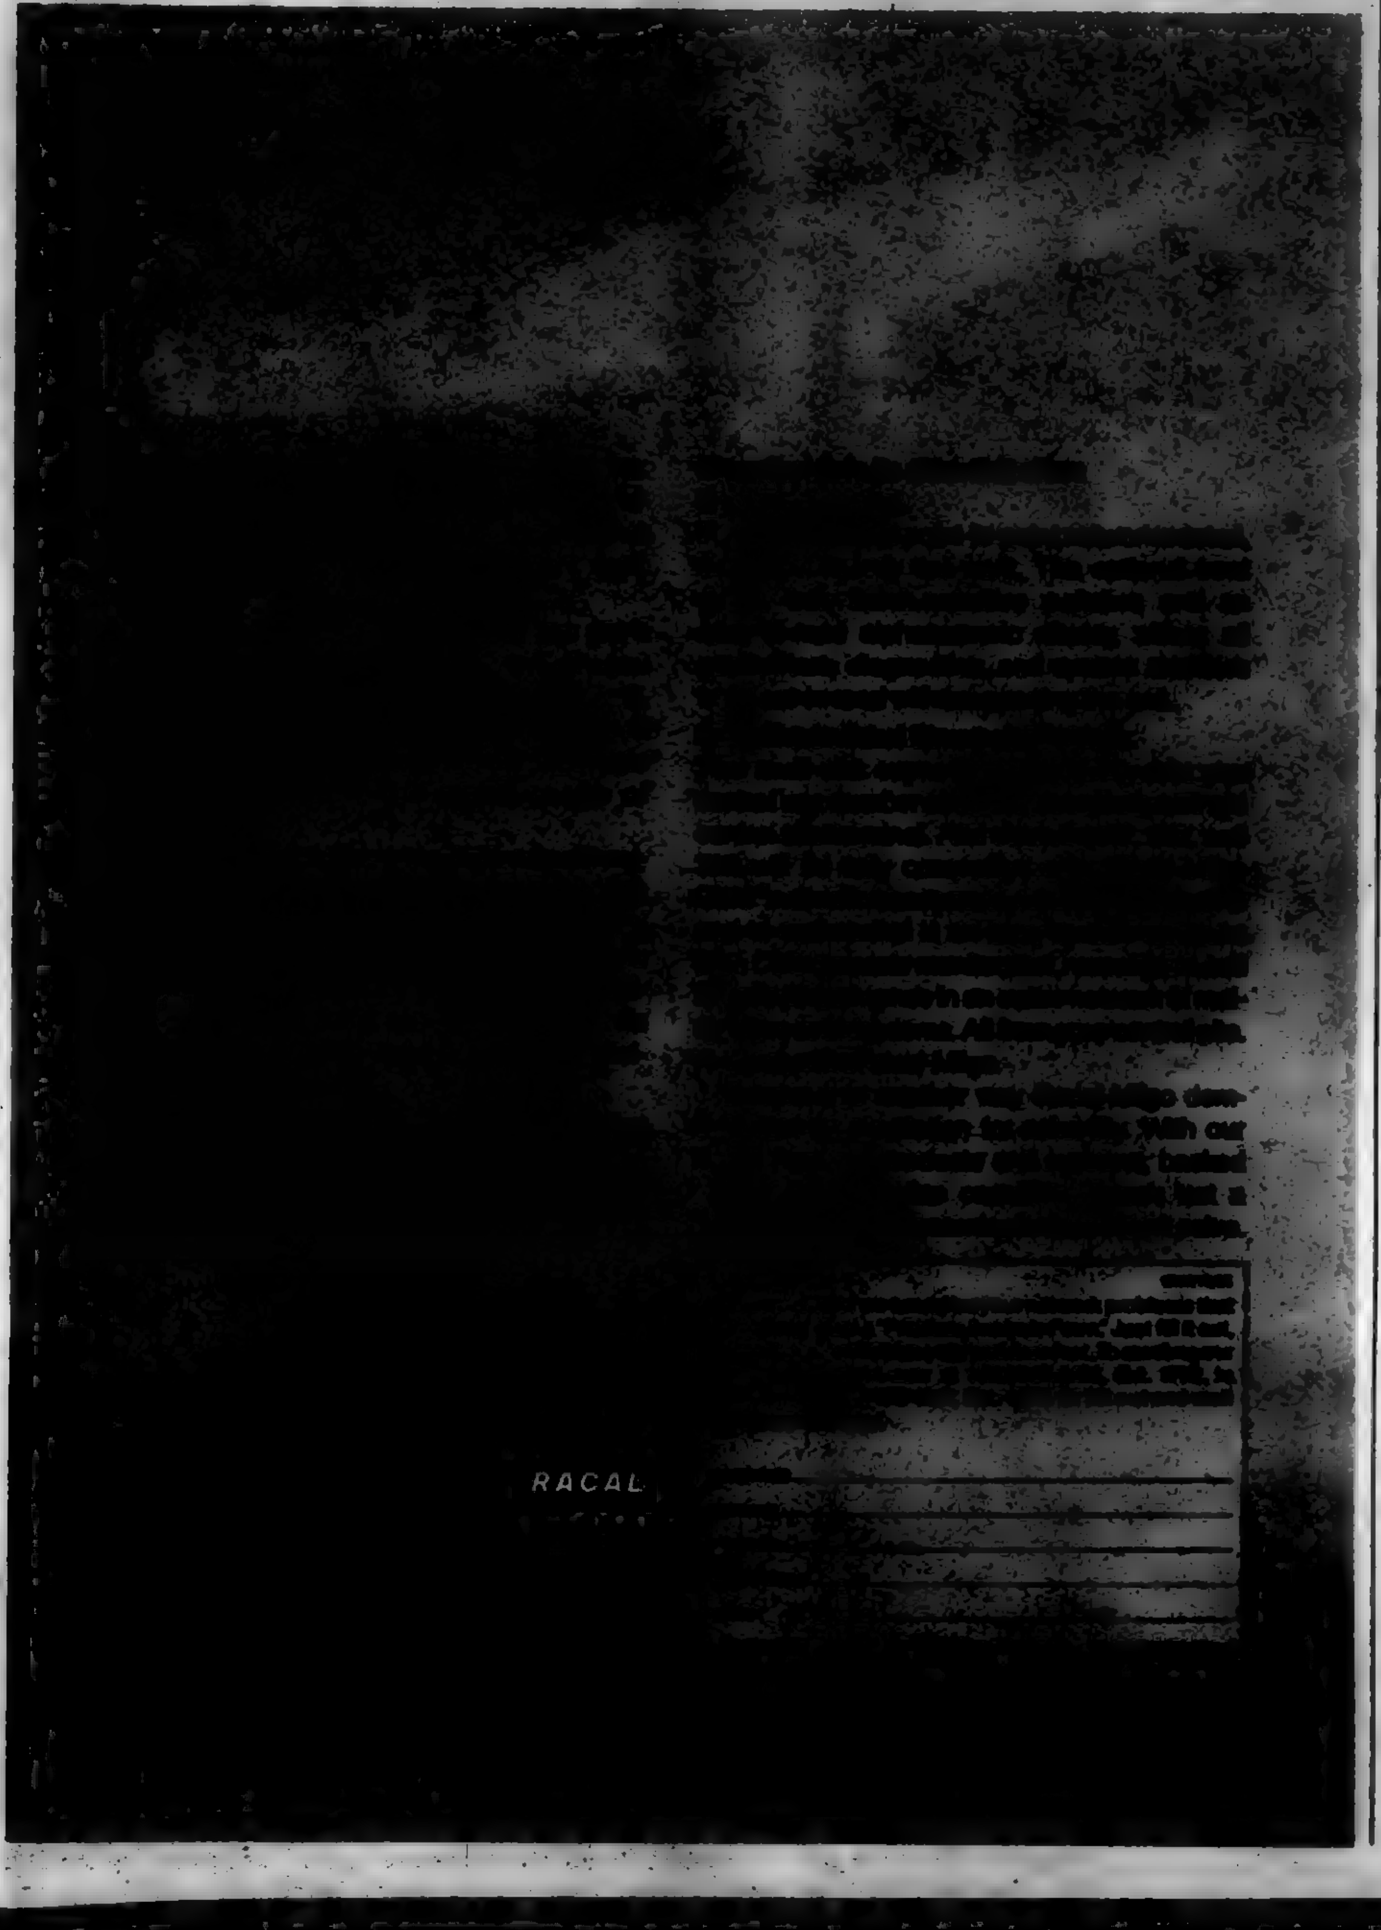
At the same time, MCI said, it will itemize price components to show the cost of local connections. MCI said this change will permit users to choose between arranging for their own local access to MCI's private line or having MCI arrange it.

MCI said that it will price its private-line rates an average of 10% less than the rates of its major competitor, AT&T Communications, for circuits of more than 250 miles. MCI said it has 1,500 users of its private-line service.

MCI also announced that users of its electronic mail service — MCI Mail — will now be able to access the service through Tymnet, the public packet-switching subsidiary of McDonnell Douglas Corp., at a rate of 5 cents per minute of connect time.

According to J. Robert Harcharik, MCI Mail's president, the Tymnet access feature will be available in 550 cities and will also offer users a 2,400 bit/sec. transmission speed in 50 cities.

He said that most MCI Mail users now access MCI Mail through the 800 Wats service, which costs 15 cents per minute.



VDT draft standards released

By Mitch Betts
CW Washington Bureau

SANTA MONICA, Calif. — A draft standard for VDT workstations was recently drawn up by an organization of ergonomics professionals here for eventual consideration as an official American National Standards Institute (Ansi) standard. The standard was released for a three-month public comment period by the Human Factors Society here.

The draft Ansi standard for "Human Factors Engineering of Visual Display Terminal Workstations," which is now subject to three months of public review and comment, covers the working environment of the VDT operator and the design of the workstation, the keyboard and the screen display.

For example, the 72-page draft standard would require the following:

- Adequate screen resolution and luminance and nonjittery displays.
- A contrast ratio between characters and background of at least 3:1 and characters that appear solid to the viewer.
- A minimum viewing distance of 12 inches and an angle between the line of sight and a line perpendicular to the screen less than or equal to 40 degrees.
- Chairs with back rests with lumbar support.
- A keyboard slope between zero and 25 degrees.

A copy of the draft can be obtained for $15 from the Human Factors Society, Box 1369, Santa Monica, Calif. 90406.

Public comments, due Oct. 1, should be accompanied by technical documents supporting the comments.

The Computer and Business Equipment Manufacturers Association (Cbema) has published a nontechnical guide to the draft standard, which can be obtained for $10 from Cheryl Bush at Cbema, 311 First St. NW, Washington, D.C. 20001.

Rumor has it you're moving up to T1.

Come back.

T1 speed.

It doesn't have to be as scary a project as everyone thinks. Fact is, installing T1 can be a fairly simple chore.

We're Infotron.

We design, build, and install communications networks. Reliable. Compatible. Sophisticated T1 networks that support data and compressed digital voice.

Our newest system, InfoStream™, introduces an open architecture to T1 networking based on Infotron's long-established strengths in multiplexing and switching.

We'll take care of you every step of the way. Before. During. And after the sale.

Calm down. Dust yourself off. Then call: 800-345-4636.

INFOTRON SYSTEMS

WORLD DIGEST

CW International News Network

TOKYO — Toshiba Corp. unveiled three mid-size and small office computers reportedly featuring enhanced image processing and a greater capacity for networking.

The models are known as Tosbac Q-600, Q-200 and Q-100 and offer integrated numeric, character and image data processing. They also feature accounting, spreadsheet and Japanese document applications that are simple enough for end users with no prior programming knowledge, the vendor said.

TOKYO — Memorex Japan Ltd. has announced its intent to enter the IBM System/38 plug-compatible business. According to a spokesman, the market — associated with data bases, Japanese Kanji character processing and distributed processing capability — is growing at a rate of 25% to 30% annually here. Memorex will market its 3680/3680-2 magnetic disk system, 3240 magnetic tape system and 1503/1511 line printers and terminals with shipments to begin in the third quarter.

BEIJING, China — The largest computer in Hewlett-Packard Co.'s current range of systems, the HP 3000 Series 68 minicomputer, will be assembled in China beginning in the fourth quarter. This was one item to emerge at the official opening of China Hewlett-Packard June 20, a $10 million joint venture between HP, China Electronic Import and Export Corp. and the Beijing Computer Industrial Corp.

BEIJING, China — "How to Succeed in Doing Business and Invest in the Chinese Electronics and Computer Industry" is the theme of a conference to be held in Hong Kong Sept. 12-13. The conference will be cosponsored by China Electronics Import and Export Corp., the Chinese Ministry of Electronics Industry, and International Data Corp. Asia Ltd.

[illegible] — One-third of this city's installed microcomputers are not being used, according to a recent survey conducted by the Industry and Commercial Bank of China here. The survey revealed that annual micro sales are dropping by 48% because of a shortage of application software, a shortage of maintenance and training services and poor management.

MELBOURNE, Australia — Australian users went on a frantic buying spree during the last days of the federal government's 18% investment allowance, which ended June 30. Those companies reporting 300% sales increases for the month included Nixdorf Computer Corp.; Wicat Systems, Inc.; Wang Laboratories, Inc.; Ultimate Computer Services Corp.; National Advanced Systems Corp.; and Amdahl Corp.

Orders were taken up to the last minute Sunday night. Other firms also reported booming sales, with the exception of Control Data Australia, which claimed it had done little added business.

CARACAS, Venezuela — On June 21, the Finance Ministry of Venezuela abolished the requirement for import licenses on some computer equipment here. The requirement, in effect since December, resulted in a decrease in data processing activity in this country.

At the same time, import duties on units up to 640K bytes have been increased to 15%, compared with 1% paid by any other type of computer equipment. The latter move is thought to be in support of Venezuela's domestic development and production of microprocessors.

MUNICH, West Germany — The software and consulting industry here enjoyed double-digit growth percentages last year. The 15 largest firms' revenues grew an average of 17%, with 9% more employees than in 1983. Total revenue for the top 15 firms was $211 million.

Topping the list is Scientific Control Systems GmbH (SCS) of Hamburg, West Germany, with 700 employees. SCS was the only German company to pass "the 100 million Deutschmark mark."

STUTTGART, West Germany — The most important investment in the future is educating and retraining employees in the work force of today's world.

So concluded the recent "Human Factors in Manufacturing" conference held here, where the need for and consequences of automation were discussed.

International conference attendees argued that work performed in offices and factories can be accomplished more efficiently with new technology, but displacement of workers must also be expected.

FREISING, West Germany — Like its U.S. parent, Texas Instruments GmbH is anticipating a decline in revenue for 1985. During a recent press conference here, Norm Neureiter, TI vice-president, blamed the drop on a "panic situation" during which many firms tried to adjust quickly to an explosive demand by dropping prices.

The effect on the German subsidiary was the implementation of shorter workdays but no layoffs. In fact, the past year has seen more than 200 employees added to TI's Freising facility, bringing the total number of German employees to 1,400.

FRANKFURT — Although Wang Deutschland GmbH expects to post losses for the fourth quarter of this business year, the company will not post losses for the entire year.

According to Dieter Benninsta, Wang Deutschland's general manager, the European computer market enjoyed a growth rate of 30% during the past business year, unlike in the U.S., where the market is relatively flat.

Given the U.S. high-tech slump, Benninsta suggested that European subsidiaries should be exercising greater clout with their American parents. With their present success rates, he contended, it might be an opportune time for foreign subsidiaries to push through some European ideas.

Wang's own European subsidiaries reportedly account for 15% to 20% of the U.S. company's total revenue, he said, with firms in France, Germany and England making up 60% of that business.

Benninsta also noted that Wang Deutschland was exercising caution in hiring to avoid the layoffs now plaguing its American parent.

PARIS — A European cooperative to develop strategic military components is part of a high-tech program launched recently by France's President Francois Mitterand. Four companies will take part in the project: Siemens AG, Thomson, General Electric Co. and N. V. Philips Gloeilampenfabrieken. Their work will focus on advanced microprocessors, gallium arsenide components, microwave components, high-density memory chips, flat panel displays and sensors.

STOCKHOLM — According to research conducted by market research firm International Data Corp., Telefonaktiebolaget L. M. Ericsson has squeezed past Luxor Computers for the No. 2 spot in the race for personal computer sales here. The study projects continued growth for the personal computer market here, which is presently being dominated by IBM.

FRANKFURT — Commodore Business Machines GmbH warned consumers of imitation Commodore 64 computers and peripherals. The machines are appearing with increasing frequency here at less expensive prices than authentic Commodore equipment.

The disadvantage to the consumer, Commodore maintained, is that the imitation, primarily imported machines do not conform to Commodore standards and do not include the needed authorization from the German Postal Telephone and Telegraph authorities for communications expansion.

SYDNEY, Australia — During a time when Australia is experiencing a severe DP manpower shortage, Sydney University here has slashed its admissions of computer science students due to an administrative bungle. The computer science department admitted that demand for courses had been growing at 10% annually over the past several years, but resources had not been allocated properly and have fallen steadily. The university has recognized the problem but is unable to divert funds quickly to the department, the spokesman said.

STOCKHOLM — Three "tele-cottages" will be opened in remote regions of northern Sweden. The four-year project is intended to familiarize Sweden's population with computer technology. The centers are completely funded by the Swedish Postal Telephone and Telegraph agency.

CANBERRA, Australia — The Australian Tax Office has refused to pay $2 million for equipment from Time Office Computers Pty. Ltd. The commissioner for taxation reportedly ordered that no invoices be paid to Time due to the unsatisfactory ergonomic design of Time's 6000 series terminal.

GOOD NEWS! Your chance has arrived...

LEARN "C"
COBOL/BASIC PROGRAMMERS

Are you a practicing DP professional or a DP Manager, who recognizes the need for "C" in your Data Processing world? Come to the ASYLUM and take advantage of the universal "C" programming language.

Make your company or department applications portable to all hardware; make interfacing and telecommunications easier and faster.

Attend a one week seminar during the month of July in Fort Lauderdale, to learn "C" in your terms, with code that accomplishes tasks found in business/DP computing, those applications that you know and understand.

One week and $[illegible] will put "C" in your pocket. Write or call for more information.

BECOME A CICS CONSULTANT IN JUST TWO WEEKENDS.

We know that it's tough for consultants to fit a weekday course into their hectic schedules. That's why SysEd offers special CICS training courses for consultants that you can complete in only two weekends.

Our intensive weekend courses in Command Level, Macro Level, Internals, Application Design and VSAM are designed to make even non-CICS programmers immediately productive in a CICS environment. Each SysEd course provides a true-to-life learning experience with "hands-on" use of the computer, up-to-date, practical information; a solid foundation in CICS fundamentals and insights into advanced materials; and individual attention from highly qualified instructors.

SysEd's special weekend courses for consultants are held regularly at our classroom/computer facilities in New York City, Chicago, San Francisco and Dallas. Because class size is limited, applications are on a first come, first served basis.

For more information, call David Shapiro (212) [illegible]

NOW OUR MORE THAN 1,000 LARGE NETWORK USERS CAN BRANCH OUT.

BECAUSE NCR COMTEN JUST PUT A FULL-SCALE DATA COMMUNICATIONS PROCESSOR IN A SMALL-SCALE PACKAGE.

From the data communications company accepted by exacting network users around the world, comes the Comten 5620—offering a new level of flexibility to meet a variety of network needs. It's a remote node concentrator or small network front-end processor. Its VLSI technology supports IBM, IBM compatible, or NCR hosts. It handles both SNA and non-SNA traffic concurrently. It saves significant line costs while providing greater access to host applications and data. And the 5620 offers modular components so you choose the capacity right for you—and expand as needed.

The functionality of a full-fledged data communications processor is now available in a small-scale package. To fit a small-scale space. At a small-scale price.

Join the over 1,000 large network users who are currently benefiting from NCR Comten's cost-effective, innovative solutions for network connectivity. Write "Data Communications," NCR Comten, Inc., Dept. 8015, 2700 Snelling Ave. No., St. Paul, MN 55113. Or call 1-800-334-2227. In Canada call 1-800-543-5713.

Congress steps up role in federal automation projects

Legislation grants more budgetary power

By Mitch Betts
CW Washington Bureau

WASHINGTON, D.C. — Committees of the U.S. Congress have started to exercise more control over the electronic filing and automation projects that are sprouting up in many U.S. government agencies.

In the last few weeks, congressional committees have passed legislation providing themselves with more budgetary power over the automation projects and have held hearings to explore the broader public policy issues surrounding the projects. For example, committees have done the following:

- The U.S. House Judiciary Committee required the U.S. Patent and Trademark Office (PTO) to fund the office's automation project from regular congressional appropriations rather than from off-budget methods, such as through user fees and barters.
- Likewise, the House Energy and Commerce Committee required the Securities and Exchange Commission (SEC) to use on-budget financing for its electronic filing pilot project and warned that congressional approval will be required for full-scale operation of the system.
- The House Subcommittee on Government Information, Justice and Agriculture held hearings on automation projects at the SEC, the Federal Maritime Administration, the Food and Drug Administration, the Department of Agriculture and the Bureau of the Census.

The automation projects vary considerably, ranging from the SEC's so-called Edgar system for electronic filing and retrieval of business documents to systems that put news releases and statistics on electronic bulletin boards.

Supports automation projects

Rep. Glenn English (D-Okla.), chairman of the House Subcommittee on Government Information, said he generally supports automation projects because they have "great potential to make government more efficient and government data more widely available."

But English and other members of Congress have expressed concern about how the automation projects will be operated, who will control the data, who will pay the bill and how private sector information vendors will be treated.

"I don't expect to be told that automation is so wonderful that the details are not important," English said.

Competition with existing vendors

For example, at a hearing on June 26, English explored the prospect that the Federal Maritime Commission's (FMC) proposed electronic filing system could compete with existing information vendors, such as the electronic tariff services run by the Journal of Commerce, Inc. of New York, and Transax Data Corp. of Falls Church, Va.

James J. Carey, vice-chairman of the maritime commission, said a forthcoming feasibility study will determine whether the commission will build its own automated tariff system or will contract with an existing vendor.

Carey and the vendors agreed that automation is inevitable.

Many shippers prepare their rate tariffs on word processing equipment and send paper copies to the FMC; then, information vendors return it to computer format for sale, Carey explained.

"We're the paper roadblock in the middle of this whole chain," Carey said.

Task force review

The maritime commission vice-chairman said a task force is carefully considering the issues English has raised about electronic filing systems [CW, Oct. 8].

The House Energy and Commerce Committee cast a more critical eye on the SEC's Edgar system after two subcommittees found that the agency had made significant management and procurement mistakes [CW, March 25].

In its SEC authorization bill, the energy committee said the SEC failed to get adequate public participation in development of the project, failed to consider all relevant policy issues and made questionable procurement decisions.

Similar to the energy committee's assessment, the House Judiciary Committee's PTO authorization bill said the General Accounting Office had criticized the management of the project to automate the PTO's massive files of patents [CW, Dec. 3].

The report asserted that the PTO had failed to analyze user needs thoroughly or assess the project's cost-effectiveness and had circumvented congressional oversight by using off-budget financing techniques.

In requiring on-budget financing, the report said, the panel acted on "the theory that unless the [PTO] has to justify fully the obtaining of appropriated monies for development of an automation plan, the automation activities will not receive adequate congressional review."

SPECIAL REPORT

Software Productivity Packages

August 26

If you sell software or related products, tell Computerworld's 687,000 readers in the August 26th Special Report. We'll examine three aspects of software productivity . . .

First, we'll look at the maintenance tools that keep software packages working.

Second, we'll investigate how managers help programmers increase their productivity . . . as well as how managers determine whether an application is "productive."

And third, we'll explore how MIS/DP personnel implement the latest productivity aids — such as 4th-generation languages, applications generators, report writers, and data dictionaries.

As the chart below shows, many of our subscribers are personally involved in the purchase of software productivity tools and related products:

Type of software	Percent of subscribers at user organizations	Percent of subscribers at vendor organizations
Applications	82	58
Data Base Management	79	57
Graphics	69	30
Decision Support	71	46
Systems & Utility	78	54

So reserve space for your ad today. Fill out the coupon below and return it today to reserve space for your ad. Or call Ed Marecki, Vice President/Sales, at (617) 879-0700. Call now.

Advertising close: August 9

☐ Yes, I want to reach the professionals who buy software and related products. Reserve space for my ad in the August 26th Computerworld Special Report.

☐ Please have a sales representative call me.

TURNAROUND TIME

Larry Long

Q *I hold a second-level DP management position in a Fortune 500 company. Marginal people in our department are being released, and the good people have already left or are looking for jobs. The company has not been profitable for several years, and the outlook for the future is bleak.*

My family is encouraging me to find another job. The headhunters tell me that they could place me in an equal or better position within three months. I would appreciate any insight you might have on my situation.

If others around you, especially top management, are trying to make a go of it, you might consider staying on. If your company emerges from the current difficulties as a leaner, stronger company, and you are an active participant in the turnaround, then you may be rewarded with a quantum career leap.

On the other hand, if top management appears more concerned with their pension benefits than a turnaround, as is so often the case, bail out.

Q *How significant is the Certificate in Data Processing (CDP) within the computer industry? Is this the "industry standard?" Do you feel there will be state certifications in the near future that will override this title?*

How does a person study for this exam in order to pass it the first time? I took all five parts of the exam and failed all five, four of them by one wrong answer. I have six years of experience as an applications and systems programmer/analyst, worked through two study manuals and learned and memorized 700 example questions.

I've addressed various facets of the CDP and its merit on several occasions in the past. During the intervening period, it is my perception that the CDP has neither gained nor lost in acceptance or recognition.

All things being equal, most MIS managers will give the edge to a holder of the CDP. However, more than a few see the CDP as silly and a waste of time.

There is no industry standard, nor do I expect there to be one in the near future. It will take a series of publicly visible, catastrophic events before states begin to consider certifying MIS professionals.

When someone with six years of experience who undertakes a concerted study effort fails five out of five exams, this confirms what I have said in the past — something is wrong with the exams. People who have taken the exams have told me that the questions are often ambiguous and that the choice of answers can boil down to a matter of opinion where there may be no truly correct answer. I also found this to be the case.

When you take the exam again, use your experience and your analytical ability to select the response that you feel the exam sponsors want. The best strategy may be to combine your experience with common sense. Don't evaluate the alternatives too literally. Remember, there is not enough space in a multiple-choice format for the list of possible answers to include all of the exceptions.

Q *My problem is headhunters. They have done me more harm than good. Some headhunters send resumes to every company they know. When the company finds that it has received the same resume from more than one headhunter, that firm automatically rejects the candidate to avoid headhunter disputes.*

I had asked the two headhunters with whom I had been working not to send a resume to a certain company because I had approached that company myself. Both headhunters sent resumes to that company, and the company told me to reapply after a year.

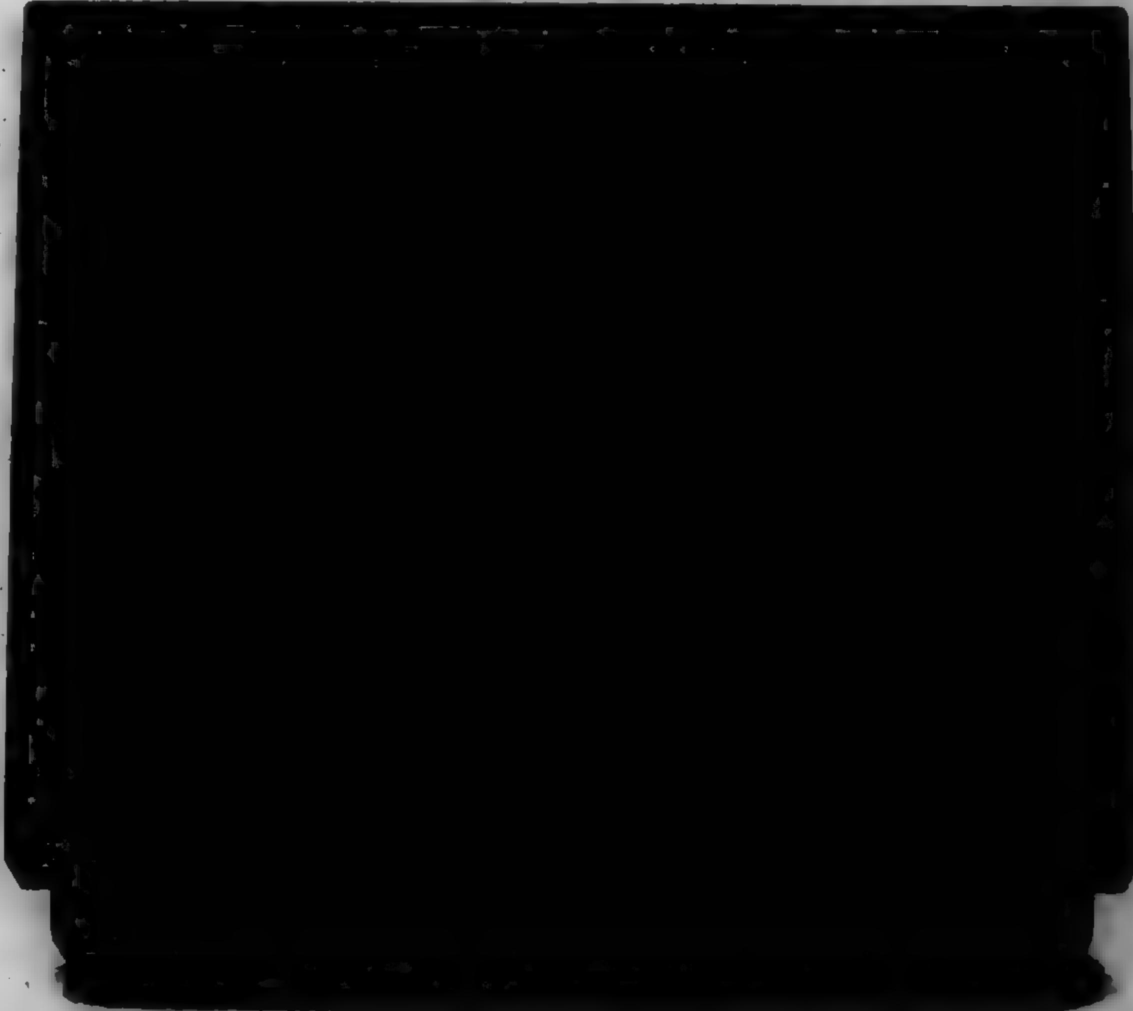
Eventually, I had to postpone my job search for a year. I did not use a headhunter when I resumed my search.

Is it reasonable to insist that a headhunter supply a list of companies contacted? I don't want one headhunter's letter to nullify one sent by another.

What you can request is a function of your relationship with the search firm. That relationship is negotiable, and it is up to you to lay out the ground rules. If you cannot agree, look elsewhere for a search firm. If you give them carte blanche to distribute your resume as they see fit, you should request a list of companies to which your resume has been sent. Certainly, if there are companies that you wish to be off limits, supply the search firm with the list and update it as needed.

Long, president of Long and Associates, is a consultant, lecturer and author in the field of information services. If you have a question you would like him to address, send it to Larry Long, Editorial Department, Computerworld, *P.O. Box 880, Framingham, Mass. 01701.*

"Oh, you'll recognize me — I'll be a-smokin' on a big cigar."



A NUMERICAL CONCEPT NO OTHER MONITOR CAN COMPREHEND.

As sophisticated as they are, you'd think monitor companies could solve a simple problem: keeping customers happy.

Fortunately, Amdek can. With the longest warranty in the industry. Namely, two years on all parts and labor. And three years on the CRT.

Even simpler, our warranty applies to every monitor we make, from our new Color Series to our amazingly popular Video Series.

And Amdek's own trained technicians make repairs quick and professional.

So when you're shopping for a monitor, look at the quality Amdek guarantees you, years after you leave the store.

According to our figures, it really adds up.

THE ALTOS 3068, SIX BREAKTHROUGHS IN ONE FOR OEM'S.

FILE PROCESSOR SUBSYSTEM
Controls 4 DMA channels for disk, tape, floppy, and parallel printer port; overlapped seeks on up to 3 disks.

CPU BOARD
32-bit MC68020 microprocessor running at 1.5 MIPS with no wait states; 8 Kb high speed cache memory; up to 16 MB virtual address space per program; optional floating point processor.

RAM BOARD
Can be configured to OEM needs up to 16MB using 1MB, 2MB or 4MB boards.

BREAKTHROUGH PRICE/PERFORMANCE

Combining the 32-bit MC68020, multiple auxiliary processors, and a tuned version of UNIX™ System V, the 30-user 3068 "is capable of a performance that rivals large mini-computers." (Computerworld, April 1985). And it does it for a micro computer price—from $7,000 for OEM quantities.

BREAKTHROUGH MODULARITY

"Using plug-in boards the way a personal computer does really sets Altos apart." (research firm Creative Strategies, Computerworld, April 1985). OEM's can choose from a wide range of modules: 10 to 40 serial ports; 1 to 16 MB of memory; 17 to 200 MB (formatted) hard disk storage.

BREAKTHROUGH HARDWARE DESIGN

"Altos is way ahead of everybody else." (Creative Strategies, Computerworld, April 1985): high speed 8 KB cache maximizes CPU speed, with no wait states; cache is simultaneously shared between many processors; high performance memory management supports demand paged virtual memory; on-board microprocessors handle all I/O processing.

HARD DISK
EXPANSION BOARD SLOTS

IF A POWER LINE FALLS

MANAGERS ON THE MOVE

FRANK M. PILUSO has been promoted to senior vice-president of computing and communications at California Federal Savings and Loan Association at the institution's service center in Rosemead, Calif. Piluso will be responsible for California Federal's nationwide computer processing and data communications.

Piluso

Piluso had previously been vice-president and division manager of computing and communications. He joined California Federal in 1983 from Carter Hawley Hale, Inc., where he had been director of information processing.

He is a 1971 graduate of California State University in Northridge, Calif.

■

JACK FUEHR has been appointed vice-president of MIS for Lotus Development Corp. Fuehr will be responsible for worldwide data processing activities at Lotus and will provide added input for the marketing and development of Lotus products to end users in the MIS field.

Fuehr

Prior to joining Lotus, Fuehr managed the marketing and development of the Cashman Personal Finance Manager software at Verisoft in Dallas. Fuehr founded that company in 1984.

Earlier, he served as vice-president of data processing at Mostek Corp. in Carrollton, Texas.

He graduated from the Case Institute of Technology in 1964 with a B.S. in electrical engineering and from Carnegie Institute of Technology in 1966 with an M.S. in industrial administration.

■

JAMES A. DECKER has been named director of insurance systems and **JOHN I. WOOLERY** has been named director of Management Decision Systems for Security Pacific Information Systems, Inc.

Decker is responsible for new product development and applications support for insurance. He has more than 15 years of experience in the insurance data processing field.

He graduated from Indiana State University with a B.S. degree.

Woolery is responsible for financial systems and decision support product development. He has 13 years of experience in providing data processing services.

Woolery attended California's Los Angeles Valley College, where he studied general programming.

Security Pacific Information Systems provides data processing and telecommunications services to financial institutions including commercial banks, savings and loan institutions, insurance companies and mortgage banking companies. It also provides financial services and disaster recovery services to the financial industry and other industries. It is a subsidiary of Security Pacific Corp. of Los Angeles.

"Look Dad! I can graph our cash flow against the inflation rate and predict the date of our bankruptcy!"

Announcing Masterpiece:™ A Powerful Mainframe Application Software Product Built Upon A Simple Idea Called Intelligent Architecture:™

What do you call a mainframe application software product designed with such patient attention to detail that it will register the effects of one transaction on every other business transaction in a company?

What do you call software architecture so artfully conceived it will someday enable a person using an application to move from one database management system to another, or from one teleprocessing monitor to another, without a single change in his work style?

What do you call query and reporting tools so simply and powerfully rendered that even a novice will find them no more difficult to work with than a personal computer spreadsheet?

Only one name fits . . .

Introducing Masterpiece.

The Masterpiece series is a family of mainframe business software products—a classification and a category which may lead you to conclude that it is like other mainframe software products.

Don't leap to that conclusion.

The Masterpiece design is so clean and uncluttered that it makes current and future applications efficient to develop and easy to use. Masterpiece comes with none of the excess baggage, inherent short-comings or system limitations that have traditionally plagued the people who need business information and the people who manage it.

Masterpiece is, in every aspect, a new family of software products.

And, in every aspect, an improvement over the software packages you may be used to.

Or are, in fact, now using.

Intelligent Architecture Design: The Fundamental Difference.

Previous software designs have been developed to better utilize the power of the computer.

Masterpiece was designed to mirror the methods and styles of the work place and to anticipate the inadequacies of the computer.

Masterpiece design is called Intelligent Architecture. It's a new term. And a new way to build software. Now, Intelligent Architecture brings new meaning to concepts like "modularity," "borderless integration" and "event-oriented processing."

Only application-specific code is contained in the application . . . other coding (system code, interfaces, code common to multiple applications) is separated out and coordinated by the Intelligent Architecture itself.

This means that ultimately a user can adopt a new database management system without the slightest change in either his way of working or in the application code itself.

Only software built in this manner, is software that will endure.

The Intelligent Architecture design means that all menus and screen prompts become common to all Masterpiece applications. It means that the way users interact with an application will be the same from application to application—a significant factor contributing to greater ease-of-learning and ease-of-use.

It is this capacity, present now in the Masterpiece Intelligent Architecture design, that lifts Masterpiece beyond the promise of other software products in its class.

And that is the fundamental difference.

Masterpiece is a trademark of Software International Corporation. Intelligent Architecture is a trademark of Software International Corporation. MasterQuery is a trademark of Software International Corporation. MasterSecurity is a trademark of Software International Corporation.

Masterpiece: Common Functions.

The reason Masterpiece works so well is because each of its pieces work so well together.

And apart.

The MasterSecurity™ system, Online Help and Navigation features work across (and are common to) all Masterpiece applications.

But because they are separate from all applications, Online Help, for example, can be custom modified or even translated into different languages.

The Navigation feature lets you move from screen to screen with direct access from one Masterpiece application to another.

Levels within the MasterSecurity system can be determined not only for different applications but set specifically for transactions within the same application.

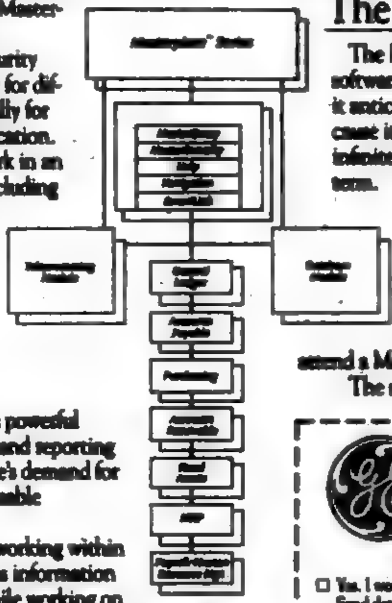
Everything is designed to work in an intelligent and modular fashion including what may now be the industry's most advanced query tool… MasterQuery.™

MasterQuery System.

The MasterQuery system is a powerful fourth generation borderless query and reporting tool designed to satisfy an executive's demand for instantly accessible and instantly usable information.

MasterQuery gives a person working within one application the ability to access information from another (accounts payable while working on general ledger, for instance) and to merge information from separate applications in a single report.

It also gives that person the ability to arrange his information in whatever form, format, or fashion he chooses. In whatever sequence or order. With whatever computations or projections he wants to make. With only the barest bit of computer know-how.



Masterpiece Integrated Applications.

The Masterpiece series will include these fully integrated, functionally rich business applications: General Ledger, Accounts Payable, Purchasing, Accounts Receivable, Fixed Asset Accounting, Human Resource Management and MRP software products.

Masterpiece: The Promise The Future Holds.

The Masterpiece series is truly "built from the ground up" software. Because its architecture is so well thought through it anticipates future enhancements and applications. Because it's a product designed to be completely modular and infinitely improvable it represents a real value over the long term.

It won't, in short, fall prey to technological or design shortcomings. Won't dead-end at some point. Won't fail to perform as your needs expand.

For a Masterpiece demonstration, clip the coupon below or call toll free 1-800-343-4133 (in Massachusetts, call 1-800-322-0491) and arrange to attend a Masterpiece executive briefing.

The sooner you call, the further ahead you'll be.

SOFTWARE INTERNATIONAL

"Promises pro
Somebody

With more than 70 and enhancements, complete solutions

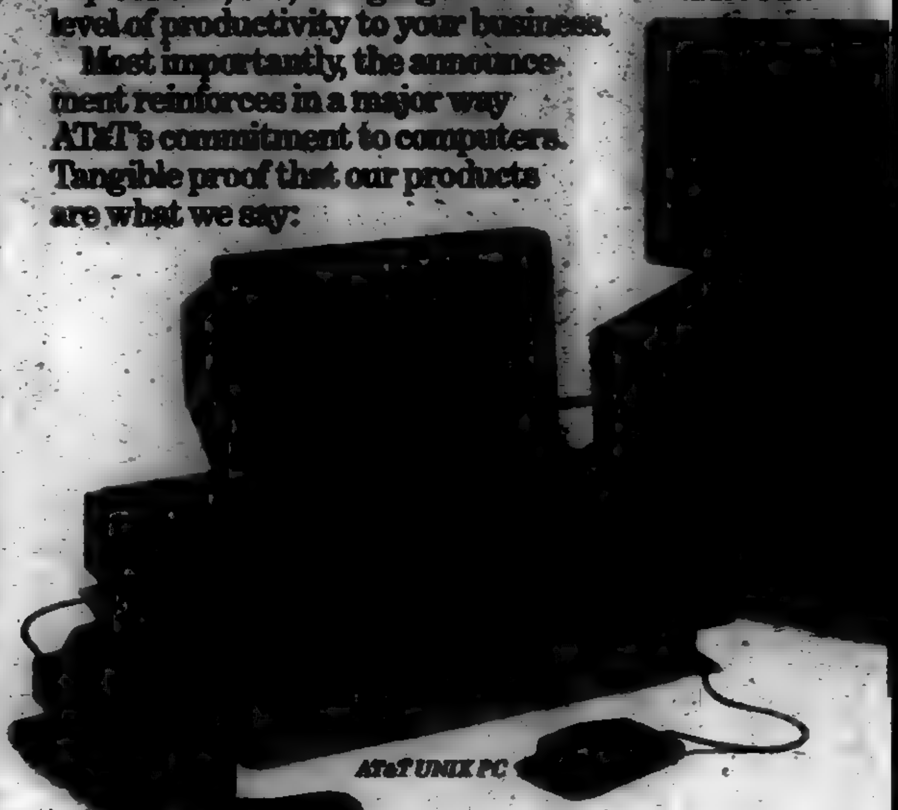
A few weeks ago, AT&T made a major computer announcement. Major in every way.

Certainly in the depth and breadth of the offering—which includes computers, peripherals, software, networking options, communications products and much more.

Major in terms of AT&T's growth as a force in the computer industry. Consider the new, enhanced and existing products. You'll find our line of integrated communications-based computers runs the gamut from PCs to superminis.

What's more, they can be connected easily to each other and to your mainframes. They're readily expandable, too, bringing a new level of productivity to your business.

Most importantly, the announcement reinforces in a major way AT&T's commitment to computers. Tangible proof that our products are what we say:



The Computers With The Future Built In. Our computer line now includes the following:

Computers: To serve an entire office, our recently enhanced line of AT&T 3B Computers puts the flexibility and power of the UNIX™ Operating System to work for you.

There are five models. Our new 3B2/400 can accommodate up to 46 different peripherals (terminals, printers, modems, etc.). The new 3B15 up to 128.

new computer products AT&T is now fully equipped to offer to your computer needs.

The 3B2/300 and 3B5 have both been enhanced with many features for better performance. The former can accommodate up to 18 different peripherals; the latter up to 128. The 3B20 has room for up to 256 peripherals.

The AT&T PC 6300 is for the single user in need of a superior MS-DOS* business computer. It can also run the Xenix* operating system.

For single or multi-user situations, the AT&T UNIX PC offers a unique combination of power, ease of use and advanced communications capabilities.

THE COMPUTERS WITH THE FUTURE BUILT IN

Communications: AT&T has always led the way in telecommunications. That leadership continues in computers. Our computers and communications products link together, allowing voice and data integration and shared information from PC to mainframe.

We now offer a complete line of low to high-end data communications products and service giving you complete control over the management of your data network.

Those with a major investment in mainframe computers can rest easy. Now you can enjoy complete end-to-end connectivity. We now support popular SNA and BSC protocols, which means our computers and systems can communicate and work with your mainframes. Your investment is protected.

Peripherals: We offer a full line of high-performance, highly reliable synchronous and asynchronous terminals and printers. They're highly compatible, too, with our own and other computers.

Software: Choose from a large and growing list of applications software based on UNIX System V. Some handle general business, such as word processing, financial spreadsheets, and business graphics. And some tackle specific needs of specific industries, including, accounting, automotive and retailing.

You'll also have the ways and means and tools to develop your own software.

The Future Looks Even Brighter

You'll find that all of these computer products are designed to work with your current system, while offering an almost unlimited variety and number of options for growth and change.

You know that when you buy an AT&T Computer product, you're making the right choice—and you're giving yourself more choice. Our flexibility gives you more options when the time comes to expand.

What's more, you'll find these high-quality products comparable, often superior, in price and performance. Which makes them an excellent investment.

AT&T also protects your investment by offering overall comprehensive service and support for computer hardware and associated software products.

This includes Customer Programming Services Centers, where we'll help you to develop your own software or customize existing packages. Implementation Services and Customer Training offer expert advice on the most efficient, productive use of your system.

Our National Software Support Center provides a 24-hour hotline for hardware and software support.

Our service options are another way we're working to help you pull the pieces together in a logical, coherent way.

In every way, we're working to make The Computers With The Future Built In work best for you.

For a more detailed look at what AT&T Computer products can do for you, just turn the page.

See how AT&T Computer products can make your system work as a system.

AT&T 4410 Terminal
AT&T 3B2/400 Computer

It's easy to get started putting AT&T to work for your business—in small easy steps or a complete system. These communications-based computer products are designed to work with each other, and with your existing system.

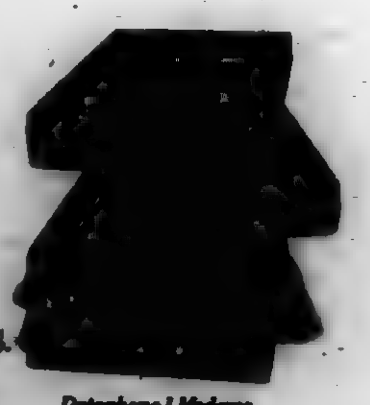
Start with the newly enhanced 3B2/300 or the new 3B2/400 to develop a distributed departmental system. Both are true 32-bit computers that run UNIX System V. The 3B2/400 offers full hardware floating point performance, streaming tape backup, and up to 4 MB of main memory. Supporting up to 10 or 25 users respectively, the 3B2/300 and 3B2/400 offer plenty of room for tape and disk storage growth.

AT&T 4410 Terminal
AT&T Model 4000 MODEM

For even higher storage capacity and performance, build your system around the enhanced 3B5 or the new 3B15 minicomputers.

The 3B15 is equipped with a high-performance WE™ 32100 microprocessor with main memory up to 16 MB. It supports up to 60 users on a number of configurations. Other features include demand paging memory management with file and record locking and standard floating point performance.

To over 500 tested software packages already listed in the AT&T Computer Software Guide, we're adding more applications programs, such as UltraCalc** and CrystalWriter.*** For systems developers, high level languages for 3B Computers such as UX-Basic† and Micro Focus Level II Cobol†† open the world to thousands of additional software applications running in the UNIX System V environment. And AT&T can address unique business needs with software solutions specifically for vertical markets such as accounting, real estate, and automotive industries. IBM††† mainframe VM users now have UNIX System V development capabilities through our System V-VM software.



Dataphone I Modems

It should come as no surprise that AT&T is the leading producer of advanced data communications equipment. To our already large and growing list we've added DATAPHONE® I, a complete line of synchronous, private line, analog, non-diagnostic modems with speeds from 2400 BPS to 14.4 KBPS. Also available is DATAPHONE I Plus Service Management, which provides you with private line network management through AT&T, eliminating the need for an in-house staff.

DATAPHONE II is a family of digital and analog modems, multiplexers, and diagnostic control devices for multilevel network management and control. To the family we just added the DATAPHONE II Model 2600 Digital Data Service Unit, an integrated DSU and Channel Service Unit in one compact, easy-to-install and operate unit. Plus, it is fully compatible with the DATAPHONE II equipment you're using now.

Our 3B Computers work with your IBM mainframes through connectivity products that allow full interactive communication using BSC and SNA/SDLC protocols. The new host connectivity products include the SNA/3270 Emulator + software which emulates a fully configured SNA IBM 3274 controller, and the BSC/3270 Emulator + which emulates the BSC IBM 3274 Cluster Controller. And C language programmers can use a library of AT&T Application Program Interface access routines to communicate directly with a host computer in a 3270 mode.

AT&T 3B5 Computer
AT&T 4410 and 4425 Terminals

Of course, one advertisement can't begin to do justice to the full line of AT&T Computer products. There's much more to talk about.

For more details, contact your AT&T Information Systems Account Executive, authorized AT&T Representative, or call 1 800 247-1212.

Do it today—and start building a completely integrated business communications system. With the one company that can pull it all together.

EDITORIAL

Sitting out the show

Digital Equipment Corp.
Wang Laboratories, Inc.
Apple Computer, Inc.
Tandem Computers, Inc.
Compaq Computer Corp.
McCormack & Dodge Corp.
Management Science America, Inc.
Software International Corp.
Lotus Development Corp.

The list of vendors that will not attend the 1985 National Computer Conference this week is almost as interesting as the list of those that will attend. What interests us more than the question of who is sitting out the show is the matter of why they are sitting out.

There will, of course, be plenty to see and do at NCC. The American Federation of Information Processing Societies, Inc., the show's sponsor, said more than 600 exhibitors from 330 product and service categories will blanket the McCormick Place convention center. NCC Program Director Anthony S. Wojcik has assembled an impressive roster of 84 technical and 27 professional development sessions. And Afips estimates that the show will draw 80,000 attendees.

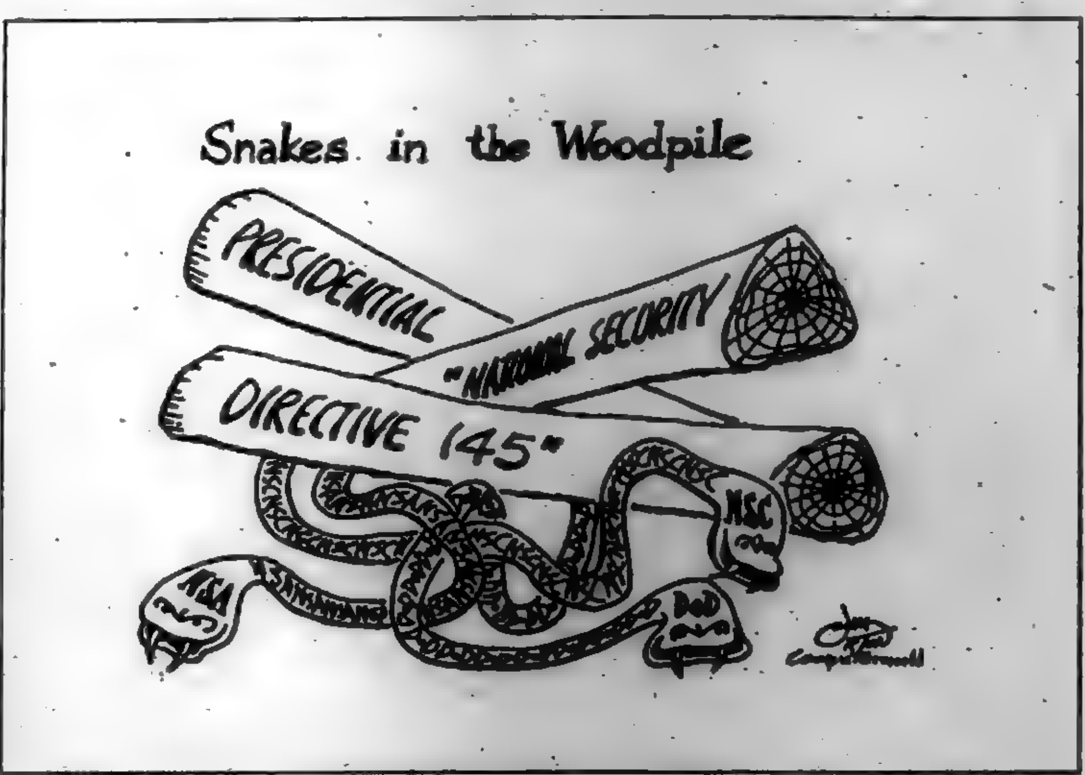
There is, however, a rising chorus of vendors, such as those listed above, that find NCC no longer delivers enough bang for the buck. Some, like McCormack & Dodge and Computer Associates International, Inc., prefer more focused trade shows where they can accomplish serious educational selling to decision makers. Others, like Wang and Apple, have had to cancel because of financial difficulties.

Approximately 50 vendors from last year's show will not be in Chicago this year. And the 600 exhibitors who will be on the floor are fewer than the 664 who exhibited at NCC '82 in Houston. Afips has also reduced its attendance estimates from 100,000 in 1982 to 80,000 this year.

But attendance and exhibitor figures at this or any other trade show merely hint at some deeper forces affecting computer vendors and computer users at the midpoint of this decade. Among them are the following:

- NCC is one of hundreds of shows in this business. With so many trade shows confronting them, vendors are resorting to more cost-effective marketing strategies.
- There is a glut of products on the market — thousands of them with new ones released every day.
- Big corporations have been computerized, and the easy bucks have been made. Vertical markets and small businesses are the new frontiers.
- Stiff foreign competition and the strength of the dollar overseas hamper the domestic computer industry and will continue to do so in the near future.
- Deregulation of AT&T has confused end users, nurtured the communications bypass industry and spawned new telecommunications alliances such as IBM-MCI.
- Financial fissures are showing up for the first time in stalwarts like IBM, DG and Wang. These, like the industry itself, were thought to be recession proof. The very technological leadership of the U.S. computer industry has been called into question.

Given the state of the industry right now, those companies sitting out NCC this year are doing so for good reasons. They have more important business to attend to.



Private sector data security control

LETTERS

Paying for specialized knowledge

I am writing to you in reference to the letter from a micro and OA consultant in Larry Long's column Turnaround Time [CW, June 10].

I, too, am a consultant. The most important thing a consultant must know is the state of the organization. We learned long ago that people cannot write computer programs to solve a problem unless they understand the problem. Certainly this consultant in the column was doing what most consultants would do — learning about the state of the organization and about the people involved.

Some of us will turn down consulting engagements when we learn of the state of the organization and its people. Perhaps I should phrase it that we will turn down engagements when we learn the *true* state of the organization; not what the person hiring us thinks it is.

It seems to me that the bill for consulting services might be correct for a month's work. The consultant could have worked 100 hours at $60 per hour, and that would be $6,000.

Many people don't realize that expertise is not cheap. But many times the person who calls in a consultant is cheap. I have many instances where people are simply shocked at what the job will cost.

Consultants are hired for their specialized knowledge. They must mesh their knowledge with the situation of the organization they are helping.

The best way for people to judge consultants is to talk with prior clients.

VIEWPOINT

Early announcements: Let the buyer beware

THE DATA CENTER
John P. Murray

Last year, *Computerworld* paid considerable attention to the early announcement of products and features and the impact of those announcements on customers [CW, July 9, 1984]. The article raised the ethical aspects of this issue. There are, however, pragmatic issues involved here that should be considered.

Anyone who is responsible for an organization's funds — particularly those the magnitude of information processing purchases — and is not cautious and prudent when dealing with the vendor is simply remiss.

If an organization does find itself in a situation where the vendor fails to deliver what was promised but was never demonstrated, it produces difficulty. Then it would appear that those responsible for dealing with the vendor are the ones to blame.

How do such circumstances come about? Usually they result from the customer's desire to realize the benefits of the proposed enhancements. If that desire is strong, it can often seduce the customer into a false sense of security. We often hear what we want to hear. We want to believe that the enhancements will be delivered, as promised, on time.

Unfortunately, it is often the case that the failure to deliver whatever may have been promised has repercussions that range far beyond the information processing department. It may affect the plans of other departments or perhaps those of the entire organization.

Given that these enhancements represent considerable value to the organization, and that nondelivery can pose serious problems, how can customers protect themselves from such difficulties?

The most secure method is to see the new feature in actual use in a client's environment and to talk to that client about the performance of the feature. "If I can't see it, I don't believe it," will work over time to the benefit of the customer.

If the vendor cannot provide a working example of the enhancement, the safest and most sensible approach is simply to delay any consideration of the new product, at least until reasonable test results can be verified. Although that is the most prudent approach, it is often the case that pressure — often political pressure — will be exerted to accept the enhancement as though it were a fact rather than a concept.

Steps for protection

If that is indeed the case, there are still steps that information processing managers can take to provide at least some degree of protection for the organization.

The first step should be to provide many qualifiers and caveats to any proposal for information processing clients and the organization's senior management in their evaluation of the particular enhancement and its impact on the organization. Statements such as, "untested technology," "high degree of risk," "potential for failure" might be considered good attention-getting devices.

Another step is to write as much protection as possible for the organization into the agreement between the organization and the vendor. The delivery date specification and the performance of both the product and the vendor should be clearly determined and identified. Nothing significant should be left out of this document.

Relying on statements from sales representatives such as, "not to worry, that can all be worked out later, trust us," may indeed turn out to be something to worry about at a later date. In all cases, make certain your legal people are involved. Trust their judgment, and follow their advice.

There are numerous organizations that have suffered embarrassment or serious operational and financial distress even to the extent of going out of business because of imprudent anticipation of new features that were never fruitful or were so late when finally delivered, that they were of little value.

Selling solutions to problems

Competition is not likely to become any less fierce among those who want to sell solutions to our myriad problems. The nature of change is so strong and so rapid in our business, that expecting all vendors to wait to announce some dramatic new feature until it is fully tested and ready for the market appears to be unrealistic.

Those who deal with the issues involved in early announcements should understand sufficiently their inherent complexities and realize that a prudent approach is not only the best one but also the only one.

The admonition "let the buyer beware" is still valid and should be used when dealing with early announcements. If you don't heed that advice, you have no one to blame but yourself.

Clever Hans and the data processing tool kit

MANAGEMENT MATRIX
Walter F. Cuirle

Back around the turn of the century there lived a computational phenomenon: a horse known as Clever Hans. He became quite a worldwide sensation in that Hans' trainer claimed to have taught the horse to solve arithmetic problems; what's more, the trainer could, and did, publicly demonstrate the horse's ability with numbers.

This wasn't a circus act. The trainer, a research psychologist, entirely attributed Hans' abilities to a new training method he had developed. This was a conceit that he was certainly entitled to if, in fact, the method worked. And, after all, it must be true because Hans did come up with the right answers.

Not always. A panel of psychologists looked into this data processing sensation and found that Hans got the right answer only when his trainer was visible and only when the trainer also knew the right answer. It wasn't a scam — the man honestly believed he had trained the horse to do arithmetic problems. But herein lies a message for the data processing manager of today.

Turn the clock forward 70 or 80 years, and change the setting to your own programming staff. Somewhere out on that workhorse they work with is undoubtedly a set of files known collectively as "the tool kit."

In it are dozens of subroutines and program stubs: a little something to set up a standard report format, another to import selected data from a master file, some routines that do common financial calculations, all of them frequently patched wholesale into new systems.

The tool kit files have two things in common: most were written by individual members of the staff for the specific needs of the company, and most were probably not documented by those individuals.

Typically, the tool kit is used in a specific fashion. For example, a junior programmer is assigned to modify a financial package and comes across a call to something named YLDCALC. The comment line, if there is any, says something like "Pass rate in R, yield returned in Y."

If not pressed for time, your junior staff member may ask someone about it. The answer may be, "It's OK. It's in the tool kit."

Generally, though, the programmer is too hurried to ask, and if the modification doesn't involve part of the code, then why bother with it? After all, it's in the tool kit so it must work, and if it works, don't fix it. Right?

Wrong. If it works, but your programmer doesn't know why, using the code is exactly like using Clever Hans to do calculations. The person using it assumes that clean input will yield correct output. But the person who created the code may well have done so for a completely different application under a whole array of assumptions that may or may not fit the current job.

It's the kind of thing that can go on for quite some time before anyone catches it. It's the kind of thing that makes accountants prematurely bald and wizened.

> *It's well worth your while to audit that tool kit. Find out what's in it, find out how each routine works, and document it. This is especially true if the creator of the code has long since left the company.*

Well worth your while

It's well worth your while to audit that tool kit. Find out what's in it, find out how each routine works, and document it. This is especially true if the creator of the code has long since left the company. Remember that Hans only gave the right answer when his trainer was present; we've all probably seen code with the same problem.

Have the code analyzed, or throw it out. Establish controls and set up an authorized tool kit — routines used from the authorized list of documented tools are the only ones for which the department takes responsibility. Set up a review mechanism to get a routine authorized. Hand out some kind of reward to people who create new tools that make the authorized list.

These routines are specific to your company's needs and are essential to its operation because they are used so widely. It is critical that the programming staff know how they work before they use them.

The moral of the story of Clever Hans is that clean output isn't everything. There's an interesting twist to it for you etymology fans: the trainer of Hans the horse was German, and the word "clever" is an English translation of the German "kluge." Seems like the more things change, the more they stay the same.

NBS guide illustrates logical data base design

By Mitch Betts
CW Washington Bureau

GAITHERSBURG, Md. — A poorly designed data base structure can result in costly, time-consuming software revisions — frequently with poor results — as user needs change. On the other hand, a well-designed data base structure can ensure the modularity, efficiency, consistency and integrity of the data base.

To help data administrators and data base administrators achieve the latter, researchers at the National Bureau of Standards (NBS) here recently developed a guide for logical data base design.

Researchers at the agency's Center for Programming Science and Technology created a four-step methodology for logical data base design that applies to very large, complex information systems. "By providing a detailed and unambiguous description of the system's information requirements in relation to the end users' perspectives, [logical data base design] offers a bridge between the end users and the physical data base designers and applications programmers," the NBS guide stated.

"The methodology emphasizes both the need for speed, so that the design will be completed in time to be useful, and the need for quality control, to ensure that the design is consistent, complete and satisfies the eventual users," it added.

The NBS defined logical data base design as the process of determining the fundamental data structures needed to support an organization's information requirements.

The structure determines the way the data is collected, stored and protected from unauthorized access.

"If done correctly, logical data base design for a complex information system is a massive undertaking. The short-term cost of [logical data base design] is great, but the long-term benefits of better information and greater flexibility provide substantial savings over the system's life cycle," the NBS concluded.

A high-quality logical data base design, the researchers said, will be internally consistent to reduce the chances of contradictory results from the information system; complete, so that information queries can be satisfied; and robust enough so that the data base structure can be adapted in response to changes in information requirements.

To fulfill these goals, a good data base design should be independent of any particular application so that all applications can be satisfied, and independent of any particular hardware or software, so that

Planning key in conversion

An unprecedented increase in acquisition and merger activity has prompted the consolidation of corporate DP operations and software applications. While such consolidation may decrease costs and provide greater operating control, achieving those results requires a structured approach to systems conversions.

The systems conversion process should begin with a formal conversion definition. The conversion team's charter should specify the scope of the conversion as well as the time allotted for it. The charter should also establish the authority to be vested in the conversion team manager and other team members. Personnel who are not used to working in a conversion project are likely to be involved, and it is essential that the team exercise full authority over all aspects of the conversion.

The team should be assembled as soon as the scope of the conversion has been determined. It should be headed by a project manager who will be responsible for all aspects of the conversion, including the management and support of team members. The project manager's qualifications should include industry-specific and data processing expertise as well as experience in the design, implementation and validation of applications.

In addition, the team needs one or more systems analysts, depending on the scope of the conversion project, to direct efforts for individual applications. Like the project manager, the systems analysts require both industry-specific and DP expertise. Programmers should be expert in the required language, although they need not have a strong industry-specific background.

User representatives should also be included in the team, to determine whether the functional system design meets their requirements and to pro-

ELECTRONIC MAIL COMMUNICATION CENTER

Lightyears Ahead . . .

The ONE electronic mail product that links all major operating environments: MVS, VSE, VM, CMS, CICS, TSO, ACF...

Emc² is easy to use. It's designed to get the mail moving *fast.*

Emc² functions as a super-efficient ACF/VTAM application. This allows literally thousands of people in your company to use mail without needing TSO, CICS, or CMS user IDs!

- Full-screen menus and help panels
- Scrollable inbaskets and outbaskets
- Uncomplicated text entry ● Mailing lists
- Bulletin boards ● Calendar features
- Timely Reminders "tickler file" (arrange for messages to be sent at some future date)
- Automatic new-mail notification
- Mail classes (partition Emc² into virtually separate mail systems)
- Efficient data base storage ● Simple installation
- Low administrative overhead
- Application programming interface

PLUS
- Electronic mail *networking* between mainframe sites
- *Integrated PC support* and *integrated PC file transfer*

INTRODUCE YOUR DATABASE TO INTELLIGENCE OF A HIGHER ORDER.

The intelligence we speak of isn't science fiction. It's science fact.

In fact, it's the Information Expert™ from Management Science America, Inc. The fourth generation technology that not only recognizes the limitations of database vendors but addresses them.

For example, Information Expert allows all your software systems to work in a completely new manner. Together. In unison. In seconds. Whether it's with existing software or new software.

But not only will we put your systems on speaking terms, they'll be speaking the same language. English (or any local language input you use).

There's even a data dictionary so nothing will ever sound like Greek.

If it appears we're saying end users will find our system easy to use for designing reports, we are. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides fourth generation language that your data processing staff can use for applications development. What's more, it's more efficient and easier to use than COBOL. So you can do in minutes what used to take hours. Or do in hours what used to take days.

Then, to speed things up even more, our system ignores all boundaries and allows borderless retrieval of information. That way, you can get all the information you need. Not all the information you don't need.

All of which proves one thing. If you want more intelligent software, go to a more intelligent software company. MSA. For more information, call Robert Carpenter at 1-404-239-2000.

Rational unveils development system for Ada projects

R1000 said to improve creation, maintenance

MOUNTAIN VIEW, Calif. — Rational has introduced the R1000 Development System, a combined hardware and software system that supports Ada language software development projects.

According to a spokesman, the R1000 Development System was designed to improve the production and maintenance of large Ada applications, including systems for computer-aided engineering, banking, industrial process control and defense and aerospace. The R1000 consists of the R1000 processor and the Rational Environment, which supports the design, implementation, test, integration and maintenance of Ada software.

The R1000 processor is said to provide the processing, storage and communications facilities required for Ada development projects. It is based on a proprietary architecture developed to support the Rational Environment and interactive, multiple-programmer software development. The processor provides up to 1.9G bytes of unformatted disk capacity and includes a streaming tape drive supporting densities of 1,600 or 6,250 bit/in. It also supports up to 64 asynchronous communications lines.

Rational also offers the Rational Terminal and Printer. The Rational Terminal was designed for Ada software development and provides a full-page, 66-line by 80-char. display and custom keyboard.

The Rational Environment is said to provide interactive support capabilities and replaces the operating system and tools of a general-purpose computer. It incrementally checks a programmer's code for syntactic and semantic errors and correction. It also completes the syntactic structure of program fragments. Users interact with the Rational Environment through the Rational Editor, a multiple-window, full screen editor through which users can enter data and commands, edit objects and receive program output.

The Rational Environment also includes an Ada compilation system validated by the U.S. Department of Defense. The system features an incremental compilation capability that allows developers to make changes without recompiling a module.

The Rational Environment offers a source-level debugger, configuration control facilities and project management and control capabilities.

Pricing for the R1000 Development System begins at $696,000, the vendor said.

Rational is located at 1501 Salado Drive, Mountain View, Calif. 94043.

informatics general corporation

application development report: MARK V

HARRISBURG MARATHON PROVIDES TRIAL RUN FOR MARK IV® AND MARK V® SOFTWARE

Within two hours after the last runner had crossed the finish line at the Harrisburg Marathon, Pennsylvania Blue Shield, chief sponsor of the annual event, had completed a computer-generated report on the run times and standings of the Marathon's 900 entrants and delivered it to the news media.

This was in sharp contrast to the previous year when it took approximately three days to get the Marathon results to the media. The greater responsiveness this year was largely the result of moving the Marathon application from an in-house Prime computer to Blue Shield's IBM 3081 system running in an IMS environment. The reprogramming of the Harrisburg Marathon application, completed in record time, was Blue Shield's initial test project for MARK V and MARK IV, Application Development Systems from Informatics General Corporation for generating online and batch applications respectively.

"We wanted to get acquainted with MARK V on a relatively simple and straightforward application like the Marathon before we began our full-scale pilot project, a new online claims processing system," Thomas M. Cline, Systems Development Supervisor, explained.

Programming the Marathon application consisted basically of creating and maintaining an online Entrant File including four screens to (1) maintain basic entrant information (name, address, phone number, and a "TAC" number to be used for Olympic identification in case the runner qualifies for the U.S. Olympics); (2) maintain control information (payment of fees, lunch and dinner reservations, etc.); (3) record the run time of each of the approximately 980 entrants; and (4) provide a menu for accessing the other three screens.

To produce reports in addition to the online portion of the Harrisburg Marathon application, Blue Shield used another Informatics Implementation System, MARK IV, to produce the required batch reports. A productivity tool designed for generation of batch applications, MARK IV also had its "trial run" for Blue Shield with the Marathon application.

Approximately 12 different reports were produced for the Marathon, including check-in sheets for use on the day of the race (cross-referencing the runners alphabetically and by runner number), three sets of mailing labels, and several types of reports listing the finishers by time, sex, and class of the runner. The reports on finishers were prepared for the news media, for internal use, and for the Athletic Congress listing any runners who qualified for the U.S. Olympics.

1983 was the eleventh year that the Harrisburg Marathon has been run. Unlike the famous Boston Marathon, which requires that entrants meet qualification standards, anyone can enter the Harrisburg event. The grueling course — 26 miles and 385 yards in length — begins near the Pennsylvania State Capitol building and winds through the streets of Harrisburg and the surrounding countryside.

Each year, large numbers of Pennsylvania Blue Shield employees volunteer their time to help with the race. "Probably 30 percent of our DP staff were involved in some kind of volunteer work for the Marathon," said Hugh Gallagher, also a Systems Development Supervisor, who coordinated the record-keeping for the Marathon. "This included registering entrants, manning water stations, keeping track of times, all sorts of things. For example, our Director of Systems Development, Karl Mundis, was in charge of one of the water stations, and I was in charge of the finish line."

Everything about the Marathon was done on a volunteer basis — including the programming for the new online Entrant File application, which was done primarily in evenings, lunch hours, and weekends, with Tom Cline doing most of the programming himself in MARK V and MARK IV.

"Our time for preparing this was so short that some of the software had never been tested prior to the day of the race," Gallagher recalled. "Fortunately, it worked like a charm."

"One of the things I found in implementing the Harrisburg Marathon application was that you don't need a lot of in-depth knowledge of IMS to use MARK V in a straightforward application like this, where you're just going in against a data base to update and add segments," Cline noted.

"I found that MARK IV and MARK V complemented each other very well," Cline added. "I found that with MARK IV, once I had established a set of reports, it was very easy to go back in and change a report, or set one up with a different set of selection criteria. I found I could make a change to a report in minutes. If I'd been working with COBOL, as I have in the past, this would not have been a matter of minutes."

"So far, we've only just gotten our feet wet with MARK IV and MARK V," Cline concluded. "But it looks quite promising in terms of potential productivity increases. I'm particularly impressed by the flexibility I've seen in setting up our initial application — the ability to make changes in a very short period of time."

I would like to see how the MARK Series can help me with my CICS, IMS/DC and batch programming.

Burroughs provides Linc enhancements

DETROIT — Burroughs Corp. has announced the Logic and Information Network Controller II (Linc II), a successor to its Linc fourth-generation applications generator. The package runs on Burroughs mainframes, from the B1000 to the A 15.

Linc II enhancements include interactive systems development and screen and report painting capabilities, a data dictionary, synchronized recovery and real-time communications between multiple applications systems, a spokesman said.

With Linc II, users can generate design prototypes, screen and report formats, transaction processing logic and special report and inquiry functions.

Linc II provides multiple language support, in both the interactive system development process and in Linc II-generated applications. Linc II is integrated with Burroughs systems software and operates without conversion on Burroughs mainframes, the vendor said.

Linc II prices begin at $36,000. Shipments are scheduled to begin in the fourth quarter.

Burroughs is located at Burroughs Place, Detroit, Mich. 48232.

SYSTEMS SOFTWARE

■ Tone Software Corp. has announced TS-Dears, a data-entry and retrieval system intended to enhance the usability of IBM's CICS in DOS/VSE, VS1, MVS and MVS/XA environments. TS-Dears runs as a CICS transaction.

TS-Dears enables an installation to develop on-line interactive applications for data entry and retrieval without requiring any knowledge of CICS programming. The applications are developed with the aid of the TS-Dears screen-painting facility. Data can be stored in and retrieved from any Vsam data set.

TS-Dears incorporates a data-validation language said to ensure the integrity of data as it is entered. Data-entry features include automatic

batch number assignment and a batch directory status display.

TS-Dears costs $15,000. Leases are available.

Tone Software, 1735 S. Brookhurst St., Anaheim, Calif. 92804.

■ Dias Corp. has released an enhanced version of its PCLink/1000, which provides file transfer capabilities from a number of microcomputers to Hewlett-Packard Co. HP 1000 minicomputers.

PCLink/1000 1.1 resides on an HP mini and runs under HP's RTE-VI/VM and RTE-A operating systems. Binary and text files can be transferred with the product. The package supports transmission rates up to 19.2K bit/sec.

PCLink/1000 costs $1,995 for a single CPU license or $4,995 for a site license.

Dias, 363 Cretin Ave. S., St. Paul, Minn. 55105.

■ Touch Technologies, Inc. has announced a high-performance sort package for Digital Equipment Corp. VAX processors under VMS Versions 4 and 4.1.

TTI Sort includes a transparent interface between user applications and the VAX-11 Sort. The package supports calls through DCL from both immediate mode commands and command files.

No command changes are necessary, so existing command files in DCL can be used without modification, according to vendor.

TTI Sort costs $1,295 for the first processor and $300 for each additional processor.

Touch Technologies, Suite 101, 609 S. Escondido Blvd., Escondido, Calif. 92025.

■ Western Computer Services, Inc. has announced Release 2.2 of Resource Executive (RX), an adjunct to IBM's RSX operating system that controls traffic flow and systems security for IBM's Series/1 minicomputer.

RX substitutes menu options for extended EDX command strings, allowing end users to use the system easily, a spokesman said. With RX, security ratings reportedly can be assigned to each menu option and to each user.

RX tracks and records system use and queues all batch jobs so that high-priority jobs are run first, according to the vendor.

RX searches for additional memory if insufficient memory is available for a job, and it broadcasts messages to any combination of terminals, a spokesman said.

To install RX, a user needs a minimum of 28K bytes of free memory, 2,500 records of free, contiguous disk space, EDX Version 3 or later, at least one installed IBM 4978, 4979 or 3101 block mode terminal, a diskette drive and IBM's Sort/Merge command or the equivalent.

RX costs $1,995 in single quantities.

Western Computer Services, Livery Sq., 33 Neill Ave., Helena, Mont. 59601.

■ Softouch Systems, Inc. has introduced a windowing facility for terminal users accessing IBM mainframes running OS under CICS.

CICS-Windows allows terminal users to access up to four windows and conduct concurrent sessions. CICS transactions can be initiated from and respond to any of the open windows while the concurrent sessions are active.

Single-keystroke operation, full panning functions and instant switching capabilities between full screen and window mode are included. Data can be transferred between applications in open windows, the vendor said.

CICS-Windows costs $7,500 for IBM DOS and $10,000 for OS operating systems.

Softouch Systems, 8265 S. Walker St., Oklahoma City, Okla. 73139.

PRODUCTIVITY AIDS

■ PAE, Inc. has announced a series of productivity aids for IBM's System/38.

Tuner/38 is a storage management system that works to allocate storage between System/38 subsystems. The product allows users to put a maximum and minimum storage capacity level on an S/38 subsystem. It costs $1,100.

Timer/38 is a job scheduling system that automatically powers down a system after all-night processing and brings the subsystems up in the morning.

The product can be used to control batch and maintenance processing. It costs $500.

Librarian/38 is a tape and diskette management system that includes a Spool Management System. The product gives users the ability to save output on tape or diskette by selecting a menu option. It costs $500.

The Qinbetween utility allows users to take print jobs out of either the System/38 Qbatch or Qinter files to improve job queue performance time. It costs $500.

Paegraph is a graphics display system for analyzing job responses. It costs $300.

PAE, 7 Riverway Road, Salem, Mass. 01970.

■ Pansophic Systems, Inc. has announced that Gener/Ol, its on-line program development system for IBM's CICS, now supports IBM's 3179 Model G graphics terminal.

Gener/Ol supports the use of the mouse pointer, graphics cursor and host-addressable plotter available with the 3179G, according to a spokesman.

Gener/Ol uses Release 4 of IBM's Graphic Data Display Manager software as a device driver to the IBM hardware.

Applications developed under Gener/Ol, including graphics and nongraphics applications, will run on the 3179G without modification. Ap-

plications developed using the 3179G can be run on other properly equipped IBM devices.

Gener/OI costs $35,000 for DOS and $48,000 for OS.

Pansophic Systems, 709 Enterprise Drive, Oak Brook, Ill. 60521.

■ MB & Associates has announced utilities for cross-referencing JCL and accessing partition data sets (PDS) in IBM OS environments.

VXREF is a cross-reference utility that produces reports on file, program and job relationships. A job report indicates procedures, programs and files used in selected jobs. A data set report identifies jobs, procedures and programs that use each of the files in the job run.

VSRCH allows users to search and print partition data sets. The product allows users to find and modify JCL statements affected by a change, print or copy selected members in a partition data set, generate new PDS members and perform global changes on partition data sets, according to the vendor.

VSRCH and VXREF are priced at $5,900 each.

MB & Associates, Suite 300, 97 S. Nome St., Aurora, Colo. 80012.

APPLICATION PACKAGES

■ National Business Systems, Inc. has announced that its Total Office Support System (Toss) now supports electronic mail for documents created on IBM Personal Computers or on word processors attached to Wang Laboratories, Inc.'s VS minicomputers.

According to a spokesman, the enhancements allow documents created on a VS word processor and IBM Personal Computers equipped with a Digital Communications Associates, Inc. Irma communications board to be transmitted to a mainframe and distributed to designated recipients by Toss. Documents initiated by Toss users can be transmitted to the Wang and IBM micros for formatting or inclusion into longer reports.

Toss is priced at $15,000 for the DOS version and $36,000 for MVS. Leasing is available for $500 per month for DOS and $1,200 per month for MVS. The Wang VS and IBM Personal Computer interface prices, based on configuration, begin at $3,700 for DOS and $7,200 for MVS.

National Business Systems, Avon Park S., 80 Tower Lane, Avon, Conn. 06001.

■ Calma Co. has announced Release 3.1 of its Tegastation computer-aided engineering software for integrated-circuit and printed-circuit board design performed on Apollo Computer, Inc. Domain workstations. The software now supports Apollo's Aegis 8 operating system and the Apollo Domain DN 320 model workstation, which is a DN 300 with a floating-point processor.

The Tegas schematic capture graphics function in Tegastation 3.1 now supports very large-scale integration circuit design. In addition, 1,400 system-level simulation models are said to be available.

Stand-alone models of the Apollo workstations with Release 3.1 of Tegastation cost from $24,500 to $44,000 for Apollo DN 300 and DN 320 models, $74,500 to $93,000 for Model DN 460s and $60,000 to $108,000 for Model DN 660s, depending on system configuration.

Calma, 501 Sycamore Drive, Milpitas, Calif. 95035.

■ RTC Systems, Inc. has announced RTC/38 Security and Help Text Control software. The package provides multiple layers of security and Help text on the IBM System/38.

Written in IBM's RPG-III, the product provides five levels of security control: password and user identification, organizations, menus, program fields and screen fields. Users can design and modify user access levels, the company's organization structure, menus, program levels and data field access.

Help Text is user defined, on-line and real-time, the vendor said. It assists users with step-by-step instructions.

Features include customized context and command keys and highlighted instructions.

The product costs $995, according to the vendor.

RTC, 609 West St., Mansfield, Mass. 02048.

■ Design Consultants, Inc. (DCI) has announced Release 5 of its Project Monitor project control software, which now runs on Hewlett-Packard Co.'s HP 3000 and Wang Laboratories, Inc.'s Wang VS series computers.

Also available for IBM mainframes, Project Monitor reportedly allows users to set up projects independently or from an established methodology. It facilitates data preparation for scenarios that test the impact of new projects on existing schedules, the vendor said. Project Monitor can also be used to update a centralized data base for tracking corporate projects.

The product costs $12,700.

DCI, Suite 225, 100 Progress Pkwy., St. Louis, Mo. 63043.

■ Polygon Associates, Inc. has introduced VAXFR, software that permits data sharing and file transfer between Digital Equipment Corp. VAX computers and a variety of microcomputers.

When used with Polygon's Poly-COM or Poly-XFR terminal emulation and file transfer products for microcomputers, VAXFR permits bidirectional file transfer and allows users to back up personal computer files on the DEC VAX. It also enables users to conduct direct transfer of personal computer files to and from VAX electronic mail systems and perform direct spooling of personal computer files to VAX printers, according to the vendor.

SOFTWARE & SERVICES

Continued from page [illegible]

Poly-COM and Poly-XFR cost $586 each, run on HP 150 and HP 110 micros, the DEC Rainbow and the IBM Personal Computer line. VAXFR is free.

Polygon Associates, 1024 Executive Pkwy., St. Louis, Mo. 63141.

Calma Co. has introduced a computer-aided engineering and design system for heating, ventilation and air-conditioning (Hvac) applications.

Dimension III Hvac Design Package is a three-dimensional system for use with Calma's Dimension III system software that runs on 32-bit Digital Equipment Corp. VAX machines or Apollo Computer, Inc. systems. The Hvac package combines systems diagram, three-dimensional computer modeling, material selection and control and drawing production capabilities.

Other features of the system include a component library and display functions for drawing and editing.

The Dimension III Hvac system costs from $12,000 for Apollo systems to $60,000 for DEC VAX systems.

Calma, 501 Sycamore Drive, Milpitas, Calif. 95035.

DATA BASE MANAGEMENT SYSTEMS

Battelle Software Products Center has announced that its Basis data management system is now available for Digital Equipment Corp. VAX processors under AT&T Unix System V.

Basis also runs on a variety of minicomputer and mainframe systems, including Prime Computer, Inc. minis and IBM mainframes under IBM's VM and MVS operating systems. The product costs from $15,000 to $38,000 depending on hardware configuration.

Battelle Software Products Center, 505 King Ave., Columbus, Ohio 43201.

CRI, Inc. has announced Release 4.5 of Relate/3000, a relational data base management system and fourth-generation language for Hewlett-Packard Co. HP 3000 systems.

Enhancements to the product include optional crash-proof access; expanded index support that permits the definition of up to 30 indexes per file; improvements to concurrent, multiuser access functions; and the ability to add fields without reloading a file. Relate/3000 costs $18,500.

CRI, 5333 Betsy Ross Drive, Santa Clara, Calif., 95052.

LANGUAGES

Honeywell, Inc. has announced the Gcos 6 Ada Compiler System, validated by the U.S. government's Ada Validation Office, for use on its DPS 6 family of small computers.

Honeywell's Ada Compiler System conforms with Ansi/MIL/STD-1815A specifications. In addition to the compiler, the Gcos 6 Ada Compiler System includes Ada Linker, Ada Symbolic Debugger, Package Standard Builder, Program Library Manager and Program Library Utilities. The Gcos 6 Ada Compiler System costs $13,475.

Honeywell, 200 Smith St., Waltham, Mass. 02154.

EVB Software Engineering, Inc. has announced the Generic Reusable Ada Components for Engineering (Grace), which was designed to aid Ada users developing applications.

The software runs on any processor that supports a full implementation of the Department of Defense's Ada, including the Digital Equipment Corp. VAX series and the Data General Corp. MV/Eclipse series.

According to a spokesman, Grace software enhances the development effort of more experienced Ada users by removing the need to code low-level components. The Grace software license authorizes

each customer site to copy the software and documentation without limitation, providing the copies are not transferred to other sites or resold.

Components are delivered with documented source code, design documentation, an example of the component's usage in larger applications and EVB's in-house coding style guide.

The cost per individual component is approximately $100.

EVB Software Engineering, Suite 701, 451 Hungerford Drive, Rockville, Md. 20850.

■ **Productivity Products International, Inc. has announced an enhanced version of its Objective-C compiler, which supports the C language, plus message and object extensions developed by Productivity Products.**

Objective-C is available for AT&T Unix-based processors.

Prices for Objective-C range from $400 for the IBM Personal Computer to $7,200 for the DEC VAX-11/730. Users receive a reference manual, executable code on floppy disks or magnetic tape, two libraries of reusable components to build a compiler or new products and an introductory course.

Productivity Products International, 27 Glen Road, Sandy Hook, Conn. 06482.

■ **Masscomp Co. has introduced Fortran 3.1 for its MC-500 series of minicomputers. According to the company, the Fortran release reportedly increases the floating-point performance of its Motorola, Inc. 68000/68010 microprocessor-based systems.**

The new version includes an enhanced symbolic debugger, access to window manager and access to the AT&T Unix profiler.

The product will be available in February and is standard on all Masscomp systems. Base price of a Masscomp system is $25,900 and can range up to $150,000 depending on the disk, tape and configuration.

Masscomp, Suite 200, 124 Mount Auburn St., Cambridge, Mass., 02138.

REMOTE COMPUTING SERVICES

■ **NL Baroid has introduced an expert system-based service designed to decrease the risk of problems in oil field drilling operations.**

Mudman is a computer-aided drilling diagnosis system that allows an NL Baroid representative at the well site to enter data about drilling fluids into a portable computer in the field.

The data is transmitted to a Digital Equipment Corp. VAX-11/780 computer at NL Baroid's Houston headquarters, where an expert system recommends solutions to the problem.

Cost of the Mudman service is $350/day.

NL Baroid, P.O. Box 1675, Houston, Texas 77251.

ON-LINE DATA BASES

■ **BRS Information Technologies (BRS) has introduced an on-line information retrieval service for word processing systems and microcomputers that use asynchronous 300 or 1,200 bit/sec. modems.**

BRKTHRU is a bibliographic search service that gives users access to more than 65 data bases stored in a BRS central computer. Subjects covered include business, finance, science, technology and medicine. The service is available for a one-time fee of $75, according to the vendor.

BRS Information Technologies, 1200 Rt. 7, Latham, N.Y. 12110.

METHODOLOGIES

■ **Database Design, Inc. has announced Version 2 of its Information Planner package for automation of strategic data planning methods. The product runs under IBM's OS and MVS operating systems.**

A spokesman said Version 2 identifies specific data base components and related applications that should be implemented as a single development project and ranks all such projects by their contributions to corporate goals. Other enhancements in

NBS

from page 55

the data structure can be supported in any environment, the NBS said.

According to the guide, the logical data base design should be an integral part of the life-cycle development of the information system. The NBS guide recommended that logical data base design work be performed concurrently with requirements analysis and system design and before the physical data base design.

> *The logical data base design should be an integral part of the life-cycle development.*

Specifically, the logical data base design methodology has four phases:

- Local information flow modeling, in which data flows are modeled for individual applications.
- Global information flow modeling, in which the individual data flows are modeled together for a view of the entire system.
- Conceptual schema design, where data within the data flows is defined in terms of its functional use.
- External schema modeling, where data is modeled from the point of view of the user.

The result is that all of the subsystems, data flows, data structures and user views of the data bases are described before the data base is physically designed, the guide said. Because the logical design process is done iteratively, there exists "a means for verifying the results of the different phases against one another," the guide said.

The NBS researchers also recommended the use of an automated data dictionary system to handle conveniently and accurately the volume and complexity of design documentation.

The NBS publication, "Guide on Logical Database Design," is available for $4.50 from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402. Order by stock number 003-003-02631-0.

Continued from page 67

the release expand the software's reporting capabilities, increase tolerance of accidental interruptions and simplify data exchange with external software products, according to the vendor.

Information Planner 2 is priced at $35,000.

Database Design, 2020 Hogback Road, Ann Arbor, Mich. 48104.

■ Marium Management Corp. has introduced a methodology for generating end-user documentation on standard word processing systems.

The User Guide Generator (Uggen) provides document writers with a methodology that includes standards and a library of formats to design, administer and produce documentation for automated and nonautomated systems, a spokesman said.

Uggen identifies participant responsibilities, establishes standards and defines deliverables in a life-cycle methodology, the vendor said.

The product is priced at $35,000.

Marium Management, P.O. Box 66, 3072 Crompond Road, Yorktown Heights, N.Y. 10598.

TRAINING

■ Control Data Corp. has announced a microcomputer-based computer-aided design and drafting training course developed by the company's Computer-Integrated Manufacturing (CIM) Division using its Plato computer-based training methods.

The 22-hour Plato computer-based course trains a user to construct, manipulate, dimension, display, file and retrieve parts and production drawings. Titled Icem Design/Drafting, the course trains users in CDC's Integrated Computer-Aided Engineering and Manufacturing (Icem) software.

Users study material on an IBM Personal Computer or compatible. Exercises are completed using a computer-aided design workstation. A set of disks and laboratory workbooks are provided.

The price for the Icem Design/Drafting course is $500.

CDC, CIM Training Delivery, BTC331, 1450 Energy Park Drive, St. Paul, Minn. 55108.

■ Science Research Associates, Inc. (SRA) has introduced a tutorial for users of IBM's Displaywrite 3 word processing package.

"Using Displaywrite 3" is a 20-hour, two-volume course for use with the IBM Personal Computer. The first volume teaches users to create, print, revise, format and paginate documents. Volume two instructs users on revising complex documents, merging text, spelling checks, diskette formatting and using utilities and directories.

The tutorial costs $300 and includes two handbooks, an administrative guide and four training diskettes.

SRA, P.O. Box 5380, Chicago, Ill. 60680.

Stuff it to JES

CICS, DSPrint, IMS, and SAS* Reports

The Dynamic Report System provides a bridge between on-line systems and the JES report queues. Move it all to JES and gain performance along with centralized report distribution. Let JES account for, archive and distribute reports to 327X printers, local printers, PCs, plotters, microfilm devices and 5210s.

And Let JES Distribute Your 328X Reports

VPS, the VTAM/TCAM Printer Support subsystem places 328X/328X printers, PCs, plotters, 5210s, and word processors directly under JES. These non-dedicated devices become JES II/III print stations. VPS expands JES's local and remote hardcopy alternatives as it reduces real network costs and complexity. Ask our 400 users and their 20,000 printers.

Reach over 30,000 Australian computer professionals.

Advertise in CW Communications' Australian publications and sell your products directly to Australia's thriving computer community. According to International Data Corporation (IDC), the world's leading information industry research firm, there are more than 2,300 mainframe computer systems installed in Australia and more than 333,000 computers of all types. CW Communications covers the Australian market with five important publications.

10,000 MIS/DP executives read *Computerworld Australia* each week. *Computerworld Australia* covers new products and services, current applications and industry trends. *Computerworld Australia* subscribers will also receive *On Communications*, a quarterly publication for communications professionals which helps readers plan their communications strategies. And, on the third Friday of each month, an additional 12,000 readers receive *Australian Microcomputerworld*, a supplement with in-depth information on the microcomputer industry.

Twice each month, 12,000 IBM PC owners and potential buyers turn to *Australian PC World* for timely information about IBM PCs and compatibles.

Australian Macworld is the only magazine in Australia for the Macintosh user community. This bi-monthly publication reaches over 12,000 owners and potential owners of the Macintosh.

CW International Marketing Services makes advertising your products in Australia, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail today.

The more se you are about dial mod the better we look.

Talk to most so called "networking companies" about point-to-point dial networking and you'll probably get a big song and dance, but very few products.

Codex, on the other hand, offers a complete repertoire of dial modem solutions. To meet any need.

We offer a full line of 2400 bps modems, proven in benchmark studies to be more accurate, more reliable over degraded lines than any other modems on the market.

We offer Bell-compatible and international modems.

We even offer modems that have a sophisticated error-correcting feature.

The fact is, we offer the most complete dial modem line in the industry.

Which means one thing: when you talk to a Codex applications expert you're talking to a person who can be totally objective in recommending products for your environment.

Maybe that's why in a recent industry wide survey we were chosen as the preferred modem supplier.*

Maybe that's why you should be talking to us, too.

CONVERT

from page 55

vide information to assist the conversion.

The next phase of a conversion project involves collecting necessary conversion materials. These include a file layout, a partial file dump, systems documentation and, if possible, a data dictionary of the applications to be converted.

> *The systems conversion process should begin with a formal conversion definition. The conversion team's charter should specify the scope of the conversion as well as the time allotted for it.*

Programmer verification

A programmer should be assigned to verify that each field on the file layout corresponds to the test conversion tape, so that discrepancies can be resolved before testing begins.

At the same time, systems analysts can evaluate data element relationships between the old and new systems, evaluating each data element in the old system and finding its counterpart in the new one. It is important to weigh each data element on its own merits. Should it be converted? How?

Careful evaluation is particularly essential with financial data since field sizes vary from system to system. When a one-to-one correspondence between an old and new data element cannot be established, further analysis, and perhaps a policy decision on the part of the institution, may be required.

Lead analyst's documentation

Throughout the conversion, the lead analyst should be responsible for documenting the analysis in a functional system design format. One form of documentation could be a cross-reference functional system design incorporating four columns.

The first column shows the location of the data element in the old system by position and data name, while column two gives the field location of that data element by data name and position in the new data base. The third column provides users with the user-friendly, or common, name of the data element. It may also identify the screen or form used for entering the data. Column four describes the operation that will transfer data elements to the new system.

The functional system design should be completed in a building block fashion, and it is useful to take an incremental approach to its approval as well, with users reviewing each logical section of the design as it is finished.

Once approved, the requirements are then frozen.

To reduce problems resulting from altering requirements after review, set up a formal change-control procedure to consider and ratify any proposed revisions.

Once the functional system design is under way, programming can begin for the conversion process. Of course, a complete system cannot be written before requirements are fully defined. However, some features of the conversion are apparent before the design is complete. These include output, the format and content of the new data base; input, a partial list of incoming data from the old system; and data elements, such as a customer name, which can be moved as is from the old to the new system.

Programmers can set up a skeleton program to read data from the old system, process data for obvious "move as is" cases and format it for input into the new system.

Then, as each section of the system design is approved, the programmer can concentrate on fine-tuning programs instead of starting from scratch. This process makes for a more rapid conversion, since design and program development can progress concurrently rather than serially.

Test to ensure effectiveness

As soon as all conversion programs have been written, a test conversion should be performed. The test ensures that the programs are effective and verifies the accuracy of the test conversion materials.

For banking applications, for example, conversion materials should include data in a readable format for each account; totals by branch and instrument category, along with a grand total; and a dump of the first 50 records from the conversion tape, to allow the programmer to validate record formats.

Once dollars and number of accounts balance, a full-fledged test conversion can be tried. Validation of the test conversion is identical to any other test. Each data element of a random sample of converted accounts is checked, along with sub- and grand totals for dollars and number of accounts.

Once all these procedures check out, full conversion of the live data base can begin.

Rothschild is senior banking consultant for Computer Task Group, Inc. He recently directed the conversion of all commercial bank applications for a newly established bank.

[*KEYFAST* Online Data Entry System from H&M]

Monitoring data capture

KEYFAST, state-of-the-art online data capture [illegible] users control over all their data. Simply. From prompted format painting and edit check definition through data capture and offloading for further processing. This is made possible with optimum user guidance, menus, prompts, help screens (system-supplied and user-defined). Once created, formats are ready for immediate use (no CICS table entries required). Entry data can be checked or supplemented using the table features and multi-record and multi-format entry is possible on one screen. Automatic IF-THEN-ELSE logic.

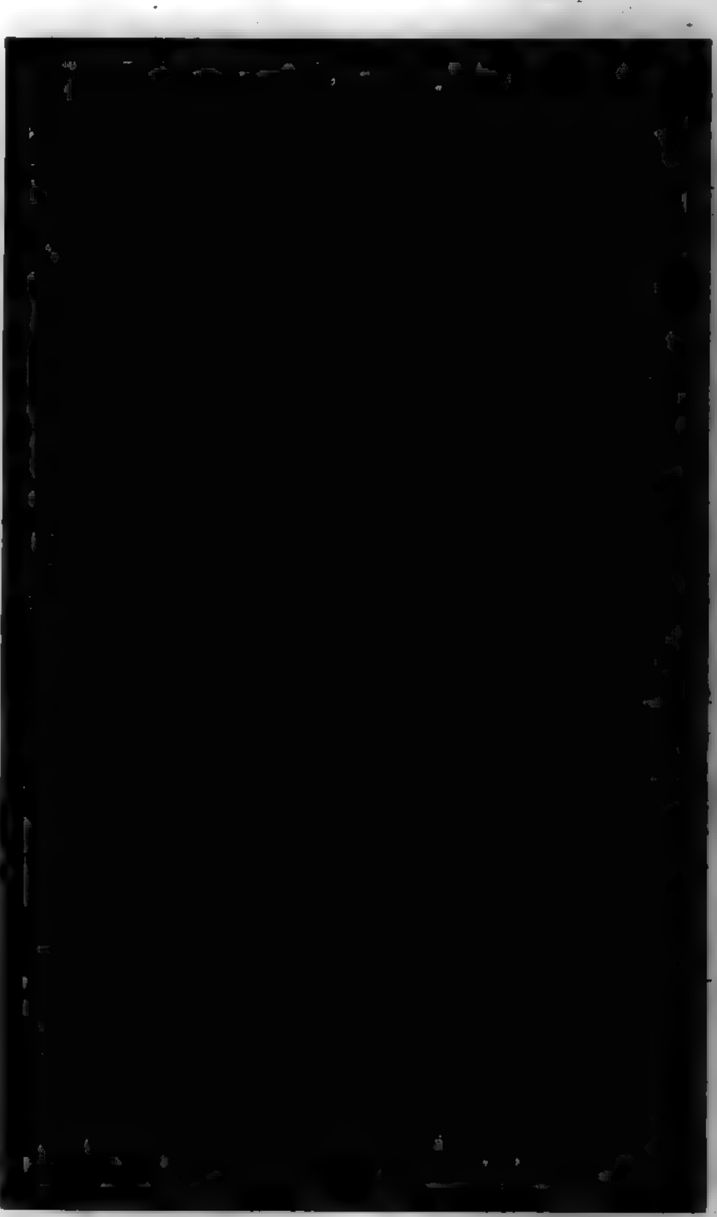
The time has come for straight talk about database management systems.

"The only reason to buy a database management system is to build better applications."



Throughout the history of the software industry, proponents of one database architecture after another have promoted their respective systems as the sole solution to a company's application backlog problem.

The early debate centered on hierarchical versus network architecture. Advocates of inverted file entered the argument in the 70's. And today, relational is the architecture of choice.

While this discussion about architecture is interesting, it's just not the issue.

Database management systems, beginning with the very first, were created to do one thing and one thing only—they were created to build better applications. *Building applications—efficient, online applications, faster, with fewer people—is the only real issue.*

Today corporations have a huge backlog to contend with. And the applications they need to develop have different characteristics. Some may be retrieval only. Some may be heavy on update. Some will run the company, and will require professional development. Some can be created by end users to satisfy their own needs.

It is extremely important to have a database management system that can handle all applications. *It is essential* that a database include tools rich and comprehensive enough to accommodate both the professional developer and the end user. It's the richness and power of these tools that's critical to the successful implementation of highly responsive fourth generation applications. What's demanded, in fact, is software that goes a *step beyond* today's conventional relational database systems.

With a comprehensive database management system and the appropriate tools like the kind I'm talking about, you'll make the data processing department a *strategic asset* instead of corporate overhead. You will make your company succeed in a highly competitive world.

In Cullinet's new Annual Report, Presidents and CEO's of major corporations speak about the positive impact Cullinet has had on their operations. For a copy that you might like to read and pass along to your company president, write to me. I'll see that you get one.

J. J. Cullinane

John J. Cullinane
Chairman of the Board

© [illegible] Cullinet Software, Inc., Westwood, MA [illegible]

The only database management system worth buying is one that meets these six requirements.

Stated simply, IDMS/R is a step beyond today's conventional relational DBMS because it meets these key requirements for building successful applications.

1. MIS Application Development Facilities

The application development system required to build high performance production applications requires more than a fourth generation language. Cullinet's ADS/OnLine is a comprehensive application development environment for the MIS professional combining fourth generation language with a menu-driven modular development approach. Integrated with the data dictionary, this minimizes not just the programming but the entire design, development and documentation of an application. Furthermore, this approach produces a dramatic reduction in maintenance and support.

2. End-User Application Development Facilities

Because Cullinet recognizes the difference between production and end-user applications, as well as the need for both to share common data, we provide an easy to use end-user oriented development and inquiry system. The Automatic System Facility of IDMS/R is a non-procedural, menu-driven tool designed for end-users. Once data tables are defined, an application is automatically generated. The query facility of IDMS/R provides menu-driven query capability and full online help, so end-users can build working applications in minutes and get reports easily and efficiently.

3. Relational Architecture

IDMS/R allows for the definition of databases using the relational data model. Data tables and associated user views are easily defined online. Additionally, any number of key fields may be defined. IDMS/R also supports advanced relational features including referential integrity and domain definition. This architecture provides the capability to address all application requirements.

4. High Performance Database and Application Tuning Facilities

IDMS/R is a full multi-tasking, multi-threaded system providing for concurrent processing of on-line and batch, update and retrieval applications. Additionally, tuning facilities provide efficient indexing techniques, space management, page management, and buffer management. No conventional relational DBMS has these capabilities.

5. Dictionary Driven DBMS

Data integrity and data independence are essential in a DBMS environment. The dictionary actively controls the source and use of all data. Data definitions, data validation criteria, data formats and security are all defined within the dictionary and exist only once, eliminating redundancy and ensuring integrity. This information is then automatically used throughout the system. Examples of the functionality of this facility include never needing to define output formats for query; never needing to define field attributes for screens; never needing to code validation and editing criteria when using ADS/OnLine. Only IDMS/R provides this level of dictionary integration.

6. Open System Architecture

With the unique Open System Architecture of IDMS/R you can maximize your investment in existing software. IDMS/R accepts data from outside the database environment with direct access to VSAM files. In addition, applications written to access other databases like IMS, DL/1, TOTAL, or VSAM can directly access IDMS/R without modification. IDMS/R is designed to work in virtually all IBM mainframe operating systems and teleprocessing monitor environments.

IDMS/R: More than a relational DBMS

400 Blue Hill Drive, Westwood, MA [illegible]

SAS Institute Inc. Announces

Lattice C Compilers for Your IBM Mainframe

Two years ago...

SAS Institute launched an effort to develop a subset of the SAS® Software System for the IBM Personal Computer. After careful study, we agreed that C was the programming language of choice. And that the Lattice® C compiler offered the quality, speed, and efficiency we needed.

One year ago...

Development had progressed so well that we expanded our efforts to include the entire SAS System on a PC, written in C. And to insure that the language, syntax, and commands would be identical across all operating systems, we decided that all future versions of the SAS System—regardless of hardware—would be derived from the same source code written in C. That meant that we needed a C compiler for IBM 370 mainframes. And it had to be good, since all our software products would depend on it.

So we approached Lattice, Inc. and asked if we could implement a version of the Lattice C compiler for IBM mainframes. With Lattice, Inc.'s agreement, development began and progressed rapidly.

Today...

Our efforts are complete—we have a first-rate IBM 370 C compiler. And we are pleased to offer this development tool to you. Now you can write in a single language that is source code compatible with your IBM mainframe and your IBM PC. We have faithfully implemented not only the language, but also the supporting library and environment.

Features of the Lattice C compiler for the 370 include:

- **Generation of reentrant object code.** Reentrancy allows many users to share the same code. Reentrancy is not an easy feature to achieve on the 370, especially if you use non-constant external variables, but we did it.
- **Optimization of the generated code.** We know the 370 instruction set and the various 370 operating environments. We have over 100 years of assembler language systems experience in our development staff.
- **Generated code executable in both 24-bit and 31-bit addressing modes.** You can run compiled programs above 16 megabytes in MVS/XA.
- **Generated code identical for OS and CMS operating systems.** You can move modules between MVS and CMS without even recompiling.
- **Complete libraries.** We have implemented all the library routines described by Kernighan and Ritchie (the informal C standard), and all the library routines supported by Lattice (except operating system dependent routines), plus extensions for dealing with 370 operating environments directly. Especially significant is our byte-addressable Unix®-style I/O access method.
- **Built-in functions.** Many of the traditional string handling functions are available as built-in functions, generating in-line machine code rather than function calls. Your call to move a string can result in just one MVC instruction rather than a function call and a loop.

In addition to mainframe software development, you can also use our new cross-compiler to develop PC software on your IBM mainframe. With our cross-compiler, you can compile Lattice C programs on your mainframe and generate object code ready to download to your PC.

With the cross-compiler, we also offer PLINK86™ and PLIB86™ by Phoenix Software Associates Ltd. The Phoenix link-editor and library management facility can bind several compiled programs on the mainframe and download immediately executable modules to your PC.

Tomorrow...

We believe that the C language offers the SAS System the path to true portability and maintainability. And we believe that other companies will make similar strategic decisions about C. Already, C is taught in most college computer science curriculums, and is replacing older languages in many. And almost every computer introduced to the market now has a C compiler.

C, the language of choice...

C supports structured programming with superior control features for conditionals, iteration, and case selection. C is good for data structures, with its elegant implementation of structures and pointers. C is conducive to portable coding. It is simple to adjust for the size differences of data elements on different machines.

Continuous support...

At SAS Institute, we support all our products. You license them annually; we support them continuously. You get updates at no additional charge. We have a continuing commitment to make our compiler better and better. We have the ultimate incentive—all our software products depend on it.

The competition...

If you would like to compare, the other vendors of 370 C compilers are: AT&T, Whitesmiths, Ltd., WATCOM Products Inc. (CMS only), Oracle Corp., Amdahl Corp. (UTS only), and IBM Corp. (VM/IX only). We think you will choose the Lattice C compiler from SAS Institute.

For more information...

Complete and mail the coupon today. Because we've got the development tool for your tomorrow.

SAS Institute Inc.
SAS Circle, Box 8000
Cary, NC 27511-8000
Telephone (919) 467-8000 x 280

I want to learn more about

☐ the C compiler for MVS software developers
☐ the C compiler for CMS software developers
☐ the cross-compiler with PLINK86 and PLIB86

today...so I'll be ready for tomorrow.

Please complete or attach your business card.

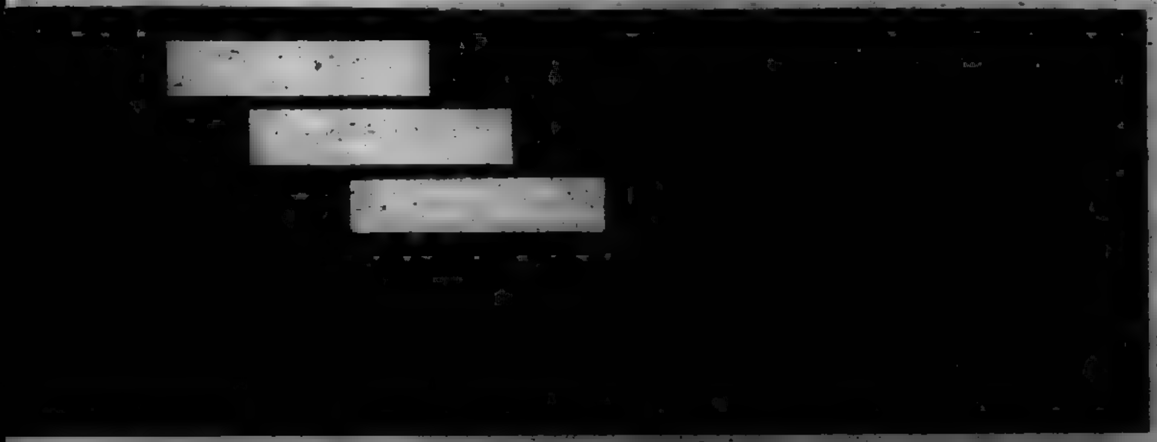
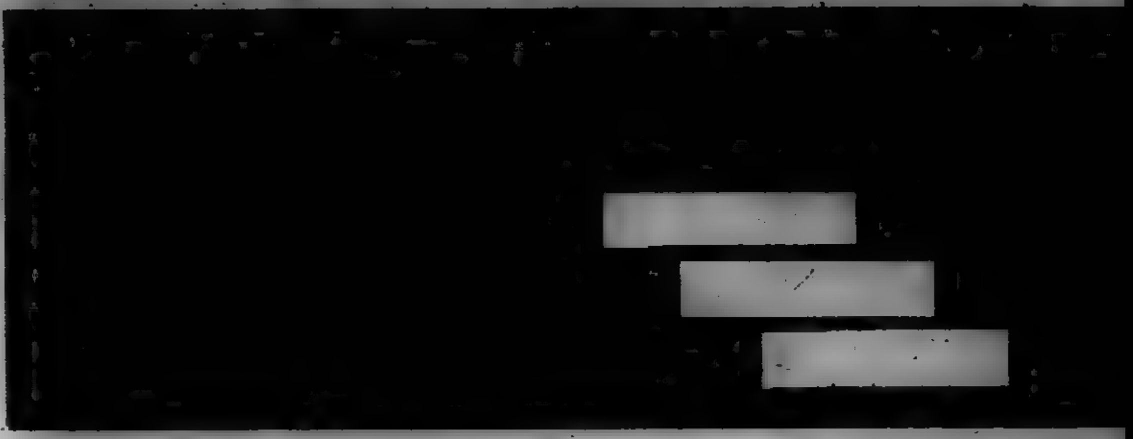
IN DEPTH



Part 1

By Ken Orr



Information systems managers today face four monumental problems: too much to do, too little time to do it in, too few good people and too many options. Industry experts say there's a software crisis, but in reality what exists is a software *management* crisis.

The pressures have created what appears to be an either/or choice: Cut the applications backlog by developing software faster or lift the maintenance burden by improving software quality. Presumably, the choice will dictate the action: To make better use of traditional systems development methodologies; to implement a more advanced, structured systems development methodology; or to take a fast-track approach with fourth-generation languages, prototyping and high-speed analysis. But these options aren't necessarily mutually exclusive.

This two-part series points the way to managing the software crisis. It is intended

IN DEPTH/SOFTWARE CRISIS

to provide a framework for the information systems manager to make intelligent decisions based on current trends and future directions in information technology. Part 1 defines the major trends in systems development methodologies over the last 15 years. Part 2 will look at three case studies and explore how organizations can take advantage of future advances in systems development methodologies and tools such as computer-aided software engineering.

Information systems managers today have enormous problems and opportunities. Their job is to harness the most important technology of the 1980s — information technology — and at the same time provide continuity with past investments that their organizations have made in information systems.

Clearly, there is no need to restate the impact that information systems technology has had upon modern business nor the potential that lies ahead. But in their enthusiasm, many people overlook the difficulties involved in managing this kind of technological change.

Because computers and software have become so powerful, top management has found more ways to employ computers for business purposes. That means an increasing amount of work for those involved. A recent survey found that application backlogs increased from 19 to 27 months in the last year.

Not only are there more new applications to program, but, unfortunately, there are still all the existing systems that have to be maintained. Industry estimates indicate that somewhere between 50% and 80% of software expenditures are tied up in maintenance of systems, a cost that is often higher than it should be because of the poor quality of existing software.

As the business environment becomes more volatile, the need for faster systems development increases. The competitive edge often hinges on time. As a consequence, the information systems manager is squeezed between his desire to produce quality systems and the needs of the business to bring systems on-line quickly.

The growing demand for information systems has also put a strain on the ready resource of skilled information systems professionals. I have yet to encounter a manager who would admit that he has enough good analysts or programmers. Department of Defense statistics show that there is currently a deficit of more than 100,000 software engineers, and that deficit may grow to 980,000 by 1990 unless new techniques are found to produce quality software more efficiently.

Finally, to complete our litany of management problems, the expansion of the information systems world has encouraged thousands of organizations to develop products for the information systems marketplace.

Francis Frank, vice-president of sales for Keane, Inc. of Boston, estimates that there are more than 40,000 applications packages available today.

Not only are there thousands of software packages for every imaginable need, but there are also hundreds of computers, operating systems, data bases and systems development methodologies — an overwhelming array of options.

It is possible to make a case that today's information systems technology is simply too much of a good thing. Improved technology is only valuable if it can be brought under effective management control, and a great many information systems managers today are having difficulty controlling the productive use of information technology.

Roots of growth

Quality and control are the roots of systems development methodologies. During the '70s, systems development methodologies became especially popular in organizations having trouble controlling the software development process. Software projects were getting larger, and many of the people involved were not trained or experienced in either project management or software development.

The defense community had developed a variety of tools and techniques for managing and controlling large hardware development projects, and the first commercial systems development methodologies translated many of these ideas

"WE JUST FOUND OUT THAT OUR LOCAL AREA NETWORK DOESN'T MEET OUR 'PERFORMANCE NEEDS.'"
"WE SHOULD HAVE GONE WITH CONCORD DATA."
Benjamin West. *The Death of General Wolfe,* 1770. Courtesy The Bettmann Archive.

In 1983 we made history with the world's first IEEE-802 broadband Local Area Network, and no one has topped us yet. Today, our Token/Net™ is the only 802.4 network with a record of proven performance. It was Token/Net that linked the computing and manufacturing equipment of Allen-Bradley, DEC, Gould, Hewlett-Packard, IBM® and Motorola at the 1984 National Computer Conference. And it is Token/Net that provides technology for the GM/MAP project and IEEE-802.4 compatibility for Allen-Bradley's VistaNet™ products.

If you're wondering why no one has caught up to us, the reason is simple: we helped develop the technology behind the standard. So while other companies are scrambling to get their *prototypes* off the drawing board— we're *delivering*. And because our high-performance network meets a standard that has been endorsed by IBM and virtually every other major computer manufacturer, your investment in our LAN technology is secure. If you're ready to marshal the full resources of automation, call us today at (617) 890-1394, or write 303 Bear Hill Road, Waltham, MA 02154, telex 951793.

Concord Data Systems
Leading the Communications Revolution

directly into software terms.

Results were mixed, however, when traditional software techniques, such as interviewing, general design, detail design and flowcharting were coupled with large numbers of project management forms (Figure 1). Management believed that it had better control of the software process, but in many cases, systems development methodologies became synonymous with paperwork and antiquated software development techniques.

For the most part, the first systems development methodologies did not attempt to solve any serious technical problems involved in the development of the structured, distributed, online, data-based systems of the '70s and '80s. They assumed, wrongly as it turned out, that most large organizations had staffs of trained programmers, analysts and data base professionals who already knew how to design state-of-the-art systems. All that was needed was better project management.

Although many organizations, particularly large ones, installed traditional systems development methodologies, they were often abandoned in practice.

Structured revolution

In the early '70s, at about the same time that the first, or traditional, systems development methodologies were beginning to be marketed commercially, a number of new ideas about software development were introduced. The application of these new ideas led to what has been called the "structured revolution."

The structured revolution began innocently enough by proposing the use of structured programming, but it also introduced a number of new concepts. A radically different waterfall chart arose in which top-down development comprised design-a-little, code-a-little and test-a-little techniques. Over time, however, there was a return to a more traditional view, with analysis or requirements definition playing a more important role up front.

Where the traditional systems development methodologies had stressed management control, the structured systems development methodologies stressed software quality. Structured programs were better because they were easier to maintain — they placed an emphasis upon requirements definition and design. And where traditional systems development methodologies had emphasized the use of forms, structured systems development methodologies emphasized the use of tools, especially graphics tools.

Where traditional systems development methodologies were targeted largely at managers, structured systems development methodologies were aimed largely at technicians: analysts, programmers and others. And where traditional systems development methodologies had emphasized standards manuals, structured systems development methodologies emphasized training.

The experiences with structured systems development methodologies, although mixed, were largely favorable. In general, programming improved, along with requirements definition, but structured systems development methodologies required much more work on the front end of the project. This caused conflict with traditional management techniques that encouraged early coding and testing.

Indeed, many of the most severe problems of the structured revolution occurred between the professionals who began using and promoting

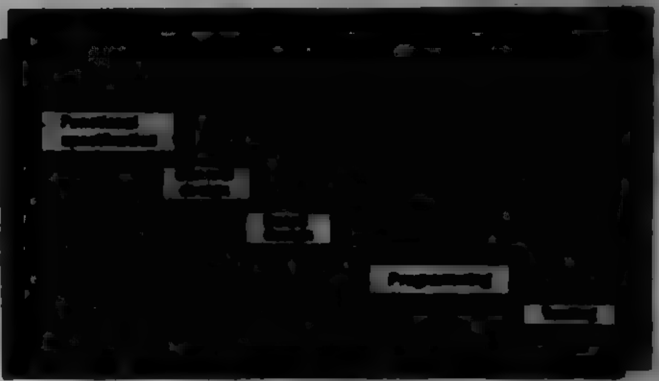

Figure 1

The first DBMS designed for online systems from the start, finishes first.

Compared to any other DBMS, CCA's MODEL 204 software is faster in a VM, OS, or DOS environment.

And, its productivity stays ahead of the pack even as you add more and more users. Incredibly, the MODEL 204 can support any size network from 30 to 30,000 terminals.

Like the cheetah's speed compared to other animals, the MODEL 204 was designed to be fast from the start. Because instead of being designed for batch, then retrofitted, this DBMS was specifically designed for online systems right from the start.

Impressive as its speed, is capacity. It can handle a few hundred records, or as many as 513 billion! With no limit on each record's size.

Because of its fourth generation tools, tough applications are easy to create, test, or change without affecting the database. And unlike any other DBMS, as your business data tracking requirements change, you can add or change new or existing fields without unloading, recompiling and reloading the database. A dramatic savings of time and manpower.

Very quickly, let us tell you more about MODEL 204's speed and superiority. Send the coupon for more information fast. Or, call 1-800-258-4100.

Send more MODEL 204 DBMS facts fast.

Software innovators creating better ways to manage business.

Save the

Millions of IBM PCs and compatibles are fighting for their lives.

Because users are demanding more and more storage space.

For bigger programs. For more applications. For downloading from the mainframe to the micro.

It's really more than a little PC can cope with.

Which is why a lot of people are replacing their PCs with XTs.

But now you can put an end to this senseless economic waste.

And save your company the massive cost of buying all those XTs.

With Hardcard.

A 10 megabyte hard disk drive on a card that makes a PC* function exactly like an XT. In fact, the only difference is that Hardcard has a faster access time than the XT's built-in drive.

It's also faster to install than any other add-on drive. Because everything is compressed onto a single card that quickly plugs into any expansion slot inside the PC. Which means you can rescue hundreds, even thousands of PCs in a day.

And with Hardcard's special installation software, your users can load the operating system and be ready to install their programs in minutes. Which saves your technical staff a lot of support time.

Hardcard also saves all that money you've invested in software. Because it runs all the most popular programs exactly like an XT would. With no extra fuss or modification. And its built-in file directory lets users arrange their files anyway they'd like. So they can boot up any application at the touch of a key.

As for reliability, there's simply less to go wrong. Because Hardcard has fewer parts than other drives. And absolutely no cable connections. Which makes it twice as reliable as the XT's built-in drive.

And Hardcard is the only add-on drive that lets your users keep both their floppies up and running.

But perhaps the most reassuring thing about this revolutionary

PCs.

concept is that it is based on totally non-revolutionary technology: the Winchester hard disk.

In fact, Hardcard was created by some of the same people who pioneered the 8" and 5¼" Winchester drives. And their company has a long history of producing reliable drives for some of the biggest computer manufacturers in the industry.

Because of Hardcard's superior reliability, we can offer you a warranty that goes well beyond the usual 90 days. We give you a full year. Should anything go wrong within the year, take it to your nearby authorized service location, and you'll get a replacement Hardcard. Immediately. Which means little to no down time.

And the price? Affordable enough to turn all your PCs into XTs.

Hardcard will be available during October at your local computer dealer. In the meantime, write for more information:

Plus Development Corp.,
1778 McCarthy Boulevard,
Milpitas, CA 95035.

And do your part to save these friendly, intelligent little machines.

*Hardcard is compatible with IBM PC, IBM PC XT, Compaq Portable, Compaq Plus, AT&T PC 6300.

Plus and Hardcard are trademarks of Plus Development Corporation. IBM, IBM PC and IBM PC XT are trademarks of International Business Machines Corporation. Compaq Portable and Compaq Plus are trademarks of Compaq Computer Corporation. AT&T PC 6300 is a registered trademark of AT&T Information Systems, Inc.

structured programming and their managers who had been brought up using more informal techniques.

Process vs. data

In the beginning of the structured revolution, there was more or less universal agreement over what constituted structured development: top-down development, goto-less programming, structured walk-throughs, chief programmer teams and documentation libraries. Those promoting structured systems development methodologies quickly broke into different camps, however, with one camp favoring the more traditional process-oriented analysis and design and another favoring data-oriented analysis and design.

The process-oriented structured systems development methodologies advocated studying the existing process in an organization and modeling the process in the design (Figure 2). They advocated modular design based on widely accepted principles. The process-oriented approach most widely used was the one advocated by DeMarco, based on the works of Ross, Constantine, Yourdon and others.

The data-oriented camp was highly influenced by data base theory and practice. Data, this camp advocated, was the key to everything. Data is stable, while process changes continually. The data-oriented structured systems development methodologies advocated studying the data of an application, especially the outputs and data base, as a means of modeling the system. Data structured design made it possible to derive the structure of the programs directly from the structure of the data (Figure 3).

Another feature of the data-oriented approach was the emphasis on defining the results (outputs) in the requirements definition phase and then designing back to front, from outputs to data base to inputs. Data-oriented systems development methodologies focused first on logical and then on physical design, on designing the data base first and then the processes to access that data base.

Over time, the process- and data-oriented methodologies began to converge as each approach matured. In general, the process-oriented structured methodologies were more widely adopted, but with the increasing popularity of data bases and fourth-generation languages,

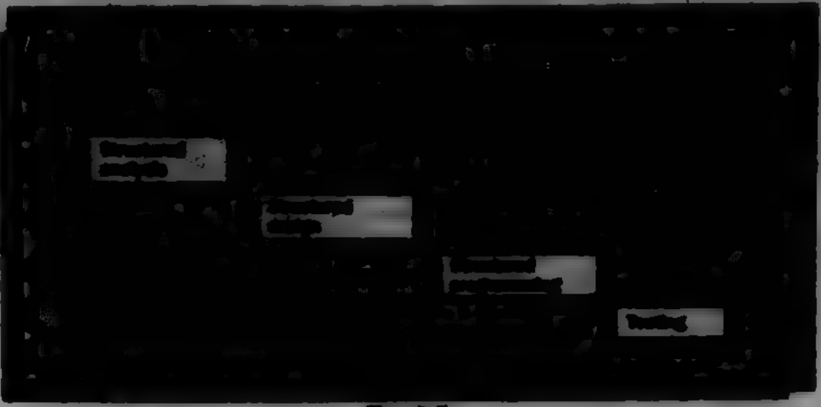

Figure 2

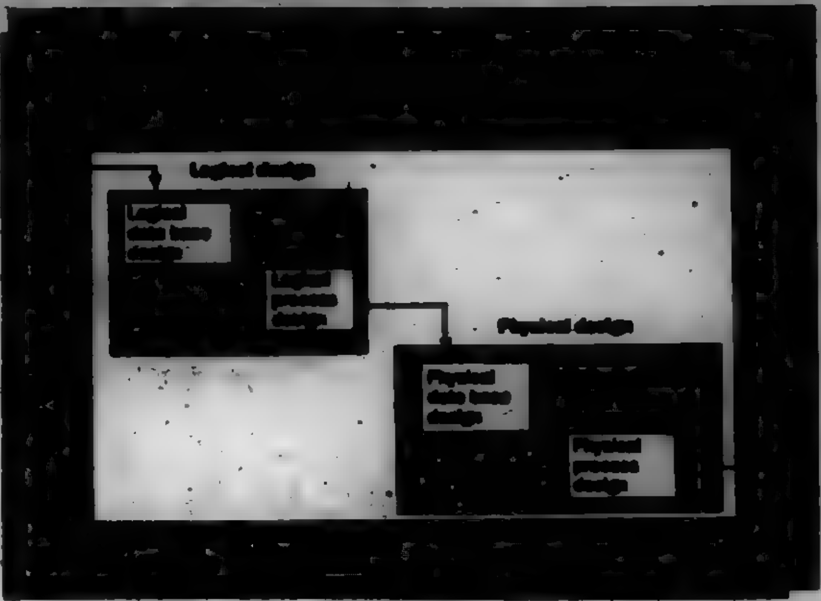

Figure 3

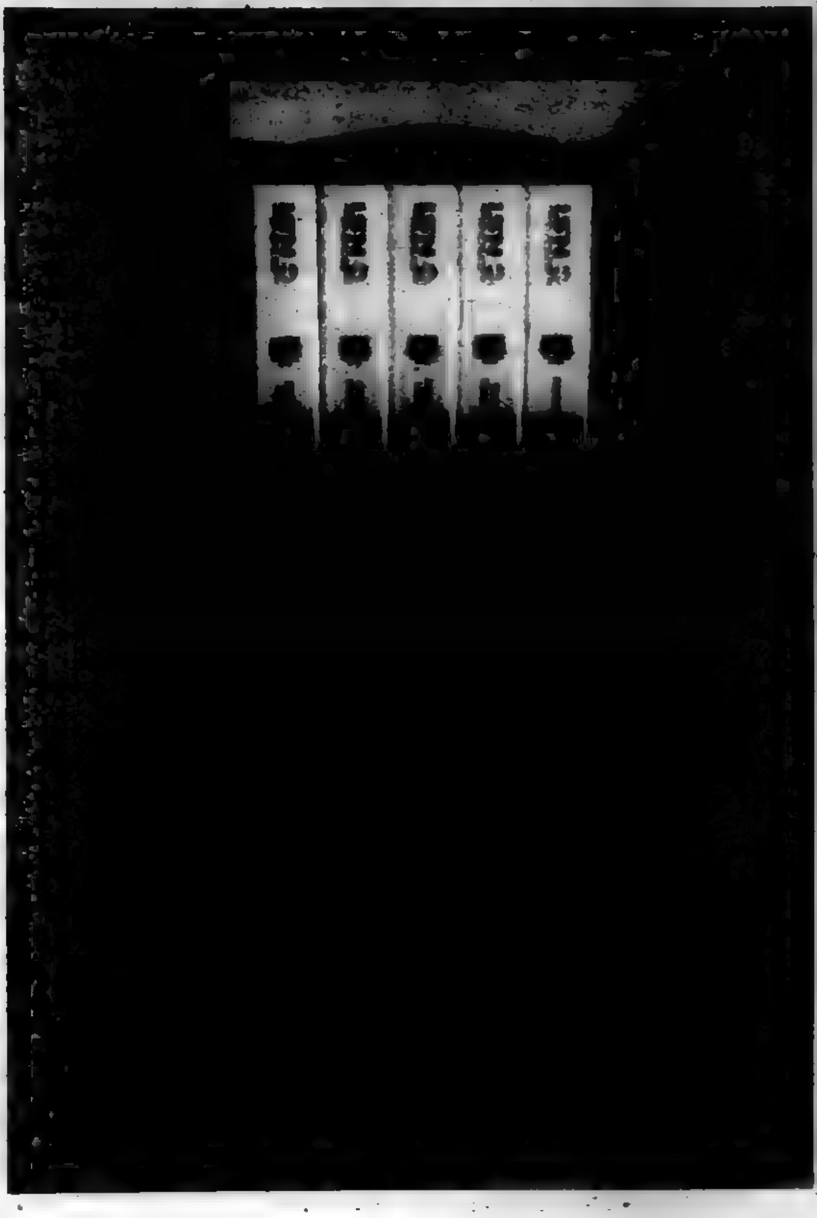

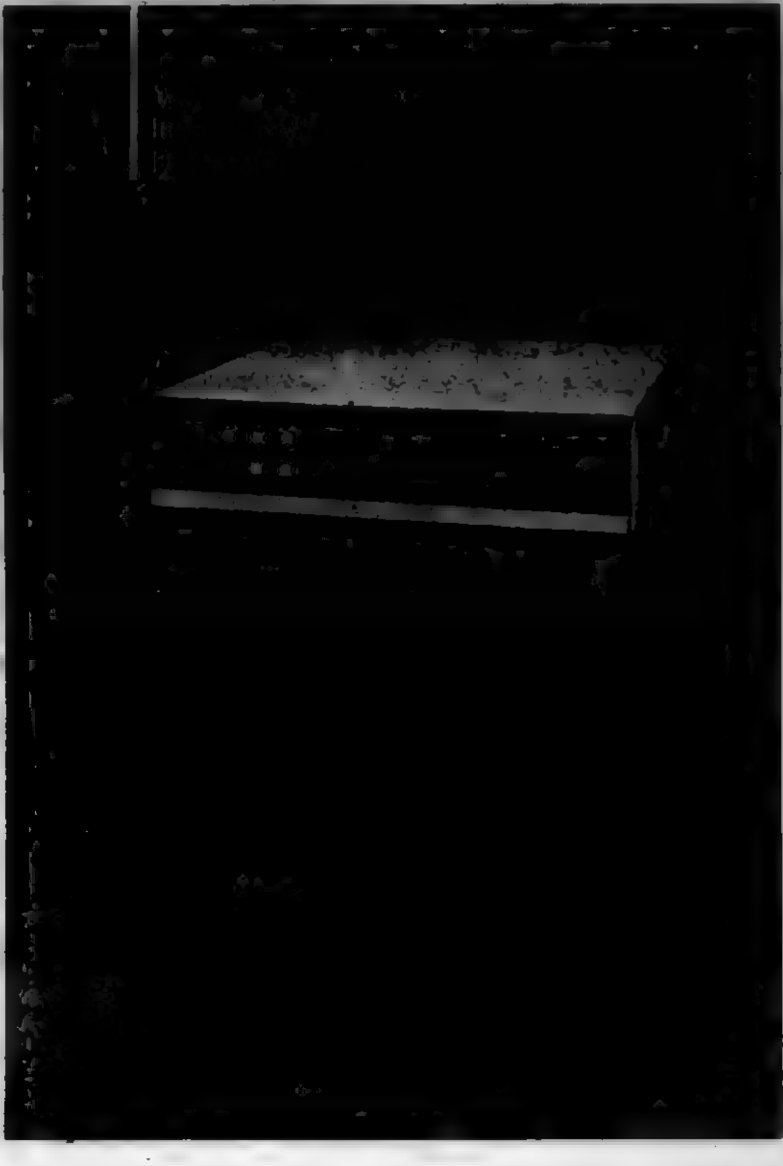

which are largely data-structured languages, more organizations are now moving to data-oriented systems development methodologies.

Some problems

Although the experience with structured systems development methodologies has been extremely positive, there are problems. Structured systems development methodologies are front-end loaded, and so a considerable amount of analysis and design are done before the user sees any results.

In many environments, it is difficult to get users and/or management to accept the time allocated for requirements and design, especially without a careful implementation plan that stresses training, consulting and the use of automated tools to support a new approach.

Another problem is that structured approaches use new tools, especially graphics tools, for defining and designing systems. These new tools make it much easier to capture user requirements, but until recently, they have not been able to capture the requirements in a machine-readable form so that they can be maintained.

The good news for structured systems development methodologies is that the systems developed using these techniques are usually considerably easier to code, test and maintain. Because of the time spent to get good requirements and develop a good design, testing, implementation and maintenance time is reduced, resulting in higher productivity. The new computer-aided software engineering tools make the process of structured development considerably easier.

During the period in which structured systems development methodologies were beginning to gain acceptance, a new set of fast-track development tools and techniques were becoming popular as well. These included fourth-generation languages, rapid prototyping and high-speed analysis.

Fourth-generation languages — the best known and most widely accepted of these techniques — evolved from the work done in the '60s and '70s on report generators, screen generators and data base management systems. These languages took advantage of the fact that a great many tasks in data processing are common.

By taking these standard functions and developing user-friendly languages to interface with standard data bases, fourth-generation languages could cut by a factor of four or five the amount of code required to do standard data processing applications, such as producing reports or filling out basic data entry screens.

Not only were fourth-generation languages more productive for certain classes of problems than traditional systems development methodologies, they were also aimed at a larger audience than traditional procedural languages.

In large part, fourth-generation languages grew out of the attempt to develop languages that could be used by managers and clerks without the assistance of programmers. As a consequence, many fourth-generation language systems have been developed by users.

Rapid prototyping

Because fourth-generation languages made it possible to develop systems, at least small systems, much more rapidly than was possible using traditional languages, the idea of rapid prototyping as a means of defining requirements was a natural consequence. Why not, fourth-generation language proponents asked, use these languages to work with users to develop prototypes of the systems to be developed? That way, the user would have a much better feel for the system that would be delivered.

Some proponents of rapid prototyping suggested that with fourth-generation languages, it was no longer necessary to go through the time-consuming process of developing formal requirement specifications.

Instead of the traditional waterfall process, a new operational life cycle emerged based on iterative development.

Iterative development usually means that the user develops a prototype of the desired system until he is satisfied with it; then the prototype is tuned until it performs satisfactorily or until the user identifies additional requirements. The danger lies in the possibility that the

HIGH PERFORMANCE OUTPUT WAS ONCE A SINGULAR EXPERIENCE.

That experience was the Datasouth DS 180.

The machine so sophisticated, so reliable, that it won international acclaim as the printer demanding people demand.

But those demanding people demanded more. More functions, more applications, the ability to perform more printing tasks.

Our answer was the DS 220. A multi-mode that actually *outperformed* every other matrix printer in its class.

Then, we brought high performance to the personal computer, with our own line of Personal Printers.

Our DaisyWheel 36 brought the Datasouth reputation to daisywheel printing.

And our CX and TX models freed once-captive IBM users from the need to buy overpriced IBM printers.

We even improved on the original, with the new DS 180 Plus and the new DS 180DD for demand document applications.

So, what was once a singular experience is now plural: the Datasouth High Performance printer *family.*

prototype never becomes a finished system.

Fast-track development emphasizes speed and early user involvement. When the user is brought into the process early on and given tools to see immediate results, he has much more control of the systems development process than was the case in the traditional life cycle. As a consequence, however, prototyping works best when restricted to small systems with one (or a small number) of users.

High-speed analysis

High-speed analysis, a slightly more advanced version of prototyping, is effective when applied to medium-size systems with several users. High-speed analysis involves a group approach. Users are brought together for an intense, three- to five-day session in which they define the system's primary inputs, outputs and data base. Normally, these sessions are conducted by an outside facilitator who structures the sessions and keeps things on track.

In high-speed analysis, prototypes (or at least mock-ups) ensure that users understand what they are getting (Figure 4). One of the advantages of this approach is that users have the opportunity to hear what other users of the system think the system should do. In these sessions, conflicts arising from differing user viewpoints are often identified and resolved before they become expensive mistakes.

Recently, various proponents of fast-track development tools have put them together as an alternative to the traditional systems development methodologies or structured systems development methodologies. Fast-track development eliminates many of the problems that users and managers have with more rigorous approaches.

Users and managers get almost immediate feedback on the nature of the system — there is no long lead time between the beginning of the project and when the user sees results — and the need for documentation is almost nonexistent.

There is a need to improve both the quality of information systems today and the speed with which they are developed. Unfortunately, many look at these goals as incompatible. They see fast-track development as a total replacement for structured systems development methodologies. In practice, the situation is not so clear.

About the author

Ken Orr, president of Ken Orr & Associates, Inc., is one of the principal developers of the data structured systems development methodology.

Orr has held various positions, including vice-president of Advanced Systems for Langston, Kitch and Associates, Inc.; director of information and communications for state government; vice-president of a management consulting firm and manager of software development for Service Bureau Corp.

He is the author of Structured Systems Development, Structured Requirements Definition *and* The One Minute Methodology.

ITT Introduces the first World-Compatible Modems.

Now your computers can communicate with their counterparts anywhere in the world as well as at home.

With ITT's new World-Compatible Modems, it's easy. And that's something worth talking about.

For starters, we offer modems that meet both CCITT and Bell standards and comply with FCC regulations. They're fully compatible with the latest computer technology. They maintain synchronous and asynchronous data transmission over full duplex four-wire and half duplex two-wire leased pairs, point-to-point or multi-point lines, or unconditioned lines. And they support data rates from 300 to 64000 bps.

ITT has more than 20 years experience in producing data transmission systems throughout the world. Today, our modems incorporate state-of-the-art engineering. And feature the most reliable design.

That's why we can offer a full 2-year unlimited warranty.

We also deliver a full range of features. Not add-ons, but built-ins. Like test pattern generation, error detection, remote diagnostics, code changing, automatic answering, dial back-up, and automatic fall back.

Best of all, is the assurance of the name ITT. It means quality and support, backed by a worldwide leader in telecommunications and a nationwide sales and service network.

For the name of your ITT distributor, write: ITT/DESD, 20 Mayfield Avenue, Edison, NJ 08837, or call (201) 226-6121.

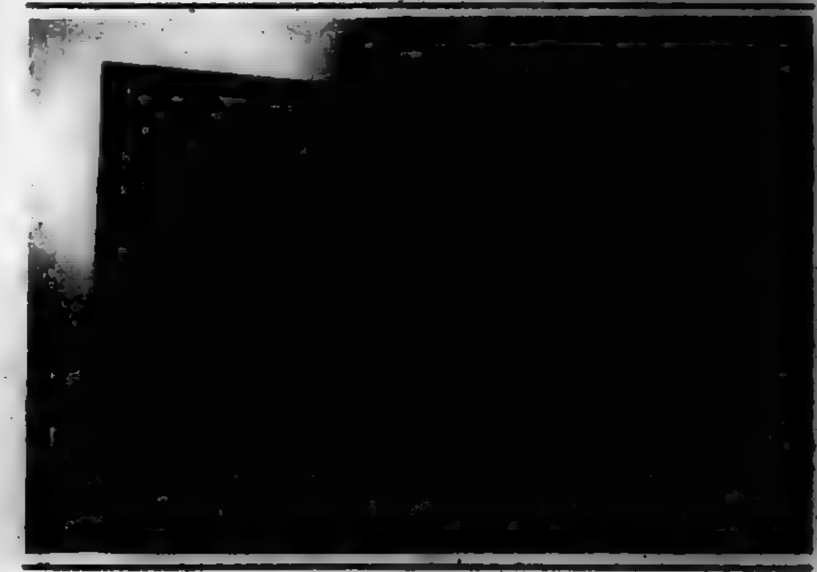
The House That 1 2 3 Built

[illegible]



By Eric Bender
Senior Editor

Lotus Development Corp.'s millionth software package rolled off the assembly line and into the hands of the governor of Massachusetts. Television ads accompanied shipments of Jazz software. The company shifted its headquarters into the Lotus Development Building, a mammoth eight-story facility on the Charles River in Cambridge, Mass. And at a festive annual meeting, executives remarked that the company achieved $301,000 in revenue per employee in 1984.

In short, May was an average month at Lotus, which celebrated its third birthday in April and employs roughly 900 people worldwide.

Lotus' meteoric rise — from start-up to leading vendor of microcomputer business applications and then to world's largest independent software vendor — was fueled primarily by one star product, the 1-2-3 integrated analytical package.

Now 1-2-3 has been joined by two five-function applications — Symphony for IBM Personal Computers and Jazz for the Apple Computer, Inc. Macintosh — which are pulling in significant revenues. Many other packages are being readied for the market.

But just as important to Lotus' future is diversification. "We're broadening out of software into the information industry," President Jim Manzi emphasizes. "That's first and foremost on the list of objectives."

The pending acquisition of Dataspeed, Inc., whose equipment lets customers receive real-time stock quotes via FM broadcasts, is the prime example of this shift, Manzi says. "We want to be in the services business, which includes data provision and content analysis that you do with software," he says. "The diversification with Dataspeed is absolutely critical."

"We will continue to build our core business of productivity applications for personal computers," says Chairman and founder Mitchell Kapor. "We will continue to amplify the service components of that business, and we will selectively have new offerings that have service for a profit. That allows us to leverage our strengths, which are our customer base and our expertise in building applications."

(Continued on ID/13)

A conversation with Mitch Kapor

"In the applications arena, Lotus is clearly in a market leadership position, and our goal is to stay that way. We expect competition from a variety of sources that may include Microsoft, Cullinet, IBM, two guys in a garage. We can't afford to be complacent."

CW PHOTO BY [illegible] O'CONNELL

How has Lotus changed in the last year?

First of all, it's a lot larger in revenue and in head count. We have started divisionalizing the company, which is a very major organizational change. We are much more stable, partly because the micro software industry has shaken out to a large degree.

I think there is a perspective shift: How are we going to climb the next mountain? That's a question that we weren't asking ourselves a year ago. We had a one-product-at-a-time focus a year ago. Now we have a focus on growing entire new product lines while we protect the core business. It is a very major shift in perspective, sort of going from a local outlook to a more global outlook.

What's the focus that ties together the Dataspeed acquisition and the other recent corporate moves?

We are selectively expanding the role that we will play as a player in the information industry, which is to say we will build upon our base as a personal computer software company, in fact as the leading company, to leverage our assets. In other words, what are we good at, and what do we have?

First of all, we have about a million happy customers. So to the extent that we can identi needs they have that are not currently being served, we can create new applications or new classes of software applications for them. Part of what I'm doing are these textual productivity tools that have some artificial intelligence aspects to them. A number of the development alliances we have made with Jon Sachs, Ray Ozzie and Jerry Kaplan will come out as products.

At the same time, we are going to expand our markets selectively to segments that we're not serving directly but where our applications and service expertise can be brought to bear.

We identify the engineering and scientific market as a clear case where there is about a 20% overlap of customers today, of engineers, scientists and technical professionals who use 1-2-3 and Symphony. That still says that we are in the software and services business, but in an expanded fashion.

What kind of services will become important for Lotus?

Substantially all of the offerings we have today are software products. Although they are products, they come with a high degree of service of various kinds, whether it's the hot line or the courseware and so on. Our goal there is to have appropriately complete service that supports our products. The [Lotus] magazine is an excellent example of a service vehicle that, by the way, we expect to pay its own way.

I would contrast that with Dataspeed, where the business is a service business. There is a software component — the software that will go on the personal computer to interpret and allow you to manipulate the real-time stock quotes, and we are intending to use our expertise as an application company understanding the needs of end users — but what we are really selling is the service. That is a new kind of offering.

What are the top issues for your corporate customers?

The first thing is to recognize that a corporation that has hundreds or several thousand personal computers requires and deserves differentiated attention from us. Some of it just has to do with the scale of operation. There are logistical issues that need special attention — for instance, upgrades. If you have several hundred users out there and we are doing an upgrade, to force them to go through the same one-at-a-time procedure we would have for any other user doesn't make any sense. Or where they have an information center, that requires some differentiated treatment and support. So there is just a laundry list of attention to details.

The number two and three issues are protection and licensing, which go together.

We are hearing now a real attitude of extreme reasonableness coming from many individual large customers. I think it has been unfortunate that there have been some very strident voices that have not contributed to positive dialogue.

We are trying to understand how to strike the correct and mutually beneficial and productive bargain, which I think could take the following form — and I say "could" because we have not committed to this.

Protection could be partly contractual. Protection does not, in all cases, have to be encryption on the floppy disk or the equivalent. Large customers understand that in order for us to do business they have to be willing to shoulder some of the burden of responsibility for the usage of the product within their organization.

That comes down to some variant of "If you remove the copy protection, we will agree to be responsible to see that illegal copies are not made."

A bargain could be struck. But that ignores the subtleties and complexities of the issue, of which there are very, very many.

We are not inflexibly committed to copy protection as some sort of last stand, but we are committed to doing business in a way that we feel protects our economic interest.

We have gradually moved our position, as much as our customers have moved some of their positions. Nobody is going to be in business for a long time if they are not responsive.

There are two things that we won't do. We won't walk away from copy protection totally, and we won't enter into any agreement that allows for unlimited reproduction, which is just not realistic or reasonable.

It's also apparent to us that if a site license makes sense at all, it will only make sense if there are 500 or 1,000 or some fairly hefty threshold number of machines.

And there have to be adequate solutions in terms of copy protection in all of the other cases.

(Continued on ID/20)

IF ANY 3M, MAXELL, OR DYSAN FLOPPY DISK FAILS, WE'LL REPLACE IT WITH A NEW VERBATIM® DISK. FREE.

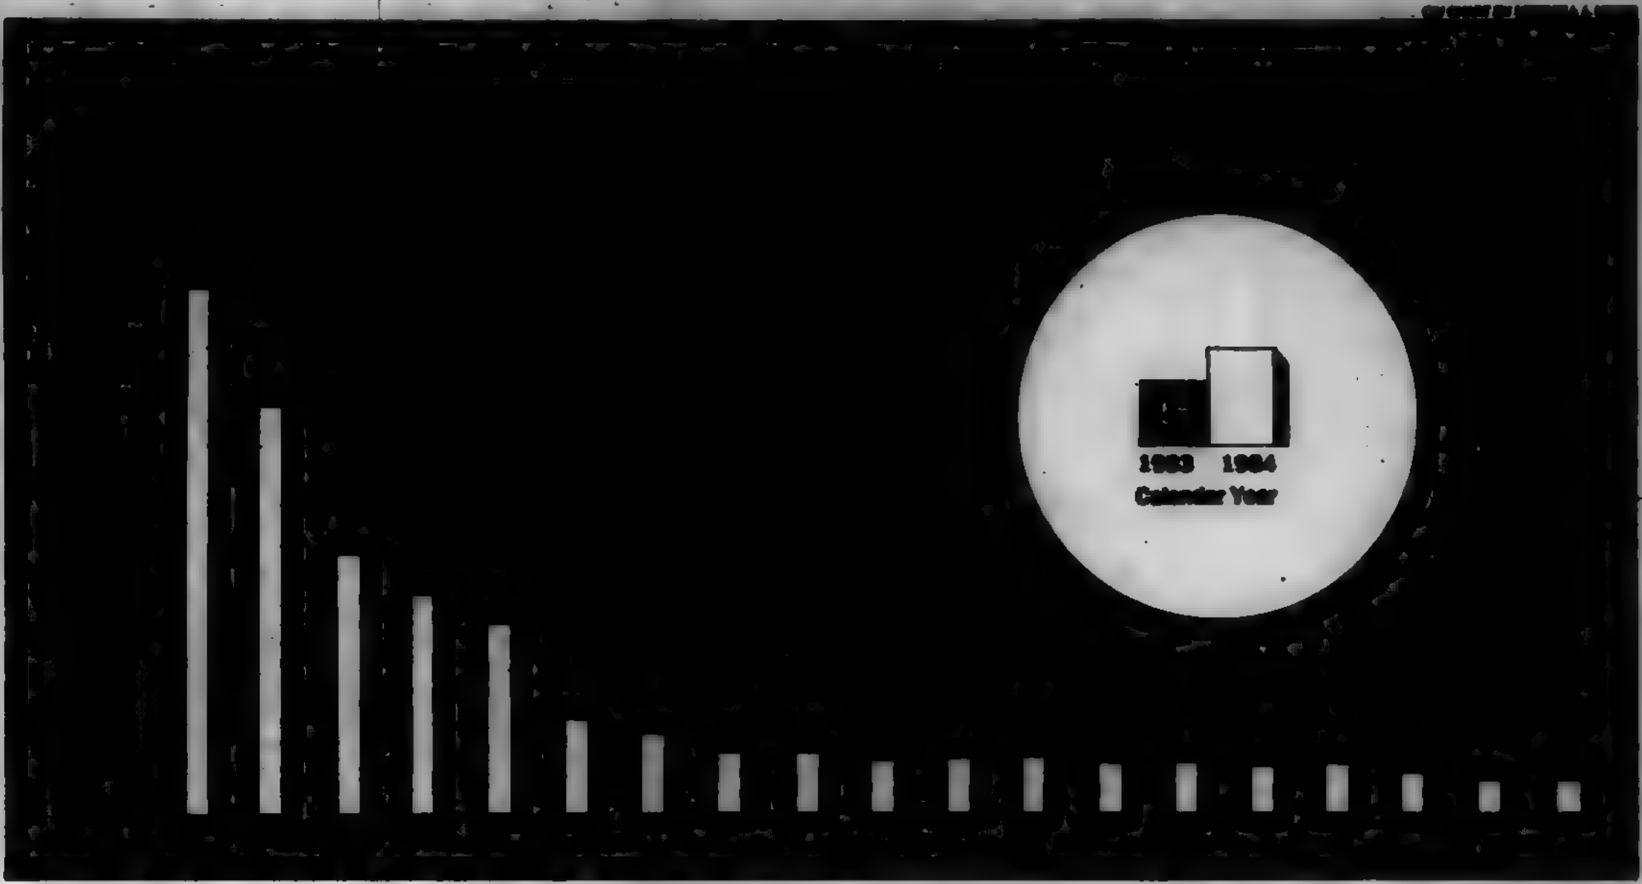
Most floppy disks come with a guarantee; if they ever fail, the manufacturer will send you a brand new one. But let's face it; if a particular brand of floppy disk ever loses your data, you might not want another one of theirs.

That's why Verbatim is offering a very special guarantee: If you buy a 3M, Maxell, or Dysan floppy disk — and it fails — we will replace it with a brand new Verbatim disk. Free. Why are we making this offer? Because we think it's time you use a floppy disk you can always count on. Verbatim.

© 1985 Verbatim Corporation.

VERBATIM. YOU CAN COUNT ON US.

Mail your failed 8", 5¼", or 3½" disk in its original envelope, along with your name and address, and the brand and model of your computer system, to: Verbatim Offer, P. O. Box 7306, Clinton, IA 52736. Limit one refund per name and address. Offer limited to the first 100,000 3M, Maxell, or Dysan failed disks received. Offer expires October 1, 1985. Void where prohibited by law. Offer rights are not assignable or transferable.



(Continued from ID/10)

Although a few recent moves, particularly the Dataspeed acquisition, have provoked some head-scratching among industry analysts, there is general approval.

"They've carefully mapped out a strategy to diversify their business," says Chris Christiansen of the Yankee Group.

"The only great danger I can see is that they're moving in so many directions they may lose their focus, but they know what they're doing," Christiansen adds. "They've gotten more flexible as they've gotten larger."

"They have a lot of good strategies in place," sums up International Data Corp.'s Aaron Goldberg. The biggest near-term danger, Goldberg says, is simply that "the personal computer market will go to hell and take them with it."

Getting started

When the personal computer explosion began in the late 1970s, Kapor, a Yale University psychology graduate who also studied at MIT's Sloan School of Management, worked at Personal Software, Inc. (the predecessor to Visicorp) as programmer and product manager. During that time, he developed two applications that he subsequently sold to Personal Software for $1.5 million.

Struggling to graph Visicalc spreadsheet results on an Apple II one day in 1981, Kapor hit on the idea of a package that would integrate multiple functions. He took the concept to software developer Jonathan Sachs, and they began working on what became 1-2-3, with Sachs acting as the lead developer. The two founded Lotus in April 1982.

Announced in October and shipped in January 1983, 1-2-3 was an instant success. Combining a fast and flexible spreadsheet with graphics and data base management functions, the package was one of the first really to take advantage of the IBM Personal Computer. Lotus' aggressive promotion efforts played a large role in its success, but word-of-mouth probably was more important, industry experts agree. And the timing was right.

"I don't think anyone is ever going to have a blockbuster like 1-2-3 again," Manzi says. "The timing was perfect, the product was perfect, IBM was just getting going, and the economy was going into an incredible upswing for three years. It was the greatest time in the history of the world to launch a product."

As 1-2-3 sales soared, Lotus also overcame the barriers that stopped many other promising software startups — carving various routes through the distribution channels, setting up manufacturing, establishing adequate customer support procedures, planning for follow-on products and dodging a host of other potential roadblocks. In 1983, its first full year of operation, Lotus reported sales of $53 million. In October of that year the company went public, raising more than $34 million.

Broadening product line

Announced in January 1984 and shipped the following July, the Symphony package pulled in more than $40 million in sales by this past April, Manzi says. The program was designed to accept add-in software modules (such as spelling checkers and Symphony Link, a micro-to-mainframe product), which also will bring in significant revenue, Manzi says. "Companies are buying large volumes of Symphony just on the strength of Symphony Link."

The 1-2-3 package is due for its first major revision this fall, and the upgrades will also pull in substantial sales, he says. "Companies would die for that revenue stream." Other announced products include a 1-2-3 report writer and the Spotlight desk organizer package Lotus received as part of its acquisition of Software Arts, Inc.

While acknowledging "that the rate of growth is fundamentally tied to new units of hardware going out the door," Manzi emphasizes the role of the new offerings. He also notes that he expects international sales, which accounted for 10% of sales in 1984, to grow faster than U.S. sales, perhaps pulling in 15% of revenue this year.

On the vertical market front, the new Engineering and Scientific Products Division, established in March, is beginning to target products toward the technical users who already account for approximately one-sixth of Lotus sales.

"We never asked these people to buy 1-2-3 and Symphony, but they

went ahead and bought them anyway," says Sandra Gunn, vice-president and general manager of the division. "Some of them used 1-2-3 and Symphony the same way a general business user would, and others tried to do some wild and wonderful things."

This market shows "very high growth, very high dollars in terms of computer tools, but the real reason to get excited is the shift in technology that's going on," she remarks. "Engineers and scientists, being released for the first time with intelligent workstations, are going nuts. They love it. And unlike general business users, they're not intimidated by the technology."

Lotus will stick to its knitting, offering "flexible, powerful, generic microcomputer software that has hooks in it to other things," Gunn says. The first step? "We're going to tell engineers and scientists all about Symphony," she says. "Nobody ever bothered to do that."

Another move is toward strategic alliances with other vendors, the prime example being the cooperative effort to integrate Symphony with Cullinet Software, Inc.'s Information Center Management System software. Similar deals are under discussion with other large mainframe software vendors.

The Dataspeed acquisition represents a new direction for Lotus and gives several important benefits, says E. C. "Mick" Prokopis, senior vice-president for finance and operations.

"First of all, it provides us with a recurring source of revenue in the form of annuities," he says. "We haven't had that type of income." The move also provides a good matchup of strengths, adding Lotus's marketing, financial and development resources to Dataspeed's technology, Prokopis says. And "it further enhances our ability to sell products that are purchased more for strategic reasons than for tactical reasons."

> ”
>
> *Like its competitors, Lotus is picking its way through a mine field of touchy and closely linked distribution issues: site licensing, the gray market and copy protection.*

The Dataspeed acquisition also comes with tax breaks that make it a bargain for Lotus.

Lotus is pouring substantial resources into creating future products, spending about 12% of first-quarter sales on research and development, Manzi says. Kapor personally supervises development, overseeing a large in-house group and a number of outside developers (see sidebar on ID/18). The first major results are expected to crop up in 1986.

Leveraging market advantages

The company doesn't expect any major inroads from 1-2-3 clones, says marketing vice-president Charles Digate. "We'd be remiss in not paying attention to those, but we understand what it takes to remain the dominant leader in that category."

One key is "new releases of our products that constantly leapfrog whatever a clone maker may decide to introduce," Digate says. "Anyone who would have a clone sitting on the shelf today would be quite surprised when they see the second release of 1-2-3. There's absolutely no way they'd be able to match that in a short period of time."

Because of this, "we obviously don't see any pressure today for moving the price of 1-2-3," he says.

Aside from product strength, Lotus enjoys major advantages over most competitors, including "the Lotus name, the support, the franchise with the dealers and the strong installed base," Digate maintains. The firm also can throw large resources into product rollouts, as in the case of Jazz.

Like its competitors, however, the company is picking its way through a mine field of touchy and closely linked distribution issues: site licensing, the gray market and copy protection.

As Lotus feels increasing pressure from corporate customers, establishing site licensing policies is a top priority, Digate says. "We're doing a lot of research to see what the needs are. . . . We've got some basic statements internally that we're all buying into. We have to work out a lot of details, organizationally and operationally, and after all that's done we can go to market with it."

Cutting in dealers

One prime concern is to continue to cut dealers in on all sales. While Lotus sold direct to large customers in the early days, that created severe conflicts with dealers, and in May 1984 Lotus announced it would push everything through the dealer channel. Among Lotus's own sales force, "we have more people than ever that penetrate the Fortune 1000 every single day," but all orders are turned over to dealers, notes Stephen Crummey, vice-president of sales and service. The main argument for this arrangement is that dealers provide support, but the logic may be more compelling for dealers than for corporate customers, industry experts outside Lotus note. Crummey acknowledged that "a lot of corporate accounts don't need support after they buy their nine thousandth 1-2-3," but he points out that "all corporate customers use dealers to one extent or another."

Even sophisticated products such as Symphony Link will be handled through resellers, Crummey says. "We're installing 3274 controllers in each field location for training on Symphony Link."

"There are 2,200 A-rated Lotus dealers and on average each of them

OEM Computer Product Buyers

"The Invitational Computer Conferences bring to you the latest high-tech information you need to hear, and the major OEM products you need to see. We'll be there!"

And you'll find other top OEM manufacturers, such as NCR, Fujitsu, Xebec, Lear Siegler, Siemens and IBM, to name but a few.

Celebrating its 15th year, the "OEM Only" ICCs bring you, the volume buying decision makers, together with the key suppliers of computer and peripheral products. The ICCs also bring you a full day of high-tech seminars, explaining the latest in computer product technologies and what they mean to you, the systems design engineer. As an invited guest, there is no charge to attend the seminars or product displays.

The ICCs, a series of eleven, one-day regional conferences are convenient to where you work. The small, exclusive setting makes it easy for you to meet potential suppliers one-on-one.

Hear what the OEM manufacturers have to say, learn about new technologies, and remember, you may attend "by invitation only."

You could win $1000 in the first international computer-generated art contest

CW Communications, Inc. — the world's leading publisher of computer-related newspapers and magazines — is proud to announce its sponsorship of the very first international computer-generated art contest.

All entries must be computer-generated, mounted, and suitable for display. Entries will be judged primarily on their artistic merit, but execution will also be taken into account. Two prizes will be awarded. The winning individual will receive $1,000 (U.S.). The winning organization will receive a trophy.

Winners will be announced during the First Pan Pacific Computer Conference (in Melbourne, Australia, this September 10-13). All entries will be put on display in a special exhibit at this conference.

Enter today. Send your entry to:
The First Pan Pacific
Computer Art Competition
P.O. Box 212 (11 The Avenue)
Hampton, Victoria, Australia 3188.

Entries must be received by August 23rd

FIRST PAN PACIFIC COMPUTER CONFERENCE / CW COMMUNICATIONS

has five outbound salesmen," Manzi estimates. "So we're talking 10,000 reps out there as sales and fulfillment mechanisms. That's reason enough to go through dealers."

In April, Lotus intensified its efforts to shut down gray marketeers (who quietly buy products from authorized distributors or dealers and offer hefty discounts from the suggested retail price, often selling through the mail) by serializing products and watching where they end up.

> *Lotus consciously works to preserve the style of its early corporate life.*

This program has shown some good early results, Crummey says. "We will start policing the channels, and if necessary terminate people who are violating the rules."

Copy protection raises many other concerns and, sometimes, tempers. Lotus is studying a number of alternatives to its current software-based schemes, from the Adapso hardware key to potential contractual protection (see Kapor interview).

Mid-to-late adolescence

Manzi, who worked as a reporter and then as a McKinsey & Co. management consultant before joining Lotus two years ago as marketing director, describes Lotus as a company in "mid-to-late adolescence."

Lotus currently is being split into divisions, effectively establishing "smaller companies that are more comfortable and where the dynamics are more small-company-like," Manzi says. "The trick is to figure how to successfully run divisional structures, how to keep these alive and well, while maintaining the soundness of the company and not getting unfocused."

Lotus consciously works to preserve the style of its early corporate life. One example is the informal companywide meetings, still held biweekly, although these days 500 people may show up. Another is the company's continued presence in not-yet-fashionable areas of Cambridge.

"There's still an enormous amount of excitement," Manzi says, which comes partly from new initiatives and partly from Lotus's high profile among microcomputer users. "People are looking to us to solve lots of thorny issues in the industry, as much as they're looking to IBM."

In the short term, even those who approve Lotus's new directions worry that sales slowdowns may loom. "A number of factors will start to erode the base that 1-2-3 has built up," Christiansen says. "Lotus doesn't have a real follow-on product; Symphony adds too much." Products now in development may be two years or more from commercial acceptance, and Lotus may see a slump in the interim, he suggests.

And while Wall Street sees the excitement, it hasn't shown up lately in Lotus's stock price.

In first-quarter 1985, Lotus earned $9.6 million on $44.7 million revenue, showing increases of 28% and 58% respectively over first-quarter 1984 results. The company was sitting on $68.4 million in cash and temporary investments. But the current price/earning margin is hovering around 10.

"When you look at companies with price/earning ratios of 10, you don't expect to see Lotus there," Prokopis says. "The investment community needs to see another four to eight quarters of continued favorable earnings reports."

However, Michelle Preston, analyst with L. F. Rothschild, Unterberg, Towbin, calls the current margin "ridiculous."

"I don't think Wall Street is really focused on Lotus's future as much as on what Lotus is currently doing," she says. "I see this year as a year of consolidation, and I look at next year as a major new product year for Lotus. Lotus and Microsoft have moved ahead of the pack."

Jim Manzi looks on as Gov. Michael Dukakis accepts Lotus's one millionth product from Bradford Chatwynd, manager of materials and distribution.

Announcing Version 6

Kapor oversees unusual mix of R&D efforts

Stepping back from overseeing day-to-day operations, Lotus Chairman Mitchell Kapor "is now totally focused on managing development," analyst Michelle Preston notes.

Kapor acts as a hands-on manager for the company's far-flung software development effort, which supplements work by a large in-house staff with an unusual number of agreements with outside developers. "It would surprise people if they knew how much Mitch is personally responsible in some degree for Lotus products," remarks S. Jerrold Kaplan, Lotus's principal technologist.

Lotus's prime forum for product ideas is the "chairman's R&D group," which joins software luminaries such as Kaplan, Jonathan Sachs and Visicalc co-author Daniel Bricklin.

The group, which Kaplan describes as a cross between "a loose-knit group of gladiators" and a dinner society, typically meets with a rather short agenda. "The schedule is that they bring in food for dinner," he adds.

"Everyone in this company has got new ideas for products and new ideas for processes," comments Gabriel Baum, vice-president of product development.

"The chairman's R&D group is ideal for products to ferment and for acquiring new products from outside contacts.

"Lotus is not and never will be a totally formally structured place," Baum says. "It's likely that products will be taken all the way to the marketplace within the chairman's R&D group. Equally, we're all agreed that a number of products will be taken to a certain point and then the individual who championed one will turn and do something completely different.

"This company has grown hugely over the past three years, and to achieve that huge growth and put out product at the same time is a remarkable achievement," he points out. "But there's a price to pay for that achievement; you tend to get somewhat isolated groups, groups pursuing their own destiny. I'm anxious to eliminate those barriers."

In recent months, Lotus has announced a string of product development contracts with external developers, including several ex-employees such as Sachs. Among software vendors, signing up so much talent from outside the company is unique to Lotus, but the setup makes a lot of sense for both parties, Kaplan says.

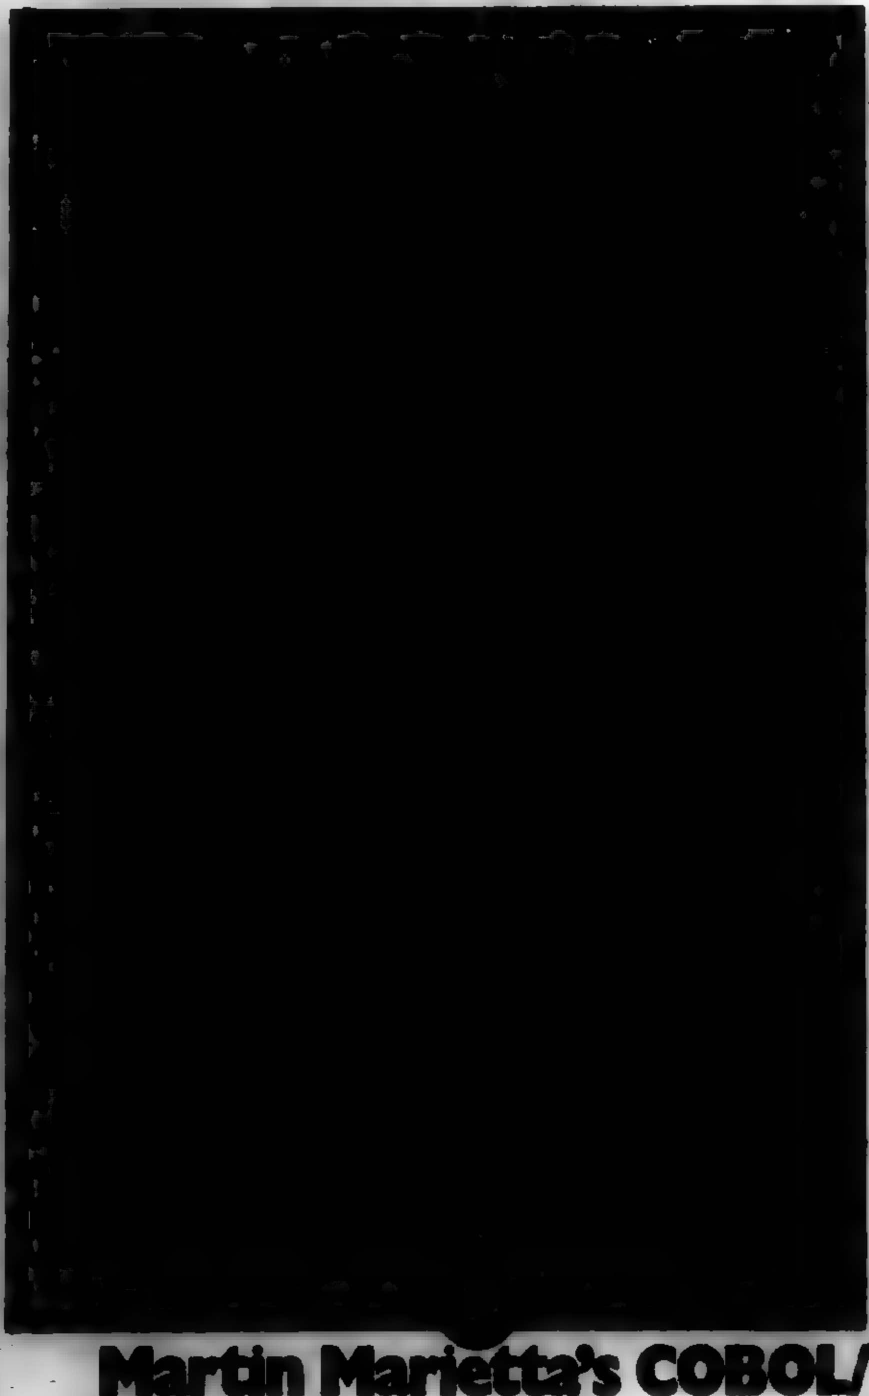
Often, the best developers don't want to be employees, but they do want their creations to sell, he notes. And from Lotus's perspective, the moves neutralize some of the company's strongest potential competition.

At Lotus's annual meeting, Kapor listed four guidelines in the ticklish art of getting the most from these high-powered developers: give the developers autonomy, "let their products see the light of day," "let them share the fruits of their labor," and make sure "it's not just a great idea but it can turn into a great product."

Kapor's own software expertise is a major advantage in this role.

"Collaborating with him is just a pleasure," Kaplan says. "Give him half an hour with one of my programs and he understands it better than I do."

Looking for a way to develop CICS applications in everyday COBOL even under CMS?



Introducing the most effective way yet to optimize both your programming and mainframe resources: COBOL/XE.™ Because now, for the very first time, you can actually develop on-line CICS applications in everyday COBOL with CICS/VS, VM/CMS and VM/PC.

Since COBOL/XE uses standard ANSI COBOL, all your COBOL programmers can learn to write programs with it in hours. Which means no drain on your Command Level resources. Yet the programs are just as mainframe-efficient as those written in Command Level.

And COBOL/XE makes another contribution to mainframe efficiency: it can operate under CMS. Which means a complete separation between the development and production environments. With no "real time" waiting or effect on CICS response time. And since it can also operate under VM/PC, CICS applications can be developed off-line on IBM PC XT/370's or AT/370's.

COBOL/XE is another fine product resulting from the combined resources and experience of Oxford Software and Martin Marietta. For more information, send in the coupon or call 800-257-5171. If you thought you'd have to wait years for a CICS applications development system this effective, you're in for a nice surprise.

It's ready now.

How DP keeps up with Lotus' growth

Dorothy Hodges

Hired two years ago, DP manager Dorothy Hodges describes herself as an old-timer at Lotus.

"I was told 'there is no data processing here, so go do it,' " she jokes. Since then, she says, Lotus has been "taking a natural evolution of MIS departments and scrunching it into a two- to three-year period."

When Hodges joined the software firm in June 1983, after experience as an IBM sales representative and a computer consultant with Arthur Andersen & Co., internal DP was "an order processing system and one person who was running a small System/38," she says. Hodges was given a September deadline to get an inventory system up and running.

"Taking my Arthur Andersen methodology, I threw it out the window and went on," Hodges says. "The methodology says it takes a year to do a systems plan and then define what you need. We did that in a month.

"Because we needed to do things so quickly, we had to go with packaged solutions," she explains. That search ended up with an integrated financial/manufacturing package that runs on a Digital Equipment Corp. VAX, "so then we got a VAX."

By the time the original VAX/750 was installed, "it was too small, because of the amazing growth curve, so we immediately ordered a 780, and that's how we evolved," she says. "Right now, we have three 785s here in the building in a cluster." The Lotus R&D group at nearby First Street offices also has a VAX, and two other VAXs are running at UK facilities.

Over the years, the internal DP group has grown to 25 employees, and the charter has spread to cover systems used for software research and development and data communications. However, Hodges does not have responsibility for the 800-plus personal computers at Lotus.

"One of my big projects is to implement an information center here, and I think it's going to make sense to roll the personal computers into that," Hodges says. "Right now, we don't have anyone who really plans for personal computers except on a hardware basis. It's an evolutionary thing, and I think it's evolving into an information center."

On the data communications side, asynchronous communications are provided through a Sytek, Inc. broadband network, now being placed throughout the new Lotus Development Building, with 800 network drops installed so far. Most users can get to the VAX by taking advantage of Symphony's terminal-emulation functions on their Personal Computers. Microcomputer local-area networks also will be attached, "so you can sit in your office and be on a local-area network, or you can call out to Compuserve or call to the VAX or to First Street or to England. We've been concentrating on getting all the transaction systems up," Hodges notes. "Now we're concentrating on getting some more management information to people.

"The VAXs were an appropriate choice, because we're clustering them, and if we need more hardware, we can buy it without having to spend millions of dollars," Hodges says. "But there may be good strong reasons that we get an IBM mainframe in the next year.

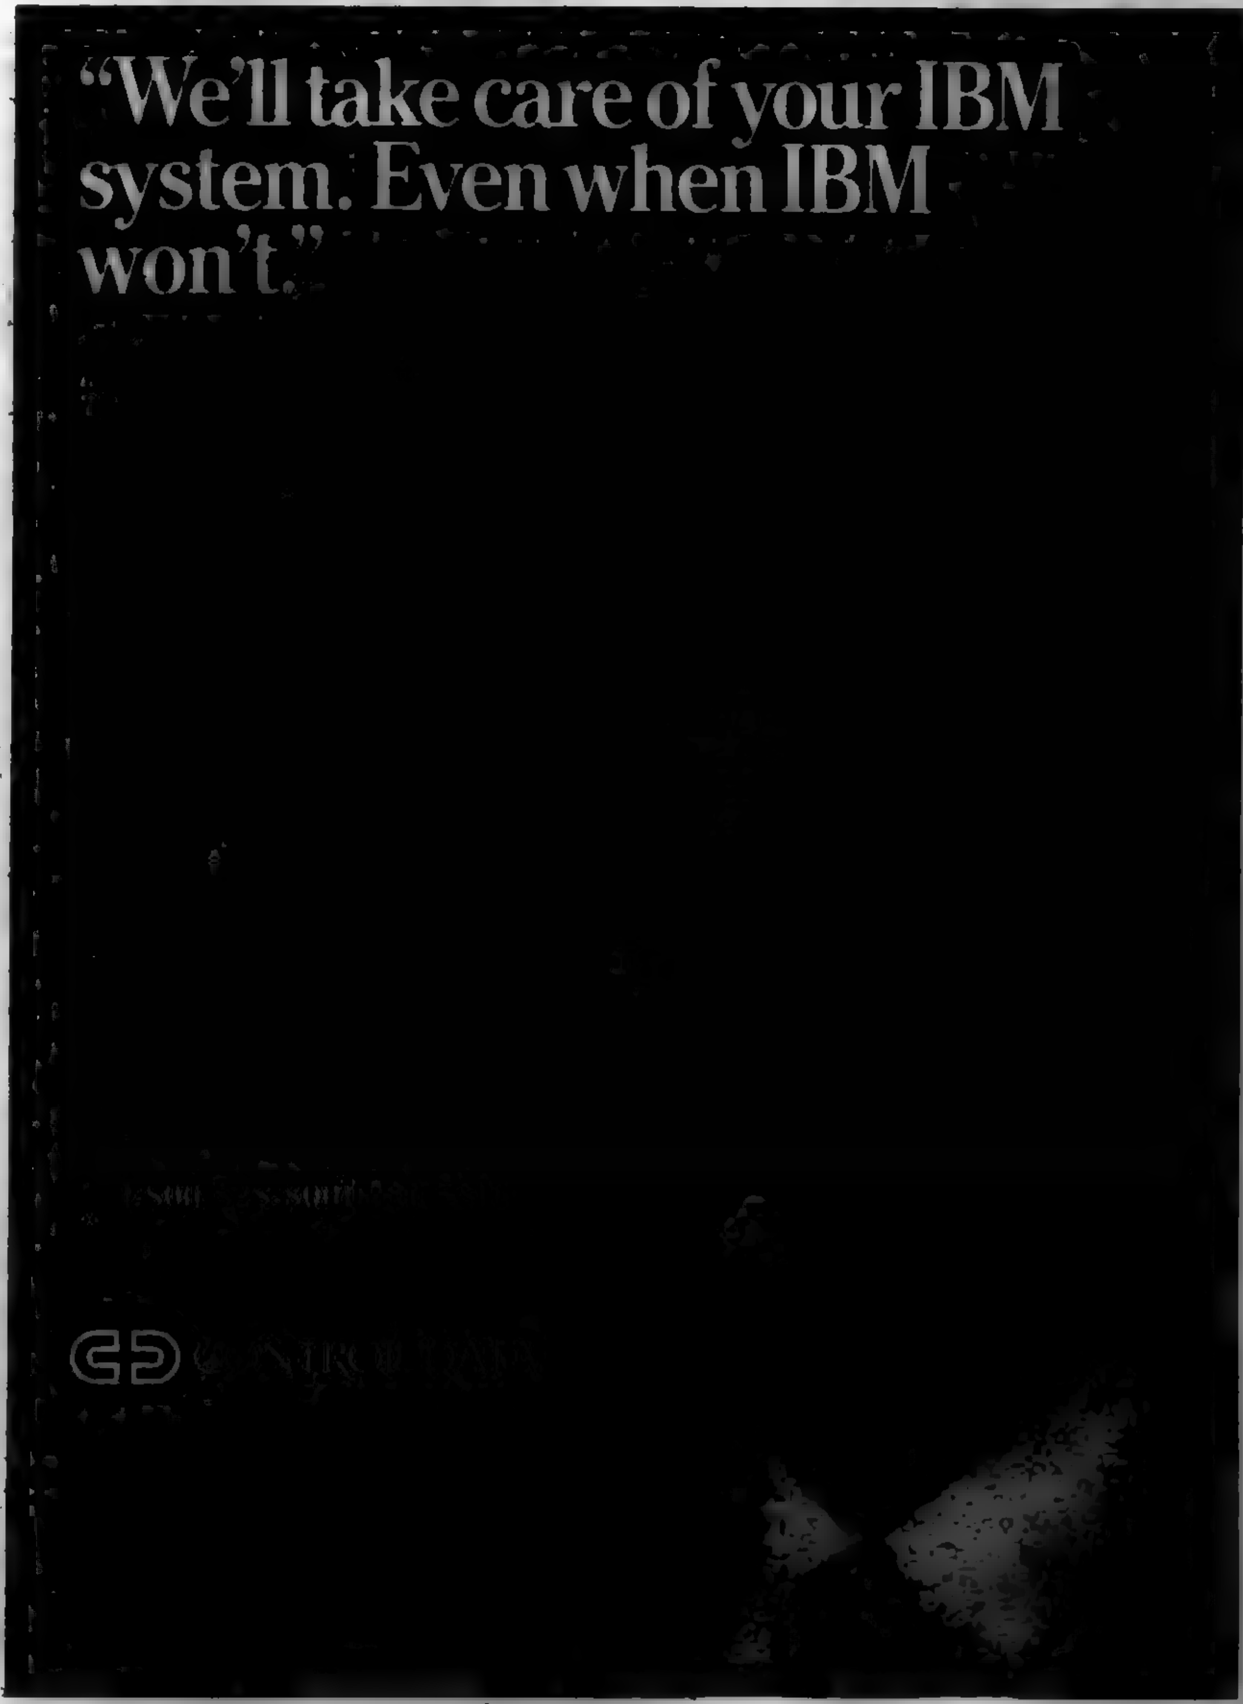
"We're facing some very large data bases," she points out. "Our end-user population is a couple of million people whom we want to be able to identify; we see that as a large competitive weapon."

Another reason for a mainframe purchase is that it would help to support Lotus' evolving micro-to-mainframe products for the company's R&D, field support and sales groups.

"So one potential scenario is having some large data base applications on an IBM mainframe and keeping the VAXs as workstations — the opposite of a traditional approach," she says. "The easy part is over. It was very clear what we had to do until now. Nobody questioned that we needed an accounts payable system."

The current challenge is determining priorities "and then, the traditional problem at Lotus, trying to predict the growth, because MIS can't react as quickly as some other groups," she says. "MIS has to be very close to the business strategy so we're there when we need to be."

Last month, Lotus took another step to boost MIS, appointing Jack Fuehr, who previously served as vice-president for data processing at Mostek Corp., to the new position of vice-president for MIS.



(Continued from ID/11)

How is the Adapso technical proposal proceeding?

It is getting closer to full publication. Some very impressive progress has been made in reducing the likely costs of manufacturing these devices. There's some very innovative technology that is being donated by Apple, which I think is very exciting. There is active involvement by hardware manufacturers of all kinds — Hewlett-Packard, Apple and others that I can't name. If a protection port or authentication port could be built into a machine that would essentially add zero cost, software vendors and users would have more flexibility.

What's in it for the hardware suppliers?

Two things. One is that all of those hardware companies are also in the software business, and they can see the effects of software piracy on their software business. Software revenues are going to grow faster than hardware revenues in all segments, including mainframes, and a hardware manufacturer doesn't want to see its own growth opportunities choked off. Every single manufacturer I have talked to, and that includes the world's five biggest, has privately expressed its concern with the problem and its commitment to do something about it.

[Another benefit is that] a significant segment, perhaps not a majority, of the large customers that I have talked to see something like the locking key as being potentially beneficial for a variety of reasons.

One is in providing a nonburdensome but more effective means of controlling and administering the use of personal computers and software within their own organizations. The second reason is security of data, which is a very pressing issue in the corporate environment. The Adapso standard itself doesn't provide that, but it has been very carefully designed to be extensible. For example, add-ons or custom microprocessors that work on the bus could provide data encryption and authentication.

One of the virtues of the [Adapso] lock-and-key schemes vis-a-vis everything that we have today is that it allows a single user to use software on multiple machines and allows a single piece of software potentially to be shared on multiple machines.

What kinds of problems will AI-based software help to solve?

One problem is that the amount of overhead and of thinking you have to go through to get nicely formatted business correspondence is actually too much, in my opinion. It could be greatly simplified.

Another issue: the management of loose bits of information, such as your appointments, a list of things to do, the notes that one may make at a meeting or something about who said he would do what and when — there is no effective organizing tool for coordinating the stray bits of information. There are some individual products like appointment calendars, but those sort of take a piece out of this integral web. They're very partial solutions.

A third problem is when you have groups of people working on projects over an extended period of time and they build up a heterogenous set of documents. For instance, in developing a software project there are specifications, design papers, weekly progress reports, schedules, correspondence, marketing plans, test site reports, bug reports and other kinds of status reports. These documents are originated by many different people. There is no effective way of coordinating, integrating and querying a heterogenous set of documents on related issues.

The more we look into it, the more firmly we believe that there are these distinct but overlapping problems with management of fundamentally textual as opposed to numeric information and that one wants to apply personal computer technology to those problems.

What do you think of Steve Job's statement at a Microsoft press conference in May that "there's a war brewing between Lotus and Microsoft?"

I think wars are fought between armies of nations.

There is no question that in the applications arena, Microsoft attempts to compete with Lotus. That is intentional phrasing, because in the applications arena, Lotus is clearly in a market leadership position, and our goal is to stay that way.

We expect there will be ongoing competition from a variety of sources that potentially include Microsoft, Cullinet Software, IBM, two guys in a garage. Competition can come from other micro software companies, from start-ups, from multibillion-dollar hardware companies. We simply can't afford to be complacent at all. It is really hard to say right now where the major threat is going to come from.

We have to maintain our own internal sense of balance and appropriateness. That means making good on the commitments we make to our customers, shipping the new products that are the ones that people want and logically continuing to build up our business.

When I get up in the morning and I ask what we are doing, my first thought is not how we are going to beat the competition; my first thought is what are we going to do for our customers. I know it sounds a bit like a homily, but it happens to be the way I think, and it's the way that Lotus thinks. It's a good corporate style. It is OK for [Atari's] Jack Tramiel to say that business is war, but I say business is making customers happy.

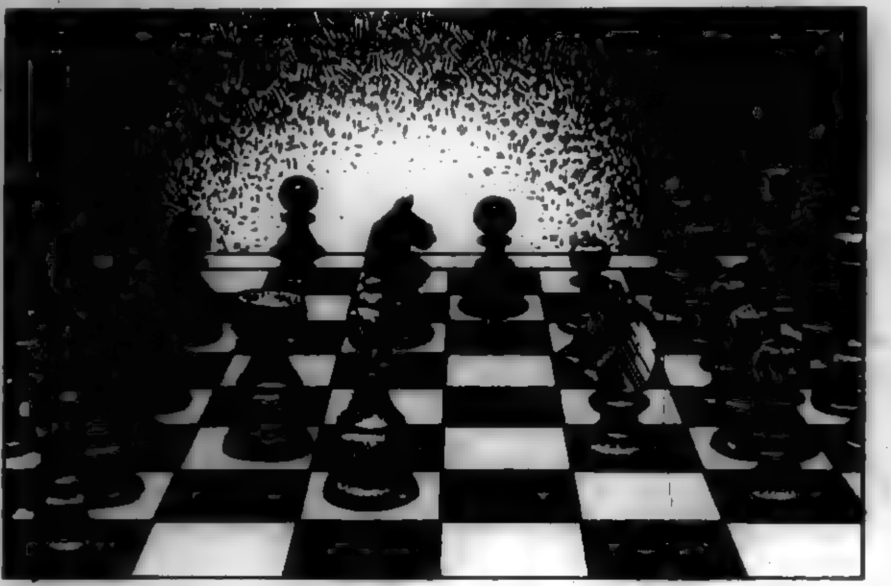
Is Lotus starting to move into systems software, for example in the Lotus/Intel expanded memory scheme?

In a strict sense, memory management being a function of the operating system, one could say the Lotus/Intel spec sort of crosses over into the operating systems arena. However, it is a major tactical move, not a strategic move, because it is intended to respond to a very particular set of customer needs, spreadsheet users who want to have more memory in their models. Because a more general solution was not forthcoming in the time frame the customers wanted it, we really felt it was incumbent to do something about it. The lack of generality of the spec is its strength, because it sends a very clear signal that it's for data, not for code. It really works well for spreadsheets but may not work for other things. It is also clean; it doesn't screw up the operating system. The nature of the specification itself says something about our intentions, which are not to go into the systems software business in a general fashion.

"

When I get up in the morning and I ask what we are doing, my first thought is not how we are going to beat the competition; my first thought is what are we going to do for our customers. . . . It is OK for [Atari's] Jack Tramiel to say that business is war, but I say business is making customers happy.

Strategy...



Technology

At GENIX, strategy and position have made us a successful Information Services Company.

The GENIX strategy is to provide customers with superior technology, quality system solutions, and the service that comes from a company whose corporate commitment is to ensure total customer satisfaction.

Quality

Our position stems from both experience and strength. Experience born of 15 years of working in virtually every discipline of information systems. Strength comes from our relationship with our parent, National Intergroup, a $2.3 billion diversified company.

GENIX remote computing is the most cost-effective solution for large users of advanced information services. At the terminal level our 2000 plus users enjoy 99% plus average availability and a transaction response time not usually delivered by the typical remote computing vendor.

Service

In addition, GENIX consultants are available to support the needs of the most demanding customer. In telecommunications networking, data base design, process control applications, capacity planning, hardware and software evaluation, data center design; GENIX consultants are expert in their fields.

The next move is yours. It's a strategy that can lead to success. Call 1-800-US GENIX.

IN DEPTH

Executive Interview

John Fralick
TRW, Inc.

CW PHOTO BY GEORGE HARRAR

By George Harrar
Features Director

John Fralick is manager of Technology Planning, Information Systems for TRW, Inc.'s corporate offices. TRW exceeded $6 billion in sales last year by providing products and services in three markets: electronics and space systems, automotive, and industrial and energy.

A few years back, TRW decided to build a new headquarters in Lyndhurst, Ohio. Fralick was assigned the job of figuring out what information systems should go into a building which management expects to occupy until the year 2035.

Fralick necessarily took a long view of how people will work in the computerized office. He had to plan for what he thought would happen as well as what might happen. He was interviewed a few weeks before TRW moved in June 1.

Management stipulated a life expectancy of 50 years for the new corporate headquarters. How do you begin to think of information systems anywhere near five decades out?

When they said the useful life of the building was to be 50 years, the first thing we tried to do was make an honest attempt to forecast where technology was going.

We tried to do the whole 50 years. You can make some assumptions, gross assumptions, on where technology is going for maybe 10 or 15 years. It's real hard to get to 15. We came to the conclusion quickly that it was silly to do it for 50 — absolutely silly. But we felt fairly confident we could make some pretty good projections on where technology would be 10 or 15 years from now. We felt we could make some very good projections on where it would be three to five years out.

You did this forecasting two years ago. How have your predictions held up so far?

I'd say for the short term we were right on. We hit the nail on the head as to what would be happening over the next three to five years. The things we said have actually come to pass — although not exactly when we said they'd come to pass.

There's a tendency to be overly optimistic about big developments. You think they're going to occur faster than they do. There's a tendency to miss the boat on some of the shorter term things. They don't come to pass quite as fast as we think they will.

On the other hand, some of the long-term things sneak up on you, things like fiber optics for communications and voice processing. They're probably going to come to pass before we thought they would.

I guess the important thing we got out of trying to forecast the technology wasn't a high level of confidence in the forecast as much as what we inferred from it and then used to design the building. We basically wound up concluding that we really can't estimate over 50 years what the technology is going to be like. Because we can't, we've got to build as much

"If you look at the amount of equipment going in, the building starts to look like a giant computer room."

IN DEPTH/INTERVIEW: JOHN FRALICK

flexibility into the building as possible to accommodate just about anything that would come down the road.

We took the technology forecast, talked about the generic styles of processing, talked about generic computer systems and what they might be like, talked in a general sense about what people might be using computers for and how much they'll be using them in their jobs. Then we tried to forecast the characteristics of the devices — again, in generic terms — and said, "Well, if that's what things are going to be like, how should we build the building to accommodate those kinds of devices?"

Some of the more important things that we decided on were how big the equipment is, how much is going to be in your office, what are you going to be doing with it, what are the wiring systems going to be like and will they change.

> ”
>
> *We've tended to push more of the responsibility for computing out into the user areas rather than trying to operate a big, monolithic, controlled data center.*

It's an interesting situation, because you started planning two years ago, and you figured three to five years as the period when you thought you could make some pretty good guesses. You only have one more year before . . .

. . . before our good vision is up. Sure, we can see that. We selected a local-area network and a PBX for the building.

A single one for each?

Yes. And there have been an awful lot of new developments in the marketplace since then.

Which ones did you choose?

We chose the United Technologies Corp. 1001E PBX, a digital PBX, and we chose TRW's local-area network. Not a lot of people know about it, but TRW has been in the local-area networking business for a number of years. The primary customer has been the government, the defense agencies.

On Jan. 1, the division that manufactures the product went commercial with a charter to go after the commercial world — to provide a dual-cable, broadband coaxial, tree-structured bus topology local-area network. It does a very nice job of supporting personal computers and asynchronous devices. Because it's broadband, it does a fine job of supporting video; and because the topology's quite similar to that being used by Wang [Laboratories, Inc.], we are also going to be supporting most of the Wangnet services.

Your personal computers are what kind?

IBM Personal Computer XTs.

Any other vendors?

Not in the personal computer world. We set a policy that says that the IBM Personal Computer is the standard for corporate headquarters.

That was the standard even before deciding on the equipment for the new building?

Yes. Here's an example of how things have changed. When we chose the local-area network, we only had a couple of personal computers on the [corporate] staff. Now we've got about 60; we're moving into the building with about 75. The number has grown tremendously.

So we selected a local-area network. Now we have a new population of devices to support.

How many people will work in the new building?

About 450 will move in. The capacity is 750.

What are the basic functions of the people who work there?

We've got six functional departments — science and technology, communications, human relations, finance, law, planning and investment.

Let's go back to what people will be using computers for and the characteristics of the devices. What changes do you see in the styles of processing in 10 to 15 years? Are you talking about centralized vs. decentralized?

Yes. Five years ago, we were just starting in office automation. All of our applications were run on a centralized — essentially a single — mainframe computer.

Actually, about seven years ago, we started installing time-sharing systems, making computers and terminals more accessible to people for interactive processing, getting people to take the responsibility for initiating their own jobs rather than having them all processed by a large central batch processing facility. We were essentially trying to spread the responsibility for computing out to the user community. Also at that time, we were getting into office automation. We implemented shared logic, word processing clusters on a department-by-department basis.

So over the past seven years, we've tended to push more of the responsibility for computing out into the user areas rather than trying to operate a big, monolithic, controlled data center.

We'd like to get friendly with you.

The beauties above are two of the most user-friendly pieces in all of techdom. And both are backed by yet another dynamic duo: the sterling quality of Digital and the stalwart service of Leasametric.

The Digital VT220™ terminal, to begin, is the latest model in the cost-efficient VT200 series. This monochromatic model has a sleek look that's slick to use, including programmable function keys and a plain-language menu that's a snap to set up.

The LA210™ printer's no slouch, either. It's probably the most versatile printer ever produced by Digital. This multimode desktop is compatible with all Digital, IBM® and IBM-compatible personal computers. A friend to all, and pleasant to your purse as well: one machine for letter-quality printing, high-speed drafts, and high-resolution bit-map graphics.

All this, arm in arm with great service.

Not only can you get the pair right away from Leasametric — they arrive ready to work. Because we've put them through their paces before we ship them to you. Complete with operator's manuals, cables and the like. Plus, so good friends can keep in touch, we supply a toll-free number for on-line diagnostics. On-site maintenance if it's needed. And the iron-clad guarantee to replace — immediately — any piece that isn't up to snuff.

Finally, financing that's more than friendly. In addition to standard rental agreements, we offer volume pricing, rentals with options to buy, leasing and even used-equipment purchases.

Leasametric is an authorized distributor for Digital Equipment Corporation. We offer a full range of Digital's popular, quality terminal products. Why not call Leasametric today? After all, the best way to have a friend is to be one.

In California, call 800-528-6891. Outside California, call 800-228-6314.

Because they did their homework. They talked to our customers and found out that for over 12 years, hundreds of Fortune 1000 companies have had exceptional results from financial software systems by Data Design.

They discovered what nationally recognized software surveys confirm year after year: that Data Design has an unsurpassed record of user satisfaction.

They learned they can expect fast, trouble-free implementation with our systems.

They were told that our systems are exceptionally flexible and easy to use.

They found out about our reputation for in-depth training and responsive, knowledgeable support.

They learned that Data Design places only management level people in customer service positions. People who average over 10 years experience—not trainees.

And more.

So, if you're in the process of doing your homework on mainframe financial software, call today for our complete customer list, and you too can hear why companies like Alcoa, Amdahl Corporation, Burger King, Estee Lauder, May Company Department Stores, Pillsbury, Sherwin Williams Company, Bankers Trust Company, Central Soya Company, Chicago Tribune, CIGNA Corporation, Federal Express, Litton, Midland Ross, Owens Corning Fiberglas, Pertec Corporation, Royal Business Machines, G.D. Searle and Company, Security Pacific National Bank, Warner-Lambert Company, Zayre Corporation, Wisconsin Power & Light and hundreds of others decided on Data Design over other vendors.

And find out why 60% of our customers, who previously had other vendor's systems in place, have now decided to use systems by Data Design.

To learn more about the best financial software available, call toll-free 800-556-5511 or complete and mail the coupon today.

It's interesting you used the words "push it out." It's not being pulled out?

Seven years ago, it was a push. Now it's a pull. I think the turning point was three years or so ago — then it was a tremendous pull from the users to take the responsibility for their systems and to get involved in the development process. Today, we have a lot of users who are doing their own applications development using some higher level language tools that we've made available to them.

What is the status of personal computing in the corporate headquarters?

At the secretarial levels, we've got word processing and some additional support tools. We tried to cover the needs of the manager and professional analyst, basically by providing personal computers. The big application there has been spreadsheets. Today, not many people have explored the other things you can do with personal computers. Once we're over the enthusiasm for spreadsheets, people will be looking for new things to do.

In terms of styles of processing, the way we see things going is that there will be intelligent personal workstations in almost everyone's office. They will be very much like today's personal computers but considerably more powerful. Those personal computers will be networked together through a local-area network, accessing a variety of shared resources, which may be allocated on a departmental basis or across the board for the staff to share.

The mainframe computer is still going to play a large role in our processing because we support a couple of key systems here that are supporting the management of the company as a whole. They're primarily involved in the collection and reporting and analysis of either financial or reporting information. So we're developing some large central systems, accessible to all the units and divisions of the company, that are repositories of financial or employee information. Then we're trying to provide analysis and modeling tools so people can access that data and work with it.

What do you see changing in how people use computers? Right now, your secretaries use word processors and your analysts primarily use spreadsheets.

There's more than just that. We have a number of people in the financial and planning areas doing financial modeling with tools like [Management Decision Systems, Inc.'s] Express and some large mainframe-based tools that can handle sizable problems and considerable amounts of data. Those are end-user tools. They are just like a spreadsheet in that the users develop their own applications and solve their own problems without a lot of support or direct involvement from the information systems group.

We've got data base tools that allow people to build their own applications and maintain personal data bases or data bases of departmental information to store, retrieve and report on the information that's of specific interest to their area of the company.

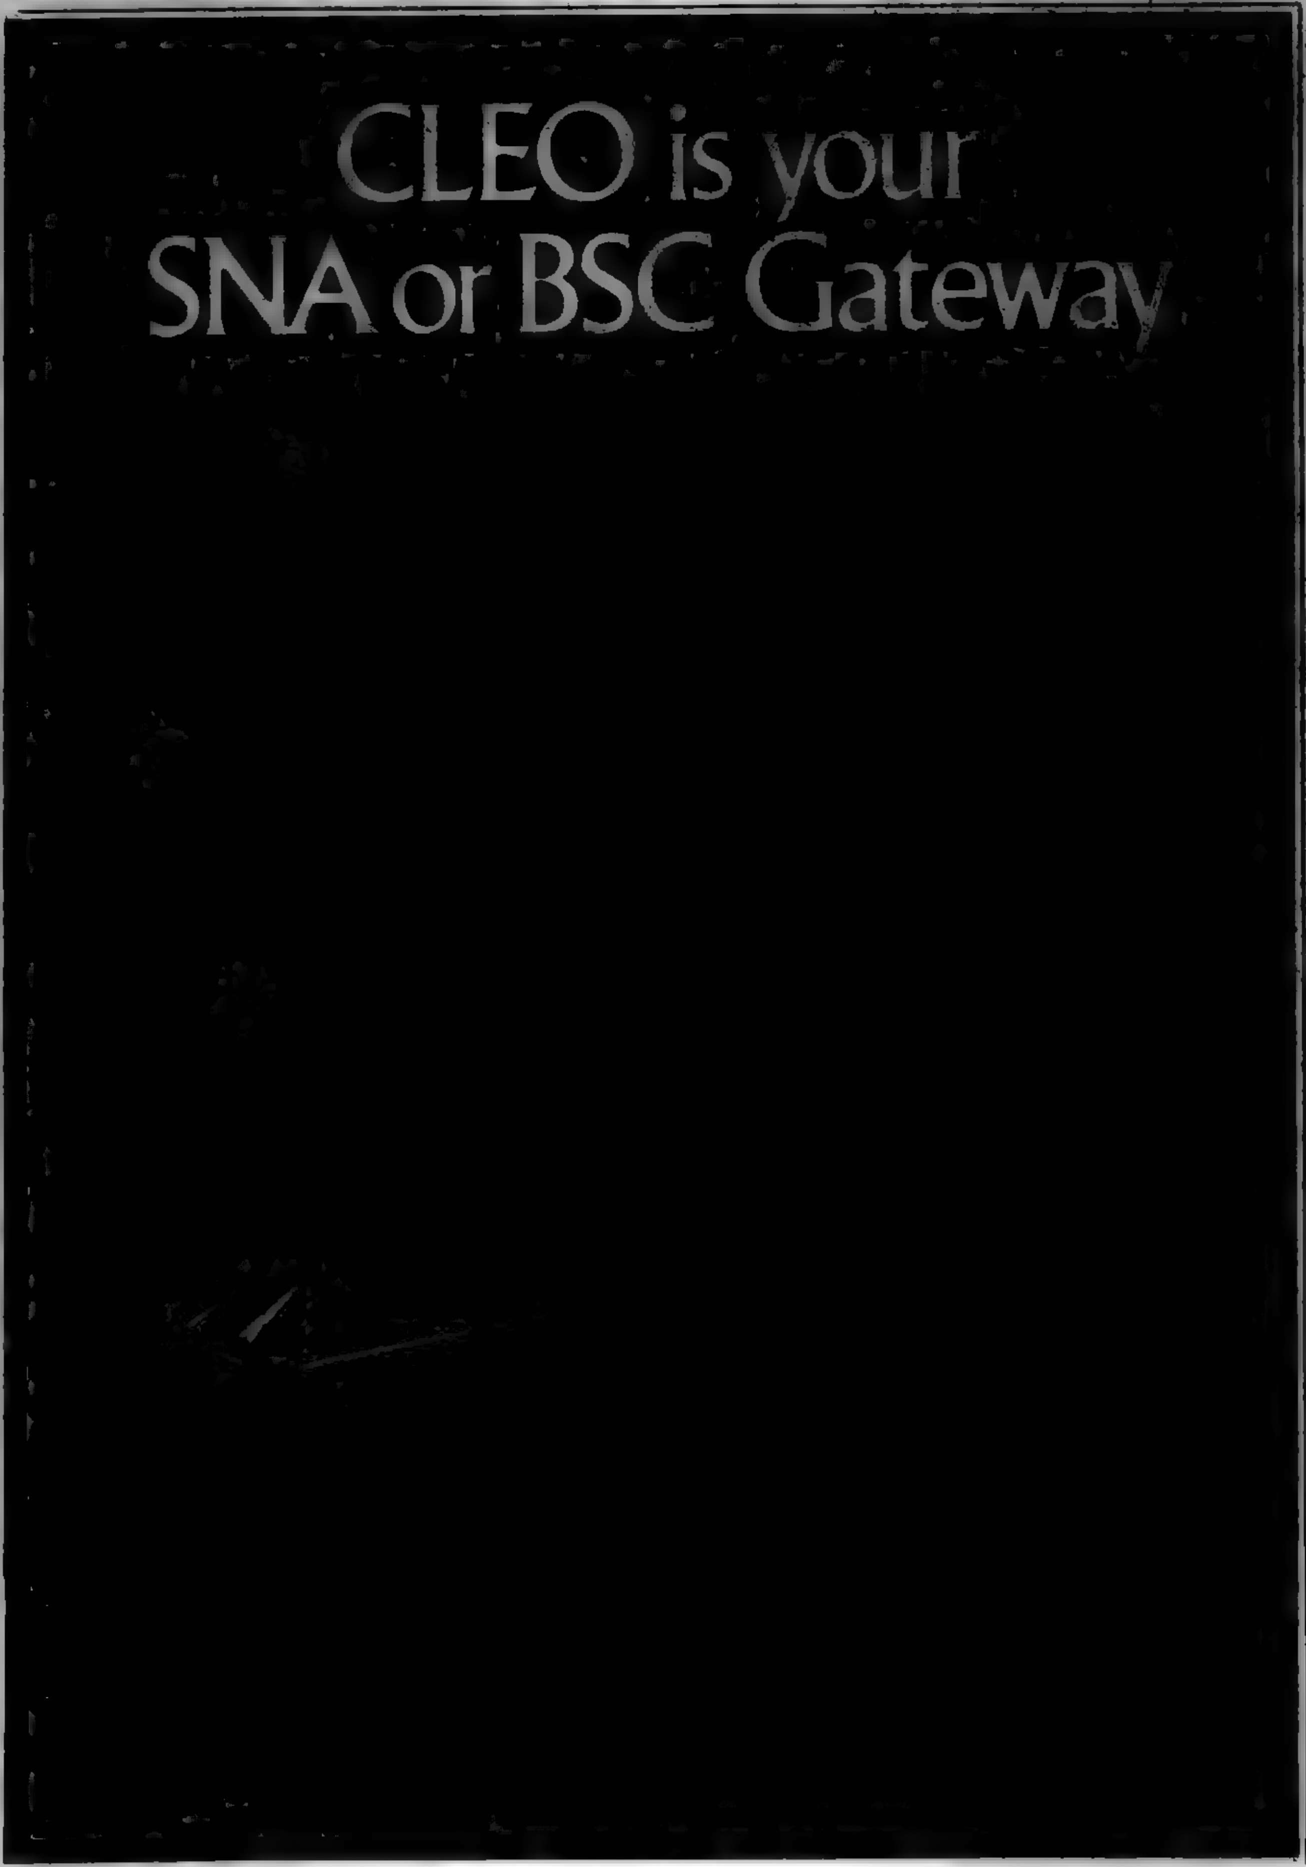
We've also got a range of traditional data processing applications, some of which have been developed as interactive applications for direct use by the end user and a few that are still operated in a traditional mode.

That's now. How about in 10 years? What do you see changing in how people use computers or what they use them for?

I think people are going to be more involved in developing their own applications. The tools that will be available will make it easier for end users to develop their own data bases — to store whatever information they're interested in working with in a data base. And then the tools will be available for them to analyze it and report on it in whatever form they need it.

Those things are becoming available now. They're not quite as easy to use as you'd like. The analysis tools that people really need don't usually work with the data bases that are available to store the information. So the whole process of end users maintaining their information and essentially being self-sufficient really isn't as easy as it needs to be before this thing becomes widespread.

I would say that in the future, people are going to be



CLEO is your SNA or BSC Gateway

using the computer to develop their own applications in a higher level language or a very powerful analysis kind of tool. They can satisfy their own needs and be self-sufficient without having to have a lot of day-to-day support from the information systems group.

How about the opposite — linking up to the mainframe? Your analysts need that connection.

I think information systems is still going to wind up getting involved in the larger applications and the applications shared by departments or divisions across the company. Information systems will be involved from the point of view of developing and maintaining the data base structures that hold the information these people need. People have their own tools to get at the information and work with the information, but you're going to see information systems or a central group needing to coordinate the access to the shared data bases to maintain control, integrity of the data base and security.

You were talking about ways data would be input — by voice, for instance. What do you see changing in terms of characteristics of the devices?

What we were interested in figuring out was how big the devices would be, how many you would have, what the power requirements would be and what kind of load they would place on the heating and air-conditioning systems. If you look at the amount of equipment going in, the building starts to look like a giant computer room.

How much of an investment is the building?

About $80 million.

What part of that amount relates to information systems?

About four and a half million — if you talk about the new things we're putting in. It doesn't include the investment in what we're carrying over.

Do you see one terminal or personal computer per person?

Right now, about two out of every three people have a terminal or a device of some sort. Our goal, like everyone else's, is the elusive multifunction workstation. Yes, to the extent that we can find the multifunction workstation that meets most people's needs, I suspect it will be about one to one.

Are you committed to looking to IBM for that workstation?

Not at all. Right now, IBM seems to have the best product for the manager/professional-level individual.

That being the Personal Computer XT?

It's certainly not the best product from the hardware point of view. But from the software point of view, people are developing software for the IBM first. The amount of software that will be available and the speed with which it will be brought to market and the extent to which it will be supported — today that says IBM's probably the best bet in the personal computer world.

How about the Personal Computer AT?

> ***"***
>
> ***We made a decision that we're not going to have a large mainframe-style data center inside the new building. You know, the very expensive floor space is better off being used for people than it is for machines.***

We've gone through the progression of hardware upgrades. As IBM introduces a new device that's faster and has a larger storage capacity, we start buying the larger device for those of our users who need the extra horsepower or storage. So when the AT was announced, we changed our ordering from XTs to ATs, but we backed off because of the problems in delivery and the quality-control problems on the hard disk. We're still ordering XTs, and we haven't gotten any ATs in yet. We're waiting for those problems to go away.

You made the decision not to put the data center in the building. Where is it located?

We're actually a service bureau customer of one of our divisions. We made a decision that we're not going to have a large mainframe-style data center inside the new building. You know, the very expensive floor space is better off being used for people than it is for machines.

If we should decide we want to staff and maintain our own data center, there is a provision in the site plan to build a separate, modular, low-cost data center building on the campus of the new headquarters.

How is your data center today connected to the new building?

By T1 carrier — a multiplexed T1 link to connect the 3270 terminals in the building to the computer-aided design equipment from the building to the mainframe here. The distance is about eight miles.

Because we made the decision not to have a large mainframe-based

Before VM Magic,
embarking on a migration from one disk type
to another was a formidable undertaking.

At last, an effortless path for DASD migration.

Now you can migrate to the new, faster disk device types in only the time it takes to copy your files—a matter of hours, instead of months or years consumed by program and job control conversions.

VM MAGIC bridges the distance between incompatible disk device types and guest operating systems running under IBM's Virtual Machine Facility (VM) without conversions or program modifications. That's right. VM MAGIC enables your system to store and retrieve data from any type of disk device, regardless of operating system, access method or software.

Get greater economy and performance without waiting.

With VM MAGIC you save more than the manpower expense of a long, labor-intensive conversion effort. You also reduce hardware and energy expenses, because with VM MAGIC you can respond to any of the disk device requirements of guest operating systems using any DASD. Save thousands of dollars in disk rental, maintenance and operating costs by eliminating outmoded or unnecessary disk device types.

Expand your options under VM.

VM MAGIC also lets you:
- increase system performance by migrating to, and taking advantage of, new technology disk hardware.
- select disaster recovery and backup sites without regard for disk configuration.
- prolong the life of your current software by eliminating its dependence on a specific disk environment.
- make decisions about hardware upgrades, program modifications and conversion efforts in a logical, orderly way.

For more information on the time and money-saving applications of VM MAGIC in your installation, call SDI at (415) 572-1200.

SDI.

SDI, 1700 SOUTH EL CAMINO REAL, SAN MATEO, CALIFORNIA 94402, TELEPHONE (415) 572-1200

data center in the building doesn't mean we don't have computers there. We recognized there's going to be a need for not only the mainframe but also distributed file servers, print servers, time-sharing systems and departmental CPUs that are shared by groups of users.

So we've done two things. One is the network control center, which essentially houses all the communications gear and communications monitoring equipment.

We also left room there for any CPUs or servers that are shared across the board by all the people on the staff. In fact, there's one room in each wing on each floor of the building. We set aside space for essentially departmental or distributed CPUs, so that if the communications department needed its own CPU or if it made sense to put a file server close to the printers in the communications area, we have space set aside.

The problem we have today is that if we wanted to wheel in a new device, we'd have to either stick it in the hallway or in the closet. So a lot of what we've done for the new building is really space planning — setting aside areas of the building to house the communications controllers, the servers, the distributed CPUs that we'll likely be using, even though we're not using a lot of them today.

Going to a new building gives you the opportunity to change strategies, change your wiring, change vendors, if you want. Did you reassess your commitments to various vendors and strategies? You don't have to tear into the walls to change your wiring. You're starting fresh. What different directions, if any, is TRW taking with the new building?

Two things — let's talk about communications, and let's talk about processing strategies. We made a decision fairly early in the new headquarters project that what we were going to do was build a good base of communications systems but not change our overall processing strategies drastically. One reason is the investment in existing systems, not only in terms of dollars for hardware and software but the amount of training that has gone on for the people who are using it.

We felt that the systems we're using today were serving us pretty well. We didn't see anything that much better on the marketplace, so there was no great motivation to change our applications or our processing hardware or our software strategies.

What we decided was that our basic processing strategies would evolve whether or not we were going to move to the new building. And that we'd handle it through just our normal strategic planning and capital acquisition process.

So we're not changing everybody's device; we're not changing CPU vendors; we're not changing applications systems at this point. And one of the advantages, we hope, is that the users will make the transition more easily from the old building to the new one.

There's nothing you felt you were doing wrong?

We had the opportunity to change things, but we didn't see anything that was so much better than what we had that there was any great motivation to change.

For word processing, you're using what system?

We're using Wang at the secretarial level and primarily [Multimate International Corp.'s] Multimate on the Personal Computers for those professionals who choose to do their own word processing.

Can the secretaries communicate with the Personal Computer users?

Yes. We're finishing up a little software right now that will make it even easier to do, so that documents can be transferred between the Wang and the Personal Computer.

You're customizing it yourself? Wang isn't helping you?

Multimate provides the conversion from Multimate to Wang. It does a pretty good job. What we're doing is essentially setting up the communications — some software to assist the communications process.

Will you have an information center on the premises?

Yes. The information center is going to be a place where people can get training. It's a place where people can get information on what's new, what's coming down the road, a place where people can try out hardware or software that they may not have used before.

We're going to be using it for one-on-one training and group training, for consulting on the use of personal computer tools. And we'll also use the space and equipment for people who may not have a dedicated device of their own. They can walk into the information center and get access to the device.

Predominantly in an IBM environment?

No. It's predominantly geared toward personal computing, which to me means something that the user does himself. If the personal computing application turns out to be a spreadsheet, it will run on an IBM Personal Computer. But if it turns out to be Wang word processing, it will run on a Wang.

We've got some data base tools that we class as personal computing tools that run on a Prime Computer, Inc. time-sharing system, and we're looking into more user-friendly interfaces to our large data base management systems. Those, to me, are personal computing tools.

When the information center first came out, people thought of it as the

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

IN DEPTH/INTERVIEW: JOHN FRALICK

place to go talk to the data administrator to get information. And then the personal computer revolution took off, and people started incorporating personal computer support in that area. For us, it's not personal computer support and it's not data administration. It's helping in the use of personal computing tools, regardless of what vehicle delivers them.

To whom do you report?

To the director of company staff information systems. He reports to the director of science and technology.

For two years now, you've been involved in technology planning for the information systems that go into the new building.

Actually, for about three and a half. My normal job is technology assessment, technology evaluation and strategic planning for how TRW company staff can and will use information systems.

By company staff you mean the corporate staff?

Yes. I used to be the manager of the data center. There was a real emphasis here at TRW, starting a couple of years back, on doing some good strategic planning. Our department created a planning unit that could focus on strategic planning issues.

How will the corporate headquarters be linked to the other divisions of TRW around the country and the world?

Primarily through an IBM Systems Network Architecture network for the applications that are IBM-based. We also have some companywide applications that run on Prime computers, and those applications are accessed through [GTE] Telenet. There is some direct-dial remote job entry back and forth. But in the future we will be depending more heavily on the IBM and the Telenet long-distance data networks.

What about electronic mail?

We have a companywide electronic mail system. There are about 3,000 active users worldwide. We're using GTE's Telemail system, which runs on Telenet. We've been into electronic mail for a little over two years now, and we've seen steady growth in the level of usage and the size of the user community. It's really caught on nicely.

Back to the building itself. You chose United Technologies, UTC, as your PBX vendor. So you decided to go with a separate digital PBX for voice and a single local-area network from TRW for the bulk of data.

Yes. One of the bigger decisions we had to make was: Do we have a PBX and a separate local-area network for data communications? Or were we going to try to get a PBX that did both voice and data? The problem is, state of the art is all relative — it's a point in time. There comes a point where you have to make a decision, and the state of the art moves on.

At the time that we had to make our decision, which was a little over a year and a half ago, we really didn't see any integrated voice/data PBXs that fully met our needs for data communications.

We also wanted to have video distribution throughout the building, and PBXs don't handle video. Now at the same time, we didn't find the local-area network that met all of our data communications requirements either. But we felt that we not only could do the best job of serving our current needs, but we'd also be building good basic capabilities for future expansion if we were to go with a PBX for voice and a local-area network for data — and video.

The basic decision was to buy a high-quality digital PBX. We selected UTC. Of the ones we looked at, its cost per handset was extremely attractive. It was a very cost-effective voice switch, and it had some reasonable data capabilities, but it wouldn't be considered a heavyweight in the data world. And that was OK, because we wanted a good voice switch. We didn't need a heavy-duty data switch, because we're going to put most of that on a local-area network.

And then we looked at local-area networks. We really did survey the entire marketplace. We were under absolutely no constraint to pick an in-house product. We picked TRW's product essentially on the strength of its systems engineering skills. It had a competitive product — competitive in price and capabilities.

The requirement we had for data communications included supporting the Wang systems, both terminal-to-CPU and CPU-to-CPU; IBM 3270 terminal-to-CPU; a host of asynchronous computers and time-sharing systems and asynchronous terminals; as well as this growing population of personal computers, both used as terminals to access CPUs and to transfer files from one to the next.

What we tried to do was find a solution to all these data communications problems that would be as integrated as possible. What we found on the marketplace was that there wasn't much integration you could buy. Wang didn't talk to IBM, and the whole idea of the virtual terminal concept and interoperability of devices and things like that was still a gleam in everybody's eye.

So we were faced with a decision of either installing traditional dedicated wiring to these systems or installing separate local-area networks for the systems — or trying to find a local-area network that could at least support, if not integrate, communications for a number of these different vendors. We didn't want to install multiple wiring systems if we didn't have to. What we wound up

Matt's office has been winning a lot of new business lately. And it's really not much of a secret.

Because he and his co-workers have been able to make more efficient use of their resources. How? Well, Matt brought in Team Xerox.

Which includes Xerox 8010 Star

"I heard you underbid us by half a million. What's your secret?"

Workstations, high speed laser printers, file servers for organizing and storing data and communications servers for accessing mainframe data bases, all linked together with a Xerox Communications Network. For complex analytical tasks, Xerox also included a Xerox Artificial Intelligence System.

So Matt (and the people in his domestic and international offices) could create, access, share and react to information more quickly and more easily than ever before,

And since Matt's office has become so much more productive, he was able to cut costs—and enter a bid that was $500,000 less than anyone else's.

To make Matt's secret yours, call Team Xerox at 1-800-833-2323, ext. 42 or send your business card to Xerox Corp., Dept. 42013, P.O. Box 24, Rochester, NY 14292.

doing was choosing a broadband local-area networking approach, which said that we could run multiple logical local-area networks on a single cable plan.

So we've actually got a dual-cable local-area network, two cables running to essentially every office in the building. Because the broadband cable is divided into separate communications channels, we can run different local-area networks within the different channels of the cable.

We have one channel of information on a local-area network supporting the asynchronous devices — the VT100s that connect the time-sharing systems or electronic mail, the personal computers that are used as asynchronous terminals connected to host computers or time-sharing systems or the personal computers when they're transferring files between each other.

Within other channels on the cable, we're supporting parts of Wang's Wangnet local-area network, primarily the part that is used to connect Wang terminals to Wang CPUs. We also have reserved a number of channels that we can pipe traditional video signals over.

All these channels and all this information is available at every office in the building. If you moved into a new office, all you'd have to do is move your terminal and the device interface between your terminal and the local-area network. And since all those channels of information are coming into your office, there's no additional wiring that we'd have to run to attach you to the set of local-area network services that you need.

The problem is that the state of the art then, and still today, is these distinct logical local-area networks. There is an asynchronous local-area network, there is a Wang local-area network, and the two don't communicate with each other. The signals share the same physical piece of wire, but information doesn't move from one channel to the next.

So what we managed to achieve, really, is integrating a bunch of logical local-area networks onto a single physical cable plant. What we'd like to see is real integration — or at least good bridging — so that information can flow from one local-area network to the other.

If you were making the decision now and what you decided could be installed in this building today, would you make a different decision separating the PBX and local-area network?

Probably not. I've been wondering about this lately, because there have been some really neat announcements on PBXs lately.

What has caught your attention?

I'm not sure I want to mention brand names.

Our readers like to know.

Well, some of the things that we liked about Intecom's future plans have actually come to pass. Intecom had some attractive offerings when we looked at them, but they were all breadboards, prototypes, not something we could buy and install. Some of those things have actually come to pass. It's still an attractive product.

Northern Telecom has come out with some attractive data capabilities on its PBX, and some of AT&T's announcements in the local-area networking area look pretty good. The problem is, most of the stuff still can't be bought and installed today.

That's one of the big lessons we learned. You've got to be careful about selecting these systems, because if you read the trade publications or the vendor literature, you're led to believe that a lot of the stuff you want is available off-the-shelf, that it will plug in and work. When you really research it and get into these vendors and talk to the engineers, you find out that it's not quite ready yet.

Having watched the industry over the last few years, the stuff that was going to be six months away slipped to 12, maybe. So in a lot of ways, I don't think that much has changed in the market in the last couple of years in terms of solid, deliverable products that would change our decision to do anything much differently than what we did.

Two years ago I had a feeling, "I wish we could wait three years to make this decision, because there's going to be some really slick stuff available in the

IBM is delivering PC Network, now our gateway hands you the Mainframe.

Our unique PCNetwork/SNA 3270 GateWay™ adds full 3270 emulation capabilities to your IBM® PC, XT, AT and compatible workstations using IBM's PC Network* to share your expensive SNA host connection.

True 3270 capability insures easy installation, giving you unlimited access to mainframe applications such as TSO, CICS, and IMS, while reducing costs over older solutions like 3270 coax adapters and dedicated point-to-point SDLC cards and modems.

Our HotKey™ allows you to toggle between 3270 functions and other DOS applications such as Lotus 1-2-3,™ further reducing your connection costs.

This PCNetwork/SNA 3270 GateWay product family includes software or a combination of hardware and software. Our entry level configuration supports 12 concurrent SNA sessions using an IBM SDLC card with our software. The next configuration replaces the SDLC card with our PC-compatible 8-Mhz 80188 ComCard,™ to provide more processing power than an IBM AT for up to 24 users, while maintaining workstation performance.

Moving the ComCard to our NetServer™ Communications System maintains performance for up to 48 concurrent users. Three additional ComCards can be installed in the NetServer to provide 192 concurrent sessions to 4 mainframes. As a bonus, the NetServer gives you the architecture to add additional internetworking capabilities, such as shared asynchronous modems, public data network access (X.25) and remote LAN bridging capabilities.

At last, you get the PC-to-SNA mainframe solution you've been looking for – Available now from a company committed to open architecture products, compatibility warranties and customer support.

We're California Network Systems – The Connectivity Company.™

*Or any IBM NETBIOS-compatible network.

marketplace." You know, I still feel exactly the same way.

The other thing is that by taking the approach that we have — the fact that we have the broadband, dual-cable local-area network — we have maximum flexibility in the coaxial-based local-area networking world. We can run and support a variety of different styles of local-area networking devices on that cable plant.

We also have a good PBX and a good local-area networking ability. We have the best of both worlds, and now we have the option to add new services to whichever engine is most appropriate.

But you do have two worlds. You don't have the one integrated world.

We haven't integrated voice and data on the same set of wires; that's a fact. But what does voice and data integration mean? It means that voice and data are carried over the same pair of wires.

That's what the state of the art is today. The advantage is it saves you some cost, and it saves you some work in managing the wiring of the building. But voice and data still aren't really integrated as information media. They travel down the same set of wires.

Three years ago, when you were hoping or wishing that you could wait three years to make the decision, you may have been expecting a local-area network from IBM. Yet what they came out with was a cabling strategy.

And it's not even a completely defined cabling strategy. The specifications on the fiber-optic components of that are still not clear, and users' experiences in installing the IBM cable to date haven't been very good. We were very aware of IBM and what they were doing at the time we made our decision. We obviously couldn't wait for IBM to go public and disclose. We couldn't buy the product, because it wasn't available. We had to make a decision to go ahead without IBM.

Was that a painful decision?

No, it wasn't. We felt comfortable about the decision then, and at times I think it has turned out to be a pretty wise one. What have you seen? In the meantime, they have introduced a completely different networking scheme, and the token ring and its associated wiring scheme still isn't something with which you can do very much.

One of the real features of the building from an information systems point of view is the raised floor throughout the office areas. We talked about flexibility, we talked about wiring strategies and local-area networking strategies. We realized that over 50 years, the only thing we can be certain about is that things are going to change. We're probably going to want to install a new wiring system. We may want to install new physical local-area networks. We're certainly going to want to install new logical local-area networks.

The medium that we choose to use may change from coax to twisted pair or fiber optics. Knowing that, what we wanted to do was make sure the building was built in a way that wouldn't preclude us from taking advantage of these new things as they became available.

So we have installed a raised floor throughout all of the office areas, with a 6½-in. clear space underneath, so that not only is it going to be easier to make changes, but also, in the event that we decide to go a whole different route with local-area networking or take advantage of some new technology, we can install it in the building without any major disruption to the end users or any major cost for construction. And we can do it quickly.

So you don't feel locked out at all? You're still looking at Intecom and Northern Telecom and the AT&T in terms of PBXs and local-area networks?

We're not looking at them, no. We're actually looking at the useful life of this PBX to be in the neighborhood of five or seven years. We expect to have an opportunity to revisit our decision in the not-too-distant future.

What do you know already that you did wrong or did right with this new building?

In terms of assessing and forecasting the technology, I'd say that things that seemed like they were a long way off and vague often surprise you and happen sooner. On the other hand, things that you thought you knew pretty well, things that seemed like they would come to pass relatively quickly, sometimes surprise you by taking much longer.

In general, I'd say that people who are in the position of trying to assess technology or select equipment should do so with a healthy dose of skepticism and inquisitiveness. We found an awful lot of things that we thought we could buy off the shelf, but really, when we dug into it, we found that they were still on the drawing boards.

Did you follow a conservative approach then? Did you end up with a conservative building?

No, our approach to the applications and the things that people are doing today with computers is evolutionary — a little conservative, yes, but evolutionary, not revolutionary. With respect to the new communications systems, we're installing things that are pretty close to the state of the art as to what's deliverable off the shelf.

What we're installing is practical, but because these are still relatively new systems, there's an element of risk.

There are several ways to simplify VM for your users...

and they're all called MULTIPAK/VM™

MULTIPAK/VM is a productivity aid designed by SKK, Inc. to enable your VM users to more easily perform daily tasks. MULTIPAK/VM is actually a collection of four separate but related VM utilities that improve upon some existing facilities, while adding some powerful new capabilities for VM users under CMS.

MULTIPAK/VM was written to assist users at all levels of experience. The package offers a trove of features that will benefit the most experienced VM/CMS programmer as well as the non-technical, inexperienced VM user. In fact, we developed MULTIPAK/VM for our own use based upon our years of IBM and VM experience from our ACF2 product line. SKK is a leader in IBM mainframe software products, with over 1,800 user sites worldwide.

Here are just a few of the many ways that MULTIPAK/VM can help you:

1. SPOOL VIEWER
Spool Viewer gives users the ability to now display all spool files. This includes print and punch files, which were previously inaccessible. With Spool Viewer users are no longer limited by file size, because the entire spool file may be viewed regardless of size.

Spool Viewer offers user-tailorable screens, which may also be used to change the displayed data. The Display/Change feature enables users to change file attributes by simply keying-over the displayed data without using complex CMS commands.

2. SHORT CUT
Short Cut is a command shell which simplifies CMS by guiding users through a multilevel system of command panels. Short Cut is designed to reduce the CMS learning curve and to increase efficiency of experienced users by offering simpler, faster alternatives to existing facilities.

Managers may use Short Cut to restrict CMS command usage by specific groups of users or by individuals.

3. SCREEN PAINTER
Screen Painter enables users to construct full-screen application panels by laying out screens exactly as they are to appear. Screen Painter offers new levels of performance, while automatically validating all screens and allowing users to print screen hardcopies. These screens may be called from an assembler program, and EXEC, or a high-level language.

4. STRETCH EDIT
Stretch edit offers VM users new and enhanced XEDIT capabilities. MVS or VS1 datasets, or parts thereof, may be copied directly into CMS files without losing the current line displayed. Stretch Edit allows users to swap screens, rename files in one step, and enhance normal program function key usage.

5. FREE TRIAL
SKK can also give you a productive way to evaluate MULTIPAK/VM; a 30-day free trial. Simply mail in the completed coupon or call a MULTIPAK marketing representative at 312/635-1040.

What could be more productive? Your company...with MULTIPAK/VM.

Panasonic portable bows

IBM-compatible unit boasts plasma display

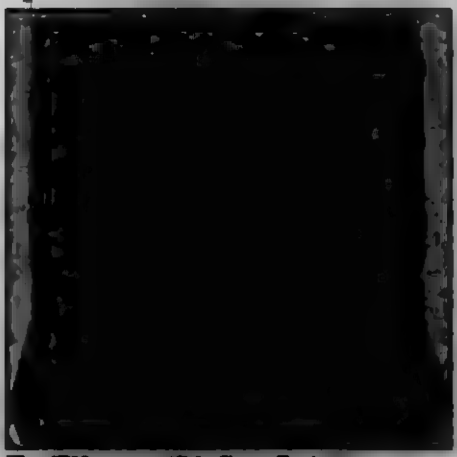
SECAUCUS, N.J. — Panasonic Industrial Co. has introduced the Exec-Partner, a $2,595 portable personal computer that features a gas plasma display and is said to be compatible with the IBM Personal Computer.

The Exec-Partner reportedly includes a 25-line by 80-col. orange gas plasma display that is flicker-free and offers faster refresh times and a longer lifespan than the LCD screens built into most laptop portables. The display also is brighter than the electroluminescent displays used in some more expensive laptop computers.

The Exec-Partner is 21 in. long, 16 in. wide and 5 in. tall and weighs 28 pounds.

The unit includes 256K bytes of internal memory and is based on the Intel Corp. 8086-2 microprocessor, the vendor said.

It is said to feature a built-in thermal printer offering correspondence and draft-quality output at 60 and 30 char./sec., respectively. Correspondence-quality printing, on regular paper, can be achieved through use of a ribbon cartridge, which is included, the vendor said.



The IBM-compatible Exec-Partner

The Exec-Partner's keyboard is said to be configured like that of the Personal Computer's and have 10 function keys. Four of the keyboard's special function keys are equipped with indicator lights.

Also included are twin 5¼-in., 360K-byte diskette drives, Microsoft Corp.'s MS-DOS operating system and GW Basic language and both serial and parallel ports.

The Exec-Partner will be available this month, the vendor said.

Panasonic Industrial is located at One Panasonic Way, Secaucus, N.J. 07094.

Word for Macintosh enhanced

BELLEVUE, Wash. — Microsoft Corp. has introduced an upgraded version of Microsoft Word for Apple Computer, Inc.'s Macintosh that improves performance with the Apple Laserwriter printer and permits users to convert Word files on the IBM Personal Computer to Word files on the Macintosh Word or vice versa, while retaining all formatting.

Microsoft Word for the Macintosh Version 1.05, priced at $195, reportedly increases Laserwriter output speed up to 400%, gives improved word and character spacing and supports manual feed and a print-cancel function.

Among other enhancements, a modified date and time stamp in the Get Info box reflects creation and modification dates; documents are returned to folders; character formats can be turned off from the keyboard and text; and formats can be moved across a horizontal window split.

An update kit with master and backup program disks and added documentation is available at no cost to customers who bought the software after April 1. Customers who bought the software before that date but paid $10 for a backup disk also are entitled to a free upgrade. Other customers with existing copies of Word for the Macintosh can buy the kit for $15.

More information is available from Microsoft through Box 97200, 10700 Northup Way, Bellevue, Wash. 98009.

SMALL TALK
Edward Warner
CW Senior Writer

IBM's variety swamps users

Maybe IBM should consider using family planning for its ever-growing line of Personal Computer models.

As things stand now, at least 15 different models of the Personal Computer exist. And while IBM may find this beneficial in some way, users are being left in a state of confusion.

Should they buy a Personal Computer AT or a Personal Computer AT 3270 Model G or go all the way for the AT 3270 Model GX? Or should they choose the Personal Computer XT or AT versions of the Desktop Series 1?

Such diversity is the mother of confusion, and that is just what befalls potential Personal Computer users in any corporation when they try to decide which Personal Computer is best for their needs.

According to Home Insurance Co.'s Vice-President of Information Systems Anthony Graffeo, "The choices and the products [from IBM] have confused a lot of people — the 3270 [Personal Computer], the Series 1 [Personal Computer] — there is much too much."

With so many different models of the Personal Computer to choose from, he observed, potential buyers are moving slowly through the selection process. This, he added, may be one reason why demand has "dried up" for the Personal Computer in corporations; the potential users are waiting until a machine comes out tailored specifically to their needs.

IBM has certainly tried to meet these needs in every variation. Consider this incomplete list of Personal Computer models: the Personal Computer; the Personal Computer XT; the Portable Personal Computer; the Personal Com-

We Took The Kinks Out Of IBM Cabling

Fact is, IBM's Token Ring baseband cabling system for local area networks is a terrific plan. But that's all it is right now. You're going to have to wait quite a while to connect your equipment to IBM cabling.

Unless you connect with NESTAR. We're the only ones now making IBM's local area network cabling actually work. Because we're totally compatible with their system. So you can get all the benefits IBM promises tomorrow from NESTAR today.

All of which isn't surprising. NESTAR has installed more large local area networks in large institutions in the last five years than any other vendor.

So if you want to make the right connections today for IBM cabling, you don't have to wait for IBM. Call or write NESTAR today; we can deliver as soon as tomorrow.

Chart-Master, Sign-Master upgrades out

Graphics tools run on IBM micro line

WESTPORT, Conn. — Decision Resources, Inc. has announced enhancements of its Chart-Master and Sign-Master business graphics software for the IBM Personal Computer line.

Sign-Master 5.1, for use in creating signs and textual slides, reportedly offers type fonts called Swiss and Swiss Bold that are similar to the Helvetica type fonts.

It also is said to offer a Symbol font that contains 94 symbols or icons for such items as arrows, geometric shapes, people and transportation vehicles.

A scroll-through menu is said to guide the user through the step-by-step production of word charts such as outlines, tables, financial summaries and the like.

Chart-Master 6.1 offers a feature called Datagrabber, which reportedly gives access to spreadsheets such as Lotus Development Corp.'s 1-2-3. Chart-Master also incorporates both the Swiss type fonts and the Symbol font; symbols from the latter can be inserted into a chart or a graph, the vendor said.

Chart-Master's standard features are said to include context-sensitive Help screens. The software also includes 40 customizing options, including hatch and line patterns, exploding pies, text fonts, colors, axis control, floating legends and others.

It supports more than 80 devices, including the Hewlett-Packard Co. Laser Jet printer, the IBM Color Jetprinter and Proprinter and the IBM Enhanced and Professional Graphics displays.

The enhanced versions of both products are said to support the IBM PC Network.

Sign-Master is priced at $245. Updates for existing users cost $65. Chart-Master is priced at $375. Updates for current users are $75.

Decision Resources is located at 25 Sylvan Road S., Westport, Conn. 06880.

Epson adds printers to FX series

TORRANCE, Calif. — Epson America, Inc. has announced two dot matrix printers in its FX series.

The 80-col. FX-85 and wide-carriage 136-col. FX-185 are both said to offer high-speed printing and high-resolution, near-letter-quality copy, single-stroke-selectable print modes and built-in IBM character sets. Both include an 8K-byte print buffer.

Both printers reportedly operate at 160 char./sec. in draft mode and 32 char./sec. in near-letter-quality mode. The IBM character sets are said to allow both machines to emulate either Epson or IBM 5152 graphics printer control codes and to operate with software configured for the IBM Personal Computer, Personal Computer XT or AT.

The FX-85 and FX-185 include logic-seeking bidirectional printing, 96 Ascii and 11 international character sets, proportional-space printing, horizontal and vertical tabulation and short paper tear-off. The near-letter-quality mode offers the choice of pica, superscript or subscript and expanded pica character sets, while the draft mode allows users to choose pica, elite or characters formatted on the computer and downloaded into the printer memory, the vendor said.

The cost of the FX-85 is $499; the FX-185 is priced at $699.

Epson America is located at 2780 Lomita Blvd., Torrance, Calif. 90505.

Apple continues to post healthy Macintosh sales

SAN FRANCISCO — While Apple Computer, Inc. is having its troubles this year, the Macintosh personal computer is selling at the substantial rate of 25,000 to 30,000 per month, Future Computing, Inc. Chairman Egil Juliussen estimated late last month at the Macforum conference here.

The Dallas-based market research firm predicted that 350,000 Macintoshes will be sold this year in the U.S. and 90,000 will be sold overseas.

Roughly two-thirds of the Macintoshes sold through computer specialty stores are 512K-byte models, Juliussen said.

About 275,000 Macintoshes were sold in 1984, compared with 90,000 IBM Personal Computers purchased in that machine's first year, according to Future Computing figures.

"The computer is getting sarcastic. Listen to this: 'Here is the information you requested, O master.' "

In August, 128,000 MIS/DP executives can stop saying
"What we have here is a failure to communicate."

There's a world full of computers out there. And everyone's trying to make them talk to each other.

The trouble is, there are so many technologies, so many products, so many promises, MIS/DP management isn't sure which way to turn.

In the August 26th issue of *Computerworld Focus* on Networks, we'll help them cut through all the smoke with a complete issue devoted to the topic of networking. Which gives you an ideal advertising forum if you've got a relevant product, service or strategy. Because you'll be surrounded by truly topical, informative editorial.

We'll take a look at LANs, PBXs and long-haul satellite technologies, as well as packet networks and teleconferencing. We'll call on experienced users to give us accounts of their own trials-by-fire. We'll ask industry experts to evaluate future directions and advise on the paths that are most likely to be successful for users. And we'll evaluate the products and strategies designed to link desks and offices and buildings and cities into a single integrated system.

So if you want to reach Computerworld's 128,000 paid subscribers, plus bonus distribution at important Fall '85 trade shows, the answer is simple. Get your ads in focus. *Computerworld Focus.* The August 28th issue. But hurry, closing is July 19th.

For more information, contact Ed Marecki, Vice President of Sales, *Computerworld Focus,*
375 Cochituate Rd., Framingham, MA 01701.
Or call (617) 879-0700.

Sun
workstations:
open architecture,
open network,
open options.

Sun workstations are in the vanguard of the open rebellion against proprietary computer systems. And the closed minds that design them.

Sun Microsystems™ took an open approach to designing their complete line of general purpose workstations, fully integrating industry standards for hardware, software and data communications to create a new standard for high performance, compatible workstations.

This open attitude, backed by hundreds of other open-minded companies throughout the computer industry, gives computer buyers the freedom to incorporate state-of-the-art products from a wide variety of vendors, while protecting their existing computer investment.

The value of the open approach is self-evident: Freedom from single-vendor delays in delivering new products. Freedom from high single-vendor prices. Freedom from having to commit your company's future to any one computer company.

Sun's Open Line

Sun's entire family of workstations is built around the same powerful "standard" features, including: A Motorola 68010 microprocessor. Ethernet 10 megabit/sec. local area network (LAN). An advanced UNIX™ operating system, supporting up to 16 megabytes of virtual memory space per process. 9-slot Multibus® (IEEE-796) or 15-slot VME cardcages. High resolution, 1152 x 900 pixels, display and 66Hz non-interlaced refresh. Two RS-423 serial ports with full modem control. Mouse pointing device. Latest Sun software release including: SunWindows,™ SunCore™ graphics library, Sun Network File System, C/Fortran/Pascal compilers, a 68010 assembler. And more.

Sun keeps your options open by allowing you to configure your workstations with or without disk, as standalone units, nodes in a network, or as fileservers. Sun Workstation® options include: Main memory expansion of up to 8 megabytes. Up to 380 megabytes (formatted) disk subsystem. ¼" cartridge tape and ½" tape drive subsystems.

The open attitude built into every Sun workstation begins with an advanced version of the industry-standard UNIX operating system, supporting fast I/O to disk, multi-processing and diskless workstation operations. Fast hardware combines with the power of more than 220 UNIX utilities, plus additional tools, to create the most productive computing environment available today.

Distributed Computing Network

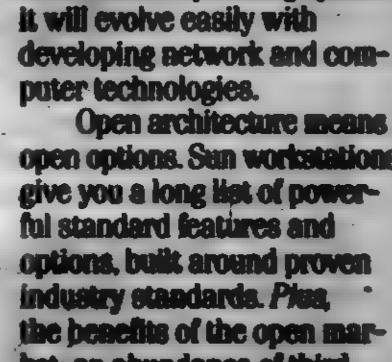
Lack of access to files stored throughout a heterogeneous network has always been the weak link in the team engineering chain. Until now.

Sun's Network File System (NFS) opens the lines of communication between multi-vendor computers, giving each user a window into a transparent information network. Via this network, large teams of professionals can cooperate on project work, accessing any specialized computing resources they need.

And, since Sun NFS is independent of any particular hardware or operating system, it will evolve easily with developing network and computer technologies.

Open architecture means open options. Sun workstations give you a long list of powerful standard features and options, built around proven industry standards. *Plus*, the benefits of the open market: an abundance of third-party companies working to open new doors for you and your company.

To find out more about Sun's open attitude and the workstations that have evolved from it, write: Sun Microsystems, Inc., 2550 Garcia Avenue, Mountain View, CA 94043. Or, simply call (800) 821-4643. In California (800) 821-4642. Our lines are open.



Open Systems for Open Minds.

Sun Workstation is a registered trademark. SunCore and SunWindows are trademarks of Sun Microsystems, Inc. UNIX is a trademark of AT&T Bell Laboratories. Multibus is a registered trademark of Intel Corp.

Sorcim enhances management package

SAN JOSE, Calif. — Sorcim/IUS Micro Software, a division of Computer Associates International, Inc., has enhanced its Superproject project management software for the IBM Personal Computer line. Sorcim/IUS has also announced a new corporate licensing program that offers users quantity purchases, unlimited licenses and service support.

Superproject 1.1 reportedly includes a printing program called Sideways, from Funk Software, Inc. Sideways permits a report to be printed horizontally, eliminating the need to cut and paste.

Other printing enhancements are said to include the ability to send spreadsheet-style columnar reports directly to a printer or disk file, as well as to a Sorcim/IUS Supercalc data file. Also reportedly included is support for the Intel Corp. 8087 math coprocessor and output devices such as the IBM Proprinter and Color Jetprinter.

Superproject runs under IBM's PC-DOS 2 or higher and requires 256K bytes of memory, the vendor said. The package costs $395.

Software available under the new corporate licensing program includes Sorcim/IUS's Superproject, Supercalc series and Superwriter and Easywriter series. The minimum license quantity is 25 copies.

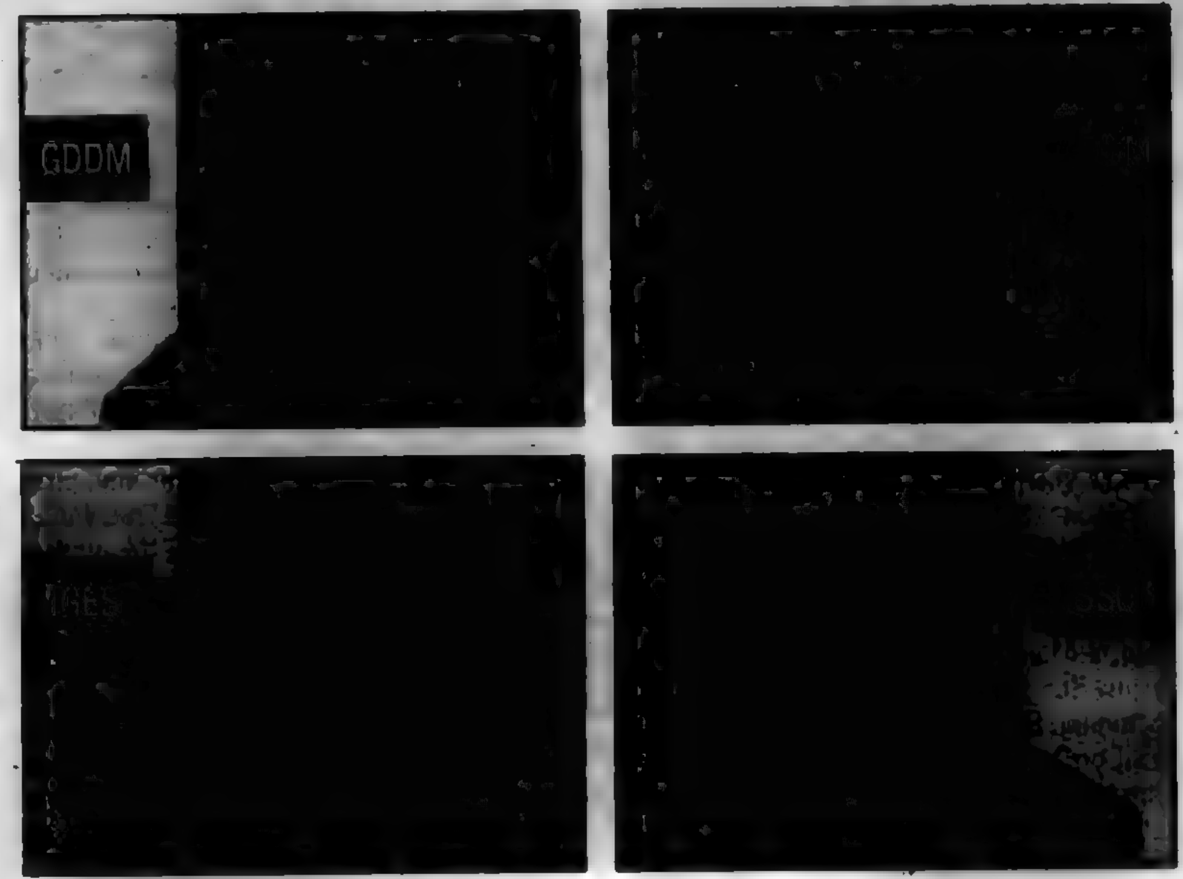
Prices for Superproject, Supercalc 3, Release 2 and Easywriter II range from $5,925 for 25 copies to $65,000 for an unlimited license. The cost of a license for Superwriter or Supercalc 2 ranges from $4,425 for 25 copies to $48,500 for an unlimited number of copies.

The corresponding price range for Easywriter I, Supercalc or Supercalc 3 is between $2,925 and $32,000.

Support material prices include $150 per hour plus expenses for applications development, $75 per hour plus expenses for user seminars and training, $25 per set of documentation materials and $1.50 for each 10-min user guide.

More information is available from Sorcim/IUS at 2195 Fortune Drive, San Jose, Calif. 95131.

See what EnerConnect can do with mainframe graphics on your PC.



EnerConnect™ is the first software package that puts mainframe graphics capability into the hands of anyone with an IBM PC/XT/AT or 3270 PC.

Now a PC user can have desktop access to business and technical graphics applications generated by GDDM, ISSCO's Tell-A-Graf® and DISSPLA,® SAS/GRAPH® and IGES datafiles.

Once they're displayed, EnerConnect lets you manipulate them in a variety of ways. You can rotate, enlarge, reduce, cut-and-paste with other elements from different mainframe files, add text and even direct output on low-cost PC printers and plotters. All without using expensive mainframe connect and processing time.

You can also use our PC-based graphics program, EnerGraphics, to interface with spreadsheet data from LOTUS 1-2-3, VISICALC and other packages, turn the data into easy-to-understand bar charts and then combine them with mainframe graphics.

EnerConnect. Your Mainframe-to-PC software link. Developed by the specialists in graphics applications software.

Call or write for our free brochure and see what EnerConnect can do for you.

ENERTRONICS SEEING IS BELIEVING

Enertronics Research, Inc. • 150 N. Meramec • Suite 207 • St. Louis, MO 63105 • (314)725-5566 • 1-800-325-0174

SOFTWARE

■ **Hart Scientific, Inc. has announced data analysis and report generation software for the IBM Personal Computer, Personal Computer XT and Personal Computer AT.**

Q.E.D. reportedly allows users to acquire, graph, mathematically manipulate and store data for report generation. Users may create an unlimited number of windows for multiple data traces or display an individual data trace in multiple windows.

The product is said to allow data collection from multiple channels and data transmission to a variety of destinations. Functions such as mathematical analysis, tracing and archiving can be performed simultaneously. Q.E.D. is file compatible with software products including Lotus Development Corp.'s 1-2-3.

Q.E.D. resides in a minimum of 256K bytes of memory on the micro and can be used with the Intel Corp. 8087, 80187 and 80287 math coprocessors for high-speed analysis.

The cost of Q.E.D. software is $849.

Hart Scientific, 177 W. 300 South, Provo, Utah 84601.

■ **Viewlogic Systems, Inc. has announced three computer-aided engineering (CAE) software programs for the IBM Personal Computer XT and AT.**

The Workview series reportedly allows electronic design engineers to design and generate documentation on the micro and communicate with other micros, CAE/computer-aided design workstations, superminis and mainframes. Each program requires a minimum of 512K bytes of random-access memory and the IBM PC-DOS operating system.

Workview 100, the entry-level software series, includes schematic entry and waveform processing. Prices range from $3,500 to $5,500, the vendor said.

Workview 300 is a digital design system that includes all Workview 100 features as well as an interactive logic simulator. Prices range from $6,500 to $8,500.

Workview 500 is an analog design system that includes the above features plus a circuit simulator and simulator library for discrete components. The price of Workview 500 ranges from $5,500 to $8,500.

Viewlogic Systems, 33 Boston Post Road W., Marlboro, Mass. 01752.

■ **Data General Corp. has announced the availability of the Microsoft Corp. GW Basic Compiler for the DG/One portable computer.**

The compiler reportedly translates programs written in GW Basic into machine language. The software is compatible with Basic A, the standard Basic used on the IBM Personal Computer, to allow Basic A programs to be compiled and run on the DG/One.

The product reportedly gives DG/One users greater graphics software development capability as well as faster operation of long programs. The compiler requires a DG/One with a minimum of 256K bytes of memory and one diskette drive.

Cost of the compiler is $395.

DG, 4400 Computer Drive, Westboro, Mass. 01580.

MICROCOMPUTERS

■ R Systems, Inc. has announced a version of its integrated office automation software for the AT&T Unix Personal Computer Model 7300.

R Office reportedly integrates word processing, desktop management, data base management, table spreadsheet and report generation programs. The product can run on a single machine or on several micros operating on a network with the AT&T Unix System V operating system.

R Office requires a minimum of 320K bytes of memory, plus an additional 32K bytes for each additional micro in a network.

The price of the Unix version of R Office is $1,295.

R Systems, 11450 Pagemill Road, Dallas, Texas 75243.

■ Digital Equipment Corp. has announced a software package that allows a second terminal to be attached to DEC Professional series workstations.

The Pro/Associate package is reportedly invoked by the main terminal of a DEC Professional 350 or 380 system, which sends a Pro/Associate menu to the screen of the second terminal.

As the software runs on the associate terminal, the main terminal user may use the same or other Professional software programs simultaneously, according to the vendor.

Programs in the package are said to include Pro/Datatrieve data base management; communications software supporting Pro/Decnet and Pro/Communications; a login/logout facility; and file, disk/diskette and print services.

Pro/Associate runs under Version 2 of the DEC P/OS operating system. Hardware system requirements are a Professional 350 or 380 with 10M-byte hard disk and a VT200 series terminal.

Cost of the software is $400, the vendor said.

DEC, Maynard, Mass. 01754.

■ McDonnell Douglas Professional Services Co. has announced the first of a series of systems development software products for the IBM Personal Computer XT and Personal Computer AT.

Prokit Analyst is reportedly designed to help systems analysts prepare data flow diagrams while simultaneously creating the supporting documentation as a data dictionary. Analysts may draw and edit data flow diagrams while the system produces and updates an applications dictionary.

The product includes the functions of McDonnell Douglas DFDdraw data flow diagramming software for the IBM Personal Computer, according to the vendor.

Additional functions include full-integrity checking, a process that enforces standard data flow rules on the user's creation and updating of data flow diagrams, the vendor said.

Prokit Analyst requires the Personal Computer XT or AT with a minimum of 512K bytes of memory and a color graphics board and monitor.

Prokit Analyst will be available in August for $2,450, according to the vendor.

McDonnell Douglas Professional Services, St. Louis, Mo. 63166.

■ Control-C Software, Inc. has announced an enhanced version of its Starjet software that reportedly offers improved capabilities in printing Micropro International Corp. Wordstar files with the Hewlett-Packard Co. Laserjet printer.

Starjet Version 3 prints multiple columns of text per page with one command, right-justifies text in both proportional and fixed-pitch fonts and redirects formatted output of a Starjet file to a disk file, according to the vendor.

Other enhancements include global font assignment, microjustification of intercharacter spaces, typographic effects, proportional fonts and support of seven font cartridges and 21 symbol sets.

Starjet 3 resides in less than 45K bytes of memory and is available in versions for IBM PC-DOS 1.1, 2.1 and 3; Microsoft Corp. MS-DOS; and Digital Research, Inc. Concurrent CP/M 86, CP/M 86, MP/M 86, CP/M 80 and MP/M II.

The cost of Starjet Version 3 is $150. Upgrade cost for current Starjet users is $25.

Control-C Software, 6441 S.W. Canyon Court, Portland, Ore. 97221.

■ Cosmos, Inc. has announced a network version of its Revelation data base system and has upgraded its single-user package.

Network Revelation reportedly is compatible with IBM's PC Network, Nestar Systems, Inc.'s Plan 3000 and networks running under Novell, Inc.'s Netware. The network data base system locks data at the record level, allowing several stations on the network to share files simultaneously but allowing only one user at a time to update records.

Release G of single-user Revelation is said to include context-sensitive Help screens, menu-driven data input and a file structure called Link that speeds sorting of files larger than 200K bytes.

Object code generated with Release G is not compatible with earlier versions. Code generated with earlier versions is compatible with the release but will run more efficiently if recompiled, the spokesman added.

Revelation runs on most Microsoft Corp. MS-DOS and IBM PC-DOS systems.

Network Revelation prices start at $1,495 for a four-user system. Single-user Revelation Release G costs $950, the vendor said.

Cosmos, Suite 108, 19530 Pacific Highway S., Seattle, Wash. 98188.

You can reach over 50,000 computer professionals in Norway.

Advertise in CW Communications' Norwegian publications and sell your products directly to Norway's thriving computer market. According to International Data Corporation (IDC), the world's leading information industry research firm, Norway's total DP expenditures for 1983 were $1.6 billion. IDC forecasts that DP expenditures will reach $3 billion by 1989. The personal computer market is also a lucrative one with expenditures in 1983 of $58 million.

CW Communications has two publications covering the Norwegian market; *Computerworld Norge* and *PC Mikrodata*.

Twice a month, 20,000 MIS/DP executives read *Computerworld Norge*. Modeled after *Computerworld*, its sister publication in the United States, *Computerworld Norge* is written for the professional end-user and reports on the most timely news concerning new products, new software applications and market trends and opportunities.

And every month, 30,000 professional and home PC users read *PC Mikrodata*. The editorial focuses on a wide range of topics including the latest information on the PC market, new software, hardware, interviews, buyer's guides and instructions for the PC.

CW International Marketing Services makes advertising your products in Norway, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, call Diana La Muraglia, General Manager, CW International Marketing Services, at (800) 343-6474. On the West Coast, call Isabella Barbagallo at (415) 328-4602 or (800) 277-8365. Or fill out the coupon below and mail today.

MICROCOMPUTERS

SYSTEMS

■ **Tektronix, Inc.'s CAE Systems Division has announced a computer-aided engineering (CAE) workstation based on the IBM Personal Computer AT.**

The Tekstation AT is said to provide a complete stand-alone engineering design environment on the desktop. The system utilizes a National Semiconductor Corp. 32016 32-bit coprocessor, the University of California at Berkeley Unix 4.2 operating system and CAE Systems, Inc. CAE 2000 design software.

The system reportedly supports design tasks through the 32-bit Unix environment, while standard tasks such as word processing and project planning are performed in the Personal Computer AT's IBM PC-DOS operating environment. The system provides up to 16M bytes of virtual memory and up to 280M bytes of local disk storage.

The IBM-based workstation is compatible with other Tektronix and CAE Systems products based on Apollo Computer, Inc., Digital Equipment Corp. and Sun Microsystems, Inc. terminals. The Tekstation AT can act as a multiple-user system networked through Ethernet.

Tekstation AT prices start at $25,000. The cost of an Ethernet interface is $1,400, and a file server configuration costs $40,000.

Tektronix CAE Systems Division, 1333 Bordeaux Drive, Sunnyvale, Calif. 94089.

■ **Spectravideo, Inc. has announced two portable computers and two IBM-compatible desktop micros.**

The Bondwell 2 laptop machine is said to be a battery-rechargeable, 11-lb portable based on the Digital Research, Inc. CP/M operating system. The system includes an internal 3½-in., 360K-byte floppy disk drive; a 25-line by 80-col. LCD with 640-pixel by 200-pixel resolution; 64K-byte random access memory (RAM); and eight programmable function keys. It is bundled with six software programs from Micropro International Corp. The Bondwell 2 costs $999.

The Bondwell 16 transportable is said to include 128K bytes of RAM, a Winchester 10M-byte hard disk drive, a 5¼-in., 360K-byte floppy drive, an internal 300 bit/sec. modem and a built-in voice synthesizer. It is bundled with five Micropro business software programs for $2,195.

The Bondwell 34 reportedly is a 16-bit, Microsoft Corp. MS-DOS-based desktop micro. It features expandable 256K-byte RAM, two double-sided 5¼-in. floppy drives, a monochrome 80-col. monitor interface and a Centronics Data Computer Corp.-compatible printer interface. It costs $1,795.

The Bondwell 36 is a hard-disk version of the Bondwell 34, featuring an internal 10M-byte Winchester disk drive and 5¼-in. floppy drive. It costs $2,995.

Spectravideo, No. 10, 3300 Seldon Court, Fremont, Calif. 94539

COMMUNICATIONS

■ **Multi-Tech Systems, Inc. has announced an autodial/autoanswer internal modem card for the IBM Personal Computer line, including the Personal Computer AT and Personal Computer 3270.**

The Multimodem 224PC is said to support communications at 2,400, 1,200 or 300 bit/sec. It is reportedly compatible with the Hayes Microcomputer Products, Inc. Smartmodem 1200/1200B.

The Multimodem 224PC can automatically switch among its three speeds for incoming and outgoing calls, according to the vendor.

The price of the modem includes Multicom PC communications software that reportedly features automatic logon and upload/download, text diagnostics and error-protecting file transfer protocols.

The Multimodem 224PC package is priced at $795.

Multi-Tech Systems, 82 Second Ave. S.E., New Brighton, Minn. 55112.

■ **Fox Research, Inc. has announced enhancements to its 10-Net 3270 Systems Network Architecture (SNA) gateway for its Fox 10-Net local-area network system.**

The Fox 10-Net SNA Gateway now provides one to four simultaneous active SNA sessions from each 10-Net local-area network personal computer with the host IBM mainframe. Previously, only one active session was possible at each networked micro.

The enhanced version also features a hot key for keying between IBM's PC-DOS and any active SNA session, the vendor said.

The code size of the gateway software has been reduced so that the 16 logical unit version will run on any IBM Personal Computer or compatible with 256K bytes of random-access memory.

The Fox 10-Net SNA Gateway, including circuit board, software and documentation, costs $1,800 for eight logical units and $2,900 for 16 logical units.

Fox Research, 7005 Corporate Way, Dayton, Ohio 45459.

■ **Digisoft Computers, Inc. has introduced its Mail-Com software for electronic mail communications over the MCI Communications Corp. MCI Mail service using the IBM Personal Computer.**

Mail-Com is said to offer users the ability to prepare letters before connecting to MCI Mail and then, by pressing one button, to send, process, receive and file messages automatically.

The package simulates a desktop environment and enables users to organize and use electronic mail in a

Discover the most powerful

The IBM
Personal Computer AT.

Hold on to your hat.

The IBM Personal Computer AT (for Advanced Technology) is based on the advanced 80286 16-bit microprocessor. This remarkable computer will run many of the programs written for the IBM PC, up to three times faster. You'll be able to recalculate large spreadsheets in seconds and retrieve files in a flash. And it's ideal for IBM TopView, the new kind of software program that lets you run and "window" several other programs at once.

The IBM Personal Computer AT has got the power (and price) to surprise you. In many ways.

Compatibility, expandability,
networking too.

With the IBM Disk Operating System, the IBM Personal Computer AT can use many programs from the fastest-growing library in the personal computer software industry.

The IBM Personal Computer AT is also available with up to 3 million bytes of user memory to run multiuser, multitasking operating systems such as XENIX™. Volume upon volume of information is available at your fingertips. You can customize your system to store up to 20,000 pages of information at one time. And its keyboard helps you use all of this computing power more easily.

This member of the IBM PC Family is a powerful stand-alone computer that can also be both the primary file server and a station on your network. With the IBM PC Network (which is so easy to connect you can do it yourself), the IBM Personal Computer AT can share information with IBM PCs, PC/XTs and IBM *Portable* PCs.

IBM Personal Computer AT Specifications

User Memory
256KB-3MB*
Microprocessor
16/24-bit 80286*
Real and protected modes*
Auxiliary Memory
1.2MB and 360KB diskette drives*
20MB fixed disk drive*
41.2MB maximum auxiliary memory*
Keyboard
Enlarged enter and shift keys
84 keys
10-foot cord*
Caps lock, num lock and scroll lock indicators
Display Screen
IBM Monochrome and Color Displays
Operating Systems
DOS 3.0, XENIX,* PC/IX 1.1
Diagnostics
Power-on self-testing*
Parity checking*
CMOS configuration table with battery backup*
Languages
BASIC, Pascal, FORTRAN, APL, Macro Assembler, COBOL
Printers
Supports attachment of serial and parallel devices
Permanent Memory
(ROM) 64KB
Clock/calendar with battery*

High-performance, high-capacity station on the IBM PC Network*

*Advanced Features for Personal Computers

Get a hands-on, hats-off
demonstration.

The IBM Personal Computer AT has the power, compatibility and expandability many PC users need, at a very appealing price.

For more information contact your authorized IBM PC dealer, IBM Product Center or IBM marketing representative. For a store near you call 1-800-447-4700. In Alaska or Hawaii call 1-800-447-0890. IBM®

MICROCOMPUTERS

manner similar to conventional mail communications. Mail-Com frees users from needing to wait for MCI Mail prompts or the need to remember MCI Mail commands.

The software reportedly permits users to send any type of information, including computer programs, Lotus Development Corp. 1-2-3 worksheets and binary files.

Mail-Com is priced at $189.95 and requires a minimum of 192K bytes of internal memory.

Digisoft Computers, 1501 Third Ave., New York, N.Y. 10028.

■ **U.S. Digital Corp. has announced a communications program that runs on an IBM Personal Computer with 256K bytes of random-access memory and IBM's PC-DOS operating system.**

Copylink-Plus features 32 user-definable function keys, 11 programmable automatic logon sequences and support for conditional programming of complex logon sequences.

Selected buffer read and write commands enable data to be received, processed and retransmitted. The package supports intercharacter delay, echo delay, programmable end of line, remote buffer control, true key breaking and automatic disk handling.

Copylink-Plus costs $129.95.

U.S. Digital, 5687-H S.E. International Way, Portland, Ore. 97222.

■ **Communications Resources has announced a communications link that allows IBM Personal Computers and compatible machines to emulate Honeywell, Inc. VIP 7200 or VIP 7800 standard terminals.**

Asynchronous Communications Emulations (ACE) is an integrated family of products that contains a set of menu options for terminal setup. Menus can be saved from session to session, the vendor said.

ACE uses a common keyboard arrangement and includes a Help facility. The product includes a file transmission facility for Honeywell's Gcos 6 Mod 400 systems. The facility transmits either Ascii or binary data files and supports all common fixed-length or variable-length sequential data structures. It accommodates records up to 1K bytes and uses a protocol handler to eliminate transmission errors.

Features also allow the user to interact with the personal computer while on line to the Honeywell systems. With ACE, users can transmit data from a personal computer file and capture data in the microcomputer file while it is being displayed or after the screen has been filled. ACE also can rename or delete personal computer files or list personal computer file names, the vendor said.

An IBM Personal Computer or compatible with one disk drive, 128K-byte memory, an 80-col. display and a communications port are required for use.

ACE is priced at $349.

Communications Resources, Suite 110, 31220 La Baya Drive, Westlake Village, Calif. 91362.

■ **Brilliant Image has announced two communications software programs for users of graphics on the IBM Personal Computer.**

Telewriter II PC is an interactive blackboard that reportedly allows multiple micros to transfer and edit graphics images over dial-up telephone lines. Graphics files that can be modified with the product include those created with Lotus Development Corp.'s 1-2-3 and Symphony software.

Telewriter II PC requires an IBM Personal Computer or Personal Computer XT with two RS-232 communications interface ports and a minimum of 256K bytes of memory, plus the memory requirement for the software environment in which the graphics files were created.

Data Reader is said to allow users to download graphics data from an IBM mainframe to an IBM Personal Computer, Personal Computer XT, AT, 3270 or PCjr. The software reportedly simplifies the process and reduces the cost of converting mainframe data into graphs and charts, which can be edited on the micro.

Data Reader requires 256K bytes of memory.

Telewriter II PC is priced between $3,500 and $5,000, depending on configuration. The cost of Data Reader is $150.

Brilliant Image, 141 West 28th St., New York, N.Y. 10001.

STORAGE

■ **Cipher Data Products, Inc. has introduced a version of its 5210 25M-byte tape backup system for the IBM Personal Computer AT and for machines compatible with the XT.**

The version for the AT, the 5210-AT, can also be used with the XT and includes software and a disk controller card.

The model for the XT compatibles, the 5210-C, reportedly does not require special interface electronics and can emulate a diskette drive. Software and a disk controller card are included.

Each unit costs $1,195.

Cipher Data Products, P.O. Box 85170, 10101 Old Grove Road, San Diego, Calif. 92138.

■ **Alloy Computer Products, Inc. has announced Super Qicstor-Plus, a storage subsystem designed for the IBM Personal Computer line.**

The subsystem consists of a 130M-byte, 5¼-in. hard disk; five expansion slots; and a tape drive. The hard disk drive reportedly has a data access time of 18 msec and a data transfer rate of 10M bit/sec. The ¼-in. car-

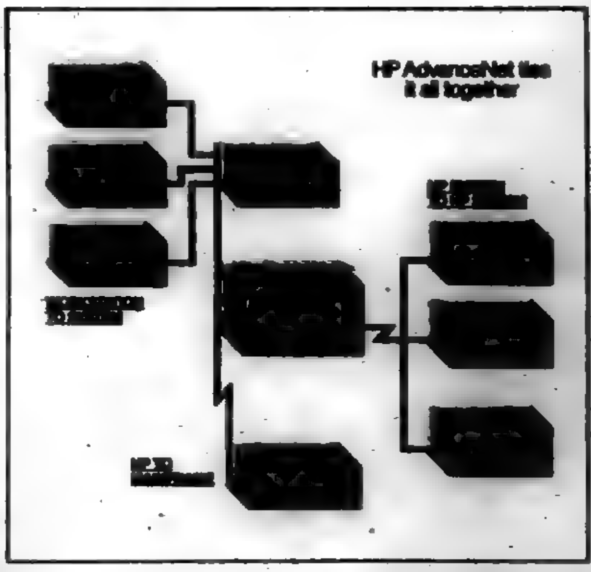
The HP 3000 compu

However much you change, you're going to need both office automation *and* distributed data processing. Fortunately, one company gives you both in a single system.

Hewlett-Packard's HP 3000 is a fully compatible family of computers, ranging from a new system that handles as few as two users to a distributed mainframe that connects up to 400. You can run the same software right up the line.

And our systems can change and grow as you do. When you're ready for upgrades and additions, you simply plug your existing programs into the new systems. No recompiling. No time and money wasted on conversion.



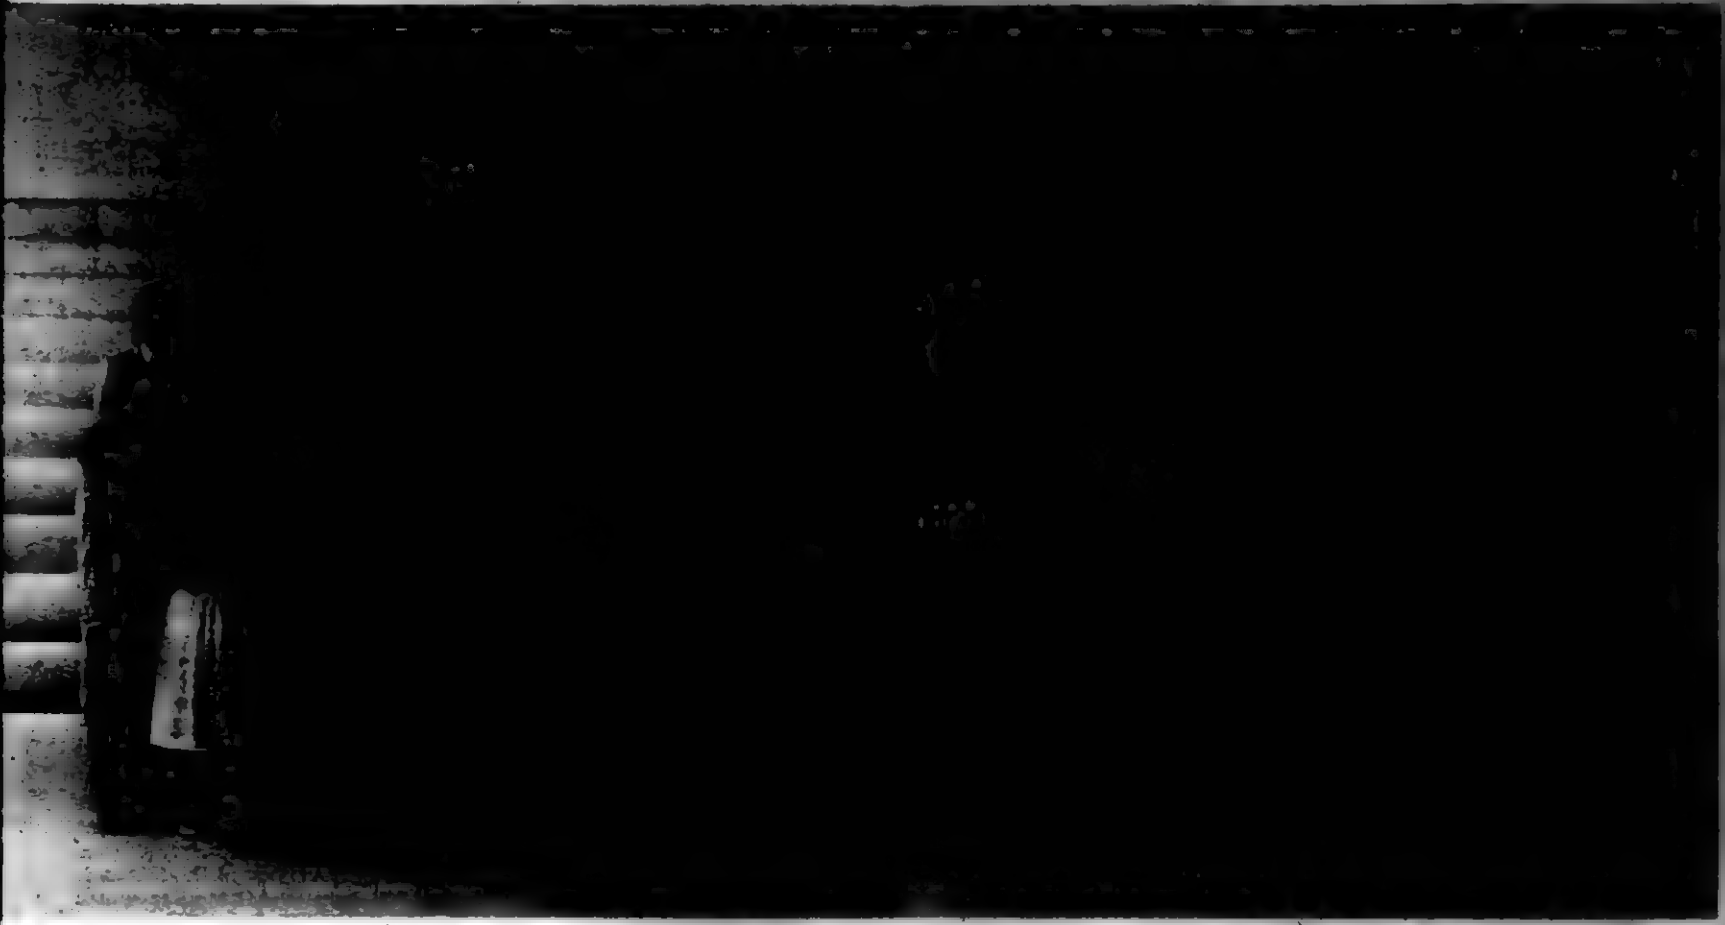
A small, but mighty, addition.

The new HP 3000 Series 37 Office Computer, the latest member of the family, puts the power of the HP 3000 within the reach of smaller budgets.

So now you can afford to give your branch offices and departments their own systems. And they'll still remain part of your overall DP picture with links to other systems.

In the office, the HP 3000 is the heart of our Personal Productivity Center. This integrates the information people need to get their jobs done more productively.

It provides an interface for a wide range of workstations, peripherals and personal computers, including our Touchscreen Personal Computer and The Portable, as well as IBM PCs. And it allows them to interact directly with



ter. One family fits all.

the HP 3000. So your people won't have to learn DP commands.

You'll communicate better with HP AdvanceNet.

Our communications go well beyond this office network. With HP AdvanceNet, they extend to links with other HP 3000s, in the same building or on the other side of the world. And to your mainframe computers, ours or IBM's.

Currently, more than 10,000 HP 3000 systems are working in networks so effectively that our communications were voted #1 in a national survey.

A Datapro poll also rated our service #1. So you get more than office automation and data processing in a single system. You get all the support you need from a single company.

To find out more about the single solution for both sides of your company, send us the coupon. (To make it easier, just attach your business card.) In Canada, call 1-800-387-3867.

We'll send you complete information, including our 12-page brochure. It shows how we can fit you no matter how much you change over the years.

☐ Send me a copy of The HP 3000 Business Computer Systems: *The Hewlett-Packard Approach to Selecting a Business Computer.*
☐ Have an HP representative call me to answer questions.

tridge tape drive has a formatted capacity of 60M bytes.

Super Qicstor-Plus reportedly can serve as a hub of a multiuser system with Alloy's PC Slave expansion cards or as a file server for the IBM PC Network, 3Com Corp. Ethernet series, Corvus Systems, Inc.'s Omninet and Proteon, Inc.'s Pronet.

Super Qicstor-Plus is priced at $10,595.

Alloy Computer Products, 100 Pennsylvania Ave., Framingham, Mass. 01701.

■ CMS, Inc. has announced expansion products for AT&T's Unix PC and Compaq Computer Corp.'s 286 Deskpro and Portable computer lines.

One expansion kit reportedly includes a 20M-byte hard disk, random-access memory (RAM) cards that supply up to 1.5M bytes of storage and parallel or serial ports. CMS is also offering 25M-byte, 45M-byte and 60M-byte tape backup systems that feature streaming, file-by-file and specific file backup capabilities.

An expansion package that consists of a 20M-byte hard disk, 384K bytes of RAM, serial and parallel ports costs $1,195. A 25M-byte hard disk sells for $695, a 40M-byte disk costs $950, and a 60M-byte disk is priced at $995.

CMS, 401-B W. Dyer Road, Santa Ana, Calif. 92707.

■ Reference Technology, Inc. has announced a laser-optic compact disk drive to provide read-only memory (ROM) data to users of the IBM Personal Computer, Personal Computer XT and AT.

The Clasix Data Drive Series 500 reportedly allows micro users access to 4¾-in. prerecorded compact disks storing up to 550M bytes of data. It is compatible with drives manufactured to the Philips Corp. and Sony Corp. compact-disk ROM standard.

The vendor also announced Sta/F File software for use with the drive. The software reportedly optimizes and standardizes the format of large data bases stored on ROM disks for the PC-DOS operating system. Also, Reference Technology introduced its Tridecc data preparation service, said to convert magnetic tape data to the Clasix optical compact disk.

Cost of the Clasix Data Drive Series 500 is $1,535. Sta/F File software is priced at $110 per user site. Tridecc data preparation services cost $3,000 per disk side plus $250 per additional reel of input data tape.

Reference Technology, 1832 N. 55th St., Boulder, Colo. 80301.

■ Digi-Data Corp. has introduced its 2000 PC, a ½-in. tape backup and media interchange system for the IBM Personal Computer line, including the Personal Computer AT.

The 2000 PC reportedly includes software to permit the exchange of Ascii, Ebcdic and binary files with mainframes and minicomputers that can run the ½-in. tapes it produces.

Included with the system reportedly are a tape controller board, interconnect cables and IBM PC-DOS-based software utilities.

The 2000 PC costs $3,995.

Digi-Data, 8580 Dorsey Run Road, Jessup, Md. 20794.

FAMILY

from page 75

puter AT, AT 3270, AT 3270 Model G and AT 3270 Model GX; the 3270 Personal Computer series; the Personal Computer XT/370; the Personal Computer AT/370; the Desktop Series 1, in either AT or XT versions; the System/36 Personal Computer; the 4700 Personal Computer, a financial industry version of the XT; and the 5531 Industrial Computer, which is based on the Personal Computer.

And that's not even mentioning the System 9000 line of personal workstations based on the Motorola, Inc. 68000 microprocessor.

IBM, of course, believes that this diversity arises from a realization that "one size does not fit all," according to spokesman Rick Scott of IBM's Entry Systems Division. "A greater selection of choices," he said, "improves the likelihood that a customer can find the solutions for his particular need."

While that may be true, I suspect that IBM is uneasy about its plethora of diverse personal computers. Aaron Goldberg, director of microsystems services with International Data Corp. in Santa Clara, Calif., has suggested that IBM could save money by only manufacturing one basic Personal Computer chassis and motherboard, the latter based on the Intel Corp. 80286 microprocessor of the Personal Computer AT.

Big Blue is likely to do this in the next year or so, Goldberg predicted, and when that happens, the computer maker will be able to slap features into the chassis in response to market demand for specific functions.

Bring order to chaos

To bring order to all of this confusion, I recommend that potential Personal Computer buyers pretend there are only three IBM machines: the Personal Computer, the XT and the AT. They can gain any additional functions beyond those provided in the three machines by using expansion boards and software.

A certain amount of courage will be needed here, because much of the add-on functionality is available from third-party vendors. To use such vendors is no guarantee of IBM compatibility, but, as the Personal Computer AT has shown, neither is buying from IBM.

IBM, meanwhile, could hold in check its desire to add a new machine for every possible use — or to use every remaining letter in the alphabet.

COMMUNICATIONS

DATA STREAM
John Dix
CW Senior Editor

Voice mail: Boon or bane?

Modern, intelligent and feature-laden telephone switches — now typically referred to as communications processors — are supposed to increase office worker productivity, that fabled measure by which office automation systems are judged.

Some technological innovations, however, are implemented without thinking through all the implications.

Take voice mail systems, for instance. Ideally, voice mail facilitates the collection of messages so that the called party can return calls on a more timely basis. The calling party is greeted with a personalized recorded message saying the person sought is unable to answer the phone and inviting the caller to leave a message. So-called telephone "tag" is reduced and message handling is expedited.

Well and good.

But voice mail systems introduce a new concept to telephone etiquette: selective answering. Now people can forward all of their calls to their voice mail boxes, check their messages periodically and return the ones they wish. Or, if it suits them better, they can answer calls when they want and have the rest automatically routed to their voice mail box after a predetermined number of rings.

While selective answering is possible with the secretary-and-pink-paper-pad message system, few users would be able to get away with forwarding their calls in this manner all day, everyday. Secretarial staffs would have to be doubled to carry the load.

Selective answering is both good and bad. From the end user's perspective, call forwarding can end pesky calls and reduce work interruptions, a paradoxical productivity boost that designers of voice mail systems probably did not

Bank to replace digital net with analog lines

By John Dix
CW Staff

BOSTON — While conventional wisdom dictates the migration from analog to digital network links, a large New England bank headquartered here is preparing to buck convention and migrate half of its digital network back to analog facilities.

In the creation of a network structure designed to provide for resource sharing and vendor independence, the bank — which preferred to remain anonymous — concluded that, given state tariffs, it made better business sense to replace its digital facilities with analog lines.

The bank currently operates two major digital networks that support more than 150 branch locations. Each branch typically has two automatic teller machines and an IBM 4700 finance system.

The bank's headquarters serves as the hub for both star networks, which consist predominantly of multidrop digital facilities provided by New England Telephone & Telegraph Co. The network of more than 300 ATMs uses 2,400 bit/sec. digital links, each of which support eight to 10 teller machines. The 4700 network operates at 4.8K bit/sec. and typically supports five or six machine drops per line.

The bank wanted to evolve these networks into a single net that would be independent of proprietary vendor network schemes and enable users to access multiple host processors.

"The vendor neutrality design concept said you could segregate the physical aspects of a net — the lines, modems, protocols — from the logical aspects," according to the bank vice-president in charge of the project. Such a net would, for example, enable simultaneous support of IBM's System Network Architecture and Digital Equipment Corp.'s Digital Network Architecture.

To achieve the most efficient, least costly multiple access capability — from a CPU capacity perspective — the bank determined some switching must be built

Report aims to ease complex task of selecting cabling, net schemes

MINNEAPOLIS — The proliferation of cabling and networking schemes has further complicated the job of telecommunications and MIS managers trying to evaluate available options.

A recent report from Architecture Technology Corp., a consulting firm here, outlines the decision-making process and methodology used by a large corporation in its evaluation of such systems and, as such, provides a road map other companies can use.

The report, "How to Evaluate and Select Local-Area Networks/Cabling Systems," was drawn from the American Express Co.'s experiences in picking a system to wire its new world headquarters, the Amex Tower in New York. The report was written by Mino F. Akhtar, manager of advanced technology group in the corporate systems and technology department at American Express, and Mark A. Lieberman, vice-president with Shearson/American Express, Inc., a subsidiary of American Express.

Although American Express chose the IBM Cabling System for its building, the report has reportedly been generalized as a case study that illustrates issues and decisions a company would probably face when choosing a network or cabling solution.

The report is divided into 10 chapters that outline from start to finish a project plan that other companies can use in their own evaluation and selection efforts. The authors stress that managerial rather than technical issues are the focal point of the report. Only one chapter deals with techni-

Racal-Vadic MDS-II allows local, remote net control

System can be reconfigured to meet traffic requirements

MILPITAS, Calif. — Racal-Vadic, Inc. has introduced a network management system said to enable users to control a network either locally or from a remote terminal.

MDS-II includes the VA1690 chassis, VA990 control card, VA2190 power supply card, VA4491E triple-speed modem and the VA9000 System Controller. The modem-based system can be used to gather statistical information on network performance and usage and enables reconfiguration to meet traffic needs, the company reported.

The VA1690 chassis can accommodate any combination of up to 32 modems — two per slot — within a standard 19-in. rack. The chassis has 16 slots and also supports the controller and an open slot for growth.

The chassis' front panel includes status line indicators, signal indicators, a two-line by 16-char. LCD and a keypad. The keypad and display can be used for alarm messages, modem status and call status. They also enable a user to enter operational commands, configure modems and perform diagnostic testing.

The VA4491E modem for use with the system is a V.22-, AT&T 212A- and AT&T 103-compatible modem that can be configured for use with dial-up or leased lines.

It reportedly provides full-duplex asynchronous and synchronous operation at 1,200 and 2,400 bit/sec. and asynchronous operation from 0 to 300 bit/sec. The modem automatically adjusts for speed and parity.

The VA9000 System Controller is a personal computer-based option that is said to provide supervision, monitoring, configuration and network testing. The device can control up to 256 chassis and more than 8,000 modems, the vendor reported. From a central site, more than 50 modem options can be selected and executed at a remote location. The controller can be used to compile event, summary and diagnostic statistics for any modem on the network.

The VA1690 chassis costs $3,260, and the VA4491E modem is priced at $1,095. The VA9000 System Controller, an interface board for an IBM Personal Computer or compatible and proprietary software, is priced at $3,500.

The MDS-II will be available in July, according to the vendor.

Racal-Vadic is located at 1525 McCarthey Blvd., Milpitas, Calif. 95035.

OFFICE AUTOMATION. IT ALL COMES DOWN TO THE WIRE.

Without the right wiring system, well-planned office automation is nothing but a pipe dream. You'd have no way to integrate equipment. You'd be trapped in a maze of bulky incompatible wiring. Wiring that would restrict growth. And leave you tied in knots.

There's only one solution. The AT&T Premises Distribution System (PDS). Based on our Information Systems Architecture, PDS is an efficient, single-wiring distribution scheme. It gives you the foundation on which to connect all your workstations, LANs, PBXs, and hosts today. And lets you upgrade in the future.

PDS is the wiring system with the future built in.

A logical wire-once system

PDS is the only distribution system that ties together your voice, data processing and office equipment. PDS is based on a common distribution architecture, so it will support equipment from AT&T and other vendors. Including IBM.

PDS is modular in configuration. So it can be installed in any building—one-story offices, multi-building campuses, or high-rise towers.

And once installed, it will accommodate all system changes and future technological advances.

Six subsystems—five pertaining to wiring, one to administration—let you alter, upgrade and expand your system in easy cost-efficient steps.

This entire subsystem network can be managed from one central administration point. This allows you to easily control moves, changes and upgrades.

Growth without the pains

A unique design of twisted copper pairs and fiber optics gives you the flexibility to link multiple generations of equipment. And easily add on advanced applications as they emerge.

And all equipment—voice, data, video—connects to universal jacks that fit standardized wall outlets. To add or move equipment, you just plug it in wherever you want it. No rewiring. No tearing down walls. No confusion or delay.

We won't leave you at loose ends

When you choose PDS, you can count on a total product and service package. All the products—from cables to cross-connects—required to install, maintain and upgrade your system are reliable, quality products from AT&T Information Systems.

And only AT&T works with you every step of the way. Whether you're involved in new construction, a renovation or installing a PBX or new data system, we give you end-to-end support. Planning, installing and maintaining your distribution system. If you need help, you know exactly who to call.

You've got good connections

AT&T has a long history of experience in advanced communications research. PDS grew from this experience.

The Premises Distribution System represents our overall system approach to meeting your integrated voice and data needs. And it reflects AT&T's commitment to networking products that solve tomorrow's communications problems today.

And like all our products, we support PDS with the largest, professional sales and service team in the industry.

To learn why the AT&T Premises Distribution System is the right investment for your future, call your AT&T Information Systems Account Executive, or 1-800-247-1212.

AT&T
The right choice.

To Be Successful In Information Management, You Need More Than Just The Right Connections.

Connectivity. The buzzword of the year. Everybody's talking compatibility, multi-user interfaces, and integrated applications.

Well, excuse us, but it's about time. Datapoint has been delivering integrated information processing and office automation systems for more than 15 years. You see, we discovered a long time ago that people really gain productivity when computing power is distributed. Because the real power of business computers is access to information—wherever it is, whenever you need it.

It's more than a matter of stringing cable. The goal is deceptively simple. You and your people need desktop access to the information and the software and hardware tools you use to do your job. Even more important than choosing the right connections is how you use those connections. Managing information flow. Controlling data access. Allocating shared resources. Integrating applications. These are the tasks that will determine the success of your information management system.

And here's where Datapoint comes in. Take our Resource Management System.® The heart of the Datapoint® ARC® local area network. In fact, the Resource Management System is the first operating system designed specifically to take advantage of the power of local area networking. And it's at least a generation ahead of all the others.

Powerful Resource Management. Powerful enough to integrate the most complicated data processing applications with the most commonly used office automation tools. Of course, all this sophistication is totally transparent to your users. From any desktop workstation, they simply select the tools they need to make them more productive. Even if that workstation happens to be an IBM®-PC.

Flexible Resource Management. You can add, shift or remove workstations, peripherals, and software applications without bringing the rest of the system down. Without reprogramming. And, most importantly, without affecting your users' productivity.

The right connections—and more. From our pioneering efforts in distributed data processing to the world's leading local area network, the secret to the Datapoint success story is this unique combination of technological innovation with a singular focus on business productivity. If you're looking for the right connections in information processing—and more—call us toll free at 1-800-334-1122.

cal issues, such as the differences between token-ring and bus network topologies.

After the statement of the problem, the first step the report recommends is to inventory the company's computer systems and outline inventory procedures. It is not unusual to find even the largest companies lacking an inventory system, the report claims. A company can then determine its present communications patterns and estimate future equipment and connectivity needs.

After those items have been determined, possible system and architecture constraints and alternatives are presented. The next report item deals with issuing and evaluating a request for proposals. Lastly, the report presents a cost/benefit analysis.

While American Express ultimately selected the IBM Cabling System wiring scheme, the report is not intended to be an unequivocal endorsement of the IBM system, the research firm reported.

Some items discussed include issues related to the physical implementation of a network such as cable runs, furniture cabling, selection of network points, placement of processors and stationing of controllers. The report also addresses the question of staffing the implementation with company personnel or consultants, managing the final bidding process and scheduling the actual cutover and initiation of the system.

The report costs $355 in the U.S. and $415 in foreign countries.

Architecture Technology can be reached through P.O. Box 24344, Minneapolis, Minn. 55424.

Centigram introduces automated receptionist

SAN JOSE, Calif. — Centigram Corp. has added an automated telephone receptionist that supports 50 to 1,000 extensions to its voice-messaging product line.

The Receptionist can answer an incoming telephone call, provide a recorded company greeting, ask the name of the person calling and have the caller enter the extension sought, the company reported.

If the extension is busy or is unanswered, the package informs the caller and allows him to leave a voice message, try another extension or hang up.

A call screening feature tells the person called who is trying to reach him and gives him the choice of accepting the call or having a message taken. To accept a call, a user would press A and to reject it, he would press R.

If a caller does not know the proper extension, the system will route the caller to a receptionist.

A direct extension access enables callers to dial a number directly rather than going through a switchboard.

The system costs $4,995.

Centigram is located at 1869 Ringwood Ave., San Jose, Calif. 95131.

SOFTWARE

■ Unique Automation Products, Inc. has announced an enhanced version of its UAP-Link file transfer software that allows transfers among systems from Data General Corp.; Digital Equipment Corp.; Sun Microsystems, Inc.; Gould, Inc. and other vendors.

UAP-Link now reportedly can move text and binary files among systems running AT&T Unix, IBM VM/CMS, DG AOS/VS, S&H Computer Systems, Inc. TSX-Plus and DEC VAX/VMS operating systems. Other micro and mini systems supported are the IBM Personal Computer, DEC Rainbow, DEC PDP-11 and DEC Decpro. UAP-Link costs $250.

Unique Automation Products, Suite G, 15401 Red Hill Ave., Tustin, Calif. 92680.

VOICE/DATA COMMUNICATIONS

■ Ztel, Inc. has announced it is offering tenant support capability as part of its Private Network Exchange (PNX) software. The tenant support capability will enable a building developer to provide shared voice and data communications service on a single PNX system to multiple tenants.

The PNX software can support 1,048 ports, or approximately 800 lines, the vendor said. The PNX allows functions and capabilities to be offered on a tenant-by-tenant basis.

Prices for the PNX software range from $600 to $1,000 per line.

Ztel, 181 Ballardvale St., Wilmington, Mass. 01887.

AUXILIARY EQUIPMENT

■ Xerox Corp. has announced Xerox 871, a communications module that enables a Xerox 8700 laser printer to work in an IBM Systems Network Architecture (SNA) net.

The product supports Synchronous Data Link Control so a Xerox 8700 printer would appear to an SNA net as an IBM 3776 or 3777 Model 3 RJE workstation.

The product sells for $9,000.

Xerox, Xerox Centre, 101 Continental Blvd., El Segundo, Calif. 90245.

ANALOG from page 87

into the network instead of having that provided strictly by attached hosts.

These requirements dictated the network structure. The new plan calls for the bank to establish three interconnected network hubs. Each hub will support local bank branches on a point-to-point basis, replacing the current multidrop lines. The point-to-point links will use time division multiplexing and support multiple protocols to provide vendor neutrality. The hub structure will provide the switching necessary for multiple access.

Once the network structure was determined, the bank began looking at the economics of implementing the communications facilities. "The network structure is the most important consideration," the vice-president explained. "The analog/digital issue is secondary because the network can use either."

The bank's analysis of analog and digital facilities led to the decision to migrate its digital network back to analog, a conclusion that the vice-president said is "counterintuitive."

The primary finding of the facilities analysis was that digital links in New England are two to three times more expensive than analog circuitry, according to the vice-president. After considering differences in the cost of the communications equipment required with either system and differences in performance, the bank decided it could not justify digital service.

High-speed 9.6K bit/sec. modems are two to three times more expensive than comparable digital service/customer service units (DSU/CSU) used with digital links, the vice-president said. But that cost differential evaporates when you add multiplexing options. The multiplexing option for digital DSU/CSUs is four to fives times as much as the same modem option, so the equipment ends up costing roughly the same.

The modem multiplexing option will enable a 9.6K bit/sec. link to be used as if it were three separate lines, one running at 4.8K bit/sec. for the IBM 4700 at each branch and two operating at 2,400 bit/sec. for the ATMs.

In terms of digital vs. analog performance, the bank weighed a number of considerations. The average time to repair digital links is shorter than with analog facilities, but the most time-consuming portion of fixing anything is dispatching maintenance personnel, a requirement common to either type of facility.

The higher reliability of digital facilities reduces the number of retransmissions required, but the overall difference in reliability is not that great, the bank found. The vice-president said that with digital links, 99.7% reliability might be typical, as opposed to 99.1% with analog facilities.

While the bank will migrate most of its branch office links to analog lines, it will retain digital service between its three network hubs.

Most important, the network structure will enable the bank to use either type of link. "We can take advantage of analog where it is feasible and the service is acceptable and digital where it makes sense," the vice-president said. "We'll stay with the market forces."

Down-time? Up-time. In Time. Every Time.

Downtime. Uptime. In Time. Every Time. Six words that tell the story of quality service. Told by TRW, the company that lives by those words. Our principal business is the expert maintenance and repair of your system's hardware. Expertise you can rely on to reverse downtime to uptime. In time. Every time.

Because we maintain a wide variety of sophisticated electronic equipment, TRW is the only source you may need to keep your business performing at peak efficiency.

1900 IBM PC's in Boston. 200 Altos systems in Detroit. An IBM Mainframe in New York City connected to an assortment of TeleVideo, Esprit and Wyse terminals in 30 different sites and ten different cities. Plus 5 Dataproducts printers in L.A. We can do it all.

Service for over 50 brands . . . and growing. In applications that are reshaping American business, industry and government. Office Automation. Banking Systems. ATMs. Telecommunications. Networking. Point-of-Sale Systems. Medical Electronics.

Whatever your requirements, chances are there is a TRW Service Program available that will more than satisfy your expectations. And fit very comfortably within your budget. Today. Tomorrow. Next month. Next year.

There's more to our story. To get the facts, call 1-800-257-7464. Today! (In New Jersey, call 201-575-7110 Ext. 100).

Service solutions for tomorrow: They're taking shape at a company called TRW.

SELECTIVE from page 87

anticipate. But on the down side, the question is whether it is in the corporate interest to have workers indiscriminately forwarding their phones. Will messages that would be forced to the fore without voice mail be delayed with the electronic system?

At the very least, the advent of selective answering requires telecommunications managers considering the technology to examine carefully the users who would be given voice mail boxes. Personnel in customer service-oriented jobs may, for example, benefit the most from voice mail. Conversely, they also have the potential of becoming the worst offenders of the system.

Ironically, both the proponents and the purveyors of voice mail systems are often blind to the down side of the technology. Faced with a deadline, this reporter recently tried to call the public relations bureau of Rolm Corp. for a comment regarding an upcoming conference. After waiting through the polite recorded Rolm Phonemail message saying the called party couldn't answer her phone, I pushed a few buttons as instructed by the message and reached the operator.

The operator forwarded me to another extension where, yes, I was greeted by another voice message. A third and fourth number elicited the same type of cheery recorded messages. No humans were available to point me in the right direction.

Client-intensive departments in other operations have made the same mistake. It is a good chance that, on any given day, five out of six people at the Yankee Group, a Boston-based research firm that specializes in communications, will have their phones forwarded to their mail boxes.

While the Yankee Group's researchers probably enjoy the peace and quiet and turn out more work — a plus for voice mail — is it smart for the firm to give voice mail boxes to everyone? Should its public relations personnel have a voice mail box? Its salesmen? What is the implication to the company of a potential client — or a newspaper reporter seeking a quote — becoming frustrated by the system and turning elsewhere?

While it is hard to quantify and balance the benefits against the drawbacks, it should be noted that voice mail is not a messaging panacea that can or should be implemented blindly.

SYSTEMS & PERIPHERALS

Firm unveils simulation engine

MENLO PARK, Calif. — Silicon Solutions has taken the wraps off a simulation engine that performs logic and fault simulation of integrated-circuit and printed-circuit board designs. The company also released an accelerator subsystem that is said to enhance the performance of its Fast-Mask Engine.

The Mach 1000 simulation engine, which uses the University of California at Berkeley's 4.2 version of AT&T's Unix operating system, is a hardware accelerator said to accommodate 65,000 gates for logic simulation on a single accelerator board. The unit reportedly uses customized very large-scale integration chips. Fault simulation requires an additional board. The engine's free-standing tower has room for eight additional boards for expansion capacity up to 500,000 gates. Towers can be coupled together to achieve a two-million gate capacity, the vendor said.

Logic and fault simulation at the gate level are implemented in special-purpose, proprietary chips that are said to simulate 1,000 times faster than software. The switch and behavioral-level simulations are handled in HHB-Softron's Computer-Aided Design and Testing (Cadat) software.

The Mach 1000 can function as a stand-alone dedicated processor or as a network server shared over Ethernet by any system in the computer-aided engineering and computer-aided test environments, including HHB-Softron's Computer-Aided Test System hardware modeling computer.

A logic simulator with a 65,000-gate capacity costs $85,000; a log and fault simulator with the same capacity costs $150,000. The engine includes a license to

TI Business System minis get memory enhancement

AUSTIN, Texas — Texas Instruments, Inc. has announced enhancements to its Business System 300A minicomputer line. The enhancements include a doubling of the main memory of the machines at no additional cost to users.

Other enhancements include the following: a one-year or optional three-year warranty plan, a switch to dynamic random-access memory (RAM) chips and the TI WD600A disk system. TI will also provide field service for a third-party multiplexer that allows a TI 300A system to support up to 15 terminals.

All Business System 300A models will now have a standard 512K-byte RAM instead of 256K-byte memories, the vendor said. The larger systems, the 373A, 374A and 375A, are said to be available with 1M byte of on-board memory.

The 256K-byte dynamic RAM chips incorporated in the systems are said to increase the maximum memory capacity from 1M byte up to 1.75M bytes to allow larger application programs to be run. The TI WD600 disk drives have been replaced with WD600A enhanced drives, the vendor said. The 43M-byte WD600 had an access time of approximately 75 to 80 msec., and the WD600A has an access time of 35 to 40 msec. The WD600A comes in three capacities — 36M, 69M and 114M bytes of formatted storage.

The warranty plan is said to change the previous 90-day on-site warranties that came with the system to a one-year carry-in service with an option to convert to on-site coverage. The middle of the 300 series line — Model 373A, for example —, previously came with free 90-day on-site warranty and now comes with a free carry-in

IBM 3080s may not be dead yet

By Tom Henkel
CW Staff

With sales of IBM 3080 mainframes in a slump and IBM users waiting for the newer IBM 3090 series mainframes, could IBM be thinking about giving users their cake and 3080s too?

There has been some speculation that IBM may be planning to extend the life of 3080 series mainframes by cooking up some alternate uses for the big boxes. The idea sounds a bit far fetched but not beyond the realm of possibility. There is nothing really wrong with 3080s, they have just been superceded by newer technology processors. If IBM could refocus the 3080, it could further capitalize on all that expensive 3080 R&D.

For example, IBM might consider the following:

- In the wake of Fujitsu Ltd. and Hitachi Ltd.'s plans to offer supercomputers through their domestic marketing arms, Amdahl Corp. and National Advanced Systems Corp., respectively, there is increased pressure on IBM to

From code busters to mainframes: the history of CDC

By [illegible]
CW Staff

Control Data Corp. was born in 1957, but the roots of the company date back to World War II.

At the end of the war, William C. Norris and his colleagues Cmdr. Howard Engstrom, engineers Seymour Cray, Bill Keye, Frank Mullaney and a handful of other associates from the U.S. Navy's intelligence units took advantage of the Navy's continuing interest in developing new devices that would become the forerunners of the digital computer. The group — enemy code breakers during the war — started a private company, Engineering Research Associates (ERA), which soon became known for its electronic data processing and storage devices.

ERA was sold by its major shareholder, investment banker John E. Parker, to Remington-Rand Corp. in 1952, against the wishes of Norris and the firm's other technical people. Norris, in a recent interview, said the sale taught him an important lesson: one person should not hold a majority position in the outstanding shares of a company.

"When Control Data was formed, I went to great lengths to ensure that that did not happen. In fact, I was the largest stockholder, and I never had over 15% of the company," he said.

By 1955, Remington-Rand had linked with Sperry Corp. to form Sperry-Rand, and Norris had become vice-president and general manager of the Univac division at Sperry. Norris urged Sperry-Rand to put all its efforts into computer operations, a move he saw as the wave of the future.

The Univac division soon found itself losing money because, in some corporate executives' opinions, Norris was spending too much money on research and development. Bad feelings resulted, Norris said, and despite the chief executive officer's pledge to support Norris, he decided that Univac would never be successful in that environment.

In the summer of 1957, Norris, frustrated at what he felt was Sperry's sluggish reaction to the burgeoning large-scale computer business of IBM and at his diminishing control in the huge company, quit his job with Sperry to form CDC. He took with him eight of his key associates at Univac.

Univac quickly retaliated by suing the group of former employees, charging they walked off with corporate trade secrets. The suit was settled in 1959 when CDC promised not to use classified material that Sperry said the engineers at CDC learned in their years at Univac.

By Oct. 1, 1957, 12 employees started laboratory work on the first fully transistorized computer, the CDC 1604, designed by Cray, who was wooed by Norris from the ERA part of Sperry's Univac division. The Navy purchased the first CDC 1604, a machine that was designed for scientific, simulation or control applications in which extensive computations were needed.

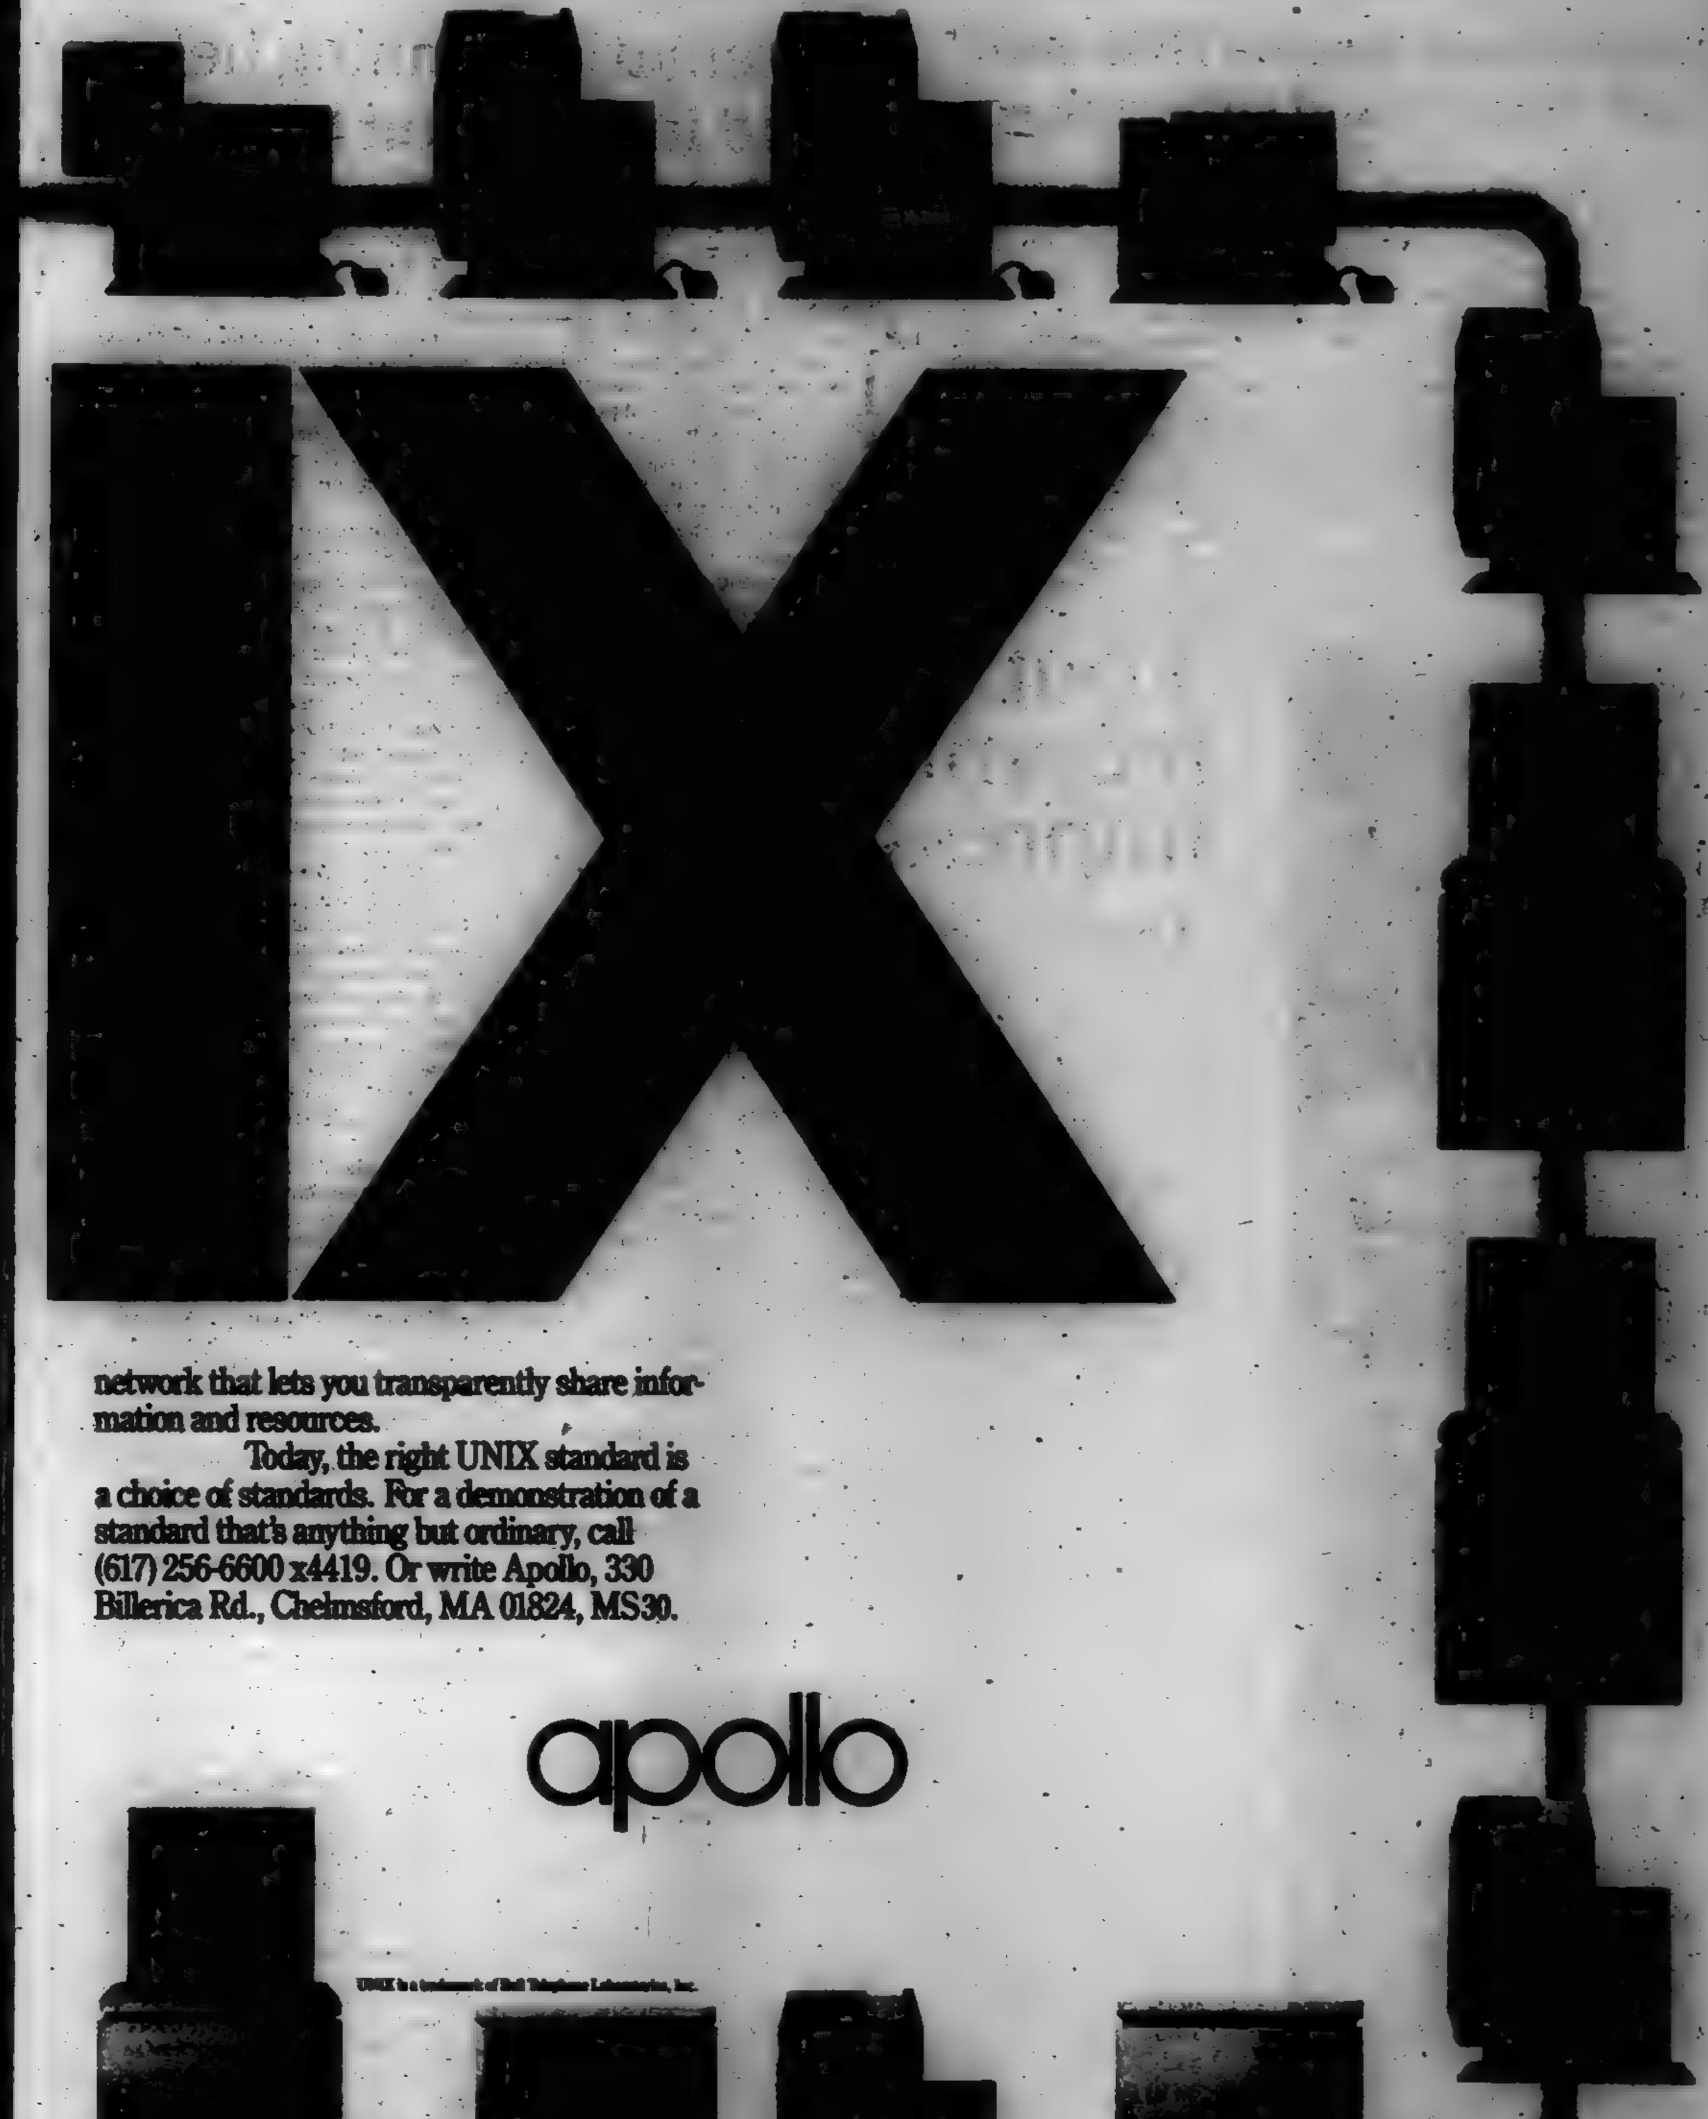
UN

It's a big word these days. And no one has a bigger commitment to it than Apollo. In fact, we've raised the UNIX™ standard to new heights.

We're the first major computer company to implement both AT&T System V and Berkeley 4.2 on a professional workstation. So you can run either standard or both simultaneously.

More important, we're the only company that gives you UNIX in a powerful, distributed processing environment. One that features 32-bit dedicated workstations, high resolution graphics, and a high-speed local area



network that lets you transparently share information and resources.

Today, the right UNIX standard is a choice of standards. For a demonstration of a standard that's anything but ordinary, call (617) 256-6600 x4419. Or write Apollo, 330 Billerica Rd., Chelmsford, MA 01824, MS30.

apollo

UNIX is a trademark of Bell Telephone Laboratories, Inc.

Four Phase targets IBM nets with Unix-based supermicro

CUPERTINO, Calif. — Motorola/Four Phase Systems, Inc. has released a 32-bit AT&T Unix-based supermicrocomputer said to be targeted at distributed office locations operating IBM Systems Network Architecture (SNA) or Binary Synchronous Communications (BSC) networks.

The Model 290 — an addition to Motorola/Four Phase's Series 2000 family of computers — offers support for up to 12 users. It features a Motorola, Inc. 68010 processor with error-correcting memory and virtual memory support.

The unit, with 1M byte of memory, an intelligent communications processor, a 52M-byte Winchester drive and a removable 5M-byte disk for backup, costs $30,665. The system is said to support up to seven 52M-byte disks for a total of more than 350M bytes of storage.

The company's previous 240 and 260 models are said to be upgradable to 290s in the field with no reprogramming. All three of the Series 2000 models share common workstations, disks and system architectures, the vendor said.

More information can be obtained from Motorola/Four Phase Systems, 10700 N. De Anza Blvd., Cupertino, Calif. 95014.

Systematic planning helps avoid installation hassles

SHOP TALK
John Roncone

In order to install computer hardware successfully, one must develop a good plan and provide the necessary supervision to make sure the plan is followed.

The most important part of the plan is determining preinstallation requirements. Such an evaluation should include the following:

- Determining the location.
- Evaluating the building and the computer room.
- Seeking vendor consultation.
- Evaluating physical planning specifications.

The location of a computer system must meet the objectives of the company's long-range plan. Location depends on whether the computer being installed will be a centralized, decentralized or distributed system. Provisions should be made for expansion.

A building with a receiving dock is probably the most appropriate, because a building without one may require construction of a high lift or a ramp to get the computer in it.

Placement of the computer room in the building is also important. For example, basement floors are subject to water and flooding. The top floor of a building can also be subject to water problems, because the roof can leak. On the intermediate floors, there can be problems with weight capacity.

Also, be sure to plan for fire prevention devices, adequate power, an elevator with the proper weight capacity if applicable and doors that are wide enough to allow equipment to be moved around.

Select a room that allows at least 30% in additional space for growth. Be wary of direct sunlight and plan to provide separate air-conditioning and power systems for the computer room.

When planning the physical layout, pay attention to factors that could affect the system, such as static surfaces, vibration, temperature variations and humidity levels.

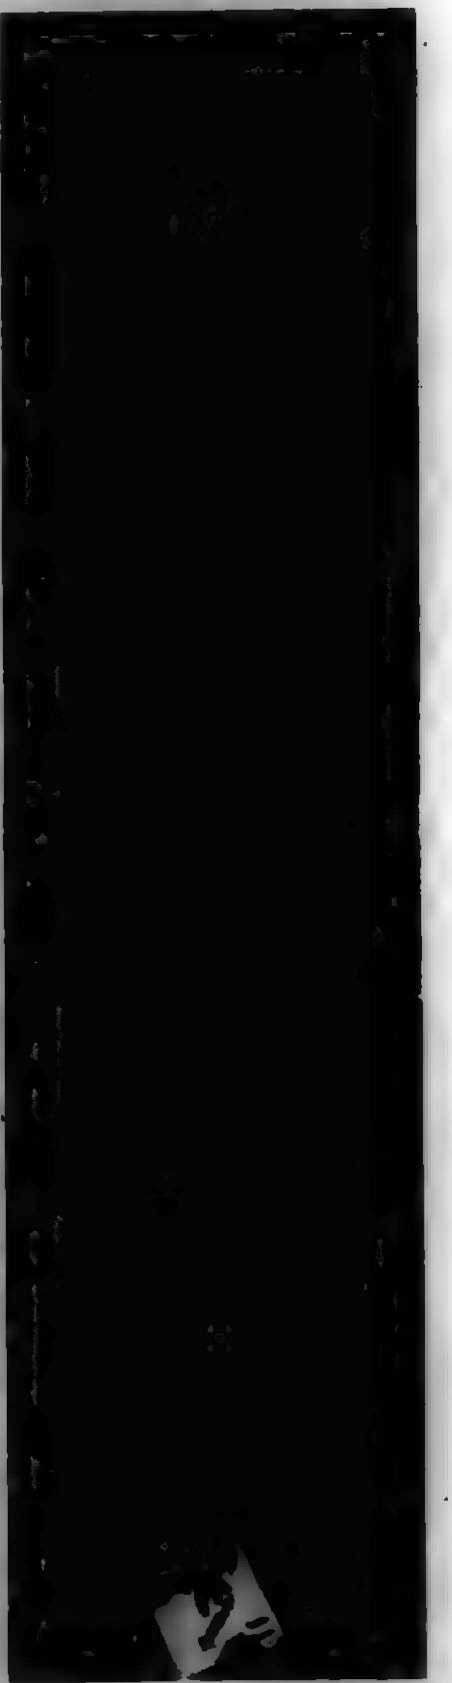
Be sure to include vendor representatives in the planning process. Think about whether you want to have a hardware and software planning committee that meets periodically to ensure the success of the project.

Vendor representatives may vary depending on the issues being addressed. Usually the vendor representatives will include a marketing representative, a hardware specialist and a software specialist.

Installation planning meetings should address the major milestones documented in the plan. For instance, the marketing representative should be at installation planning meetings when the features and the shipping dates of hardware components are discussed. When the physical layout of the computer room and equipment and service requirements are discussed, the hardware specialist should be present. Finally, when the operating system and system generation are discussed, the software specialist should be present.

When the system is installed, there should be enough room on each side of the unit to allow the doors to be opened freely for equipment repair. Ask the vendors in advance for specifications of all the equipment to be purchased, from the CPU down to the desks, chairs and cabinets.

Roncone is a professor in the Computer Science Department at Kent State University's East Liverpool regional campus in Ohio.



4 out of 5 artists recommend Impressionist.™

Take it from the experts. When you have to impress the best, you need the very best impression. And the best impression comes with Impressionist, EXECUCOM's new business graphics software package. It can make anybody a presentation genius.

Impressionist is the only presentation graphics system designed to run on corporate mainframes, departmental minis and micro workstations—with the same commands and functions for each environment. Using Impressionist and a plotter, printer or high resolution camera, you can produce bold, imaginative graphics. Market trends, sales projections, inventory cycles, business strategies and financial forecasts will come alive before your audience.

Using Impressionist is as simple as putting brush to palette. It can be menu or command-driven for impromptu creations or automatically driven for production of frequently needed graphs. Draw upon the powerful graphics editor to draw *free-form*. Best of all, Impressionist's chartbook contains over 100 preformatted charts, and it's compatible with CueChart™ from ISSCO.

Impressionist can easily be accessed by both micro *and* mainframe users. It accepts data from any ASCII file as well as from other talented contemporaries. Like Lotus 1-2-3™ and Multiplan®. Or IFPS®, EXECUCOM's powerful Decision Support System.

Turn a few keyboard strokes into boardroom strokes of presentation genius. With Impressionist. From EXECUCOM, number one in decision support software, continuing a decade of excellence. For hardcopy samples, call or write: Phyllis Shockey, 1-800-531-5038 (in Texas and Canada call 512-346-4980): EXECUCOM Systems Corporation, 3410 Far West Blvd., Austin, TX 78731.

We've got thousands of micro communications problems your solutions can fix.

Micro communications is one of the biggest challenges that MIS/DP professionals face today. And that's the problem we'll be addressing in the September 25th Computerworld Extra!

We'll be dealing with all the issues corporate buyers must face. And answering their questions. On micro-to-mainframe links. PC networks and networking software. Gateway software for SNA and Ethernet. Service and support.

We'll take a look at how PCs can function as dumb terminals and intelligent terminals. And help the reader make an intelligent choice.

We'll have a global overview of how micros are fitting into the big picture.

And right in the middle of all this critically-needed information, you can place your ad. Where it will be seen by our 128,000 paid Computerworld subscribers. Plus all our extra pass-along readership.

So if you've got a micro communications solution, our Extra! can supply the people with the problem. And the money to buy a solution. The September 25th Computerworld Extra! on Micro Communications. But hurry, the closing is August 16th.

Call Ed Marecki, Vice President/Sales, at (617) 879-0700 or your local sales representative to reserve your space today.

CDC targeted one segment of the market — scientific and engineering computation — with the 6600 computer.

CDC

from page 93

In the spring of 1960, CDC announced its Model 160, a desk-size solid-state computer for small-scale scientific applications. Various enhanced models of the 1604 and the Model 160 were announced during the next few years. In May 1962, the first of the medium-size 3000 series was unwrapped. Like the 1604A, it had a 48-bit word length.

Lawrence Radiation Laboratory in Livermore, Calif., placed an order for a Cray-designed Model 6600 immediately after the system's announcement in July 1962. The 6600 was scheduled for delivery in February 1964. The new model, packed with 350,000 transistors, proved to be difficult to debug, however, and was not actually delivered until September 1964.

"We decided to focus very strongly on one particular segment of the market — scientific and engineering computations — and it was a very wise decision," Norris said. "Our early computers sold so well that IBM became alarmed. They zeroed in on us with . . . practices which finally led to the lawsuit that Control Data filed against IBM."

IBM announced its 360 Model 90 machine between the time of CDC's 6600 announcement and its installation. Neither machine was ready for the market, as the 6600 had production difficulties, and the 360 Model 90 was an idea but not a reality when IBM's sales representatives started touting it, according to a recently published book, *The Computer Establishment*, by Katherine Fishman.

Norris was angered by IBM's tactics of announcing machines and enhanced versions of machines before they were ready, tactics that forced CDC to give its customers more enhancements at cheaper prices before it was ready to do so.

In the meantime, CDC lawyers collected evidence against IBM, which they presented to the U.S. Department of Justice in hopes that the government would sue IBM for violations of federal antitrust laws. In December 1968, CDC tired of waiting for the government, and it formally filed suit against IBM, charging 37 instances of monopolistic practices. The government filed its suit a month later.

The lawsuit against IBM was countered with equal ferocity by IBM. IBM filed suit against CDC claiming that CDC engaged in reciprocal marketing practices: giving its business to companies that bought CDC computers and taking it away if the company did not buy its equipment.

The suits were hurting both companies, and in January 1973, the companies announced an out-of-court settlement. CDC agreed to buy IBM's Service Bureau Corp., a subsidiary that provided remote computing services to businesses in the same way as CDC's consolidation of small service bureaus and data centers did. Service Bureau had become the Cybernet remote computing network and provided remote computing for scientific customers. IBM gave CDC more than $100 million worth of subsidies, and in return, CDC destroyed all the documents it had compiled about IBM's practices.

"We learned early on that you can't compete head on against IBM," Norris said about strategies CDC developed to build its business. To protect CDC from IBM, Norris acquired small peripherals companies, and CDC became the largest peripherals supplier in the industry. He scooped up service bureaus to handle companies that were overloaded or that did not want to invest in their own computer centers. To handle the burgeoning need for computer technicians, he established CDC schools. In 1968, CDC acquired Commercial Credit, a finance company with gross assets of more than $3¼ billion, a move that allowed CDC to survive the 1970-71 recession in which the company's computer operations lost millions of dollars.

"The one [strategy] that was most effective early on was [based on a feeling that] there was a market for computers with very little software," Norris said. The scientists and engineers that CDC catered to generally wrote their own software, so the company could sell a bare-bones system that included the operating system and little else, he said. The resulting lower price of equipment was one of the reasons for the early and strong success of the company's scientific computers, he said.

Norris

In 1973, Cray resigned to form his own company. "There wasn't any impact [on CDC] at the time of his departure because we couldn't afford to get another supercomputer project under way then. The impact came later when he got his first machine on the market," Norris said.

"We are philosophical about it," he said. "You have got to have good competition, and Seymour is good competition — in fact, the best."

CDC continued to develop supercomputers after Cray left when the Star machine was in production, Norris said. ETA Systems, Inc. was formed in 1983 with about 100 CDC employees to "design and manufacture the most powerful supercomputer in the world by 1987," according to CDC literature. "It goes back to that early experience that I had in ERA and in Control Data of giving people part of the ownership to provide some incentive. We felt that to make it a separate company in which we owned a substantial portion would be the best for everybody concerned. They are making excellent progress, and we will see that approach proven to be very sound again," Norris said.

Various mainframe computers continued to be created at CDC, including the company's Cyber line that started in 1970 with the Cyber 70 series and has continued into 1985 with a series of 800 models.

In addition to the diversified business interests, Norris started several projects that address social problems. Training programs for handicapped workers and urban and rural programs for economically disadvantaged people use CDC's Plato computer-based education system to ready people for gainful employment.

"These [programs] are the future of the company," Norris said. "We have been investing in these things for quite a few years. It has been a difficult strategy for us, but it's going to pay off handsomely," he said. The programs are business opportunities, Norris stressed. Several of the programs have become profitable, he said.

Norris' confidence in these business opportunities is not shared by many CDC watchers. Bill Sheefer, a former general manager of communications at CDC for five years, for example, is not convinced that the social programs were a wise move for CDC. Norris is a technocrat — one who believes that society can be managed by technical experts — Sheefer said, but experience has proven otherwise. "Earnings are up, but profits are going the other way" because of the social programs, he said.

The day-to-day operations of CDC fall to Robert Price now, Norris said. "I'm involved primarily with working with our different constituents outside the company."

"I spend quite a bit of time helping to develop our relationships with other countries," Norris said. "Also, while Bob Price worries about the day-to-day operations, I'm very heavily involved in the projects addressing societal needs like education and training, health care and so forth. I'm really dealing in the future."

[2] Peripheral processor for 800 series

DATA BASE FAT.

HOW TO AVOID IT, FROM THE LEADER
IN ON-LINE TRANSACTION PROCESSING.

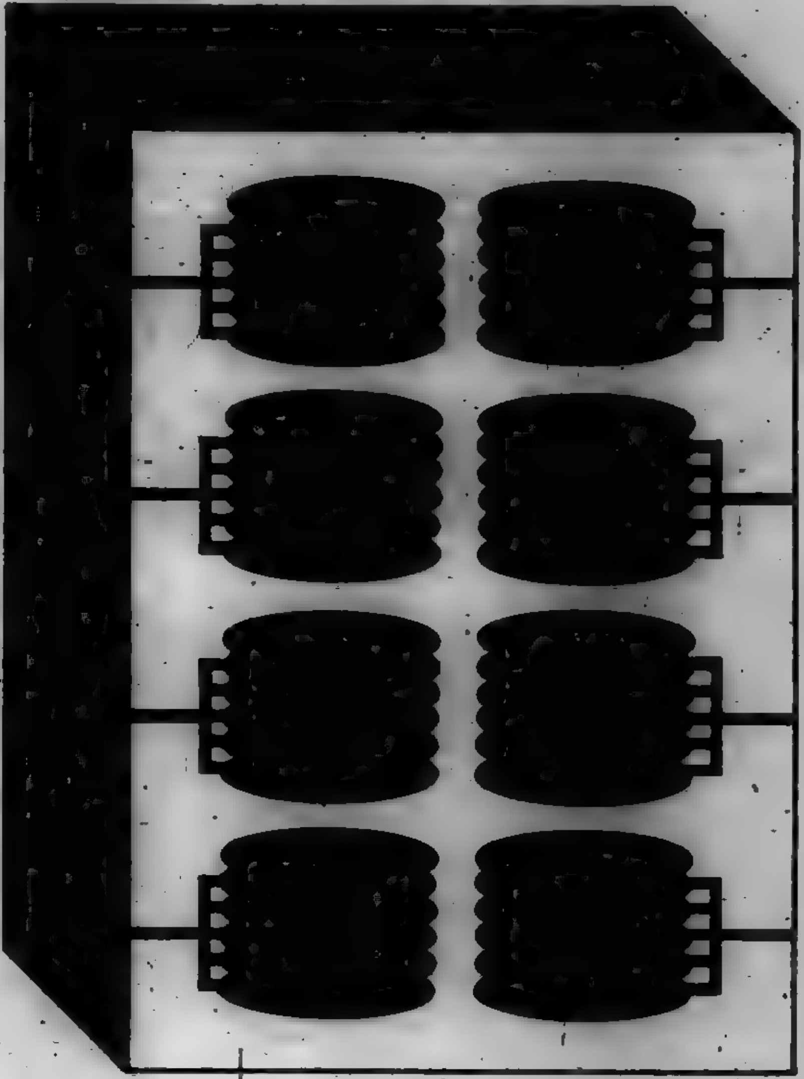
WHAT DATA BASE FAT IS.

It's a waste of time and space—the time it takes to access data and the space required for the storage. It's a hardware problem and a software problem and Tandem has solved them both.

NEW NON-FAT HARDWARE.

Introducing a new disc drive product called the Tandem V8.

The data base that would normally be stored on one large, conventional disc has been split up over eight small, high-density discs.



NEW TANDEM V8.
8 disc drives, 8 actuators in one cabinet.

Instead of one actuator handling I/O requests sequentially, eight actuators can now work simultaneously. No disc space goes unused.

The Tandem V8 gives you high throughput, stores 1.3 gigabytes of data, yet remarkably takes up only six square feet of floor space.

Maintenance is easy, too. Each disc drive can be removed and replaced in a few minutes. And the Tandem V8 can stay on line even while it's being serviced.

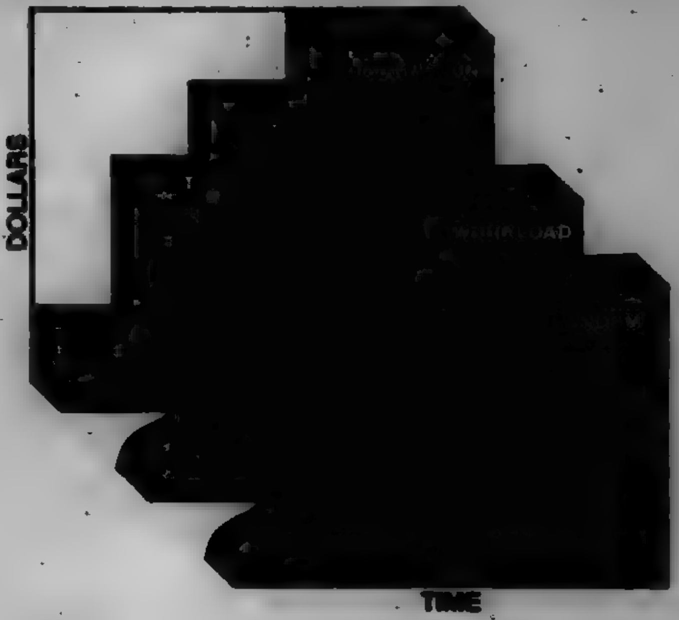
NEW NON-FAT SOFTWARE.

We've developed new data base software that allows our relational data base to operate 50% to 100% faster on the same hardware. That means you can boost your throughput without buying new hardware. Massive amounts of data can be made easily and instantly available to hundreds of users, even if they're geographically distributed over a worldwide network.

Parallel paths to the disc speed up data access.

TANDEM'S GROWTH ARCHITECTURE.

When you outgrow a Tandem system, you don't replace it. You just add to it. You can start with two processors in a local system and expand at any increment you choose, all the way to 4,080 processors worldwide. You never buy more than you need.



Tandem matches need. The competition compounds it.

With Tandem, your software expands, too. So you only write applications once. It's also a fault-tolerant system that stays on line without using idle backup components. Instead, each component has at least one identical copy with which it shares the workload. No single failure can shut you down.

LET'S CHEW THE FAT.

Tandem systems are already at work for FORTUNE 500 companies in banking, telecommunications, manufacturing, transportation, retailing and energy, as well as several branches of the U.S. Government.

To find out what we can do for you, call (800) 482-6336. Or write for our annual report. Corporate Headquarters: 19191 Vallco Parkway, Dept. 762, Cupertino, California 95014.

TANDEMCOMPUTERS

SYSTEMS & PERIPHERALS

TERMINALS

■ Esprit Systems, Inc. has released a VDT that is said to provide emulation of Applied Digital Data Systems, Inc.'s Viewpoint terminal.

The ESP 6110+ is an enhanced version of Esprit's ESP 6110. Features include a 14-in. screen that is housed in a tilt-and-swivel case, a choice of green or amber screen and a 7- by 11-dot character matrix. The 6110+ operates at 50 to 19.2K bit/sec. speeds.

The unit costs $395.

Esprit Systems, 100 Marcus Road, Melville, N.Y. 11747.

■ Telesis Systems Corp. has announced a computer-aided design workstation and printed-circuit board design software for the workstation.

The EDA-700 workstation, for printed-circuit board design and mechanical applications, uses Digital Equipment Corp.'s LSI 11/73 microprocessor as the primary CPU. Graphics are supported by a proprietary Motorola, Inc. 68000-based graphics processor.

On-screen menus are accessed with a mouse or via function keys. The unit features a 19-in. color monitor with five assignable colors and a choice of three background colors. The 1K- by 2K-byte pixel roam area can be increased to a 2K- by 2K-byte roam area for $4,000.

The unit costs $43,000 with 1.5M bytes main memory and 65M bytes of disk capacity. The memory can be upgraded to 2.5M bytes for an additional $5,000, and the disk space can be expanded to 140M bytes for an additional $7,500. The EDA-700 is upgradable with the $19,000 EDA-660 coprocessor, the vendor said, which is said to double routing speed and provide an AT&T Unix environment.

The company also released its ECL Toolbox software for the design of ECL and Cmos-based printed-circuit board systems. Features of the package are said to include automatic scheduling and terminator assignment, daisy chain routing and report generation.

The ECL Toolbox costs $15,000.

Telesis Systems, Two Omni Way, Chelmsford, Mass. 01824.

■ Plessey Peripheral Systems, Inc. has announced a Tektronix, Inc. 4010/4014-compatible graphics terminal for Digital Equipment Corp. terminal users.

The PT-100G monochrome graphics terminal is compatible with DEC VT100 and VT52 terminals. It is said to offer a 14-in. nonglare screen in amber or green and has 1,024- by 780-pixel resolution.

The unit costs $1,295, according to the vendor.

Plessey Peripheral Systems, 17466 Daimler Ave., Irvine, Calif. 92714.

■ Westward Technology, Inc. has announced that its Model 3220W color graphics terminal is available domestically.

The 3220W offers resolution of 1,024 by 1,024 addressable pixels with refresh rates of nearly 60 times a second, according to Westward Technology.

The unit, equipped with an RS-232 interface, is used primarily with minis and mainframe computers, the vendor said.

The unit costs $15,450, and the optional eight-plane feature is an added $3,215.

Westward Technology, 90 Montvale Ave., Stoneham, Mass. 02180.

POWER SUPPLIES

■ Power General, a subsidiary of Unitrode Corp., has released a family of 150W, quad-output switching power supplies for microcomputers, disk drive systems, CRT terminals and digital/analog circuits.

The four models in the series — 4150-1, -2, -3 and -4 — give output combinations of 5, 12 and 24 volts dc, the vendor said.

Input voltage ranges of either 90 to 130 volts ac (Vac), or 180 to 260 Vac are available as a factory-wired option, according to the vendor.

The units are fabricated on a single 4- by 8- by 2-in. printed-circuit board that weighs 22 ounces.

All four models cost $169 each.

Power General, P.O. Box 189, 152 Will Drive, Canton, Mass. 02021.

TI from page 93

one-year warranty or an optional one-year, on-site plan that costs $492 to cover transportation costs for the year.

The cost of one-year, on-site coverage previously would have been $990 — $110/mo for the nine months not covered by the 90-day warranty, according to the vendor.

An optional three-year plan — either on-site or carry-in — is available for $2,772 for an on-site plan or $1,296 for a carry-in plan. Maintenance contract rates paid on a monthly basis have been reduced from $135/mo to $113/mo on the model 372A.

Warranty, maintenance upgrades

The warranty enhancements and maintenance reduction are said to be possible because of the incorporation of 256K-byte dynamic RAM chips and the use of the WD900A 5¼-in. hard disk drive.

TI also announced support for the Octacomm MCPU/300 Multiplexer, produced by Responsive Terminal Systems, Inc. of Dallas, which is said to support up to 15 terminals, doubling the current limit.

More information is available from TI at Data Systems Group, P.O. Box 809063, Dept. H-801, Dallas, Texas 75380.

KODAK INTRODUCES THE COM
AUTOMATIC
START TO

It's the COM you asked for: A completely integrated system, automated and in-line.

Now your mainframe output can be printed by laser on film, processed, duplicated, and intelligently collated—yet nobody has to lift a finger.

No clock watching. No shuffling fiche into a duplicator. And no chemicals, because processing is by heat only.

You're looking at a real system, not parts stuck together. A design that started with a blank sheet of paper and then took shape over the years as we listened to what you needed—and translated those needs into fresh ideas that are years ahead.

For instance, there's a systems manager. A powerful new business computer that actually runs the operation, and also provides instant system access when requested. One benefit is that less experience and training are required for operators.

There's also an exclusive buffer for fiche masters, automatic exposure adjustments triggered by bar codes, and a programmable

IBM

from page 96

offer a product aimed at the scientific-oriented processing community.

Most industry watchers believe IBM will build on its relationship with Floating Point Systems, Inc. to develop some sort of supercomputer-like attached processor for IBM mainframes.

But what if IBM were to devise a scheme to use multiple 3080s working as parallel processors — especially if those parallel processors were being driven by a 3090 series processor? Most scientific IBM mainframe shops already have at least one 3080. Most of them have multiple systems. IBM now supports AT&T's Unix operating system on its mainframes, so it would not be out of the question to do what several companies have already done on a smaller scale: alter Unix so that it can support multiple processors in a parallel processing environment, thereby producing a series of processors with impressive overall power.

■ IBM has already admitted its interest in the transaction processing marketplace when it signed an agreement with Stratus Computer, Inc. to supply supermini-type fault-tolerant CPUs, which IBM quickly whipped into the System/88. Dedicated 3080s used in conjunction with System/88s, could make a handsome addition to IBM's transaction processing effort and possibly cause some real headaches for executives at Tandem Computers, Inc.

■ Data base management and a swelling sea of disk drives have been growing concerns among big IBM mainframe users. It is possible that 3080 mainframes could be used as the basis of a sophisticated data base machine in the tradition of products currently offered by Britton-Lee, Inc. and Teradata Corp. IBM is rumored to have dabbled already in data base machine design but has held back announcing a product for fear of taking a beating on its own mainframe and disk drive sales.

■ With the spiraling demand for communications capabilities, a 3080-powered communications controller would be an impressive product for serious communications shops. Some industry observers felt IBM would significantly enhance its 3705 communications controller with a very powerful replacement. But when IBM finally enhanced the 3705 with the 3725, the new controller's capabilities fell far short of some observers' expectations. A 3080-based controller would certainly fill some high hopes for a big communications controller.

■ Judging by recent product announcements for its System/36 and 8100, it is clear that IBM is still hot on the idea of distributed data processing (DDP). A 3080 would make a fine file server in a large distributed network, but would probably further confound IBM's already confused DDP strategy.

Possibilities for washed-up 3080s

There are clearly possibilities for what appear to be washed-up 3080 mainframes. But does IBM really want to refocus the machine? Unless 3080s were used in a way that would preclude field-installed machines from being retrofitted, IBM would probably wind up bolstering the used market for 3080s and not providing much incentive for new sales — not a very appealing scenario for profit-hungry IBM. An internally retrofitted version of the 3080 for a special purpose could wind up costing more, from an R&D standpoint, than building a box from scratch with off-the-shelf components.

Still, some variation of the first possibility seems to have a plausible ring to it. The ability to use currently installed 3080s with a 3090 would fill an immediate need for IBM to do something in the scientific processing sector. It would give users who already own 3080s pause when the suggestion is made to sell the thing before it gets any older, and it would open up some doors for IBM to sell more model-to-model 3080 upgrade and memory expansion kits.

With IBM trying to play down its sometimes perceived image of periodically shafting its big systems users, some alternate use for 3080s would be an interesting olive branch for Big Blue to offer. The sketchy case for such an offering, however, does not at this point seem sufficient to warrant taking the "For sale, cheap" sign off the old 3080 just yet. But there is always hope.

SIMULATE

from page 103

run the Cadat software. It will be available for shipment in the fourth quarter of 1985.

The company also released an accelerator subsystem that is said to enhance the performance of its Fast-Mask Engine. The accelerator — based on the Motorola, Inc. 68020 processor — is said to allow the engine to verify the layout of integrated circuit designs up to 10 times faster than software.

The Fast-Mask system, running without the accelerator, took 9 hours to run design rule checks on a customized integrated circuit design with 40,000 transistors, a spokesman said. When the system was used with the accelerator, the time to run design rule checks was reduced to one hour and 10 minutes.

Each board in the accelerator subsystem contains 1M byte of random-access memory. A Fast-Mask Engine can reportedly be upgraded on-site by inserting the subsystem into the engine's cabinet. No changes to the user's programs are required.

The accelerator enhancement costs approximately $45,000, and it will be available in the third quarter of 1985.

More information can be obtained from Silicon Solutions at 1380 Willow Road, Menlo Park, Calif. 94025.

The odyssey of the Microvax II

By Clinton Wilder
CW Staff

HUDSON, Mass. — Several small conference room doors in Digital Equipment Corp.'s semiconductor engineering facility here carry signs saying things like "Gigantic Beanstalk" and "Troll Room." The names are the work of DEC corporate consultant Bob Supnik, a devotee of the computer game "Adventure." Back in the days when he was translating the game into a version for the DEC PDP-11, Supnik decided to rename the rooms after Adventure's more interesting pratfalls.

But for most of the last three years, Supnik and his colleagues have been part of a different kind of adventure. Supnik headed the design team for the 32-bit chip set that drives the Microvax II, the recently unveiled supermicrocomputer that DEC claims has brought VAX-11/780 supermini power to the desktop.

"We had in our minds something that would set the world on fire," Supnik said during a recent interview in the appropriately christened "Treasure Vault" room. "We certainly still think it will."

The odyssey of Microvax II is the story of ambitious computer engineers who enthusiastically bit off more than they could chew and ultimately proved they could digest it. The result was a machine that DEC President Ken Olsen has called "the most exciting, and in many ways, the most significant, product [DEC] has ever developed."

The Microvax journey began quite fitfully in the summer of 1982, after DEC had consulted several external semiconductor vendors on their development cycle estimates for encoding the complex VAX architecture on a thumbnail-size chip. Some people didn't like the answers they were getting, especially Supnik. The memory still arouses the professional pride of the eight-year DEC veteran.

"If we hadn't decided we would make the chip ourselves, they'd be debugging the first pass just about now," he said. "I was absolutely incensed — here were these outsiders telling us how we couldn't get the thing to market in less than 36 months, and some of our people accepted the prognosis.

"I just reached a point where I said it can be done, and I will do it," Supnik continued, tapping his fist lightly but firmly on a table. "And in the great DEC tradition, he who proposes, does."

While Supnik assembled his Microvax chip and floating-point coprocessor chip design teams here, Jesse Lipcon, senior corporate engineer, mustered troops to develop the machine itself at DEC corporate headquarters in nearby Maynard, Mass. All told, less than 40 employees were assigned full-time to the ambitious project.

"We wanted a lean-and-mean team

Chip-dumping debate heats up

By Kathleen Burton
CW West Coast Bureau

ANALYSIS

MENLO PARK, Calif. — Allegations of dumping are being hotly disputed in the semiconductor industry these days.

The industry has been reeling from an 80% price drop in 64K-byte and 256K-byte dynamic random-access memory (RAM) products since last August. Now, U.S. and Japanese chip manufacturers are locked in a debate over how those price cuts are justified.

Japanese manufacturers say that efficient production methods and high yields are the key to their lower costs, and that U.S. manufacturers have sparked recent price wars. But U.S. manufacturers claim that the Japanese are the culprits, and a recent petition by Boise, Idaho-based Micron Technology, Inc. asked the U.S. Department of Commerce and the U.S. International Trade Commission (ITC) to arbitrate [CW, July 8].

But some U.S. analysts are unconvinced. "The recent chip-dumping charges are clearly a way for U.S. manufacturers to point a finger during an industry downturn," said Ken McKenzie, a semiconductor analyst at Dataquest, Inc., a San Jose, Calif.-based market research firm. According to McKenzie, selling chips below cost is a common business practice in the industry.

"There's nothing illegal about Japan's chip manufacturers attempting to move inventory at any price, even below cost. Everybody does it," McKenzie said. It is the only strategic decision the Japanese could make, given their ramped-up capacity and today's competitive market conditions, he said.

Representatives from Fujitsu Ltd., Matsushita Electric Corp., Hitachi Ltd. and NEC Corp. claim they are not selling products in the U.S. for less than fair value. They say they can afford to sell more

Court ponders racketeering

By Jeffry Beeler
CW West Coast Bureau

SAN DIEGO — Does a vendor qualify as a racketeering organization and become criminally liable under federal law if it is found guilty in civil cases of defrauding its customers?

That question now faces the 9th U.S. Circuit Court as it ponders a $5.12 million lawsuit that a user in Oklahoma has brought against Burroughs Corp. and a Dallas-based software supplier.

How the court ultimately decides the question may go a long way toward determining how much legal latitude disgruntled users will have in accusing vendors of engaging in racketeering enterprises.

The issue of how strictly federal courts should apply a controversial antiracketeering law lies at the heart of a lawsuit

Slump spurs industry wars

INDUSTRY INSIGHT
Peter Bartolik
CW Senior Editor

One year ago, NCC '84 keynote speaker John Akers, president of IBM, delivered a backhanded rebuke to the media, which he claimed fails to understand the competitive process in the computer industry. The image of the industry as projected through the media, he said, "too often seems to be that of a battlefield, a place of cutthroat competition."

A year later, the industry is down in the dumps, and cutthroat competition is the order of the day.

Not only are U.S. vendors at each others' throats, they are also, to varying degrees, pointing fingers of blame at foreign competitors.

Although few realized it last summer, the semiconductor industry was already on the fast downward track toward a deep depression. Much of the blame has centered on allegations of dumping by Japanese chip manufacturers. But one outstanding fact is that the demand for personal computers was vastly overestimated, and the semiconductor industry, on a worldwide basis, greatly overexpended on new capacity.

The micro disk drive industry was embroiled in controversy last year, and part of the blame can be laid right at the door of IBM. With Big Blue churning out huge num-

DEC continues patent suits; files against Emulex for infringement

CONCORD, N.H. — Digital Equipment Corp. recently filed another in a series of recent patent infringement suits against peripheral vendors, charging that Emulex Corp. of Costa Mesa, Calif., used proprietary DEC technology in its DEC-compatible disk controllers.

The suit, filed July 5 in U.S. District Court here, seeks treble damages based on profits DEC allegedly lost to sales of Emulex products. DEC is also requesting an injunction barring Emulex from manufacturing, marketing, selling or distributing the cited products.

The suit charges that Emulex's disk controllers use DEC's patented MSCP port protocol or plug into DEC's patented SBI, Unibus, Q-bus and CMI buses in VAX-11, Microvax and PDP-11 minicomputer systems.

In previous suits, DEC has charged a variety of vendors with infringing upon its patents. "[The Emulex suit] demonstrates the company's longstanding policy and commitment to protect vigorously its innovations resulting from investments in research and development," DEC said in a prepared statement.

In a prepared statement of its own, Emulex said it was not aware of the DEC suit. "We have no direct knowledge of such a suit. We have no comment pending corporate counsel's review and analysis of any complaint which may have been filed," the statement said.

Emulex makes disk and tape controllers, package subsystems for DEC computers, multiplexers and add-on boards for the IBM Personal Computer.

SUPNIK

from page 105

building a lean-and-mean product," Lipcon said. "I have a theory that products reflect their organizations. Big, bloated companies, like IBM, build big, bloated machines. We build distributed systems because we have a distributed engineering organization. This was a project that was not managed by managers. The company just let us clear away management and do the job."

From the beginning, Lipcon drilled his charges on the Microvax II bottom line — the clock. "We had a list of project priorities, and time to market was Nos. 1, 2 and 3," he said. "Price, performance and functionality came later. We knew [Motorola, Inc., National Semiconductor Corp., Intel Corp., Apollo Computer, Inc. and Sun Microsystems, Inc.] were clearly well along with their 32-bit architectures; we weren't arrogant enough to think we were the only ones that could do it. This revolution would happen, with or without us."

Supnik

Competition with chip makers, rather than minicomputer vendors, was a new experience for DEC, Supnik said. "Unlike computer rivals like Data General Corp., [semiconductor manufacturers] pretty much tell you what their plans are and give optimistic target dates," he said. "That absolutely sharpened the company vision and helped everyone focus on the competitive level. [Lipcon] always said we had to assume the worst-case competitive scenario."

Even with time to market as the paramount consideration, Lipcon and Supnik devoted the first two months of the project to selecting their teams. Supnik said the strength of his 30 workers — 20 on the CPU chip, 10 on the floating-point coprocessor — lay not in their glowing resumes but in their ability to rise to the occasion of Microvax II.

"It was not, surprisingly enough, a team of superstars," Supnik said. "The company didn't want to pull away all its top engineers and 'rob Peter to pay Paul.' We simply took talented, bright, enthusiastic people with track records in their areas, and almost everyone had challenges that were new," he said.

Although the Microvax team perfected the chip and brought the product to market well ahead of the original forecasts by outside vendors, the project was not without its snags. In the fall of 1983, Lipcon decided the conceptual design of the Microvax board could not be achieved on the tight project schedule.

"It was just plain too complex," he said. "But we followed what I call the Kiss rule — 'keep it simple, stupid' — and pared it back. The board simply had to be ready when [Supnik's] team finished the chip. In that sense, time to market dictated the design."

In January 1984, Lipcon went through another catharsis when he realized the design schedule of the board's gate arrays was slipping.

"We had to call for help," he said. "Our internal goal [for releasing the Microvax II] had been November 1984. We slipped a quarter or two [during the entire project development], but the competition slipped more."

In the end, however, Microvax II surprised even its designers. Only three debugging passes were required to produce the first batch of working chips. In August 1984, the loading and successful running of the Micro VMS operating system took just 3½ days.

Lipcon said that was the turning point. "I don't think anyone really thought we could do it until last fall, when we started running VMS. People had to understand that it really felt like a [VAX-11/780]. It was a marketing job to get this juggernaut rolling."

DEC chip engineers here are now running batch programs on the Microvax II resting snugly under Supnik's desk. DEC has staked the first claim in the desktop supermini market, and DEC OEMs have greeted the long-awaited Microvax II as a bridge to scores of potential new customers (see story below).

Lipcon

And while DEC's chip foundry here cranks out 32-bit Microvax 78032 microprocessors and Microvax 78132 floating-point chips, Supnik has moved on to new challenges. He isn't even playing "Adventure" on his PDP-11 any more.

"Actually," said the designer of VAX on a chip, "I solved it years ago."

OEMs see Microvax II leveraging lower end of market

The Digital Equipment Corp. Microvax II has been touted as the leading edge of a revolution in CPU downsizing and price reduction that will make superminicomputer power accessible to an array of new users. And no one is awaiting that trend with greater anticipation than the OEMs that tailor their products to DEC VAX systems.

Several OEMs contacted by *Computerworld* agreed that the size and $18,840 entry-level price tag of the Microvax II should help expand their customer bases both within and outside of their current vertical markets.

"We're extremely excited about it," said Tony Glinkokas, director of sales and marketing of PDA Engineering, Inc., a vendor of DEC VMS-based mechanical computer-aided engineering (CAE) software in Santa Ana, Calif. "When you look at the size, power and price, you're looking at bringing computers where they've never been before. We've resisted going into the personal computer world because it takes forever to do a CAE problem [on a micro]. We need 32-bit power and to think there is now a small computer with the power and name of VAX, it's amazing."

PDA does not sell its software packaged with VAX machines, but Glinkokas sees PDA's sales to smaller users expanding if DEC successfully markets the Microvax II to those customers. "It's pretty easy for a smaller engineering company to justify a real engineering tool for the price of a new car or van," he said. "For firms that have been using our software on a [VAX-11/780], the problem is sharing the system with 12 other people. These people want their own little machine."

Glinkokas said the portability of the Microvax II will make his sales calls easier. "I'll put it in the back of a station wagon and take it on [demonstrations]," he said.

According to Len Lazar, president of Zoltech Corp. in Van Nuys, Calif., "customers are coming in from the cold" with inquiries about Zoltech's turnkey computer-aided electronic drafting systems with Microvax II CPUs. "These are people from outside the DEC world, educational users and smaller manufacturers just now looking at some kind of computer facility," Lazar said. "These people had been interested in VAX but could never justify it before at the price. We emphasize [DEC] Q-bus systems — Microvax II allows us to get into the VAX world where previously we were just in the [DEC] PDP-11 [world]."

Most OEMs anticipate a downward expansion within their vertical niches as a result of the new supermicro. "The Microvax II won't bring a new set of customers but a new size of firm," said Bill Payne Jr., manager of systems marketing at Huntsville, Ala.-based Intergraph Corp., a seller of turnkey architectural and electronic computer-aided design systems. "For several years, the trend has been to a reduction in physical size while keeping the same performance. I think that trend will continue."

Computer industry analysts have generally agreed that the Microvax II should boost DEC's OEM and direct sales. But many believe those sales will come at the expense of older DEC VAX products, as buyers shy away from the larger, more expensive minis.

"The VAX-11/730, 750 and 780 are now far off the price/performance slope of today's technology, and the appeal of these machines is now open to serious question," said a recent industry report from International Data Corp., a market research firm in Framingham, Mass. "Until DEC comes up with an aggressively priced two to three [millions of instructions per second] VAX product, system sales in the $100,000 to $400,000 range may falter."

— Clinton Wilder

Disk makers reach accord in patent suit

CHATSWORTH, Calif. — Tandon Corp. and Sony Corp. recently announced the settlement of Tandon's patent infringement suit against Sony, and the two companies also announced plans to develop disk drive products jointly.

Under the terms of the settlement, Sony will pay Tandon an undisclosed amount, including royalties for Sony's sales of 3½-in., double-sided disk drives that allegedly used proprietary Tandon technology. Sony also agreed to allow Tandon the option of using Sony technology in its 3½-in. drives.

In suits filed before the U.S. International Trade Commission (ITC) and a federal court in Los Angeles, Tandon had sought to block U.S. sales of disk drives from Sony and two other Japanese vendors that allegedly infringed on Tandon patents. Tandon's suits against Mitsubishi Corp. and Teac Corp. are still pending, with an ITC hearing scheduled for Aug. 19. Tandon attorney Ray Lupo declined to comment on potential discussions for out-of-court settlements with Mitsubishi and Teac.

Lupo said Sony and Tandon would work jointly to develop a 3½-in. double-sided disk drive with a capacity of more than 1M byte. "The product will be based on technology from both companies," Lupo said.

A favorable May 30 ruling by administrative law judge Sidney Harris in the first phase of the ITC hearing on the patent infringement suit [CW, June 10] spurred negotiations for the recent settlement, Lupo said. "Both companies are very pleased with the settlement," he said.

Lotus files copyright suit against Oregon publisher

BOSTON — Lotus Development Corp. recently announced it has filed a copyright infringement suit against a Portland, Ore.-based publishing company that sells user manuals dealing with Lotus software programs.

Publisher Bob Miller, chief executive officer of Management Information Source, Inc., denied that his company's publications, *The Manual: 1-2-3* and *The Manual: Symphony*, violated any copyrights.

Miller was not surprised by the suit, and in fact, his company has in recent weeks bought advertising space to promote what it describes in the advertisement as, "The book Lotus wants stopped."

Lotus charged that the publications "plagiarize extensively from the text of both Lotus training manuals," and the company has asked for a permanent injunction to halt distribution of Management Information Source's books.

Miller said he was surprised that Lotus announced the suit because it was filed more than two weeks before the announcement and included a request to bar Miller from talking about the dispute.

Lotus, according to Miller, has a weak case because the organization of his manuals is different from the manuals that Lotus provides with its software packages. Miller said his company made a nonfinancial settlement offer to Lotus prior to the announcement and has not received an answer.

Miller said he offered a settlement because of the expense in fighting a copyright battle.

Lotus has aggressively pursued copyright charges in the past year, obtaining injunctions or consent orders against three companies that it charged had copied the actual software.

Most recently, Lotus said Mueller Co. of Decatur, Ill., agreed to a settlement that acknowledged that a Mueller employee duplicated and distributed Lotus software, but that prior to the December 1984 filing of the suit, Mueller management had discovered the problem and taken corrective measures.

Datapoint OKs separate service firm

SAN ANTONIO — The board of directors of Datapoint Corp. recently approved the previously announced conversion of the company's U.S. customer service division into a separate corporate entity.

The new public company, Intelogic Trace, Inc., will be fully owned by Datapoint shareholders. Current stockholders will receive one share of the subsidiary for each share of Datapoint common stock owned; previously released plans call for the new operation to absorb the service division of Mohawk Data Sciences Corp. The new company will represent all the assets and business of the domestic service organization.

The reorganization is subject to a favorable ruling from the Internal Revenue Service or corporate counsel's opinion that the move is free from taxation. The record and distribution date for the spin-off will be announced by Datapoint in the near future.

John Hale, former executive vice-president of Datapoint, was named president of the new company. Datapoint Chairman Asher B. Edelman was named chairman of the new company.

Intelogic Trace, according to statements mailed to shareholders, will commence operations with about 2,000 employees, assets of $76.1 million and liabilities of $26.7 million. Revenue of the service operation for the nine months ended April 27 was $118.6 million.

How to make NCC *really* work for you

Thousands of your customers and potential clients will go to NCC this summer (in Chicago, July 15-18). And hundreds of thousands more will follow the show by reading Computerworld.

We'll provide our readers with complete coverage of NCC in three special issues — the July 8th Preview issue, the July 15th Show issue, and the July 22nd Wrap-Up issue.

Our editors will showcase the new products; report on the major speeches and seminars; and take a look at industry trends of interest to our readers.

Protect your investment in NCC. Advertise in these issues now to keep your company and your products in front of more than 687,000 computer-involved professionals all during this eventful period.

Call your local Computerworld representative today to reserve space for your NCC campaign. Or call Ed Marecki, Vice President of Sales, at (617) 879-0700. Call now. These issues will be closing soon:

Xebec plans plant closing, consolidation

SAN JOSE, Calif. — Disk drive manufacturer Xebec, Inc. said recently it will close one plant and consolidate other operations due to an expected loss for the quarter ended June 30.

The company said that worldwide net sales for the quarter just ended were about 30% below the previous quarter's sales, which were $45 million.

The decline was due to a softening of demand and changes in customer demand, Xebec said.

Cost-cutting measures being implemented by the company include the closing of the Xebec East manufacturing facility in Pennsylvania and the consolidation of the operations of two subsidiaries, Information Memories Corp. and Dastek.

Another cost-saving step will be the elimination of two corporate vice-presidential functions, Xebec said.

Additionally, the company said it is considering possible write-downs. These include reserves for shutdown costs of certain facilities, write-downs of fixed assets and intangibles acquired from Datapoint Corp. and adjustment of inventories.

Sperry to resell TI system as part of planned AI line

BLUE BELL, Penn. — Sperry Corp. recently announced it signed a three-year contract to purchase Texas Instruments, Inc. Explorer systems to be resold as part of Sperry's Knowledge System product line.

Sperry said it will probably purchase more than $42 million of the TI hardware and software systems over the life of the contact.

The workstation is the first of a planned line of artificial intelligence/expert system products that Sperry intends to offer. Sperry said it will market the workstation with Knowledge Engineering Environment software developed by Intellicorp.

"Artificial intelligence and expert systems are the next echelon in computer evolution and offer dramatic opportunities, especially for a systems-based company like Sperry," said Larry L. Walker, director of Sperry's Knowledge Systems Center in Bloomington, Minn.

The company said it is currently developing 26 expert systems environments and employs more than 150 people working to make commercially viable expert systems products.

Slump spreads to CAE mart

SAN JOSE, Calif. — Two vendors of computer-aided engineering (CAE) systems recently indicated that the slump in computer systems sales has spread to dampen one of the fastest growing market niches.

Valid Logic Systems, Inc., headquartered here, said it laid off about 40 employees from its work force and has scheduled a two-week production shutdown during August.

Mentor Graphics Corp., based in Beavertown, Ore., said it expects second-quarter results to show no growth in profits over the year-earlier period. The company expects sales to be about the same as those in the first quarter of this year.

Both companies cited slow spending rates by customers. "Our customers' business is soft right now, [and] that softness is reflected in Valid's current order rate," said Jared Anderson, chairman of Valid Logic. Anderson said the company will remain profitable but that second-quarter revenue is expected to show no increase over the first quarter.

Trilogy, Elxsi sign merger agreement

CUPERTINO, Calif. — Trilogy Ltd. and Elxsi International recently announced they had signed a definitive merger agreement, formalizing an earlier agreement in principle.

Under the terms of the agreement, Trilogy will issue or reserve for issuance approximately 36 million shares of Trilogy stock to Elxsi security holders. The agreement is subject to approval by Elxsi shareholders and certain regulatory approvals and would provide Elxsi shareholders with slightly less than 50% of the outstanding shares in Trilogy.

Elxsi will operate as a wholly owned subsidiary of Trilogy when the merger is consummated.

In addition, Trilogy said it has agreed to advance certain loans to Elxsi pending completion of the merger, which is expected within three months. Trilogy advanced $5 million to Elxsi in March.

Elxsi is a privately held manufacturer of multiprocessor computer systems designed for engineering and scientific applications. Trilogy was founded by Gene Amdahl to develop wafer-scale integration semiconductors and a large-scale IBM-compatible computer.

CONFIDENCE

The #1 3270 alternative for people who need a name they can trust.

Sooner or later, the search for truly compatible low-cost 3270 terminals, better service and product flexibility comes to a question of confidence. And nobody answers the question better than Telex.

Who is Telex? The #1 supplier of 3270 alternatives. Next to IBM, nobody sells more 3270 displays, printers, controllers and intelligent workstations than Telex.

Why Telex? Because Telex terminals are a lot more than just 3270 plug compatible. Product for product, they offer extra features. So they're more than an alternative . . . they're an advantage. With cost efficiency only a high-volume manufacturer can offer.

And every Telex product is backed by over 2,000 Telex-dedicated service and support people worldwide.

What kind of company is Telex? Strong enough to have earned the confidence of a market that demands stability, dependability and innovation. That's why more and more companies are trusting Telex to be their #1 3270 supplier.

For more information, contact John Hawkins, 6422 E. 41st Street, Tulsa, OK 74135/1-800-331-2623.

AT&T ADVANCED 800 SERVICE.

A terrific source for all kinds of new ideas for your business.

And an important part of AT&T Long Distance Services: the better business machine.

AT&T Advanced 800 Service is one of the most exciting advances in business communications since we developed the original 800 number.

Why? Because it gives you the flexibility to customize and control your own communications network.

With AT&T Advanced 800 Service, you will be able to direct calls to different locations, even different departments. And redirect them at a moment's notice.

You can even decide what percentage of calls each office should receive any time of the day. Any day of the week. Or both.

Here are the specifics:

800 CALL PROMPTER.

Allows your customers to hear a recorded message that will help them route their own calls to the department or service of their choice. Just by dialing additional digits. Making it easier and faster for your customers to get to the right people.

For example, if you're a wholesale distributor, you'll be able to direct customer calls to billing, general information, or the appropriate order desk. And if you've been using a separate 800 number for each of these departments, now you'll need only one.

800 COMMAND ROUTING.

Reacts to your spontaneous needs by letting you instruct the AT&T network to redirect your AT&T 800 Service calls to planned alternate routes. Immediately. Whenever the need should arise.

Let's say you're in financial services or any other industry which undergoes sudden, often hectic changes. Maybe even emergencies. To ensure that your communications link with your clients is protected, you must be able to move fast. And with 800 Command Routing, you can.

800 CALL ALLOCATOR.

Lets you direct calls to two or more call-answering locations by determining the percentage of calls each location should receive.

For instance, if you're an airline, hotel, or any other company involved in the travel business,

©1985 AT&T Communications

*Excluding Channel Islands.

IS IN NEW NESS AS.

you know your customer calls for reservations and information peak at certain times, causing an overload.

With 800 Call Allocator, you'll be able to plan for and divide that overload of incoming calls between your different offices. So you'll automatically be sending calls to offices where there is adequate staff to handle them.

800 TIME MANAGER, 800 DAY MANAGER.

Gives you the ability to have the AT&T network route calls to different offices at different times of the day, or days of the week, or both.

So, if a call comes into an office that's closed, you can have it automatically routed to an office that's open. That way, you won't lose any business to the competition because someone will always be available to answer a call.

800 ROUTING CONTROL SERVICE.

Lets you directly access the AT&T network to add, change or delete most any AT&T Advanced 800 Service call-routing feature. You can even program your future service needs up to one year in advance, and they'll automatically be taken care of by the system.

With the introduction of Advanced 800 Service, you'll be able to access the AT&T network to make changes 22 hours a day, seven days a week.

AND EVEN MORE 800 SERVICE.

Now, when you buy AT&T 800 Service in the continental U.S., you get access from Alaska, Hawaii, Puerto Rico and the U.S. Virgin Islands at no extra charge. And you can also purchase toll-free service from many international locations as well, including Canada, Bermuda, the United Kingdom,* France and the Netherlands.

Advanced 800 Service. Only from AT&T.

It's an exciting part of AT&T Long Distance Services: the better business machine.

And it's just one more way we can help your business in ways you never thought of.

To find out more, talk with your account executive at **AT&T Communications.** Or any one of our sales specialists at **1 800 222-0400.**

AT&T

The right choice.

Bell Atlantic subsidiary signs leasing pact

PARAMUS, N.J. — Tricontinental Leasing Corp., a subsidiary of Bell Atlantic Corp., recently signed a $100 million joint venture agreement with Forsythe/McArthur Associates, Inc., a privately held computer leasing company headquartered in Skokie, Ill.

The move marks the first venture by the Bell Atlantic subsidiary to gain a share of the lucrative third-party market for IBM mainframe computers and peripherals.

Richard A. Forsythe, president of Forsythe/McArthur, said his firm will provide the marketing and administrative services in the venture and that Tricontinental will provide the financing. The company is regarded as one of the largest privately held companies involved in leasing IBM equipment.

Holding title to 10,000 IBM units

Forsythe/McArthur is currently holding title to approximately 10,000 large IBM computers. It operates from seven regional offices in the U.S.

According to Forsythe, the firm "needed financial muscle" to expand operations in leases involving top-of-the-line IBM 3080 series and the new 3090 mainframes and peripheral equipment.

The Illinois firm will write the leases financed by the venture, and Tricontinental will take title to the equipment through a purchase lease-back arrangement.

ITC as impetus

Forsythe said the impetus for the agreement is the federal Investment Tax Credit (ITC) that will accrue to Tricontinental.

If the U.S. Congress members approve President Reagan's tax reform proposal, and it eliminates the ITC, Forsythe said, "it would dramatically impact if not eliminate the venture."

However, Forsythe noted, "We seem to have lost a little steam for tax reform," and it now appears unlikely that the proposal will be approved before January.

Cipher Data cuts work force

SAN DIEGO — Storage tape drive manufacturer Cipher Data Products, Inc. recently announced cost-cutting measures, including a reduction of its domestic work force by about 13%.

Don M. Muller, chairman, president and chief executive officer, said the sluggishness of the U.S. economy and the minicomputer industry prompted the move.

"It's our view that the economic conditions and current industry slowdown will be with us for several more months, and these actions are appropriate to prevent further erosion to fiscal 1986 financial expectations," Muller said.

WARS

from page 105

bers of desktop devices, it has doled out contracts that could more than double the production runs of some small manufacturers. And just as quickly as it blessed these essentially one-product vendors, IBM could cave in the ceiling by canceling and taking its benefits elsewhere.

Although it is unclear whether the strength of the U.S. dollar or a cutback in consumption caused the slump, it does seem certain that IBM's unabated flood of products has not eased the problem. Just ask Wang Laboratories, Inc. if cutthroat competition is loose in the land.

Take personal computers . . . please! We all know what happened to those vendors foolish enough to believe that they could build on a supposed industry standard. IBM is more than happy to see the entire industry dependent on Microsoft, Inc.'s MS-DOS operating system, but developing a standard I/O system to massage the software brings lawsuits from IBM.

So now that every personal computer is tied to the whims of IBM, the elephant has everyone scared that it really can dance. With the large variety of IBM Personal Computer versions already out, rumors are emanating that PC2 is going to change the rules.

Well, even IBM is not immune to the problems that are plaguing all other players in the industry. No longer propped up by rental income, IBM is facing problems of foreign competition, a strong dollar and weakened demand. It shelved the PCjr, saw the Sierra cut into 3080 series sales and has watched the demand for departmental processing systems dry up.

But IBM is big enough to weather any storm. It can cut equipment prices to the bone and raise the rental fees on software. IBM can ride out a year of adversity because it knows it will be around to catch the next wave of prosperity. A lot of others don't have that kind of cushion.

The innately skeptical might be excused if they think that IBM is not unhappy to see the playing board cleared of some clutter. Some open spaces might give IBM a little more room to position its chess pieces more tightly around AT&T's king. These skeptics might think not that the role of competition is overplayed, but rather that the media is too much in awe of the emperor's new clothes.

HOW
WE'RE RUNNING
CIRCLES AROUND HAWORTH,
STEELCASE AND HERMAN MILLER.

When it comes to planning an office environment; you probably think about work spaces in terms of squares and rectangles. In other words, shapes with 90 degree corners. Up until now, this way of thinking seemed natural and correct. Since most rooms, desks and office furniture had familiar right-angles, these shapes appeared to work...pretty well. The time has come, however, to change your thinking about space planning by considering another familiar shape... the circle. At Center Core we have used the circle to create workstations that put more people into the same space and, provide more work surface per person. These workstations offer you the simplicity of conventional desks, the privacy and attractiveness of systems furniture—plus, the flexibility and human engineered benefits of ergonomic design. The Center Core concept was the first to group up to six individual workstations around a clear space, or core. This core is extremely functional because it eliminates complicated wire management schemes. Other significant Center Core concept benefits include: Cost Efficiency. Our workstations save up to 40% in floor space and increase primary work surface up to 75% over conventional systems. Aesthetics. Our core concept eliminates visual clutter because all major wiring is out of sight. Also, a wide choice of fabric coverings and wood finishes make Center Core workstations warm and inviting. Flexibility. With our designs you get maximum utilization of available space. Our workstations can be adapted to changes in job functions without your having to buy additional components. Accessibility. With Center Core, both primary and secondary work surfaces are within easy reach. And, most overhead storage falls within the primary work area. When you think about these benefits, then you're thinking Center Core. Once you do, you will never think about conventional systems furniture again. And, that's how we're running circles around our competition. Call us for the Center Core distributor or dealer nearest you. Or, write for more information: Center Core Incorporated, 250 Corporate Court, So. Plainfield, New Jersey 07080. 1-800-433-4304.

CENTERCORE

RACKET

from page 105

that Madison J. Bowers has filed against Burroughs and CCH Computax Systems, Inc., a software developer. In addition to alleging breach of contract and misrepresentation, the Tulsa-based provider of tax consulting and accounting services has accused the two defendants of violating the federal Racketeer Influenced and Corrupt Organizations (Rico) Act.

As legal justification for claiming Rico Act violations, Bowers and his San Diego-based attorney, William Woods, cited a prior complaint in which Burroughs was found to have fraudulently marketed a B series system. In Bowers' view such a judgment helps fulfill the legal requirements for prosecution under the Rico Act, which specifies at least two indictable acts of fraud or comparable offenses within 10 years, Woods said.

Both Burroughs and CCH, however, dispute the plaintiff's argument that fraud judgments in civil matters qualify as criminal violations of the Rico Act.

"As a matter of law, [Bowers' contention] is insufficient to state a claim under the Rico statutes," Burroughs attorney Albert F. Shamash said. "If the [opposing side's] theory is sustained, every time a company is involved in a civil case and a judgment is entered on a fraud cause of action, the defendant can somehow be construed as engaging in a racketeering activity. So far as I know, no court has interpreted [the Rico Act] to that extent."

As to the issue of which interpretation of the Rico Act — Bowers' or Burroughs' — is correct, the law itself provides no clear-cut answers. The Act's language, particularly its use of the ambiguous phrase "indictable acts," raises questions about how broadly racketeering statutes were meant to be applied.

Burroughs, through its legal counsel, interprets the law quite narrowly and takes indictable acts to mean convictions. Such a reading would preclude an aggrieved buyer from using prior civil judgments as a basis for suing a vendor under the Rico Act.

Liberal interpretation of law

Bowers, by contrast, has adopted a comparatively liberal interpretation of the federal law and wants Rico Act applicability widened to include any prosecutable fraud, Woods said.

Because both Bowers and Burroughs can cite judicial precedents to support their respective viewpoints, neither interpretation of the Rico Act is universally recognized as valid.

The legal community had been anticipating a definitive ruling this year from the U.S. Supreme Court on the applicability of the Rico statute to business fraud. Lawyers who oppose such application have argued that Congress drafted the law to penalize organized crime elements and that the spreading use of Rico Act claims to win triple damages awards from legitimate business enterprises is too broad an interpretation of the law. The Supreme Court early this month rejected limits set last year by a federal appeals court in New York and instead said it is up to Congress to set any limitations.

So for the time being, the battle to clarify the Rico Act's exact meaning and scope will continue to be fought at the U.S. circuit court level.

As expected, Bowers and Burroughs differ sharply in their opinion of how the outcome of their legal dispute will affect similar cases in the future. If the 9th U. S. Circuit Court sides with Bowers and interprets the Rico Act broadly, "computer companies and other companies will find themselves facing these kinds of racketeering allegations more often," Shamash predicted.

Woods, on the other hand, foresees just the opposite effect. A 9th Circuit endorsement of his liberal Rico Act theory would enable federal courts to clear their dockets by creating a legal basis for dismissing all racketeering claims that are unsupported by at least two prior judgments for fraud. At a time when Rico Act allegations are becoming pandemic, many courts are increasingly trying to rid themselves of frivolous racketeering cases, Woods said.

Except for its unusual interpretation of the Rico Act, Bowers' legal action is almost indistinguishable from a thousand other customer complaints against vendors: During a recent phone interview, Bowers accused Burroughs and CCH of working together to sell him a B92-based accounting system that they knew would be inadequate for his needs.

Asked to respond to the charge, Shamash absolved Burroughs' hardware of any responsibility for Bowers' alleged problems and denied the existence of a formal marketing arrangement with CCH.

Phaser seeks debt shelter

SAN FRANCISCO — Phaser Systems, Inc., a microcomputer software development company, recently filed for protection from creditors under Chapter 11 of the U.S. Bankruptcy Act.

Phaser, a developer of business-oriented software systems, reported assets of $425,891 and debts of almost $2 million.

The company is publicly held and has about 480 shareholders.

Phaser said its principal assets are software products designed to enhance programmer productivity and enable micro-mainframe networking.

The company said it hopes to file a plan for reorganization that will permit further product development and sales.

"My idea was to give our PC users a screen display identical to the 5251."

Our IDEAcomm 5251 is the only Twinax Emulator that lets him do it.

For users accustomed to an IBM 5251 terminal, our IDEAcomm 5251 with the D card option doesn't just approximate the 5251 screen display, it duplicates it. The full 32 display attributes of the 5251 are supported. And the D card is an exact replacement for IBM's monochrome display adapter, including a parallel port, so you don't lose an additional PC slot.

Our ideas for IBM System 34/36/38 users shouldn't surprise you. IDEA shipped the first fully functional 5251 twinax emulator last December. And since then we've added several new features you told us you were looking for.

Now, IDEA offers complete support for IBM's FSU and FTF programs on the host. In addition, there are many third party software packages which support IDEAcomm 5251, including DecisionLink and Smart Link, giving you even greater file transfer options.

IDEAcomm 5251 works with the widest range of PC printers including Okidata, Epson, Hewlett-Packard, IBM, NEC and many more. The PC printer can be configured as the IBM 5224, 5225, or 5256—so it's compatible with many work environments.

And our ideas go even further. IDEAcomm 5251 supports four logical units so you can run four tasks simultaneously. Our programmatic interface lets programmers easily customize applications to the board through software. IDEAcomm 5251 can be configured for PC and 5250 keyboard modes and we provide templates for both. And we even have a color mapping option which gives you the choice of remapping any of the 5250 attributes to different colors.

Best of all, IDEAcomm 5251 uses only 30K of memory. So when you have a great idea for improving the communication capability of your IBM PC, look to IDEA to make it a reality.

Call us at 800-257-5027 for more information.

NICKELS AND DIMES

Mentor Graphics Corp. reported revenue for the first quarter ended March 31 of $32.3 million, compared with $14.5 million in the comparable period a year ago. Profits were $3 million, or 22 cents per share, compared with $1.5 million, or 12 cents per share, in the first quarter one year ago.

■

Western Digital Corp. announced revenue for the third quarter ended March 31 of $40.7 million, compared with $27.5 million a year ago. Profits were $3.1 million, or 16 cents per share, compared with $1.7 million, or 11 cents per share, in the same quarter one year ago.

■

Xidex Corp. reported revenue for the three months ended March 31 of $73.4 million, compared with $46.5 million in the same quarter last year. Profits were $5 million, or 16 cents per share, compared with $7.3 million, or 31 cents per share, in the same period a year ago.

■

Ramtek Corp. announced revenue for the third quarter ended March 31 of $12.3 million, compared with $8.8 million in the comparable period a year ago. The company reported a net income of $165,000, or 5 cents per share, compared with a net loss of $976,000, or 28 cents per share, in the like period last year.

■

Altos Computer Systems, Inc. reported revenue for the third quarter ended March 30 of $30.7 million, compared with $25.9 million one year ago. Profits were $2.7 million, or 15 cents per share, down from $3 million, or 20 cents per share, in the like quarter a year ago.

■

Computer Task Group, Inc. announced revenue for the first quarter ended March 31 of $26 million, a 50% increase compared with $17.3 million in the like period a year ago. Profits were $773,000, or 36 cents per share, compared with $357,000, or 17 cents per share, in the same period a year ago.

■

ISC Systems Corp. announced revenue for the quarter ended March 28 of $37.9 million, compared with $34.7 million for the same period a year ago. Profits were $2.2 million, or 15 cents per share, compared with $3 million, or 20 cents per share, for the same quarter in the previous year.

■

Automatic Data Processing, Inc. announced revenue for the third quarter ended March 31 of $373.5 million, compared with $334.9 million a year ago. Profits were $36.1 million, or 73 cents per share, compared with $3.1 million, or 65 cents per share, reported one year ago.

■

Applied Data Research, Inc. reported revenue for the three months ended March 31 of $34.3 million, up 59% from $21.5 million in the same period a year earlier. Profits were $566,000, or 10 cents per share, compared with $328,000, or 6 cents per share, in the corresponding period last year.

DUMP

from page 105

cheaply than U.S. chip vendors because of more efficient production methods and higher yield rates.

"Micron has no facts," asserted Ken Shimba, a spokesman for Matsushita. "We always pay attention to dumping margins and set the U.S. prices at a higher level than our domestic prices," he said.

According to Harry McGrath, a spokesman for Hitachi, Micron is trying to scapegoat the Japanese because its own business strategy has backfired. Micron is seriously undercapitalized and cannot compete against Japanese conglomerates and other semiconductor giants, he said.

U.S. chip makers' response

Predictably, U.S. chip makers disagree. "When prices drop 50% to 80% in six months' time, you know there's more at work than normal cost declines," said Larry Grant, general counsel for Micron. According to Grant, the Japanese are dumping memory chips here to gain market share and discourage Korean manufacturers from entering the fray.

Grant denied that Micron led the price wars. Although the company cut its 64K-byte dynamic RAM prices from $2.50 to $1.85 last fall, prices have plummeted since then. Now, 64K-byte products are selling at 50 cents to 75 cents, and the Japanese are to blame, he said.

The dumping allegations will be difficult to prove, said Sheila Sandow, an analyst with the Semiconductor Industry Association, a trade organization in Cupertino, Calif. The Japanese cost of chip production is not publicly available. And even with a cost model being put together by the Commerce Department, yields and volume are still difficult to compute because the Japanese are vertically integrated and often recycle chips internally, Sandow said.

According to Sandow, the real problem is Japan's protected chip market. The Japanese increased capacity 30% over the past eight months, resulting in a surge in exports to the U.S., predatory pricing and dumping, she said.

Ultimately, the Commerce Department and the ITC may have to choose between limiting foreign companies' business ventures in the U.S. or sacrificing U.S. semiconductor profits. If it comes down to tariffs, quotas and other protectionist policies, it could open a no-holds-barred trade war where nobody wins.

How to advertise in every major computer market in the world as easily as you advertise in the U.S.

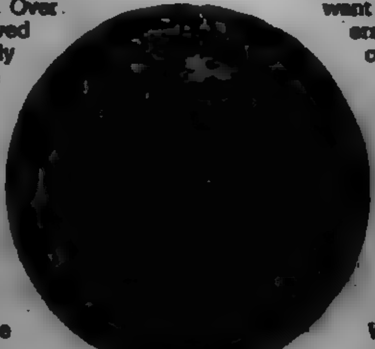
CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide — easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 55 computer publications in over 25 countries is the largest in existence. Over 9,000,000 computer-involved people around the world rely on our publications for the information they need to stay ahead.

With more than 10 years experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our local offices can translate your ads for a 15% surcharge on the space you purchase.

We'll help you increase your market penetration. We're also available to advise you on your campaign strategy — such as when to advertise in order to coincide with special-focus issues and trade shows. And you'll be able to advertise in even more markets when you take advantage of our corporate discounts.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.



Call Diana La Muraglia today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474. In Massachusetts call (617) 879-0700. Or you can reach her through Telex, at number 95-1153. Or, if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

If the space program had advanced as fast as the computer industry, this might be the view from your office.

And space stations, Martian colonies, and interstellar probes might already be commonplace. Does that sound outlandish? Then bear these facts in mind:

In 1946 ENIAC was the scientific marvel of the day. This computer weighed 30 tons, stood two stories high, covered 15,000 square feet, and cost $486,840.22 in 1946 dollars. Today a $2,000 kneetop portable can add and subtract more than 20 times faster. And, by 1990, the average digital watch will have as much computing power as ENIAC.

The collective brainpower of the computers sold in the next two years will equal that of all the computers sold from the beginning to now. Four years from now it will have doubled again.

It's hard to remember that this is science fact, not fiction. How do people keep pace with change like this? That's where we come in. We're CW Communications, Inc.—the world's largest publisher of computer-related newspapers and magazines.

Every month, over 9,000,000 people read one or more of our publications.

Nobody reaches more computer-involved people around the world than we do. And nobody covers as many markets. In the United States we publish three computer/business journals. *Micro Marketworld*, for businesses selling small computers and software. *On Communications*, the monthly publication covering the evolving communications scene. And *Computerworld*, the newsweekly for the computer community, is the largest specialized business publication of any kind in this country.

[illegible] seven personal computer [illegible] publications, *InfoWorld*, the [illegible] computer weekly, is [illegible] for all personal computer [illegible]

POSITION ANNOUNCEMENTS

DATA PROCESSING PROFESSIONALS

Phone for an interview while you're in town for the NCC!

What's Blocking Your Talent?

Are slow growth and lack of challenge at your present company blocking your talents...stopping your career growth? Then it's time to make a change. To ASA, Advanced System Applications, Inc., one of the nation's top 50 software firms and one of the few companies to nearly double in size last year through sales...not acquisitions.

Like our growth, the challenges are steady too. After all, meeting the needs for on-line software solutions for the group health insurance industry requires a high level of talent and dedicated teamwork. Join us and put your talents to work. Immediate opportunities are now available.

PROGRAMMING MANAGER

As head of the programming staff, you will schedule resources, prepare and administer budgets, prepare cost estimates, and provide technical consulting. Five or more years experience in data processing required. Experience in IMS, CICS and DL/1 is necessary; knowledge of formal life cycle approach to systems-development is required. At least 1 year of management experience is a must.

SENIOR PROGRAMMER ANALYST
SENIOR SYSTEMS ANALYST

Requires a minimum of 2 years COBOL programming experience with large multi-tiered on-line systems in an IBM compatible environment. Desired experience includes: BAL; on-line editor (PANVALET, ROSCOE, TSO); group health claims or billing and membership; and OS/JCL.

SYSTEMS PROGRAMMER

Requires expertise in DASD management, working knowledge of operating system internals and CICS/IMS plus the ability to optimize job stream processing. Experience with all phases of Assembler programming essential. Must be able to develop and maintain procedures and have the ability to communicate with technical and business personnel.

TECHNICAL SUPPORT SPECIALIST

Among your responsibilities will be on-site installation; design, coding, testing, documentation and maintenance of Assembler programs; providing technical expertise in JCL and VSAM; and maintaining CICS tables (FCT, DCT, PPT, PCT) for development systems. A minimum of 2 years Assembler programming experience is required, including experience with CICS logic concepts and problem analysis/debugging. Good communication skills and COBOL proficiency are also necessary.

EXPERIENCED NON-IBM PROGRAMMER/ANALYSTS SYSTEMS ANALYSTS

Individuals with experience in Hewlett Packard, Univac, NCR, Honeywell, and other large mainframe environments can find hands-on experience working with our IBM compatible applications. Must have 2 or more years experience designing complex COBOL applications for modular systems. Experience with complex applications such as insurance or banking is preferred. Any on-line TP monitor experience will also be considered. BAL would be helpful.

In addition to a creative environment, we offer the on-going educational support that ensures growth to achievers, excellent salaries and complete benefits. Our new headquarters in a western Chicago suburb provides easy access to major expressways. Send resumes or call Trudy Norman, (312) 893-9055, Dept. #8546, ADVANCED SYSTEM APPLICATIONS, INC., One ASA Plaza, P.O. Box 395, Bloomingdale, IL 60108. An Equal Opportunity Employer M/F/H.

TECHNICAL SERVICES MANAGER

The Pennsylvania Department of Transportation is recruiting qualified applicants for a career position as Manager of our Technical Services Unit in Harrisburg, Pennsylvania. This is a highly visible management position requiring large systems experience, preferably in an IBM environment, and excellent communications and planning skills.

Candidates should have three years of basic assembler language programming in the development, modification, installation and maintenance of executive software, which included one year of computer systems design and programming in a large-scale operating system. A Bachelor's Degree in Computer Science, Business Administration, Accounting or other specialized background is preferred but not required.

This challenging position presents an excellent career opportunity in a very large IBM environment that is committed to the application of leading edge technology.

Applications are currently being accepted for an Operating System Programming Supervisor with an annual salary range from $25,824 to $34,875. The Commonwealth offers a liberal program of employer-paid benefits valued at approximately 40% of base salary.

This is a Civil Service position. A job announcement and application materials may be obtained by contacting [illegible], Transportation Personnel, Room [illegible], Transportation and Safety Building, Harrisburg, PA, 17120, telephone number 717-78[illegible]. The required application and supplement must be filed at this address by August 2, 1985.

When are you going to stop throwing your money away?

It is entirely possible that you are being paid less than you're worth in today's market. So, unless you change that condition, you will indeed continue to throw money away. You see, EDP salaries have been rising dramatically for some time now. Your own income may not have kept pace with that trend. While money, admittedly, is not everything, it is most certainly a major career consideration.

Don't underestimate your value in today's market. You owe it to yourself and to your family to make sure your income is what it should be. The very least you can do is to check it out.

All of our NCA firms can provide you with precise information about current salary levels both locally and nationally. If it turns out that your income is high level you can contentedly remain at your present position. If your income is less than you're worth we can help you to change that.

Come in. Call. Or mail your resume to the NCA firm nearest to you. Confidentiality is assured. Company clients pay our fees, so there is no charge to you ever for all our specialized services.

Work In Harmony

Greatness is often inspired by association. At Candle, we encourage the interplay of ideas between professionals and support it with a climate of technical flexibility and freedom. The results, such as our OMEGAMON®/IMS performance monitoring system, have demonstrated the quality of the Candle approach.

The rapid expansion of our organization has created a need for more innovative professionals in the following areas:

COMPUTER SERVICES DIVISION

This Division is involved in developing and producing a variety of high-performance monitoring products for IBM mainframe systems. We currently have many opportunities available for software professionals.

Systems Engineers

Will be responsible for customer education and training as well as performance analysis, tuning, and problem resolution. Must have internal knowledge of MVS, IMS, CICS or VM. Experience in performance and tuning a must. Good communication skills required.

Systems Programmers (Los Angeles)

Will install, maintain and troubleshoot multiple release DOS and VM. Will also define and document system maintenance procedures and conduct performance analysis as required. Must possess 3-5 years' systems programming experience with DOS and VM. MVS experience preferred, CICS a strong plus.

Software Developers (Los Angeles and Berkeley)

Will participate in the design and development of performance monitoring software products. Must have extensive knowledge of the design and performance characteristics of either MVS, VM or IMS. Positions requires strong IBM 370 assembler skills.

Managing Technical Editor (Los Angeles)

Will be responsible for editing and directing the production of Candle's technical publications. Excellent editing and coordination skills required, as well as knowledge of major IBM systems, such as MVS, VM, DOS, CICS or IMS.

To apply for these positions, please send your resume to:

150th E. 52nd St. 10th Floor
New York, New York 10022

INFORMATION SERVICES DIVISION

This Division is engaged in research and development related to office automation and information-center products. We have opportunities available in all areas of systems software development.

Software Engineers — Language/Compiler Development

This key position will be responsible for extending and enhancing our development tools, and contributing to our compiler-oriented R&D projects. The ideal candidate will have substantial compiler development and systems programming experience in an MVS environment. Since we have extended the C language run-time environment to achieve compatibility with Assembler and PL/I under CICS, knowledge in these areas at the internal levels is also a plus.

Software Engineers — Application Development System

We are seeking professionals at several levels to assist in the creation of a sophisticated interactive application development system. Depending on experience and career orientation, these individuals will be responsible for technical leadership, design, or programming, in company with a team of talented and highly motivated Software Engineers. The people we are seeking must have had substantial system software development experience in a variety of environments, particularly TSO, CICS and CMS, using both Assembler language and structured high-level languages such as C, PL/I or PASCAL. A strong interest in state-of-the-art user interface technologies, including object-oriented concepts is also important. Some areas of technical expertise which are especially desirable are:

- Data Communications (VTAM applications using 3270 devices)
- Database (particularly relational DBMS internals)
- Compiler development (structured HLL, 4GL)
- Programming Languages (C, OS/VS Assembler, PL/I)
- Operating Environments (MVS, TSO, CICS, CMS, ISPF)

To apply for these positions, please send your resume to:

CANDLE CORPORATION®
Human Resources, Dept. MW191
10880 Wilshire Blvd., Suite 2404
Los Angeles, CA 90024

Candle respects talent. Excellent salaries and benefits, superior technical backup and a progressive environment are just some of the ways we reward greatness.

Send your resume to Candle now. Tune into the future.

Candle

Equal Opportunity Employer

WHEN IT COMES TO SYSTEMS, RAINIERBANK PUTS PEOPLE FIRST!

● RainierBank, the largest independent banking company in Washington State, is headquartered in Seattle. We have over $7 billion in assets, 131 state-wide branches, 18 International offices in 8 nations, 41 mortgage banking and insurance offices in ten western states and 5,756 employees.

● While our investment in data processing and office automation systems represents a multi-million dollar commitment, we feel the people behind the system deserve first consideration. Imaginative, energetic people have made us the largest independent bank in the Pacific Northwest. The same type of people will help us develop the systems capability that will meet the banking challenges of the future.

● As part of our Information Systems Group, you will have the opportunity to explore new technologies in transaction processing, electronic transfer, ATM applications, and office automation.

● We are interested in people who are interested in joining a winning team. And we encourage that winning team through training programs, sponsorship in professional groups, and attendance at advanced technical seminars.

• SR. TECHNICAL CONSULTANT

(#1) Will translate the Bank's applications requirements into a computing architecture which will support the Bank's future transaction loads, relational data structures and communications requirements.

We require 10+ years experience in high-level computer software design and or hardware design and development.

• SR. TECHNICAL CONSULTANT

(#2) Provide consultative services regarding multiple technical environments associated with end user computing. Will support the definition of end user EDP requirements and recommend technical solutions and integrate solutions via appropriate hardware/software configurations.

Ten years EDP experience with primary focus in end user computing and office systems networking.

• MANAGER DATA BASE

Responsible for developing strategic data planning and technical support for the Corporation, including logical data base design expertise and consulting, physical data base design, and implementation for all systems.

Ten years EDP experience with a minimum of six years in data base analysis and design, extensive experience in data administration and planning. Banking experience preferred.

• TECHNICAL CONSULTANT

Provide long range direction in the development and analysis of new technology for the Tandem interface processor environment. Will act as an internal consultant by providing highly specialized technical guidance on complex projects.

We require six to eight years EDP experience with working knowledge and ability to utilize current technology and implementation methodologies. Technical expertise in Tandem operating systems.

• MANAGER TELECOMMUNICATIONS

Responsible for managing and directing the Telecommunications Department in order to provide and support data and voice communications equipment and services for the Corporation.

Strong working knowledge in data and voice communications as normally acquired through ten years experience.

● Seattle, the cultural and business center for the Pacific Northwest, is nestled between the Cascade mountains to the east and the majestic Olympic mountains to the west. It offers a wide range of leisure activities from golf and tennis to camping, skiing, fishing, hiking and sailing. Our cultural scene is expanding new art galleries, repertory theatres, the best of broadway shows, and a great assortment of first run foreign and domestic films.

● The Seattle Opera, The Seattle Symphony, The Pacific Northwest Ballet, our professional sport teams - The Seahawks, Mariners and Supersonics - are nationally acclaimed favorites. Seattle, excellent schools, affordable housing and an unmatched quality of life.

● We provide compensation commensurate with your skills and relocation to the Seattle area. To learn more about what RainierBank has to offer, please send a resume that outlines your qualifications to: L. M. Toliver, Personnel Officer, RainierBank, P.O. Box 3966, Seattle, WA 98124. We are pleased to be a leading Pacific Northwest Equal Opportunity Employer. M/F/H/V.

Put Your Energy Into One Of California's Best DP Environments.

As one of the world's largest and most technologically advanced corporations, detailed information must be communicated rapidly and precisely to our managers around the globe. To meet our ever increasing information needs, we've established a data processing environment which is second to none. It includes five IBM 3084Q and two IBM 3081K mainframes linked across two data centers using IBM 3725 and Comten 3690 communications processors. Together they provide batch, on-line and timeshare services to managers from San Francisco to Anchorage to London.

Our brand new facility in San Ramon (less than an hour east of San Francisco) has been custom designed for professionals like you. There, you'll find all the resources you need to do your best work. You'll have your own work station with sub-second response time and access to some of the most advanced technology available.

Right now, we have two excellent opportunities available for experienced professionals.

DATA COMMUNICATIONS ANALYST

You'll plan, design, install, troubleshoot and maintain our nationwide data communications networks and facilities. You should have two to five years of related experience, including the evaluation, testing and installation of digital and analog circuits, modems, communications controllers and terminals. Knowledge of communications interfaces such as V.35, RS-232, etc., and either CCITT X.25 or IBM SNA communications protocols are also required.

DATA BASE ANALYST

As part of a project development team, you'll provide data base consultation and play a key role in the development of our business systems. You should have a thorough knowledge of data base and application design and be ready to put your expertise to work. We require at least 3–5 years of experience with NOMAD2 and/or IMS. You will need excellent communications and interpersonal skills and the ability to produce results while working under demanding deadlines. A BS in Computer Science or the equivalent in work experience is a must. Experience with VM/CMS, TSO, PL/1 and MVS is also required. Knowledge of FOCUS, ADF and ADABAS would be a plus.

Our pay for performance system rewards excellence and our benefits package reflects our status as an industry leader. Please forward your resume to: Chevron Corporation, Professional Employment Office, Dept. 85-16, P.O. Box 7137, San Francisco, CA 94120-7137. We are proud to be an equal opportunity employer. Principals only, please.

Chevron

SYSTEMS ADMINISTRATOR/ SOFTWARE ANALYST

Quill Corporation is growing at a phenomenal pace. We're one of the nation's leading mail order office supply companies with an advanced, multiple Sperry 1100/80 and 1100/70 hardware environment. As we continue to progress in our systems capabilities, we seek a highly motivated software professional to administer, control and maintain the corporation's systems software procedures.

This challenging position will involve installing, maintaining and testing procedures and systems as well as consulting with corporate users on problem identification and resolution. A BS/BA in Computer Science or equivalent experience is required along with at least 1 year of systems programming on a Sperry 1100 and excellent communication skills. A background in 1100 O.S. EXEC, 1100 TIP/CMS, and MASM or ASM Assembler is highly desirable.

At Quill, productivity and creativity earn rewards and recognition. We provide an excellent salary and benefits package in addition to growth potential with an industry leader. For consideration, please send your resume, including salary history, in confidence to: Personnel Dept. 7161, Quill Corporation, 100 S. Schelter Road, Lincolnshire, IL 60069. Equal Opportunity Employer.

Hewlett Packard Professionals wanted

exceptional tax-free salaries, plus bonus free accommodations, airfares, and more in

Saudi Arabia

The Riyadh Al-Kharj Hospital Programme is seeking experienced Hewlett-Packard Data Processing professionals for a new challenging phase in the development of the Computer Department.

Based at the Riyadh Armed Forces Hospital in the Capital City of Saudi Arabia, our Data Processing Staff is responsible for the design, development, implementation and support of automated information systems utilized in direct support of the health care facilities at the 570-bed medical center in Riyadh, its peripheral clinics in the local area, and the Al-Kharj Hospital located 50 miles from Riyadh.

Environment:

Hardware: HP 3000/3
2 X HP 3000/68
2 X HP 3000/111
CDC Cyber 18
HONEYWELL 66/40 (Phasing out Jan. '86)

Software: COBOL, IMAGE, VIEW, SPL, QUIZ, QUICK, QTP, FORTRAN, IDSI, TDS, GMAP

Project Team Leader

Reporting to the Systems & Programming Manager, the Project Team Leader/Senior Analyst will have responsibility for controlling, Coordinating quality reviewing of all projects assigned to the Programming Team.

The main tasks associated with the position are:

- Assessing the feasibility and effectiveness of proposed systems
- Examining and developing alternative approaches for optimum resolution
- Developing Project specification, estimating resource requirements, time schedules & cost estimates
- Co-ordinating and controlling the activities of all team members to ensure adherence to established procedures and schedules
- Preparing and presenting project status reports on a regular basis
- Providing technical guidance to all team members
- Responsibility for training Saudi-Nationals assigned to the team

A Bachelor's Degree, combined with 8 years data processing experience, including 3 years in Systems Analysis and a minimum of one year Project Management experience in a large scale organization is required. In addition, more than 4 years experience with Hewlett-Packard equipment and must be proficient in COBOL, SPL, VIEW, IMAGE, VPLUS as well as QUICK, QTP and QUIZ.

Senior Programming Analyst

This position calls for in-depth experience with a high degree of knowledge relative to the development and on-going maintenance of application systems in a HP 3000 environment. The Senior Programmer Analyst will be responsible for designing and implementing solutions to complex application problems and the provision of technical guidance and training of other computer staff.

Should have at least 6 years experience in computer programming with high proficiency in the COBOL Language. Background should include training and experience with VIEW, IMAGE and VPLUS. Knowledge of QUIZ, QUICK and QTP would be a plus.

Programmer/Analyst

Reporting to the Project Team Leader, the Programmer Analyst will be involved in writing and testing source code according to specifications and established standards. You will also assist in preparing detailed programming specifications and related support documentation.

Must have a minimum of 3 years Hewlett-Packard experience, including COBOL, VIEW, IMAGE, VPLUS. Experience with QUICK, QUIZ and QTP would be a plus.

Clinical Laboratory Programmer/Analyst

The Clinical Laboratory Programmer/Analyst will assist in the direct support of the MEDLAB PATHLAB product.

Reporting to the Clinical Laboratory Programming Team Leader, you will be responsible for the support and modification of vendor-supplied software, bug-fixes, etc., and the coding and testing of specialized application programs, all written in the FORTRAN language.

Applicant must have minimum of 4 years data processing experience, with at least 2 years of FORTRAN programming. Experience with Clinical Laboratory systems a definite advantage.

Computer Operations Shift Leader

Responsible for a shift consisting of two operators. Candidates should have minimum of 4 years experience working with HP 3000, including at least 2 years as Senior Operator, be able to demonstrate sound supervisory experience, the ability to communicate at all levels and have indepth JCL knowledge, experience with HP 3000 utilities such as Editor, TDP, DBUTIL, Adager would be positive factor.

Computer Operator

To assist in operation of multi Hewlett-Packard configuration consisting of 2 HP 3000 Series 33 and Series III, operating under MPEIV and IPEV, and a CDC Cyber 18 Medlab Laboratory Computer operating under M27.

2 years Hewlett-Packard operating experience and the ability to work in a tight production environment is essential. Successful candidate, reporting to Shift Leader, will be responsible for the initiation of the daily task schedule, perform all necessary load and reload functions, preventative maintenance and output distribution expected within an operational environment.

Benefits: Tax-free salary, some married-status positions, accommodations, airfares, education allowance for approved dependents, free, fully furnished, air conditioned living accommodations, two month salary bonus on completion of initial 2-year contract, free medical care and emergency dental care, one month paid leave on completion of each 6 months of service, free air fares (including leave flights), subsidized meals, use of extensive recreational and sports facilities.

Closing date for receiving C.V.s is July 31, 1985.

Interested applicants should send a comprehensive C.V., including copies of certifications or diplomas, passport type photograph, and salary history to:

KAMA ENTERPRISES, INC.
1515 SW Fifth Avenue, Suite 800
Portland, Oregon 97201

KAMA ENTERPRISES, INC.

Minicomputer Programmers

Can You Accept Our Challenge?

The high standards of SAS Institute employees are reflected in the quality of our software. We need people who share our drive to produce the best. We develop and market the SAS® System and SYSTEM 2000® DBMS, software designed to meet every computing need. We back our software with complete documentation and a comprehensive training program—both developed and produced ourselves, both as high-quality as our software. Over 40% of our staff is committed to research and development. Challenge yourself with one of these openings!

Senior Systems Programmers
Programmers are needed for the following minicomputers:

- Prime
- Data General
- Wang.

These persons will develop host level routines interfacing the SAS System to Prime, Data General, Wang, and various other minicomputers. These persons will write and maintain code and documentation for various parts of the system. A BS degree, preferably in computer science, as well as extensive minicomputer experience are required. Knowledge of SAS software and assembler language experience are preferred.

Compiler Developer—IBM 370 Code Generation
This person will work on generation and optimization of 370 object code produced by a C compiler. This person must have in-depth knowledge of IBM 370 architecture, instruction set and object code, as well as extensive knowledge of assembler or object code level debugging on a 370 architecture mainframe under any operating system. A bachelor's degree or equivalent experience and the ability to work well with other programmers investigating suspected code problems are required. Knowledge of C is a plus.

Manager of Hardware Support
This person will manage the Hardware Support Department, which specifies, installs, monitors, and maintains data, voice, emergency power, and security hardware for the Data Center and SAS Institute. This person must be able to manage people with diverse technical knowledge and skills, prepare and interpret specifications, analyze bids, prepare reports, and maintain records. A degree in engineering or a related field, or the equivalent in directly related work experience is required. Applicants must have two years' experience in data processing; one year's experience in a supervisory capacity; and experience in several of the following areas: data communications, voice communications, LANs, security systems, power systems and switchgear, electronic troubleshooting, construction planning, and project management. A working knowledge of SAS software is desirable.

Software Sales Account Representative
This person will license SAS software to current and new sites using telemarketing. A minimal amount of travel is required. A bachelor's degree, thorough knowledge of the SAS System or related software, two years' sales experience, and excellent interpersonal skills are required. Experience with data base management systems, preferably SYSTEM 2000 DBMS, is a significant plus.

Technical Marketing Representative
This person will provide the marketing interface with the sales, product development, and corporate communications staffs for developing product training, sales literature, and advertisements. This person will evaluate competitive products and serve as a technical resource for the Software Sales staff. A thorough knowledge of SAS software products, the ability to work with people of various technical backgrounds, and excellent verbal and written communication skills are required. Applicants must have a BS degree and two years' experience using SAS software.

Technical Support Representative—VMS
This person will provide primary support to users with software installation, SAS supervisor-level problem investigation, I/O interface, and utility procedures usage. Applicants must have two years' extensive SAS programming experience; one year's experience in a VMS environment; knowledge of VMS DCL programming; and familiarity with VMS system quotas and parameters. A bachelor's degree and prior technical support experience are preferred. PL/I, C, and VMS macro programming experience is a plus.

SAS Institute offers a progressive atmosphere, with excellent benefits and competitive salaries. We are headquartered between Raleigh and the Research Triangle Park in North Carolina; our Austin Division is part of the rapidly-growing Southwest. Both locations are full of educational, cultural, and recreational opportunities.

The excitement of producing top-quality software is building. Will you add your high standards to ours? Send a detailed letter or resume to Department 0715 by July 31, 1985.

MAKING IT BIG AT MATTEL MEANS MORE THAN MAKING TOYS.

It means opportunity, challenge and enjoyment. It means an ideal mix of creativity and high technology. We are the world's leading toy designer and manufacturer offering state-of-the-art facilities in an appealing Southern California/Los Angeles location just minutes from the beach.

Whether you choose our IBM 3081 or Integrated System 38 environment, you will have the opportunity to make it BIG in a company that recognizes initiative and professionalism.

IBM 3081 MAINFRAME

Sr. Programmer Analysts—Perform analysis and program design for application programs using structured techniques. Your responsibilities will include internal design, programming, documentation and installation of newly developed systems as well as maintenance of existing systems. We require 3-5 years of experience in an IBM environment with OS/COBOL, CICS and IMS/DL1.

Systems Programming Specialists—Working with the latest IBM technology, we use the newest releases and are converting to XA. You should have at least 5 years experience supporting an IBM/MVS system with IO and IOCP gens, put maintenance, SMP, BAL coding, and problem analysis/resolution. Experience in installation and implementation of subsystems and major products (JES3, CICS, IMS, RACF, HSM) is also required.

Production Control Shift Supervisor—You will oversee, review, prepare and coordinate all candidate systems or jobs scheduled for installation. We require 3+ years experience as a lead production control analyst in an IBM mainframe environment. Mainframe programming exposure would be a definite plus.

IBM SYSTEM 38

Sr. Programmer Analysts—Within our MIMICS (Mattel International Modular Integrated Common System) environment, we are developing the world's largest integrated modular manufacturing and marketing system for the System 38. We are seeking individuals with experience in a structured shop environment.

Within our EMOTIONS DIVISION, you will have the advantages of working in a small shop environment, with all the benefits of a large corporation. You will function in a variety of capacities from user interface to detailed design, through project implementation.

Our INTERNATIONAL GROUP is responsible for the development and support of financial, marketing and product planning systems. Newly developed projects for each of these areas are planned for the upcoming year.

For all System 38 positions, we require a minimum of 3 years DP experience with at least 2 years in a System 38 RPG III application development environment.

Mattel Toys offers an excellent compensation program that includes the comprehensive benefits you'd expect from an industry leader. Relocation assistance is available.

[illegible] worldwide [illegible] seconds
What an exciting time to work at Kodak.

At Kodak, we're applying high technology to information management. We're developing a system that allows operators in remote locations to scan a central file of 12 million microfilm documents and in seconds electronically transmit any document to any location to be enhanced, manipulated, or made into hard copy. The benefits are obvious. But the application possibilities keep growing. What an exciting time to be working at Kodak.

Come, help us discover more high-tech excitement.

If you're a CS or EE loaded with talent and motivation we'll put you right on the leading edge of high tech. We're spending $725 million a year on research and development. We need people with the right stuff to put it to use—with imagination and flair. If you're ready to take the big step up, working in an environment that encourages initiative, recognizes ingenuity, and rewards contributions, send your resume to Personnel Resources, Dept. DCPW,
Eastman Kodak Company,
Rochester, NY 14650.

Systems Programmer

As the world's largest winery, we are offering an unusual career opportunity and an excellent compensation and company paid fringe benefit program. Work in Central California's beautiful San Joaquin Valley 90 miles from San Francisco and enjoy affordable housing and ideal living conditions away from urban congestion.

The individual should come from an IBM 4300 series environment with a minimum of two years' experience in the installation and maintenance of VM/SP including knowledge of IPCS, EXEC's and/or REXX. Experience is also desired in DOS/VS(E) and CICS/VS. Exposure to VTAM would be a plus.

Please send resume and salary history in complete confidence to: Professional Staffing Department, E. & J. Gallo Winery, P.O. Box 1130, Modesto, CA [illegible]

E. & J. GALLO WINERY

An equal opportunity employer m/f/h.

The Next Generation Technology Will Be Born At Sperry In Atlanta

Sperry's all-out commitment to our new Software Technology Center in Atlanta requires that we bring together "Software Craftmasters" to work in a one-of-a-kind facility equipped with every resource they'll require. These high-powered professionals will be taking on the biggest challenge the industry can offer — to create a new world of operating systems software for Sperry's most advanced computers. The finest creative talent will have the opportunity to work in this technology-transfer organization that will bring together research advancements in software — from engineering through product development.

At Sperry's new Atlanta Software Technology Center, you will be working in a "pure" and flexible R & D environment that is highly conducive to original conceptual thinking and future career development. You will also enjoy all the cultural, recreational, professional and social advantages of living and working in the South's most exciting city: ATLANTA. We invite you to join and grow with us in one of the following areas:

SOFTWARE ARCHITECTURE & PROGRAMMING

Join a team of recognized achievers performing key creative work in design and implementation of state-of-the-art operating systems for Sperry's premier computer line. These positions require 6-7 years of experience in operating systems design and development. Working knowledge of IBM-MVS, VM or XA is preferred. Message-base systems and operating system security knowledge would be a definite plus.

SOFTWARE ENGINEERING & PRODUCTIVITY

A thorough background in software and software development is a prerequisite for working in the technology-transfer organization that brings together research advancement in software engineering for product deployment. An advanced degree in computer science or a related field is preferred.

Our rewards will back up our commitment — Sperry's career packages will exceed your expectations for every aspect of your future, both personal and professional. To discuss these unique opportunities at the Atlanta Software Technology Center, call Michael West TOLL FREE at 1-800-328-0238, or send your resume to: Professional Staffing, Department MDW4C,Sperry Corporation, P.O. Box 64942, MS 4973, St. Paul, MN 55164. An Equal Opportunity Employer M/F/H/V.

County of
FRESNO

DATA BASE ADMINISTRATOR

The County of Fresno in California is looking for an experienced Data Base Administrator to manage the data base, security and program library functions within the Computer Services Department. This is an excellent opportunity to manage the development of an organization responsible for data design, data dictionary, security administration and program change control/configuration management. Qualified applicants will have solid experience in at least two of these areas.

The County is a progressive government agency with over 5000 employees serving a population of more than 500,000 located in California's San Joaquin Valley. The Computer Services Department serves as the data processing agency for the other 27 departments in the County. This department manages several communications networks totaling over 900 terminals running off IBM 3083 and 4341, DEC VAX 11/780 and Wang VS100 computers. The software environment includes MVS, VM/CMS, ACF2, CICS and UFO. The department also supports Wang office automation and IBM information center products.

In addition to an annual salary range of $35,714-$48,094, the County offers paid life insurance, paid medical/optical/dental insurance and a retirement plan. For more information about this opportunity and to obtain an application, contact:

SERVING THE NATION SINCE 1893

COAST TO COAST NETWORK REFERRAL SERVICE

We specialize in Data Processing, Engineering, Electronics, Management Services, Office Services, Financial & Executive Placement.

Management Information SYSTEMS ANALYST

To $40,000

Take advantage of a manufacturing environment that has many avenues of management potential. Be involved in systems design. Have a hand in planning, training and implementing! 4341, OS/MVS will qualify!

STAFF MANAGEMENT PROGRAMMER/ANALYST

$40,000 - $50,000

A free wheeling consultant opportunity. Act as client liaison. Do enhancements and new development. Utilize your Systems 38 and Cobol expertise as a base.

NETWORK ENGINEER MANAGER

$40,000 - $50,000

Knowing OS/MVS and CICS can open the door! Combine with knowledge of network design and 4341 mainframes and you have a new career horizon to look to! This is upper management calling!

DIVISIONAL COORDINATOR Corporate Status

$30,000 - $40,000

Move up and into corporate management. Play a key role in performance evaluation of other corporate sites. An opportunity to apply your systems background.

CORPORATE SPECIALIST Vice President's Staff

$30,400 - $36,000

Ideal for the versatile personality with good communications skills and solid basics in DEC/VAX 11/780. Take on development, training and implementing for a CAD system.

APPLICATIONS EXPERT Corporate Support Center

$30,000 - $42,000

Be a part of a professional service center for a leading financial operation! Have an active hand in modifying and installing software packages. Cobol is the key.

PROJECT LEADER

$37,000 - $46,000

Be a member of the "corporate family." Be in on the strategic planning activity. Background in COBOL, OS/JCL and on-line applications are the qualifiers. Career opportunity abounds here!

PROGRAM MANAGER

TO $40,000

A key position in a nationwide networked office automation system. Be involved with on site management and coordinate network activity. DEC equipment experience ideal.

SYSTEMS MANAGER UNDERSTUDY

$25,000 - $35,000

The supervisory training in your background coupled with IBM Systems 36 and RPG II will give you promising future! Grow in a manufacturing atmosphere.

SYSTEMS CONSULTANT

$35,000 - $50,000

Enjoy the unique position of capitalizing on your systems expertise in a marketing environment. Determine problems, recommend solutions in developing software packages. Variety plus!

Get your money's worth.

Computerworld will lower your cost-per-hire.

When you're looking to fill MIS/DP positions, there's really only one place you need to advertise. Computerworld.

In every major market, Computerworld reaches more data-processing professionals than the local recruitment media. And we reach them for less.

Over 600,000 computer-involved professionals receive Computerworld every week. That's more than any other computer trade journal, business publication, or general-interest magazine.

Computerworld delivers quality readership, too. Fully 41% of our subscribers read Computerworld's recruitment section every week. And 95% of our subscribers read this section regularly.

That's why over 4,000 organizations ran more than 6,500 recruitment ads in Computerworld in 1984. The openings they advertised for cover the whole gamut of MIS/DP positions — including systems analysts, computer science & software engineers, directors of MIS/DP, programmers, sales managers, and systems managers.

As a matter of fact, recruitment advertising has made Computerworld the national leader in classified advertising among specialized business publications (according to *Business Marketing* magazine).

Compare costs and the people reached. You'll find that Computerworld is the number one medium for computer-related recruitment advertising.

Find out how we can lower your cost-per-hire. Get your copy of our "1985 Quick Reference Rate Card." Call toll-free (800) 343-6474. In Massachusetts call (617) 879-0700. Call now. We'll help you find the people you need.

DEPARTMENT OF INFORMATION TECHNOLOGY
COMMONWEALTH OF VIRGINIA

The Department of Information Technology in Richmond, Virginia, serves the citizens of the Commonwealth of Virginia by providing meaningful, cost effective, and responsive information technology guidance, assistance, and services.

Richmond is a city steeped in four centuries of history, legends, and tradition. It is conveniently located just 90 miles south of Washington, D.C., and about an hour from Colonial Williamsburg. And the capital city is less than two hours from Virginia Beach or Skyline Drive and Blue Ridge Mountains.

We are currently accepting applications/resumes for the following:

INFORMATION SYSTEMS INTERNAL CONSULTANT

The functions of this position require an individual with a broad depth and breadth of experience in both the computer and information sciences. A solid background in all aspects of systems development technical and analytical services is required. Additionally, knowledge and experience in information systems strategic planning, tactical planning, general consulting, and multi-project management is highly desired. The duties of this position involve a variety of special projects including, but not limited to, planning, research, consulting, project management, and problem solving related to information systems development for various state agencies.

Candidates should submit an applications package describing knowledge and experience in the following areas: strategic and tactical planning, applied research, developmental methodologies, distributed processing, general consulting, project management, feasibility studies, cost/benefit analysis, hardware/software procurement, data administration, decision point analysis, organizational impact analysis, and conceptual systems analysis and design. The ideal candidate should possess strong formal presentation skills, good oral and written skills, and problem solving abilities. Above all, a "can-do" attitude and a desire to accept a variety of challenging assignments is mandatory.

Salary Range: $35,730 - $48,808.

We offer excellent benefits, state-of-the-art technology and relocation assistance.

All applications/resumes should reference position #IT721 and must be received by August 30, 1985.

Pioneering in any field demands inquiring technical minds — people capable of applying present technology to the future. Of looking forward. Pushing limits. Creating ways to apply new hardware and software. Central to our success is our ability to integrate new developments in the rapidly evolving science of communications. The following positions represent an opportunity to play a key role in the development of our services — ways you can become one of the bold pioneers creating new boundaries of networking technology.

TELECOMMUNICATIONS SPECIALISTS

Openings are available for this position throughout the United States to install and maintain sophisticated telecommunications equipment. You must have an AS degree or equivalent in Computer Technology or Electronics, a knowledge of earth stations and switching nodes, (Tandem and/or Rockwell/Collins equipment preferred), and familiarity with communications protocols such as X.25 and HDLC. Practical knowledge of voice grade and DDS data circuits is also required.

SR. TELECOMMUNICATIONS ENGINEER

You will design programmable communications interfaces for various protocols (i.e. X.25, mobile satellite, SDLC/SNA, etc.). A Bachelor's degree or equivalent in Electrical Engineering or Computer Science and 4 years professional experience in communications or computer systems engineering and training are required. You must have a thorough knowledge of microcomputer hardware and software and good communication skills. Experience in computer hardware, programming or data transmission is preferred.

SR. TECHNICAL ANALYST/NETWORK OPERATIONS

You will provide maintenance and diagnostic technical support to isolate and resolve component and system problems; formulate and document operational procedures. You must have a Bachelor's degree or equivalent in Computer Science or Electrical Engineering. Five years professional experience in field maintenance/repair/technical support of high technology computer, microprocessor, office products and/or telecommunications systems is required along with strong interpersonal skills.

PROJECT ENGINEER/IMAGE PROCESSING

You will develop data compression and image processing strategies and provide technical expertise in the design of advanced image processing systems and data compression. A Bachelor's degree or equivalent in Engineering, Mathematics, Physics or Computer Science is required. A Master's degree is preferred. You must have 7 years professional experience in data compression technology, including 3 years experience in image processing research and analysis.

SR. TECHNICAL ADVISOR/SWITCHING SYSTEMS SOFTWARE

You will develop telecommunications strategies and provide technological expertise and planning to support existing and corporate objectives; ensure cost-effective networking and cost control of network/systems. A Bachelor's degree or equivalent in Engineering or Computer Science is required. Master's degree is preferred. You must have a minimum of 10 years professional experience in data communications network design and analysis. An in-depth knowledge of micro-processor hardware and software, including "C" and Assembler languages is required along with strong organizational, analytical, planning, human relations and communications skills.

SR. TECHNICAL ADVISOR/PACKET SYSTEMS DESIGN

You will develop telecommunications strategies and provide technological expertise and planning to support existing and planned corporate objectives; ensure cost-effective networking and cost control of network/systems. A Bachelor's degree or equivalent in Engineering or Computer Science is required. Master's degree is preferred. You must have a minimum of 10 years professional experience in data communications network design and analysis. An in-depth knowledge of micro-processor hardware and software, including "C" and Assembler languages incorporated in packet switching design is required along with strong organizational, analytical, planning, human relations and communications skills.

TECHNICAL ADVISOR/NETWORK DEVELOPMENT

You will be an authority in the area of telecommunications in performing research, analysis and design of advanced telecommunications systems, thereby ensuring that the most cost-effective systems are consistent with traffic requirements and minimizing expenditures for equipment and services. A Bachelor's degree or equivalent in Engineering, Mathematics, Physics or Computer Science is required along with 7 years professional telecommunications experience. Experience must include 3 years in communications research and analysis with background in traffic engineering, computer architecture, and network modeling. Strong human relations and communications skills are essential.

SR. PROGRAMMER ANALYST

Requirements include experience using online systems, OS/MVS, IMS, large-scale IBM systems, and strong analysis and design skills. 4+ years experience using COBOL is also required.

Ours is a unique and creative environment for achievement. Technical resources are superior. Salaries are competitive. And our corporate benefit program is comprehensive. If you are eager to create the new boundaries of networking technology, please call Toll Free, 1-800-435-2222, between 8:30 AM and 12:30 PM, Wednesday or Thursday, July 17 or 18, ONLY, or forward a letter or resume indicating your experience and salary history, in confidence, to the address below.

TO EXPEDITE CONSIDERATION, PLEASE INDICATE THE POSITION FOR WHICH YOU ARE APPLYING ON YOUR REPLY ENVELOPE.

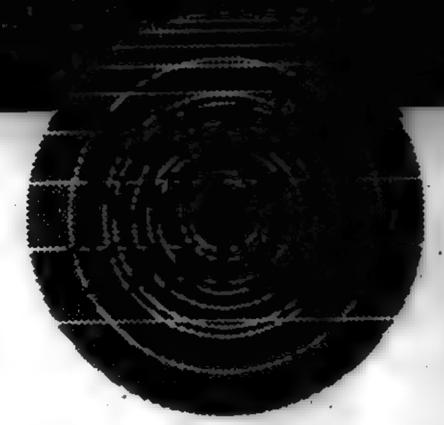
COMPUTER CENTER DIRECTOR
THE AMERICAN LEGION NATIONAL HEADQUARTERS
P.O. BOX 1055
INDIANAPOLIS, IN [illegible]

You've got the experience. We've got the opportunity. Let's talk.



We're looking for someone who talks our language. ADABASE. NATURAL. COM-PLETE. These are the kinds of forward-looking products that have made Software AG the leading supplier of advanced information system development software.

But we didn't get where we are by resting on our laurels. We need experienced mainframe software professionals to continue our reputation for anticipating industry software needs and meeting them with innovative solutions.

Like ADABAS. One of the first relational database management systems. Proven by over a decade of use.

Or NATURAL. The world's most widely used, fourth generation programming language.

And COM-PLETE. Our on-line teleprocessing system that monitors on-line transactions in a multi-user environment.

Do you have three or more years' experience with mainframe software and IBM operating systems? Are you ready for a fast-growth company where you'll play a key part in an innovative development team? Can you handle an attractive salary, lots of room to put your ideas to work, and growth potential limited only by your ability and your imagination? Then we want to talk to you.

IBM-PC SOFTWARE

Excitement is rising like Roman candles as Pansophic begins the next adventure — systems software for the IBM PC. In Naperville, Illinois, and Clearwater, Florida, brilliant minds take our IBM-mainframe systems-software leadership into the realm of PC technology as we establish a product line of custom tools for the IBM PC and PC/mainframe cooperative processing.

ARE YOU SEEING STARS?

Creative Sparks Light Up The Sky At PANSOPHIC

We seek specialist professionals with 5 to 10 years in software development and 5 years' experience with IBM PC and PC Assembler. Knowledge of IBM BASIC and compilers/code generators, B-tree ISAM file structures, and full-screen editors is desirable. Significant experience with PC architecture and C language or PASCAL may qualify you for more senior positions.

Pansophic's salary/benefits program includes relocation assistance, and our fast growth means high-flying advancement possibilities. For information, call us toll-free at 1-800-323-2201, or send your resume and salary history in confidence to S. Worthy, Pansophic Systems, Inc., Dept. 715, 709 Enterprise Drive, Oak Brook, IL 60521. Define The Future Of Industrial Automation With GE

Our Company

At GE's Factory Automation Products Division headquartered in Charlottesville, VA, we are putting together the tools that will rebuild American industry. We build advanced hardware — programmable, numerical and robotic controls — and combine it with the software, thoughtware and services to provide the full scope of integrated factory automation. Our commitment is firm. General Electric's own production facilities have provided the proving ground for more than $3 billion worth of the world's most advanced automation technologies.

Your Opportunities

Our **Automation Controls Department** develops automation products that are the basis for the factory of the future. We are looking for degreed people with skills in the following areas:

- **Software language and tool development**
- **VAX systems management**
- **Real-time control software development**
- **Microprocessor software development**

Familiarity with the DEC VAX-11/785 and Intel 8086-386 hardware families is desirable. Although our opportunities are primarily for experienced people, some entry-level positions are available.

Our **Industrial Automation Systems Department** works with client companies to implement factory automation and hardware/software integration. Our current needs are for degreed individuals with experience in:

- **Manufacturing Systems Design, Engineering, & Analysis**
- **Project Engineering**
- **Software Engineering**
- **Applications Engineering**

Experience with factory automation applications using DEC and/or IBM computer hardware/software systems is desirable.

Your Rewards

If you want to become part of this exciting Industrial Renaissance, consider the advantages of joining GE. In addition to interesting work assignments and a strong corporate commitment, we offer very competitive salaries and benefit packages. Openings are available in both Charlottesville, VA and Albany, NY, and other locations throughout the U.S. For immediate consideration, please send your resume to: **GE FACTORY AUTOMATION PRODUCTS DIVISION, P.O. Box 8106, (CW0715), Charlottesville, VA 22906, Attn: Recruiting Program Manager.**

MAINFRAME
MINI
MICRO
COMPUTER
SALES

Sperry is *right* where it counts.

Right with customers because Sperry Systems meet all their needs and expectations.

In the time it takes to read this sentence, another Sperry computer system will go on-line. Joining what is already the world's largest installed systems base—save one. $17 billion worth of conviction that Sperry, the systems integrator, is the right choice.

What do customers see in Sperry?

Investment protection... Of the sort that lets a Series 1100 mainframe computer buyer increase system's power 23 times, using the same operating system and without changing applications.

Compatibility... Sperry systems talk to IBM and IBM-compatible hardware. And Sperry offers a complete PC to mainframe line based on the industry-standard UNIX™ Operating System, with hundreds of available off-the-shelf programs for everything from office automation to shop floor control.

Research & Development... On projects for mainframe-to-mainframe communication, artifical intelligence, voice recognition systems and desk-top mainframes.

Total Integration from PC to Mainframe... It's the difference between computers that function and systems that work.

Right with sales professionals because Sperry Systems *SELL*...very well.

How well? Consider this. Sperry Corporation is a $6-billion company with one of the largest installed systems base in the world. For example, over 100 airline companies throughout the world depend on Sperry integrated systems, including 12 of the top 20. Over a third of the world's 200 largest industrial corporations, including 10 of the 20 largest industrial companies in the U.S. are Sperry customers.

As for the government, on any given day, Sperry Series 1100 systems in 27 of the 50 states are running mass transit systems, collecting taxes, and providing cost-effective welfare services for millions of people. Energy companies? Six of the top energy giants depend on Sperry 1100 systems to help identify the most promising sites for test drilling. Not to be outdone, 3 of the 5 largest overseas commercial banks rely on Sperry systems to conduct their finances with maximum efficiency. In fact, Series 1100 systems process data on virtually all stock transactions in the U.S., and 90% of the securities traded in Japan.

Current and anticipated growth has created exciting opportunities for success-oriented sales professionals with a proven track record marketing micro's, mini's, and UNIX*-based systems and software applications/packages. At Sperry you will sell a competitive and complete product line based on the industry-standard UNIX* Operating System, so you can sell Sperry with boundless confidence and incredible success.

Add to this the fact that Sperry offers a salary/commission/bonus/benefits package second to none—plus prospective membership in our sales super-achievers' "Go-Club" (in such places as Rome, Paris, Hawaii)—and you have all the reasons you need to explore these career-expanding opportunities with Sperry.

Call Bart Erwin or Bill Thom at (312) 693-4800 for prompt consideration or send your resume in confidence to: Sperry Corporation, 8600 West Bryn Mawr, MS-311, Chicago, Illinois 60631. An equal opportunity employer.

COMPUTER AUDIT MANAGER
Hong Kong

Our client, the ROYAL HONG KONG JOCKEY CLUB, is one of Asia's leading racing organizations and a world-renowned Hong Kong institution, responsible for the control of all racing and betting in Hong Kong, and provision of facilities for its 10,000 members. Their computerized betting systems are among the most technically advanced in the world and comparable systems will be intensively developed over the next three years through the use of the most advanced technology and software concepts available. The Club needs three outstanding Computer Audit Managers.

One Computer Audit Manager will be responsible for each of three aspects: Finance and Administration Systems, Betting Systems and Architecture and Network topography. Each will contribute to software development as well as ensuring the absolute integrity, security and accuracy of the Club's processing systems. In addition, the Managers will be expected to develop a highly skilled team of auditors capable of assuming full audit management responsibility within three years.

The successful candidates will be mature professionals, fully conversant with the latest advances in computer technology, specifically DEC equipment and related software, and experienced in the control aspects either of high-volume, real-time transactions systems or fast response management and financial applications.

The managers will work within a creative, innovative atmosphere and candidates will have the opportunity to contribute as important members of a close-knit group of specialists. The Club is seeking individuals of exceptional ability for an initial contract period of 2 years. The compensation package includes an attractive salary and expatriate benefits. This is a unique opportunity to apply and develop the latest hardware and software concepts in an advanced computer environment.

WE NEED YOU

WE'RE HIRING SENIOR IBM SYSTEMS PROGRAMMING AND MANAGEMENT PERSONNEL.

We need professionals to work in our MICS, product line who are knowledgeable in state-of-the-art IBM technology with experience and expertise in:

- MVS/XA or TSO
- VTAM or SNA
- IMS, CICS, or DB II
- SMP, INFO/SYS and INFO/MGMT
- ISPF/DM

We need you, if you also have a solid background in MVS installation management in any of these areas:

- Manager of Customer Support
- MVS Specialist
- Product Control Specialist
- Systems Management Specialist
- Product Education Specialist
- Customer Support Specialist
- Network Component Specialist

Our atmosphere is casual, but intensely productive. Our salary, benefits, and relocation package is one of the best in the industry. Our commitment is to excellence—in software products, user support, education and staff.

If you are interested in a fast-paced, technically challenging, business driven firm, that is among top 50 U.S. supplier's of software products and services as ranked by the ICP Software Business Review, call or send credentials to:

EQUAL OPPORTUNITY EMPLOYER M/F

OVER 600,000 CHANCES TO WIN!

Hiring a new employee is always a bit of a gamble, but when you advertise your job openings in Computerworld's classified pages the odds are on your side.

In every major market, Computerworld reaches more data-processing professionals than the local recruitment media. And we reach them for less. Consider the facts:

1. More than 600,000 computer-involved professionals receive Computerworld every week. That's more than any other trade journal, business publication, or general magazine.

2. Our readers are the very people you're looking for. MIS/DP directors, systems analysts, programmers, and engineers – as well as presidents, treasurers, and general managers.

3. Computerworld delivers quality readership. Fully 41% of our subscribers read Computerworld's recruitment section weekly. And 95% of our subscribers read this section regularly.

When you compare costs and the people reached, Computerworld is the number one medium for computer-related recruitment advertising. Place your ads today. You'll get the responses you're looking for. And you'll get them fast, because we accept ad materials up to 10 days before the issue date.

Simply call toll-free (800) 343-6474. In Massachusetts call (617) 879-0700. Call now. And don't forget to ask for a copy of our "1985 Quick Reference Rate Card." Or write Computerworld, Box 880, 375 Cochituate Road, Framingham, MA 01701.

SOFTWARE DEVELOPMENT

Reawaken the creative energies that brought the first thrills to your software career...join Pansophic's high talent innovators as we build the IBM-mainframe systems software that defines the state of the data processing art.

LOSING THE SPIRIT?

Recapture Software's Excitement At PANSOPHIC

On-going expansion in our product development groups has opened multiple positions. If your background includes a computer science degree and 5 years IBM systems software experience in any of the following areas, you're ready for Pansophic.

- **Data Dictionaries**
- **CICS Systems Programming**
- **IMS/DBDC**
- **OS/MVS, DOS/VSE, or VM Systems Programming**
- **DBMS**
- **PASCAL**
- **IBM PC**
- **BAL**

For information, call us toll-free at 1-800-323-2201 or send your resume and salary history in confidence to S. Worthy, Pansophic Systems, Inc., Dept. 712, 709 Enterprise Drive, Oak Brook, IL 60521. An Equal Opportunity Employer m/f/h. (Principals only, please.)

PROGRAMMERS AND PROGRAMMER ANALYSTS

We have some excellent opportunities for experienced Data Processing Professionals at our home office in the Southwest. We are enlarging and remodeling our Data Processing Department and now have positions open for individuals with 2 to 3 years of COBOL experience, and positions for people with Command Level CICS experience. We are developing new application software and installing MSA packages on an IBM 4341 under DOS/VSE. In addition to these challenging and rewarding positions, our company offers generous benefits including: Life, health, and dental insurance, profit sharing, executive bonuses, employee purchasing plans, and relocation.

Please send your resume, including salary history and requirements to:

POSITION ANNOUNCEMENTS

UNITED AIRLINES

THE SKY'S THE LIMIT... AT UNITED!!

Leadership, aggressiveness, promotion from within – that's the winning formula at United Airlines. Our success is based on the aggressive development of sophisticated computer operations to better support management decisions throughout the corporation. For the career-oriented professional, this environment is limitless – offering exceptional opportunities for advancement, dual career paths into management and technical areas, and one of the industry's most competitive salary structures. Immediate opportunities are available at our Chicago Corporate Headquarters complex for:

CAPACITY PLANNER & PERFORMANCE ANALYST — MAINFRAME

To determine feasibility of new applications and their impact upon the existing environment, collect/reduce performance statistics on MVS systems and project resource needs, and participate in special studies. Experience with RMF, SMF and SAS required. Working knowledge of TFOMON, SLR, BEST/1 is a plus.

OPERATING SYSTEMS PROGRAMMER ANALYSTS

To perform MVS, VM or CICS diagnostics and systems programming and maintenance. 3-5 years programming experience with SMP, JCL, IBM Assembler and a combination of more than one of the following areas: MVS/XA internals, VM internals, CP CMS, Syncsort/Ocean. Prefer BS in Computer Science, VTAM and NCP considered a plus.

SPERRY UNIVAC SYSTEMS PROGRAMMER ANALYSTS

To assist in upgrading our large-scale network to a distributed model system utilizing multiple DCP 40 communications processors. 2+ years programming experience in CMS 1100 and/or Telcon is required.

You can take your career to the limit this week. Find out more about United's winning formula for career success, our attractive relocation package and pass/reduced travel benefits. Send your resume, including salary history to: Professional Employment/EXOPE-CW-KT, United Airlines, P.O. Box 66100, Chicago, IL 60666. *Equal Opportunity Employer.*

Don't trust us to keep your classified information secret

Every week, we deliver more of your target audience than anyone else. Over 600,000 computer-involved professionals. Including MIS/DP directors, systems analysts, programmers, and engineers – as well as corporate presidents, treasurers, and general managers.

And we deliver these readers for less. Compare costs and the people reached. You'll see that Computerworld is the number one medium for reaching MIS/DP professionals.

Our readers rely on Computerworld's classified section. In fact, 41% of our subscribers read the recruitment section every week. And 95% of our subscribers read this section regularly.

Readership like this means responses. Just ask some of the 4,000 organizations that ran more than 6,500 recruitment ads in Computerworld in 1984.

We make your ads work harder. Because we divide the classified section into logical categories: Position Announcements; Buy, Sell, Swap; Software For Sale; Time & Services; and The Bulletin Board. (Available on request: Software Wanted; Business Opportunities; and Real Estate).

So the people you want to reach will spend less time looking for your ad, and more time reading it.

We'll even typeset your ad at no extra charge. All you need to do is attach clean typewritten copy to your order. (Figure about 25 words per column inch, not including headlines). Or give us your order over the phone. We'll do the rest.

And since we're published weekly, we can offer you a fast turn-around from when you place your order to when your ad appears. As little as 10 days.

The next time you want results, advertise in Computerworld classified pages. Call toll-free at (800) 343-6474. In Massachusetts, call (617) 879-0700. Call now.

Computerworld's Classifieds work.

Issue Date: Ad closing is every Friday, 10 days prior to issue date.

Sections: Please be sure to specify the section you want: Time and Services, Software for Sale, Position Announcements and Buy/Sell/Swap (Available upon request: Software Wanted, Real Estate, and others).

Copy: We'll typeset your ad at no extra charge. Please attach CLEAN typewritten copy. Figure about 25 words to a column inch, not including headlines. Any special artwork should be enclosed with your ad also. Logos must be submitted on white bond paper for best reproduction.

Cost: Our rates are $144.90 per column inch. (Each column is 1 13/16") Minimum size is two column inches (1 13/16" wide by 2" deep) and costs $289.80 per insertion. Extra space is available in half-inch increments and costs $72.45. Box numbers are $15.00 extra per insertion.

Billing: If you're a first-time advertiser, (or if you have not established an account with us) WE MUST HAVE YOUR PAYMENT IN ADVANCE, or a Purchase Order Number. Any extensions on this policy must be made through our Credit Department.

ORDER FORM
COMPUTERWORLD BULLETIN BOARD

Issue Date: Ads can be accepted up until the Monday preceding the issue desired. Computerworld comes out every Monday. The Bulletin Board is only for the buying and selling of computer equipment.

Classifications: Most ads will be classified according to the brand of equipment that is being bought or sold. These classifications include Basic Four, Burroughs, Control Data, Disk Drives and Tapes, Amdahl, Prime, Modems, Perkin Elmer, Printers, TI, Tapes, Wang, Cental, Desk Top Computers, Data General, Digital/DEC, Hewlett Packard, Honeywell, IBM, NCR, Sperry Univac, Salvage, Terminals, Misc: Systems and Miscellaneous.

Copy: Copy sent in via the mail or telecopier (telecopier extensions are 410 and 461) should be cleanly typewritten. Ads must be given over the phone to our team of ad takers, or sent in writing, no camera ready material will be accepted. The standard size is 1 column by 1 inch deep. These units may be combined to form larger size ads. Describe the equipment very briefly, give the price and the name of the person to contact. All ads will be set up using a standard format. No borders or logos are allowed.

Cost: The price for each standard unit is $140.00 (One unit minimum and no fractional units allowed.) There are no agency commissions or quantity discounts.

Billing: Once you've written your ad, send (or call) it in with your name and address for billing purposes and we'll run it. (If your company has never advertised with us before, we request a check with your order.)

Features	**Ven-Tel 1200 PLUS**	**Hayes**
1200 and 300 baud, auto-dial, auto-answer	Yes	Yes
Compatible with "AT" command set	Yes	Yes
Can be used with CROSSTALK-XVI or Smartcom II software	Yes	Yes
Regulated DC power pack for cool, reliable operation	Yes	**No**
Eight indicator lights to display modem status	Yes	Yes
Speaker to monitor call progress	Yes	Yes
Attractive, compact aluminum case	Yes	Yes
Two built-in phone connectors	Yes	**No**
Compatible with The Source and Dow Jones News Retrieval	Yes	Yes
Unattended remote test capability	Yes	**No**
Phone cable included	Yes	Yes
Availability	Now	
Price	**$499**	**$599**

The Ven-Tel 1200 PLUS offers high speed, reliable telecommunications for your personal computer or terminal. Whether you use information services or transfer data from computer to computer, the Ven-Tel 1200 PLUS is the best product around. Available at leading computer dealers and distributors nationwide.

Also from Ven-Tel: internal modems for the IBM and HP-150 Personal Computers with all of the features of the 1200 PLUS.

You choose. The Ven-Tel 1200 PLUS – the smartest choice in modems.

Union rules rile exhibitors at NCC/6

NCC '85: Big crowds, little action

By Kathleen Sullivan
CW West Coast Bureau

CHICAGO — Although the 1985 National Computer Conference here attracted 8,000 more attendees than last year's show, it will leave behind an otherwise undistinguished record. Since few companies chose this city as the backdrop for product introductions, the show lacked the excitement of previous NCCs.

When asked to comment on their impressions of NCC '85, visitors interviewed by *Computerworld* gave the show — both the exhibits and the technical seminars — mixed reviews. NCC lacked excitement, many said. Though some visitors gave the technical seminars high marks, others complained that the quality of the presentations was uneven.

Vendors registered a different set of complaints, centering on their dealings with the city's trade unions (see story page 6). Representatives from several firms told stories of mishandled equipment, damaged computer systems and abrasive contact with union members.

Yet a spokesman for the American Federation of Information Processing Societies, Inc., the prime sponsor of the show, said that, in his estimation, exhibitors were pleased overall with NCC '85. "The reaction to this year's NCC has been more positive than I've seen in years," said Donald G. Dowd, NCC '85 communications chairman.

Dowd said the show's increased attendance could be interpreted as an optimis-

Slump snares mainframe makers

By Peter Bartolik
and Clinton Wilder
CW Staff

Evidence of the continuing computer industry slump was in sharp focus last week as IBM and four of the five Bunch mainframe vendors reported second-quarter profit declines. Sperry Corp. was the three-month period's lone winner, posting a 23% earnings gain over its results from one year ago.

IBM reported that second-quarter profits were down almost 13% from the year-earlier quarter, as revenue growth continued at the dismal pace set in the first quarter. Results from the four other Bunch companies showed that profits declined by 5.6% at Burroughs Corp.; 13% at NCR Corp.; 84% at Control Data Corp., with a $24.9 million operating loss from computer sales; and 29% at Honeywell, Inc.

IBM's financial results for the first six months of the year reflected the dramatic downturn that has thrown the industry into turmoil following two years of overall record growth.

Although much of this year's financial adversity was attributed to the strength of the U.S. dollar abroad, IBM said it estimated that if currency rates had equaled those of the first half of 1984, the company's

Poll shows mini mart saturated

Sales drop-off attributed to heavy 1984 purchases

By Tom Henkel
CW Staff

DELRAN, N.J. — For mini and superminicomputer vendors wondering why their products have suffered a sales drop-off recently, the answer may rest in the heavy sales of the past year.

[redacted]

A recent survey conducted here by Datapro Research Corp. of 1,702 minicomputer users revealed that most of these users replaced an older system during the past 11 months. A Datapro survey of mainframe users [CW, July 15] turned up similar results. The mainframe users said the average age of their systems was less than 10 months.

By contrast, when surveyed by Datapro on the same question last year, minicomputer and mainframe users said their then-current systems averaged slightly more than 40 months old.

On the whole, the minicomputer users polled this year said they were more pleased with their systems now than they were last year. This conclusion is derived from Datapro's "overall satisfaction" category, a composite score based on several factors, including ease of operation, reliability, vendor services and vendor-supplied software. Most minicomputer vendors included in the 1985 Datapro survey showed a moderate improvement in overall user satisfaction. Some, like Harris Corp. and Honeywell, Inc., showed significant improvements.

Asked whether their systems fulfilled expectations, 85.9% of the mini users polled by Datapro said that they did. But as with the survey's overall satisfaction rating, most vendors' scores showed lit-

Stolen parts spur Navy probe

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — The U.S. Navy last week began conducting a head-to-toe investigation of its computerized inventory control system in the Naval Supply Systems Command, following the arrests of five individuals who were charged with diverting to Iran stolen weapons systems parts for F-14 aircraft.

U.S. Customs Service special agent John Hensley said last week, "We don't know how they did it. We were afraid during the investigation to push up inquiries into the [computerized inventory] system because we were afraid we would tip them off. We are really in the dark."

Meanwhile, the Naval Investigative Service was busy beginning a more thorough effort to establish the trail used by four Filipino nationals and an Iranian living in England. The Iranian allegedly stole the parts for F-14 aircraft and smuggled them to Iran in containers identifying them as medical supplies and auto parts.

> *'We don't know how they did it. . . . We were afraid we would tip them off. We are really in the dark.'*
>
> — John Hensley
> U.S. Customs Service

The ring was broken by Federal Bureau of Investigation, Customs Service, Navy and U.S Department of Justice investigators who were supposedly tipped off to its existence last fall during a routine audit of exports leaving the U.S.

Last week, Navy officials in Washington, D.C., were unavailable for comment on the security, level of personnel access and the architecture of the computerized inventory control system used by the Naval Supply Systems Command.

"We just don't want to comment on this until we are able to find out more about what happened on the [aircraft carrier *USS Kitty Hawk*] and in San Diego," a Navy spokesman said.

Meanwhile, Winston Kuehl, regional director of the Naval Investigative Service, shed some light on the difficulty that investigators faced trying to determine how the stolen-parts ring operated.

"It is logical to assume that since there is a highly computerized system in operation — the standard supply system for the Navy is computerized — that they were using it in some fashion," Kuehl said.

He said the investigators accumulated a lot of information during the breakup of the ring that is still being pieced together.

No clue as to how parts were removed from system

"We have no certainty to conclude how the parts were getting out of the system. We don't know if they were ordering parts up on the system and then diverting them or just taking parts from existing inventory or as they came in," according to Kuehl.

Kuehl said the Navy "was not in the position to check its system inventory to see if parts were missing. We can't say whether or not the parts were listed as missing." He added that the existing inventory control system was not an integrated one but rather a system of collateral parts that served particular functions.

One of three San Diego residents arrested was a Navy enlisted man, Baluyat Cayabyab, 36, working on board the *Kitty Hawk*. A second was a civilian, Pedro Manansala Quito, 60, employed by the Navy at its Air Logistics center in San Diego where aircraft engines were reworked; a third, Franklin Pangilinian Agustin, 47, ran an insurance business.

The two others arrested were Edgardo Pangilinian Agustin, 45, of Jamaica, N.Y., brother of Franklin Agustin; and an unidentified Iranian national living in England. Court papers identified Saeid Asefi Inanlou, 36, of Middlesex, England, as communicating with the other four.

The stolen-parts smuggling ring was traced back to San Diego through Virginia, New York and London.

Navy officials said they have also traced stolen parts from the aircraft carriers *USS Carl Vinson* and *USS Ranger* and indicated there may be more persons involved in the ring.

"We think they were a bunch of thieves. Their motivation was money," said Quintin Villanueva, Customs Service regional commissioner.

Ramblings from the floor of the 1985 National Computer Conference:

■ William Steele, Sytek, Inc.'s OEM Programs director, borrowed a page from political science to explain why he does not expect a major role for diskless personal computers on local-area networks.

Networked diskless micros will not fly if DP uses them in an attempt to return to a highly centralized computing environment, Steele said. In his view, users will no longer accept overly centralized computing plans, which share many defects with socialist centralized economic plans. "You have your five-year plans, which never work, and you have your annual crop failures," he explained.

■ IBM has changed its stripes — pinstripes, that is. It seems the company's attempt to shuck the image of being stodgy and bureaucratic was reflected in the attire of Big Blue's booth personnel. There was not a three-piece men's blue pinstripe suit or women's two-piece navy ensemble on any of the 30 or so booth attendants. In fact, light-colored suits with brightly colored ties, penny loafers (cordovan colored, no less) and open-toed women's shoes were the dress of the day. And the presentations at the booth, clearly one of the busiest on the floor, were lighter and breezier than we have seen at other shows. It makes us wonder what they did with all that pinstripe wool.

■ Televideo Systems, Inc. is expected to announce a laser printer in time for the Comdex/Fall '85 show, but the machine will not use the popular Canon USA engine. According to a Televideo source, "Canon has a very poor price-performance factor." Canon's engine has a frequency of repair problems, the source said, adding, "We are looking at several Japanese manufacturers of better laser engines."

■ At the press conference introduction of its new and enhanced Control:Manufacturing and Control:Financial applications, Cincom Systems, Inc. also announced that it intends to develop specific versions of those manufacturing/financial systems for the aerospace and defense industries. Cincom President Dennis Yablonsky said the targeted industries represent a massive marketplace that no vendor is adequately addressing.

Cincom also said that, as a result of its recently penned joint marketing agreement with Digital Equipment Corp., it is currently at work on a VAX-compatible version of its Netmaster network control software.

The company also announced that it is developing general ledger and order entry packages for its Business Control System line and will likely be introducing them within the upcoming year.

■ Nonprofit organizations that got free countertop space from the American Federation of Information Processing Societies, Inc. (Afips) in past years were out of luck this year. Afips — reportedly annoyed that some of those countertops were left unattended and became messy — made it a rule that only Afips-affiliated organizations could have the countertops for free. The rest of the organizations had to purchase space — an option some of those organizations could not afford.

■ In the "best-laid-plans-go-awry" category, the 12- by 12-ft frog used by Charles River Data Systems, Inc. was not able to sit atop his customary pad this time. The giant amphibian would not clear the ceiling over the booth he usually sits on, so Afips gave him his own floor space this time around. This was the frog's second unseating, the first occurring in January of 1984 at the Federal Computer Convention in Washington, D.C. There, the frog was relegated to the lawn and got snowed on, according to one of his keepers in the booth.

■ The burning man who demonstrates halon gas in the Fenwal, Inc. booth was accompanied again this year by magician Denny Rourke of Omaha. Rourke claimed to make about 50% of his earnings per year by working magic for trade show crowds.

MIGRAINE

How do you spell relief from the pain of Documentation? (S-Y-D-O-C.)

Call (201) 568-9700.

Cut your COBOL Maintenance costs.

SYDOC:

STRUCTURED DOCUMENTATION SYSTEM FOR OS/VS

QUESTION: Which is a bigger headache? The COBOL-documentation problem or the high-cost-of-maintenance problem?

ANSWER: Both.

* * *

We're not kidding. Documentation and high maintenance costs are both parts of the same big headache. Here's why:

1. THE PROBLEM BEGINS WITH DOCUMENTATION: And it begins right at the program-development stage.

Most programmers hate to document. And although they may think they are producing well organized programs, they really have no way of judging. If they produce badly organized programs, they will inevitably produce badly organized documentation, too. One always equals the other.

2. BAD DOCUMENTATION LEADS TO COSTLY MAINTENANCE: Even if the documentation started out being accurate, it's probably never been updated. When modifications occur, someone's got to go back and attempt to divine the underlying logic before new code can be inserted. A long and costly operation.

No wonder COBOL maintenance may consume as much as 75% of your entire budget!

FAST RELIEF WITH SYDOC: Our Structured Documentation System takes the documentation problem off the shoulders of your programmers and puts it where it belongs—on the computer:

- **SYDOC HELPS YOU DEVELOP STRUCTURED PROGRAMS.** It not only provides structured documentation, it is also a very useful guide for the production of structured COBOL programs. Flaws and inconsistencies can be spotted at the development stage. And corrected before they start driving your maintenance costs up.

As a manager, you will—for the first time—have a tool to standardize both your documentation and the quality of your programs.

- **SYDOC MAKES IT EASY TO MODIFY EXISTING PROGRAMS.** It can analyze "orphan" programs without adequate documentation and tell you everything you need to know about the programs' structure, logic, variables and relationships. Armed with this knowledge, the maintenance problem shrinks.

No longer is it necessary for skilled programmers to spend days searching for clues about the program's logic. SYDOC makes all necessary information available quickly and easily.

But the best way to find out about SYDOC is to try it. If this remedy doesn't work you'll just have to try another—A-S-P-I-R-I-N.

Syncsort Incorporated 560 Sylvan Ave., Englewood Cliffs, N.J. 07632

Apple cites reorganization costs in first losing quarter

By Clinton Wilder
CW Staff

CUPERTINO, Calif. — Apple Computer, Inc.'s recent layoffs and consolidation moves struck the bottom line last week as the microcomputer vendor reported a $17.2 million loss in the third quarter ended June 30. The results reflected by far the worst period in Apple's 8¼-year history, and it was the company's first losing quarter since it went public in 1980.

Apple attributed the 28-cent-per-share loss to a $40.3 million expense from its dramatic reorganization, plant closings and four-figure layoffs during the quarter. One year ago, the company earned profits of $18.3 million, or 30 cents per share.

Apple's revenue of $374.9 million for the three months represented an 11% drop from the year-earlier quarter and a 14% decline from the first quarter of 1985. The company said it had modest operating profits before taxes of $3.5 million, compared with $28.3 million one year ago. A tax write-off of $16.6 million helped cushion the reorganization and consolidation costs.

Apple President and Chief Executive Officer John Sculley said the firm has successfully lowered its break-even point and increased its cash reserve by 31% to $254.6 million during the quarter. "While it's difficult to predict how long the pause in the computer industry will last, we are confident that Apple is positioned to take advantage of future growth," he said.

Lloyd Cohen, an analyst at International Data Corp. of Framingham, Mass., attributed Apple's loss to its failure to crack the business market with the Macintosh. "Having [Lotus Development Corp.'s] Jazz come out as late as it did caused a severe impact on [its] earnings," he said. "No matter what they say, unless you can get into the business market, you can't survive in the long run."

WANG

from page 1

Wang Office Connection, priced at $1,200, would offer a Wang Systems Networking (WSN) card and WSN software, in addition to Wang WP for the IBM Personal Computer.

Internal debate caused delays?

A Wang spokesman made no comment on the products and would neither confirm nor deny that they exist. A spokesman for a Wang user magazine said internal debates are delaying the products since they represent a change in Wang's strategy of competing head-to-head with IBM, rather than marketing IBM-compatible products.

Wang WP for the IBM Personal Computer would provide users with a modified version of the Wang WP Version 2.5, including such functions as glossary, math, merge/print, sort and a spelling verifier with a 66,000-word vocabulary. The product would provide the IBM Personal Computer and Wang Professional Computer with compatible disk formats. Wang software would not work on IBM Personal Computers without Wang's modified version of the universal keyboard, the documents indicated.

Wang Office Connection with the WNS card and software would allow users to link IBM Personal Computers to a Wang VS for file transfer and remote logon. To a VS, the IBM Personal Computer would look like a remote Wang 2256/C VS/DP workstation.

'Strategically shifting gears'

Wang previously announced the WSN card option for the IBM Personal Computer in 1984 for a price of $1,850 [CW, June 18], but a Wang spokesman said the product was never delivered. "Strategically, we are shifting gears" on the WSN card, the spokesman said, adding, "To talk about that strategy would be premature." The Wang user magazine spokesman suggested that the Wang Office Connection product is a competitively priced enhanced WSN card for the IBM Personal Computer, bundled with the Wang WP software and keyboard.

The WSN card would fit into any expansion slot on the IBM Personal Computer and would run either point-to-point or multipoint communications. It would support transmission speeds of 1,200 bit/sec. to 9.6K bit/sec. The VS would have to be equipped with appropriate VS software, communications controller hardware and Version 6.2 or greater of the VS operating system, the documents indicated.

The two communications services offered by Wang Office Connection would be VS Remote Logon and Bidirectional File Transfer. VS Remote Logon would provide the VS with DP capabilities, including access to Wang Office, the company's series of office automation applications.

The Bidirectional File Transfer product would allow binary file transfer between the IBM Personal Computer and the Wang VS. IBM PC-DOS files could be sent to the VS for storage, and VS print files could be sent to the IBM Personal Computer for printing. Documents created on the IBM Personal Computer with Wang Word Processing could be transferred to a VS.

Both packages would work on an IBM Personal Computer with two diskette drives or on an IBM Personal Computer XT with one disk drive and a hard disk. A minimum of 256K bytes of memory and PC-DOS 2 or higher would be required. The products would support monochrome and color monitors.

Products not supported by the Wang products would be the IBM Personal Computer AT, 3270 Personal Computer, PCjr and all IBM compatibles.

According to Vincent Flanders, associate editor of *Online Data-Access*, a magazine for Wang users based in Austin, Texas, internal bickering at Wang is continuing about whether or not to announce the products, even though the company is geared up to produce them. "Some people are questioning it because they're afraid it'll cut into sales of their own [Professional Computer] and Wang Office Assistant," the company's low-cost word processor, he said.

RESULTS

from page 1

profits would still have declined by more than 7%. The six-month profits of $2.4 billion, or $3.91 per share, were off 15% from the $2.82 billion, or $4.62 per share, reported in the first half of 1984.

Second-quarter profits were $1.41 billion, or $2.30 per share, compared with year-earlier profits of $1.62 billion, or $2.65 per share. Revenue for the quarter was $11.43 billion, up 2.1% from $11.2 billion a year ago. For the six-month period, revenue increased only 2% to $21.2 billion from the first six months of 1984.

IBM President John F. Akers said the company is pleased with orders for its 3090 mainframe, and it has been able to push up shipments into the third quarter for a number of customers.

At NCR, second-quarter profits were $66.6 million, or 67 cents per share, down 13% from $76.2 million, or 73 cents per share, a year earlier. Per-share profits were down only 8% because of the company's stock repurchase programs. Revenue for the quarter was $1.03 billion, up 3% from $998.8 million a year earlier.

Honeywell's second-quarter profits indicated a rapid reversal of its first-quarter results, when the company went against the grain of the spreading industry slump with a 16% profit increase on revenue that increased by 7.5%.

In the second quarter, revenue was $1.55 billion, a 5.3% increase over $1.47 billion in the year-earlier quarter. Profits for the quarter ended June 30 were $52.5 million, or $1.14 per share, compared with $74.3 million, or $1.59 per share, a year earlier.

Honeywell said operating profits were below year-earlier levels in three of its divisions, and the fourth division, aerospace and defense, was even with the pace of a year ago.

Sperry went against the tide of adverse mainframe company financial results, reporting that computer sales offset declines in other areas to push first-quarter profits to $51.5 million, or 91 cents per share. Those results were up 23% over year-earlier profits, excluding the write-down of its investment in Trilogy Ltd.

Sperry's first-quarter profits were actually up 156% from an unusually low quarter one year earlier, when it posted profits of $20.1 million, or 37 cents per share. Without the write-down of the Trilogy investment, profits for the earlier quarter would have been $41.9 million, or 77 cents per share.

The company's revenue for the quarter just ended was $1.42 billion, up 20% from $1.87 billion a year earlier. However, these results were in comparison to a very low quarter. In the preceding two quarters, Sperry reported revenue of $1.45 billion for the third quarter of fiscal year 1985 and $1.79 billion for the fourth quarter; profits were $61.2 million and $105.9 million, respectively.

Gerald G. Probst, chairman and chief executive officer of Sperry, said the company's commercial computer business experienced continued strong performance, while the defense and aerospace and farm equipment businesses were below plan.

Burroughs' revenue posted a scant 1.1% gain from $1.21 billion a year ago to $1.23 billion in the last quarter. Burroughs Chairman W. Michael Blumenthal called the results "somewhat better than expected," considering the industry slowdown.

Profits of the Detroit-based company dipped 5.6% from $57.3 million in the year-earlier quarter to $54.1 million. Per-share earnings fell 7 cents from $1.26 to $1.19 per share.

CDC said profits plummeted from $23.4 million, or 60 cents per share, in the like quarter in 1984, to $3.8 million, or 16 cents per share. CDC revenue remained flat at $1.26 billion.

The Minneapolis firm said it lost $29.4 million in its computer sales before an extraordinary gain of $12 million from the sale of its on-line financial transaction service and other assets. CDC's losses were cushioned by a successful quarter for its financial services unit, Commercial Credit Co.

Also last week, AT&T reported that second-quarter revenue, after the deduction of access charges paid to local telephone companies, declined slightly from the year-earlier level. Profits for the quarter were up just more than 1%, although year-earlier profits were inflated by access costs that did not show up until the third quarter of 1984.

AT&T said second-quarter revenue, after deducting access charges, was $8.55 billion, down slightly from $8.58 billion a year earlier. Profits were $461 million, or 41 cents per share, compared with year-earlier profits of $455 million, or 43 cents per share.

NCC '85 exhibitor turnout mirrors industry downturn

By Paul Korzeniowski
CW Staff

CHICAGO — Just as a number of hardware and software vendors are doing, the National Computer Conference (NCC) tightened its belt this year.

"The computer industry is in a cyclic phase of consolidation," noted Arnold Smith, chairman of the NCC committee, in an interview at last week's conference.

A by-product of the consolidation is that approximately 100 fewer companies exhibited at this year's show than at last year's show. The number of exhibitors this year is similar to 1981 and 1982 levels — significantly less than those for 1983 and 1984.

Some large companies like Digital Equipment Corp. and Wang Laboratories, Inc. did not attend this year's show. Smith claimed that their absence will not affect future shows. "Attendees come to see products from a number of companies — not from just one vendor," he claimed.

Despite this year's downturn, Smith predicted that the number of exhibitors at next year's show will increase by at least 10%. "My gut feeling, which comes from predictions by companies like IBM, is that the industry will pick up at the beginning of next year," the chairman forecast.

An upturn may prompt the return of traditional participants. "We have been in contact with companies that dropped out of NCC this year, and none have ruled out the possibility of returning next year," Smith said. "Most were faced with financial problems this year." The chairman claimed that this year more than 180 companies representing a broad range of industries were participating at NCC for the first time.

> *"My gut feeling . . . is that the industry will pick up at the beginning of next year."*
>
> — Arnold Smith
> NCC committee

Smith ruled out a number of reasons for the decrease in the number of exhibitors. Some participants have stated that the show should not be scheduled in July. "Some people have complained about the show being run in the summer," he said. "Others think it is a good idea because they can schedule their vacations and bring their families with them to the show."

Despite Smith's assertion, the American Federation of Information Processing Societies, Inc. is attempting to schedule the conference so it will be held in early June. Through 1990, the show will alternate between Las Vegas and Chicago sites. "Convention centers such as [Anaheim, Calif.] and New York are too small to hold the conference," the chairman noted.

All of the Las Vegas shows are scheduled for early June, according to Smith. The 1987 Chicago show is also slated for June, but other Chicago shows are scheduled for July. "We are trying to reschedule all the July Chicago shows," he said. "We would like to move them to May, but we have a better chance of having them moved to sometime in June."

ITT announces applications processor units

CHICAGO — ITT has introduced an applications processor aimed at providing local processing capabilities to users of IBM 3270 workstations or voice/data private branch exchanges.

Two models of the unit were announced here. The Model 1, which includes a 20M-byte fixed media disk drive, costs $18,500. The Model II includes one 60M-byte fixed media disk drive and one 60M-byte tape subsystem. It costs $24,000.

Both models come with Microsoft Corp.'s Xenix operating system, a 1.2M-byte floppy disk drive, one Centronics Data Computer Corp.-compatible parallel printer port, one RS-232C asynchronous terminal port and one device adapter that will support eight coaxial cable-attached devices. The unit reportedly accommodates from 1M to 13M bytes of main memory.

The applications processor is said to give users of the firm's 9200 series display stations the option of either communicating on-line with an IBM 3270 or using the local processing power of the applications processor. Programmers' code can compile and run programs locally, without having to access the host processor. Once a program is complete, it can be uploaded to the host, the company said.

ITT is located at 1515 W. 14th St., Tempe, Ariz. 85281.

NCC exhibitors frustrated by union setup hassles

By Charles Babcock
CW New York Bureau

CHICAGO — National Computer Conference (NCC) exhibitors said Chicago is their kind of town for a trade show, but many said they have come to loathe dealing with the trade unions that dominate the city's McCormick Place.

Some said they are thinking about not coming back.

"You have to have these big, hulking people, who don't know anything about electronics, moving things around," said an irritated exhibit manager for a large laser printer firm, referring to the Teamsters union riggers.

"A forklift operator dropped our Astra 300 minicomputer, which we needed to run half our exhibit, and ruined it," said Laurel Dutcher, show coordinator for NEC Information Systems, Inc. Because the machines are custom-made, NEC had no backup model in the U.S. and had to assemble another in Japan quickly.

The wood panels that frame the Britton-Lee, Inc. display were gouged in several places during installation, and five minutes before the show opened, an improperly installed fuse cap blew, robbing Britton-Lee's exhibit of power, according to David L. Britton, the firm's president.

A forklift operator carrying *Computerworld's* 14 Digital Equipment Corp. Rainbows "drove into a wall," tumbling the micros from the top of the load and breaking two of them, the newspaper's Operations Manager Jeff Pennett said. Some of those that work have parts rattling around inside them, he said.

Mishaps at trade shows not uncommon

Stories about freight mishaps are not uncommon at a major trade show, and exhibitors arrived knowing that all work was supposed to be done by $23.50-per-hour riggers, $34.25-per-hour carpenters and other skilled laborers.

But many complained that the work was done more poorly than during NCC's previous visit to Chicago two years ago, and union representatives were abrasive about following work-expanding contracts.

"This little guy with a yellow pad went around telling everybody [that] you need a union man to do anything," said Judy A. Diaz, marketing manager for Oracle Corp.

"We couldn't plug in our own machines," complained one exhibitor, and another said three electricians spent hours studying his complicated audiovisual system before accepting the exhibitor's guidance on how to connect the wires. The Charles River Data Systems, Inc. exhibit in Ray Schoessling Hall was charged $50 to plug in its inflatable frog.

[illegible]

Three union workers assemble one chair.

Joseph Hannon, president of the Chicago Convention and Tourism Bureau and managing director of McCormick Place, referred the exhibitors' complaints to aides. Those aides referred questions to Rick Dobson, exhibition manager for the American Federation of Information Processing Societies, Inc., who was unavailable for comment before press time.

"They really take their time, kibitzing and everything," said Oracle's Diaz about the union laborers at McCormick Place. "We asked them why they couldn't speed up, and they said, 'Why hurry? Your company just writes off the expense.' I feel like I'm being robbed from both pockets," she said.

At a printer exhibit, carpenters assembled wooden steps with translucent covers while electricians stood by to screw in the light bulbs, said the exhibit coordinator.

Exhibitors were frequently reluctant to talk about their problems with the trade unions. "I don't want to get into that," said IBM's Exhibit Manager Jeff Malley, as he looked askance.

Many exhibitors needed the services of trade unions during the show, and all of them had to live with the trade union representatives until their exhibits were dismantled last Thursday night.

According to Diaz, word went around Schoessling Hall Friday that a small exhibitor who had complained too much about the slow pace of work had suddenly lost power at his site.

"Can you imagine being at a computer show and not having any power?" Diaz asked.

Many exhibitors expected their bills to be the highest they will have ever paid for a trade show. Exhibitors were already paying $21 per square foot for McCormick Place space, one of the highest rates in the country. The recent PC Expo at the Coliseum in New York charged exhibitors $20 per square foot, and rates in other cities are typically $10 to $11 per square foot, exhibitors said.

Many said work that should have been done prior to the show was not finished by the Friday before the show. So exhibitors paid time and a half on Saturday to get it finished.

The aggressive union attitude and frustration over delays prompted many exhibitors to skirt rules they had come to Chicago planning to honor. D. Michael Hunter, marketing technical administrator for Dotronix, Inc., said he lost power at his site four times during the show, with electricians making lengthy searches for the cause each time.

After the fourth time, he rolled up the carpet himself and found an improperly installed junction box, which he fixed, solving the problem, he said.

The staff of Panasonic Co. requested riggers at 8 a.m. Friday, and when they had not arrived by 3 p.m. Saturday, they went ahead and set up their exhibit themselves. "We informed the management of McCormick Place what we were doing. They were quite understanding," the Panasonic coordinator said.

Paying $914 for table covers

CW staff members balked at paying the $914 quoted by United Exposition Service Co., a company contacted by the show's sponsor for NCC, to have table covers spread on 12 worktables. Instead they bought $47 worth of plastic tablecloths at Woolworth's, covering the tables themselves.

A high-speed printer company spokesman with a 40- by 50-foot exhibit space said he spent $600 to $700 to have his carpet vacuumed during the four days of NCC. He said he was not allowed to bring his own vacuum cleaner, and the charge is an example of why his company is cutting back on its NCC exhibit next year.

"We've decided to go from 2,000 feet to 900 feet. You could call it purely a business decision, but it's enhanced by the fact [that] we don't like the union hassles here," he said.

"A lot of people are going to think twice about coming back," Diaz said.

AI expert systems: Increase in practical applications

Uses range from blood types to interest rates

By Kathleen Sullivan
CW West Coast Bureau

CHICAGO — Within the field of artificial intelligence, expert systems are attracting attention. In an effort to demonstrate some of the practical applications of these systems, a group of panelists presented snapshot views of current projects during a session at last week's National Computer Conference here.

Harvey P. Newquist, editor of "AI Trends," a newsletter published by DM Data, Inc., a Scottsdale, Ariz.-based market research firm, said Shearson Lehman/American Express, Inc. is using an expert system to perform interest rate swapping at its offices in New York.

The system, which was installed in early 1984, allows real-time processing of interest rates and presents suggestions on where to invest money based on interest rates, Newquist said. Of the $15 million the firm took in last year through interest rate swaps, $1 million could be attributed to the installation of the expert system, Newquist said.

The police department in Seattle recently installed an expert system designed to help solve a case involving a serial murderer, Newquist said. In the four years since the first murder occurred, the police have collected more than 300,000 pieces of information, which are now displayed on a wall at headquarters.

The police hope the system, which is based on a Digital Equipment Corp. VAX, will allow its investigators to sort through the information and develop new leads in the case, Newquist said.

According to Mache Creeger, who works at Lisp Machine, Inc., in Los Angeles, his company recently developed an expert system designed for process control. At present, the system is going through beta testing in six locations, including oil refineries.

Thomas Bylander, an Ohio State University graduate student who works at the school's artificial intelligence research laboratory, described the lab's current work with the Conceptual Structures Representational Language (CSRL), a language developed by the lab for use in expert systems. The lab has launched a variety of CSRL projects, including work on a system that will analyze automobile fuel problems and another that will detect welding faults.

The lab is also developing a system that will interpret data related to red blood cell antibody identification, which will be used to match blood types of patients and donors, Bylander said.

Mike Morgan, an engineer at General Dynamics Corp.'s electronics division in San Diego, said his firm is investigating how expert systems can be put to use in equipment maintenance. The company is currently focusing on developing an expert system that will diagnose technical problems in the U.S. Army's M1 tank.

"In the M1 tank, we want to be able to find out where a problem is and solve it quickly," he said. That will involve designing a system capable of analyzing information on the 63 black boxes and 1,400 connections that make up the heart of the tank.

Although many promising applications are now under development, Newquist warned the audience not to expect a retail version of an expert system to be available soon.

"Don't look for expert systems in Computerland or Businessland stores," he said. "You might see them in 10 to 15 years, but not before."

WHEN MARKETING REJECTS YOUR RUNDOWN ON THE OVERRUNS,

WHAT'S YOUR DEFENSE?

VMCENTER:

THE ONE INDISPENSABLE SURVIVAL TOOL FOR VM DATA CENTER MANAGERS.

It's funny how the very same people who say "spare no expense" one day, will spare no expletive a few days later when you send them the bill.

Of course, it's not so funny if you can't substantiate the charges. And in today's VM operating environment, accounting for system usage can be a forbidding task.

Unless you have VMCENTER.

VMCENTER is the one comprehensive software system that simultaneously addresses all your key concerns as manager of a VM data center. Concerns like system security, resource scheduling, and not least of all—cost control.

VMCENTER helps fight the cost war on several fronts. It lets you operate more efficiently—getting more mileage from existing resources. And it makes it easier to charge for the services you provide, through automatic tracking of system usage and costs.

The results: On-time reports —with a lot less in overtime, overruns, and embarrassment. And VMCENTER is so much more—a multi-level security system, a foolproof disk and tape management system, and a workload balancer.

Best of all, this capability comes in a proven single-vendor package that's more convenient, more reliable, and more cost-effective than any possible collection of separate piecemeal approaches.

VMCENTER. It's a survival tool —and a whole lot more. For more information on VMCENTER, call or write VM Software, Inc., 2070 Chain Bridge Road, Suite 355, Vienna, Virginia 22180, telephone (703) 821-6886.

[illegible]

Study sees DSS taking bigger bite out of end-user budget

By Donna Raimondi
CW Staff

CHICAGO — Decision support systems (DSS) could account for up to a third of a corporation's information services budget and almost half of the end-user budget by 1990, preliminary findings from an MIT study showed. DSS will most strongly influence rapid, ad hoc decision making, will lead to better decisions and will offer an increasing number of alternative solutions to problems, said C. Lawrence Meador, chairman of the board of Decision Support Technology, Inc. of Wayland, Mass., and staff member at MIT's School of Engineering.

Meador and Fred L. Brachman of Brachman Associates in Penfield, N.Y., spoke on the topic "Decision Support Systems: the End User View" at a National Computer Conference session last week chaired by Ephraim McLean, associate professor of information services at the University of California in Los Angeles.

During the session, Meador and Brachman presented findings from a recent study designed to determine the current and future DSS needs of top information services and end-user management. The study, conducted by MIT, surveyed 102 companies in 28 industrial categories with revenues ranging from $500,000 to $40 billion, Meador said. According to Meador, the preliminary findings showed that end-user management and information services management are very close in their knowledge of and expectations for DSS.

Both of the survey groups agreed that the least important results of using DSS techniques will be increased teamwork, cost savings and better control, Meador said.

The most important technologies that will impact the development of DSS are end-user computing facilities, powerful desktop personal computers, fourth-generation languages and graphics, both groups of managers agreed. The least important technologies will be voice interaction, public subscription data bases and automatic programming, the study showed.

End-user management is very aware of the technology involved in implementing DSS, Meador said. Unfortunately, there is a lot of "smokeware" on the fourth-generation language market, and information services will have to be careful about sifting through the smoke to get to the good packages, he said.

When it comes time to justify the implementation of DSS, end-user management and information services management both agreed that the promise of better decisions, end-user effectiveness and end-user demand for and commitment to DSS will be the critical factors, Meador said. Both groups indicated that company politics and the return on investment were not important to a purchasing decision. One important area of disagreement between the groups was that end-user management was unconcerned with the impact of DSS on information services resources, where that factor was important to information services leaders.

The study also revealed that if a new, inexpensive and effective DSS breakthrough suddenly became available, it would take an average of 4.2 years for companies to implement it. Although DSS will be very important to companies by 1990, it takes a long time for companies to implement a working system, Meador said. The development life cycle goes through a variety of stages — planning, research and development, design, construction, testing, evaluation, demonstration, orientation, training, deployment, maintenance and adaptation, he said. Of those stages, design and construction offer few problems, Meador said, but front-end planning is seen by the managers as the single most important stage.

The implication of the study, Meador said, is that information services managers should plan on heavy DSS and end-user computing investments. In addition, they should plan to be using fourth-generation languages and expect knowledgeable users by 1990. End users should get into a planning and evaluation orientation, finding out how DSS can work for them, he added.

According to Brachman, once the decision to implement DSS is made, some basic issues will have to be handled. Information services must determine what position DSS will take in the firm, he said. There is an element of DSS that could fit into all areas of the company structure, he said, from the executive suite to the manufacturing floor. The company must decide where to start out, he said.

At Eastman Kodak Co., where Brachman spent 18 years, he started the DSS development effort in the finance area because the data base — a necessary ingredient in a DSS — already existed. Other areas require the building of data bases, a project that can take from six months to two years, he said.

Users call for communications networking standards

By John Dix
CW Staff

CHICAGO — Communications standards are critical to the future of networking, agreed users queried at last week's National Computer Conference, but the short-term implications are viewed with various amounts of criticism.

"Standards are extremely important, but they are not here yet," said James Hall, general manager of information services with Union Oil in Schaumburg, Ill. IBM's Systems Network Architecture (SNA) is a de facto standard, Hall said, but it is not all inclusive.

Ideally, standards will give users more product alternatives, Hall noted. For now, however, standards are more vendor rhetoric than actual products, he said. The most important standards, according to Hall, will be those that define capabilities similar to those available with IBM's Distributed Office Support System and document handling architectures.

Bill Mulligan, director of administrative services with Rand McNally & Co., agreed that standards are extremely important. The lack of communications standards is holding back many technologies, such as micro-mainframe links, Mulligan said. "We have been hampered by the industry's inability in handshaking for too long."

The industry needs the equivalent of the standard yardstick, according to Ira R. Cash, a senior programmer analyst with Union Carbide Corp. "There are 100 [fewer] vendors at this show than there were last year," Cash noted, a fact that he attributed to a slowdown in user spending spawned by equipment saturation. Users need communications standards to help them maximize their investment in this equipment, Cash speculated.

Cash said that his company is entering a second wave of decentralization. This transformation requires that each of the firm's divisions develop expertise in communications that, if they were available, would be greatly facilitated by standards.

'There are no standards'

"There are no standards," said Martin Gabret, a DP manager in the health care industry who also faults SNA. "SNA has so many holes, it will never be a tight standard — kind of like Cobol."

Eventually, this will change, Gabret said, "especially if AT&T and IBM have to live together." Full standards would open up communications across vendor boundaries, he said. "We are all frustrated."

Vendors contacted said they are also eagerly awaiting national and international standards to which they can build: "Standards are absolutely necessary," according to Thomas Keating, vice-president of sales with Omnitel, a manufacturer of modems. "Nationally we are in pretty good standing in regards to standard transmission rates," Keating said, noting there is a need for further standardization.

NCC from page 1

tic signal to the computer industry, which is in the midst of a dramatic downturn. "I think we're beginning to see the end of the tunnel, in the sense that the exhibitors are saying they have found major buyers here in Chicago," he said.

By the time the show doors closed Wednesday, 86,123 people had registered for NCC, exceeding last year's attendance, Dowd said. Last year's NCC, which was held in Las Vegas, attracted about 65,000 visitors.

Dowd boasted that NCC '85 broke the existing second-day attendance record. The previous record was set in 1983 in Anaheim, Calif., where approximately 50,000 people registered by the close of the second day, he said. Dowd credited Afips' promotional activities — which included making complimentary tickets available at 140 computer retail outlets in Chicago and providing free buses from the downtown area — with the rise in attendance.

Although the number of visitors climbed, fewer companies exhibited their wares in Chicago than last year. This year, 564 companies signed up to show their products, a 19% decline from last year's show, which attracted more than 700 exhibitors.

A number of prominent firms were absent from NCC this year. Included among the missing were Digital Equipment Corp.; Apple Computer, Inc.; Perkin-Elmer Corp.; Gould, Inc.; Compaq Computer Corp.; and Wang Laboratories, Inc. For some firms, the decision to sidestep NCC was reportedly based on a belief that resources would be better spent on vertical market shows.

Few product announcements

Only a few companies chose this year's NCC to announce products. In the microcomputer arena, networking products took the limelight. Sytek, Inc. announced a local-area network head end that is compatible with IBM's PC Network and can support up to 1,000 nodes within a 5-mile radius. 3Com Corp. unveiled the 3Server, a high-end addition to its family of local-area network servers that features a 70M-byte hard disk drive and a storage capacity expandable to 420M bytes.

As expected, Britton-Lee, Inc. extended its data base machine line into the office automation arena, introducing a relational data base server for a local-area network. Designed to support data sharing in an office environment, Britton-Lee's new Relational Server RS310 is compatible with the firm's existing high-end IDM 500 series data base machines, the company said. It features a high-density 10-MHz data base processor and 1M byte of direct-access memory, the firm said.

The show, held at a time when the industry is in a prolonged slump, was marked by further evidence that the downturn has affected some major players, with several companies announcing disappointing financial reports.

Last Monday, IBM reported that its second-quarter profits were down almost 13%, compared with the same period a year ago. NCR Corp. followed suit, also announcing a 13% fall in profits for its second quarter over last year's levels. Honeywell, Inc. later joined the chorus, saying its second-quarter profits declined more than 39%, compared with the same period last year.

The news was better for Sperry Corp., which reported sharply improved financial results for the most recent quarter. Its commercial computer operations reported increases of 33% in revenue and 64% in operating profits, the company said.

ORACLE:
The portable version of IBM's DB2 and SQL/DS.

COMPATIBILITY

The ORACLE relational database management system is fully compatible with IBM's SQL/DS and DB2. SQL/DS and DB2 represent IBM's latest generation of database management technology for IBM's largest computers. ORACLE's capabilities and user interface - the SQL language - are identical to those of SQL/DS and DB2. Programs written for SQL/DS and DB2 will run unmodified on ORACLE.

PORTABILITY

SQL/DS and DB2 run only on IBM mainframes; ORACLE runs on IBM mainframes, DEC, DG, AT&T, HP, STRATUS, and several other manufacturers' minicomputers, and on a wide range of microcomputers including the IBM PC/XT and PC/AT. All versions of ORACLE are identical and include a complete implementation of SQL – not a subset.

CONNECTABILITY

Having the same software running on your mainframe, minis, and micros greatly simplifies the task of connecting your machines into a network. ORACLE's network software allows microcomputer users to directly access data stored in the shared database on the mainframe or minicomputer, or copy that data into the database on their micros and operate independently.

Oracle introduced the first relational DBMS and the first implementation of SQL back in 1979. Today, eight of the ten largest U.S. companies use ORACLE. In fact, INC MAGAZINE ranks Oracle as the fastest-growing software company in the USA. Surprised? Don't be. ORACLE is the number one relational DBMS, with thousands of installations on IBM mainframes, DEC, DG, AT&T, HP, STRATUS and most other vendors' minis and micros. Even the IBM PC.

To attend the next free, half-day seminar in your area or receive additional information, write Oracle Corp., Dept. C4, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350. Following is the ORACLE seminar schedule:

ORACLE Seminar Schedule

Albany	Sept 19
Albuquerque	Sept 19
Anchorage	Aug 29
Atlanta	Jul 25, Sept 18

End-user access to mainframes: Still no easy solution

By [illegible]
CW Staff

CHICAGO — Visitors to the National Computer Conference (NCC) floor here have tried their hands at a variety of solutions for providing end users access to mainframe data — everything from homegrown configurations to slick, prepackaged facilities. None of those questioned by *Computerworld*, however, seem to have found the perfect solution.

The John Deere Co. is taking a basic step to micro-mainframe communications. At the corporation's engine works division in Waterloo, Iowa, Digital Communications Associates, Inc.'s Irma board is installed in approximately 25 of the company's IBM Personal Computers to give users terminal emulation capabilities and allow them to log on to its mainframe for data access, according to Charles Doerr, manager of computer systems.

Deere has been using the Irma boards for about a year, he said. Admitting the link does not provide sophisticated file transfer capabilities, Doerr said, "The use of the link is not for everybody, and this is the simplest way of transferring data."

"We're still looking for an easy-to-use, one-step product," said David Ray, corporate DP manager at the Ciba-Geigy Corp. pharmaceutical company's Greensboro, N.C., plant. Right now the company is employing in-house software to allow some of its 400 microcomputer users to access mainframe data for financial modeling.

Ray said the company selected the homegrown software "out of desperation. We needed something and didn't want the expense of the packages that are out today."

Ray said the capabilities of today's micro-mainframe links fall short of his expectations. "What's missing is a simple, user-friendly way to download information from the mainframe in a one-step process. Now, you must convert files to get to the mainframe, and format and convert files to get to the micro," he explained.

One company that is preparing to step into a prepackaged micro-mainframe link is Harte-Hanks Communications, Inc., a media holding company for newspapers, television and radio stations throughout the country.

The San Antonio-based company is currently using Irma boards to give about 20 end users in the finance group access to corporate financial information.

Today, however, the company is searching for a better solution to allow users to retrieve financial information from its Cullinet Software, Inc. General Ledger package.

"Management told us to go out and find something that was better than the batch processing we were doing," said Bruce Flory, corporate director.

Harte-Hanks is considering the use of Cullinet's Goldengate package, which will tie users into the Cullinet data base, and allow end users to extract data from the Cullinet General Ledger package and download it into the Goldengate spreadsheet package, noted Homer Faucheaux, director of systems and procurement services.

> ”
>
> *'Everybody claims to have a link, but when you look under the covers, it's an extract.'*
>
> — DP manager
> Dow Jones & Co.

Although the idea of a micro-mainframe link is attractive to many corporations, product selection requires careful consideration, users said. At the circulation department at Dow Jones & Co., giving end users access to mainframe data to create marketing reports would be a valuable capability, according to a company data processing manager who did not wish to be identified.

Dow Jones uses about 300 IBM 3270 Personal Computers, IBM Personal Computer XTs and Sperry Corp. microcomputers in its circulation department.

All requests for reports now come to the company's MIS department. When considering a micro-mainframe link, however, the company is looking to avoid products that require MIS departments to define the information that has to be extracted.

According to the DP manager, "Everybody claims to have a link, but when you look under the covers, it's an extract. We don't want to create another bottleneck for users," the manager said. "If they have to ask information systems to extract a file, they have to wait until we get around to it."

NCC attendees agreed that while giving end users access to mainframe data is often beneficial, too much access threatens security, and might be the factor that is preventing many companies from considering micro-mainframe technology. "There is still a degree of uncertainty about multiple users accessing a common data base," said James Stark of DVRY, Inc., an education and electronics information company.

Introducing the ADM 3E for under $400.

When it comes to quality display terminals, absolutely no one sets a higher standard than Lear Siegler.

So it may raise a few eyebrows when word spreads that we've reached an all-time low. It's the new ADM 3E and, at under $400, it may change forever the way you think of low-end terminals.

For starters, we've included a wide variety of features you'd expect to pay more for.

Like a superior keyboard design with seven programmable keys shiftable for fourteen non-volatile functions. Dynamically allocated function key memory. Plus, a 14" screen in your choice of green or amber—all standard.

You get compatibility with our ADM 3A and ADM 5 terminals, as well as ADDS Viewpoint. There's even a bidirectional printer port with independent baud rate available. All this with legendary Lear Siegler quality.

Give us a call today. And find out why we're so high on our new low.

800-LEAR-DPD (800-532-7373).

Inexpensive micro systems boost user-developed DSS

Need for credible systems critical

By Tom Henkel
CW Staff

CHICAGO — Increasingly powerful systems and rapidly declining memory costs have brightened the horizon for developers of decision support systems. But a panel of researchers at a National Computer Conference session, held here last week, warned that those increased opportunities also open the window for a rash of user-developed decision support systems (DSS) that are based on inaccurate data and invalid assumptions.

Noting the popularity of microcomputers, Miles H. Kennedy, an associate professor of professional management and decision systems at Case Western Reserve University in Cleveland, said that inexpensive systems have been a boon to user-developed DSS.

Comparing today's environments to the time-sharing mainframe environments that existed 10 years ago when the first DSS were developed, Kennedy said early DSS could consume an entire mainframe and cost $20/hour to use. This made the widespread use of DSS uneconomical.

"On an average evening in Cleveland, more decision support systems are written today than in the past 10 years," Kennedy said.

Management tool

He quickly added that future DSS will become even more popular as managers discover the software can be used as a persuasive management tool.

But to make DSS effective management tools, Kennedy said, there is still much work that needs to be done.

For example, improvements in networking technologies and better I/O devices and graphics will be a catalyst for moving DSS into the mainstream of office automation and electronic mail systems.

Structural changes in the way DSS are developed could increase their credibility as tools.

Kennedy said DSS have been designed that can give users an explanation of how their recommendations are reached.

" 'What-if' [analysis] is not good enough; we need 'how-come' [explanations] as well," according to Kennedy.

Credible DSS a critical issue

Developing and maintaining credible DSS are perhaps the most critical issues facing DSS users and developers, Kennedy said.

"I worry a lot that there are people making decisions based on models they have not debugged," Kennedy said.

But even if users develop flawless decision support systems, according to Gary W. Dickson, a professor of management science at the University of Minnesota, it may not help managers make better decisions. Dickson said it has not been conclusively proven that providing managers with better information, graphics or systems will improve the managerial decision-making process.

Dickson said DSS that not only make recommendations but explain how those recommendations were reached would be more helpful to users.

Information centers a boon to end-user computing

CHICAGO — The difference between an information center and an MIS department is that an information center does not do any coding.

Henry Delevati, from Information Builders, Inc. in New York, made that distinction at "Managing Information Centers," a National Computer Conference session held here last week.

An information center should provide the expertise, tools and training to enable an end user to develop his own data processing solution, according to Delevati. Support should continue after the user has written the application. This service separates an information center from a typical corporate training center.

The information center is one of four alternatives facing a user when he determines how to solve a data processing problem. The three other methods are manual means, a traditional MIS application or a time-sharing application.

Not all uses suitable

There are a number of applications that are not suitable for an information center, according to Delevati. "A user could develop a department application, but a payroll system with millions of records should be written by an MIS department," he said.

Information centers can supply significant benefits for certain other applications. He cited one case in which an application developed with the help of an information center and maintained by an end user replaced a time-sharing application. "As soon as the application was completed, the company began saving $100,000 a month," Delevati said.

Bart Benne, who works at the information center at Texas Instruments, Inc., claimed that information centers saved the company $19 million in 1984. The figures were supplied by users who responded to a questionnaire.

The firm has information centers in more than 18 countries, and 14,000 Texas Instruments Professional personal computers are tied into a central network. "When we put the network in place, we had to set strict communications parameters," Benne noted.

One reason for the success of Texas Instrument's information center, according to Benne, was top-level management support. "There were 19 people with an average of 16 years of MIS experience hired when the centers first opened in 1983," Benne claimed. There are now 38 people working in the information centers.

Shifting to end users

Shifting smaller applications from an MIS department to an end user can supply some benefits. One benefit may be alleviating an MIS application backlog. "It is similiar to the benefits that happened when companies shifted from assembler to Cobol for application development," Delevati noted. "Some companies may experience a five- to tenfold increase in application development."

Better working relationships between users and data processing departments was another benefit that Delevati listed. "Once a user develops his own application, he is better able to think through his data processing needs," Delevati said.

Another advantage of information centers was better use of corporate data. Delevati claimed that $30 billion worth of data processing spending goes to blue-collar workers and only $5 billion is used by white-collar workers. "We have to find a more equitable way of getting corporate information in the hands of top managers," he said. "End-user computing and information centers may aid that process."

Another Smart Solution From AVATAR

It's a sad sight. Seeing your IBM 3270 printer falling further behind every day. Outpaced by ASCII printers that deliver far greater performance at a much lower cost. ASCII printers that, until now, didn't link to your 3270 system.

Enter AVATAR's PA1500 protocol converter. It lets you attach virtually any ASCII printer directly to your 3270 network with a simple coax connection—, including printers that are three times as fast as your IBM printer and cost half as much.

Now you can select the printer that matches your system needs. For greater speed, letter quality printing, better performance. Fast dot matrix or line printers. Bar code or graphics printers. Even the newest ink jet or laser printers can be a part of your 3270 network.

Together, the PA1500 and the printer of your choice give you all the capabilities of your IBM printer…and more.

So get yourself an AVATAR PA1500. And bring your 3270 printer up to speed.

Macintosh gaining acceptance in corporate world

Users cite system's graphics, ease of use

By Kathleen Sullivan
CW West Coast Bureau

CHICAGO — Although the IBM Personal Computer has taken the lion's share of the corporate market, Apple Computer, Inc.'s Macintosh still has a place in serious business computing. That was the consensus of a group of National Computer Conference attendees here who responded to an informal *Computerworld* poll on the viability of the Macintosh as a serious business machine.

Although most respondents said the Macintosh has some advantages over its arch rival — the IBM Personal Computer — one respondent was not quite so sure.

Robert C. Locher, director of marketing and administrative services, Eastman Kodak Co., Rochester, N.Y.

Locher

Locher said he felt it is too early to write off the Macintosh in the corporate environment. The Macintosh is just coming into its own in the business world, he said.

"I think it's becoming a serious business machine," he said, noting that a broad range of Macintosh business applications programs have entered the market.

Although the IBM Personal Computer and its look-alikes "crept in and stole a part of the show," the Macintosh still has an edge over these systems because it is easy to use, according to Locher.

Janette Moore, MIS program administrator, American Academy of Dermatology, Evanston, Ill.

Moore described the Macintosh as "a nice home computer." But she said that it lacked the crucial telecommunications capabilities that would allow the machine to become a serious contender in the office environment.

"Like a lot of other companies, Apple expected third-party vendors to create telecommunications programs for the Macintosh," according to Moore. "But only Macterminal is now available." That presents problems for some of the academy's members who own Macintoshes and want to gain access to the academy's data base, she said.

Raymond E. Barber, director of MIS, TRT Telecommunications Corp., Washington, D.C.

Barber echoed Locker's remarks, saying that the Macintosh was much easier to use than the IBM Personal Computer.

Since TRT has already standardized on IBM systems, however, it is questionable whether the firm will adopt Apple's Macintosh, according to Barber.

"We've been debating that question lately," he said.

Mike Smith, senior vice-president of systems development, Rainier Bank Corp., Seattle.

Smith

The Macintosh has already found a place at Rainier Bank.

There, more than 50 Macintoshes are being used in the engineering department for word processing and document preparation applications, Smith said.

"We use IBM in our office automation environment," he said.

"But when we want to design documents, we use the Macintosh," he added.

Stratis Sapuntzakis, UOP, Inc., Des Plaines, Ill.

Sapuntzakis

Since Sapuntzakis' firm does chemical and petrochemical processing design, he noted that the Macintosh was appropriate for specialized applications.

One group of UOP employees bought Macintoshes for its plant control work, according to Sapuntzakis.

"They're using it because of its graphics," Sapuntzakis said.

"That's the strength of the machine, and that's what they're using it for," he added.

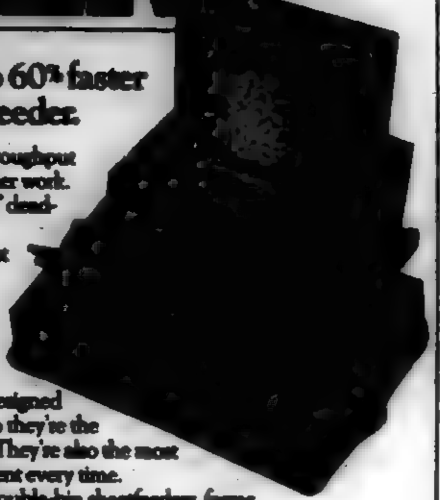
Harold H. Diepholz, development engineer, AT&T Technologies' computer systems center, Lisle, Ill.

Diepholz

Diepholz gave the Macintosh a vote of confidence.

"I would say, yes, it is a serious business computer," he said. "It runs the same major business programs as the IBM Personal Computer, such as [Microsoft Corp.'s] Multiplan and Word.

"And now, [Lotus Development Corp.'s] Jazz is also out," he said.



"YOU WANT IT BY WHEN?"

UP TO $200 REBATE
On purchase of Profeeder Series Sheetfeeders when purchased with Qume Letter Perfect Printers. Now until 10/15/85.

Print your work up to 60% faster with a Qume paper feeder.

Qume paper feeders shorten throughput time and free your operators for other work. So you can meet those "impossible" deadlines while actually lowering your printing costs. At a usage rate of just 50 sheets a day, our single-bin sheetfeeder pays for itself in less than a year. At higher output levels, it can save you as much as $2,000 annually!

Only Qume paper feeders are designed expressly for your Qume printer, so they're the easiest to interface, install and use. They're also the most reliable, with perfect paper alignment every time.

We have Profeeder, single and double-bin sheetfeeders, forms tractors, and a forms guide/collector. Plus a free brochure to help you choose the right one for your needs. Ask for it at your printer dealer, or call (800) 233-2479. And start meeting your deadlines with time to spare!

Do software vendors sell solutions or technology?

By John Gallant
CW Staff

CHICAGO — *Solutions.* In the software industry, that is one of the most pervasive buzzwords. Vendors claim to sell not just software, but solutions to the pressing problems facing users.

But how do those users feel software vendors are doing at providing real solutions?

Computerworld took to the floor of the 1985 National Computer Conference (NCC) here last week to put together a report card on software makers.

NCC visitors were asked the following question: "Are software vendors really selling solutions — or technology in search of solutions?"

Bryce

Willits

Ruth Willits, vice-president, Northwest Bank & Trust Co., Davenport, Iowa.

"I think software companies are doing a pretty good job overall. With very few exceptions, all the software we have purchased has done what it was supposed to do. If there is one piece of advice I would give to vendors it would be to lower their prices. Software prices have fallen, but not far enough."

Thomas Abel, microcomputer specialist, Northwest Bank & Trust.

"So far, we are very happy with the software we have purchased. I think the vendors could be a little more flexible in the types of user training they provide.

"But we are quite comfortable with the packages we use."

Little

Mel Little, president of the Data Printer Division of Printronix, Inc., a manufacturer of computer printers, Irvine, Calif.

"That question could not come at a more appropriate time. Three of our divisions are currently in the midst of converting to new data base management systems (DBMS).

"Every division thought it had selected the best product, but management has found it is not that easy to implement the systems. The divisions have had pretty mixed results with the software vendors, who, I think, could do quite a bit to improve their performance."

Hamish Bryce, director, Thorn EMI Information Technology, Middlesex, England.

"I think the companies that are successful are selling real solutions. But I think that, on the whole, they could all do a better job. Software vendors' performance will become even more critical in the future. Most users are not interested in computers or how the product is implemented. They are just looking for bottom-line answers. So what the vendors provide will increasingly be the key to success."

Jeffrey Hunter, network administrator, John Deere & Co., Moline, Ill.

"I think the vendors are selling a little of both. One big problem with software is the documentation. It is not designed to be easily read and understood. The learning curve with new products is just too high. It is too tough to train users.

"The initial start-up period with a new product is a big hurdle. Once users learn how to use the packages, they are great. Then, they really are a solution. But the training and adaptation are tough," Hunter reported.

Kelly Havens, assistant director, user services, computer center, University of Notre Dame.

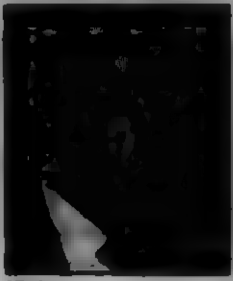
"I think the companies are meeting users' needs. Otherwise, the software products would not sell. They are doing what needs to be done," Havens said.

Mark Eggers, consulting programmer, user services, computer center, University of Notre Dame.

"In certain areas, software is just not meeting users' needs. For example, many vendors seem to be refusing to provide local-area network versions of products.

"Also, in terms of software licensing, the vendors just are not doing what needs to be done to end piracy and solve user problems. My advice to them is to be more in tune with developments in hardware and make their products take advantage of those developments.

"I think they should improve the communications capabilities of their packages to allow people to share information better."



Kleist

Robert Kleist, president, Printronix.

"I agree. The question is very apropos. Software vendors call themselves solutions vendors, but we are finding out very quickly which of them really do provide solutions. Two of our divisional DBMS projects are going well, but the third division is having some difficulties. The package that division has chosen was supposed to be wonderful. But, to date, it has only achieved what I would call an elitist MIS following."

How To Delight Your Lotus With Mainframe Data

Another Smart Solution From AVATAR

The idea is simple. Make your PC spreadsheet even more powerful by giving it mainframe data. But getting that data out of your mainframe, into your PC and onto your spreadsheet isn't that simple.

Until now, you've had three choices. Transfer entire files from the host and risk choking your PC with data. Not very efficient. Or find the information in printed reports, then reenter and reformat it. Very tedious. And the alternative of asking your DP department to write special host software…well, they're overburdened already. Three choices, no real solution.

Now there's TURBO, the newest micro-to-mainframe link from AVATAR.

TURBO's Data Capture lets you select just the information you need from the mainframe. And use it immediately in any of your PC applications – Lotus, dBASE, you name it. Without rekeying, reformatting, re-anything.

And you can use TURBO's host-assisted File Transfer the way file transfer was meant to be used – for sharing data with other PC users on the 3270 network.

If that isn't enough, TURBO's exclusive Macro Language adds a whole new dimension to your micro-to-mainframe link. Use Macros to automate file transfer and data capture. Better yet, massage host data even before feeding it to your spreadsheet.

So give your PC a TURBO from AVATAR. And delight your Lotus with mainframe data.

Operating systems integral to local net transparency

Make net more accessible to user

By Charles Babcock
CW New York Bureau

CHICAGO — Evolving local-area network operating systems have become the key to making networks' capabilities more accessible to users, panel members said at a National Computer Conference technical session here on "The Arrival of LAN Operating Systems."

"The local-area network is only as good as the software that manages it," said panel member G. Craig Burton, vice-president of Novell, Inc. of Orem, Utah, producer of the Novell Netware operating system.

In the past, when a user moved an application program from one point on the network to another, he experienced "a high probability of application failure," explained panel member Gerald Popek of Locus Computing Corp., the Santa Monica, Calif., manufacturer of the Locus local-area network operating system.

Likewise, transferring data around the network ran the risk of altering the data, or worse, losing it as wrinkles in network management caused unexpected changes in how it was handled, Popek continued.

Underlying technology

Part of the difficulty was the network's dependence on the user "understanding the underlying technology" and adopting the right codes and formats to suit the destination he was trying to reach on the network, Popek said.

All locations on the network should be transparent to the user, and this capability must be built into a sophisticated, third-generation local-area network operating system, he said.

In addition, local-area net system developers say the operating system should allow a user on the network to access any application and have it run the same as it would at the point where it originates.

A user should be able to use peripheral devices without having to tell the network their location.

Net transparency

Such steps toward network transparency will make local-area networks more useful to the growing number of personal computer users who need network services but who cannot afford to devote much time trying to access them, said Noel E. Schmidt, session leader, whose Architecture Technology Corp. in Minneapolis is a consulting firm on configuring local-area nets.

Local-area net operating systems discussed by panel members, in addition to Locus and Novell, included a new version of Concurrent from Digital Research, Inc., Concurrent-DOS 286; and PC-NOS from Applied Intelligence of Mountain View, Calif.

E. Michael Loftus, marketing manager for Digital Research's System Software Division, said a redirector, or extender of the local-area net operating system, can provide network transparency to users.

Functions independently

The redirector "functions independently from the operating system," taking calls to the printer, disk drives and other devices and redirecting them to the proper place.

Through the redirector, incompatible equipment can be linked together on a local-area network and remain accessible to all users, he said.

Complete user transparency allows any user to tell as soon as he logs on the network the node in which he is operating and what network services he has, Loftus said.

Although they can be rigged to deal with a variety of devices, local-area net operating systems like Concurrent-DOS and Novell Netware are oriented to serving microcomputers and peripherals that use the IBM PC-DOS or MS-DOS operating systems, the spokesmen said.

OFFICE INTEGRATION IS FINALLY HEADED IN

There's a new road that leads to total office integration. Ours.

The NYNEX Business Information Systems route provides the best communications equipment with an alliance of the best suppliers of office equipment.

Data General, InteCom, Wang, GTE, General DataComm and TIE are already part of this alliance. And as authorized agents for New York Telephone and New England Telephone, we can give you one neatly integrated package by utilizing the latest networking technology.

With our proven expertise we'll design and deliver an integrated office system utilizing the best networking technology and the best equipment for all your information needs.

Our solutions go beyond those of any single manufacturer. And because we are not manufacturers, we are free to recommend

Hayes Microcomputer to endorse X.25, X.PC protocols

By Eric Bender
CW Staff

CHICAGO — Hayes Microcomputer Products, Inc. last week disclosed plans to support two additional communications protocols, the CCITT X.25 standard and Tymnet, Inc.'s X.PC, in future products.

Hayes, the leading supplier of microcomputer modems, will adopt X.PC for asynchronous communications and begin using X.25 as personal computer communications become synchronous, according to Gary Betty, Hayes marketing vice-president.

The move is designed "to overcome the confusion that exists over protocols," Betty said during an announcement at the National Computer Conference (NCC) held here last week.

Many firms have held off expanding their personal computer communications links because of uncertainty about which protocols they will be required to support, Betty added.

X.PC will provide improved error-checking capabilities, support for multiple-host sessions and other features that will prove crucial as transmission speeds increase and microcomputer communications become more critical to businesses, Betty said.

He also noted the widespread adoption of X.25 as an interface standard by most value-added network carriers.

Hayes examined several other widely used protocols that have been proposed as standards, including Microcom, Inc.'s Microcom Networking Protocol.

Path for future

Among the reasons for endorsing X.25 and X.PC, Hayes felt that the protocols "had to be in the public domain, had to be supportive of international standards, had to meet the needs of today's environment and had to provide a migration path for the future," Betty said.

Current Hayes products support the proprietary Hayes Verification protocol and the Xmodem protocol. Future software products reportedly will be compatible with all Hayes software based on those protocols.

Hayes will publish the specifications for its implementations of X.25 and X.PC, as it did for its modem command sets, which Betty asserted have become a de facto standard.

No delivery schedules for products incorporating the newly endorsed protocols were announced.

Additional information is available from Hayes through P.O. Box 105203, Norcross, Ga. 30348.

VDT-related angina found

SAN FRANCISCO — A study by the Computer Workers of America (CWA), a 650,000-member union, and the North Carolina Occupational Safety and Health Project, has found a correlation between working with a VDT and an increase in incidents of angina — chest pain that is often the first sign of heart disease.

The study sampled 1,000 telecommunications workers in North Carolina and found that 18% of VDT workers aged 30 to 39 experienced angina compared to a general average of 4%.

Other health problems cited by the study were increased eyestrain, musculoskeletal problems and increased stress.

The president of the CWA called upon the U.S. government to conduct more extensive research into the area of possible VDT health problems.

A CWA spokesman reported that the union plans to file a health hazard request with the Cincinnati offices of the National Institute for Occupational Safety and Health's Hazard Evaluation Services Branch.

THE RIGHT DIRECTION.

the best road to travel.

Naturally, we install, service and show you how to use your new system. All with the help of your NYNEX Advisor, who is backed by a team of experts from the fields of networking, voice and data communications, office automation, technical support, training, service and maintenance.

NYNEX Business Information Systems. It's your best direction for office integration.

Display top priority for laptop shoppers

OSCAR & ASSOCIATES, INC. PHOTO

Kelleher

By Edward Warner
CW Staff

CHICAGO — Those interested in buying a laptop portable personal computer are looking for three things: display, display and display.

That was the response offered by several National Computer Conference attendees interviewed by *Computerworld* on the show floor last week.

Robert D. Kelleher, manager of data center operations for Alberto-Culver Co. in Melrose Park, Ill.

"I'd love to have one in my office for my own purposes," Kelleher said.

As he spoke, Kelleher was examining the NEC Home Electronics, Inc. PC-8401A, a 4.7-lb machine with built-in Micropro International Corp. Wordstar software and an LCD. Kelleher said he had no problems viewing the screen but estimated that its 16-line display would not be as useful as the 25-line displays he is accustomed to using on his company's mainframe data terminals.

The quality, rather than the size, of the display of another laptop at the show, the Data General Corp. Data General/One, was an issue for some attendees.

William Lydon, manager of future product planning for Johnson Controls, Inc., in Milwaukee, Wis.

Lydon said that Johnson Controls had considered buying several DG/Ones and had even worked with a demonstrator model but found the machine's screen "didn't appear to be readable." The Hewlett-Packard Co. 110 laptop was unacceptable for the same reason, he added. "The desire [in the company] is to have laptops," Lydon said. "It's just a question of getting something usable."

Though Lydon said he found that the NEC PC-8401A's display "looks better than the [DG/One]," another visitor to the NEC booth said he couldn't "read it very well from here," as he stood an arm's length away.

August H. Blegen, executive director of the Association of Data Communications Users, located in New York.

Blegen said he had been considering the purchase of a laptop, but was holding off for at least a year until improvements in technology brought down the prices of laptops and improved their screens. Price is going to be important, he elaborated, because "people are going to have this [laptop] as an adjunct to something else," most likely a desktop computer. A good price, he added, would be about $1,000.

> *'The desire [in the company] is to have laptops. It's just a question of getting something usable.'*
>
> — William Lydon
> Johnson Controls, Inc.

Jesus Briso-Montiano Morel, general director of the Jobrimont computer dealership in Madrid.

Briso-Montiano, while looking over a Grid Systems Corp. Compass laptop, said he liked the machine's electroluminescent display but not its $3,450 price. "This particular machine is good but too expensive for Spain at the moment," he said.

S. M. Krzyzaniak, Cobol programmer with Natural Gas Pipeline in Lombard, Ill.

Krzyzaniak said screen resolution was the most important laptop feature for her needs. She said she was also concerned with a laptop's appearance.

"I don't like working weekends either, so just run the job and maybe we can both finish early!"

Inman urges investment of resources in technology

Information handling called critical to gains

By Clinton Wilder
CW Staff

Investment of human and financial resources in technological advancements is essential, both for economic growth and global stability. So said retired Adm. Bobby R. Inman in the keynote address of last week's 1985 National Computer Conference (NCC).

Inman, chairman and chief executive officer of Microelectronics and Computer Technology Corp. (MCC), called on major institutions in both the private and public sectors to spur investment in emerging technologies and to master the human talent to foster, manage and market them. He said corporations, universities and the federal government must emphasize innovation, long-term planning and partnerships among themselves and other nations in order to succeed in the remaining years of this century and beyond.

"Information handling has been at the heart of gains in every major area," Inman said, "and it will continue to be critical to all the gains that beckon ahead of us."

In addition, Inman said, postwar economic alliances among the U.S., Japan and Western Europe have been the critical factors in avoiding global military conflict for the past 40 years. Citing a "turbulent period of change in Soviet leadership" in the next several years, Inman said the world's economic and military balance of power may rest on U.S. economic cooperation with its allies.

'Most critical element of the future'

"A Soviet decision on whether to assert their conventional military power may rest on how they judge the cohesion of the Western alliances," Inman said. "How we hold those, and avoid trade wars and trade barriers, may be the most critical element of the future. The information-handling industry is at the cutting edge, not only for its own growth but for hope for a peaceful and stable world."

Inman sounded many such global themes in his remarks in the Arie Crown Theater at McCormick Place. He said a critical area for the future of the microelectronics field lies in the fast-growing economies of several Asian countries, including nations of the Pacific Basin and China. "In these nations, we face very tough new economic competitors but also see the creation of vast new markets," he said.

Inman specifically urged American industry to move ahead quickly in factory automation and to accelerate the process of converting research and development advances into marketable products. "The No. 1 priority for industry is to accommodate the accelerated pace of change," he said. "Far too little effort has been focused on manufacturing technology, especially in developing [an industrywide] systems approach."

Inman, former director of the National Security Agency and deputy director of the Central Intelligence Agency, said government must play a much greater role in technology advancement than it has to date.

Inman

He said existing public funds, for example, should be channeled from federal farm subsidies to programs to educate farmers about emerging agricultural technology.

He urged the Federal Reserve Board to create a "model financial transaction system for the 1990s" that could be made available to commercial banks. "The government must focus existing revenue on long-term problems," he said.

Inman called for reform of American education at every level and for retraining of displaced workers, both to prepare citizens better for a technology-oriented world.

Inman praised the current controversial effort in his native state of Texas to prohibit failing students from participating in athletics. "In the Southwest, one approaches the subject of interscholastic football with great trepidation," Inman said, drawing laughter from the audience.

"But we must change our attitude from one of keeping students happy to getting them prepared. Our No. 1 need is talented people, and investment in education at all levels is the most critical step toward meeting those needs."

Inman said that the current computer industry downturn is a cyclical phase and he remains optimistic for the future. "We are in a slump, but it is a slump in the rate of growth," he said. "As an industry matures, it is increasingly difficult for start-up companies to find niches, but there are 181 new companies [exhibiting] at NCC."

Office Automation:
Making the Pieces Fit

No other Conference provides you with everything you need to know to "Make the Pieces Fit".

There are many "pieces" to office automation, from personal computers to image management systems, and only by integrating these and other diverse technologies can Federal managers take full advantage of office automation to increase productivity. The 1985 Federal Office Automation Conference helps you meet this challenge.

- **Leading Speakers**–A roster of more than 100 outstanding speakers.
- **Leading Topics**–A wide-ranging program of seminars, sessions and workshops covering such hot topics as *"Linking Incompatible Systems"* and *"Analyzing OA Requirements."*
- **PLUS — Special Track for Federal Executives** A special two-day track for Federal executives featuring top industry spokespersons covering the benefits of various OA technologies.
- **PLUS— The Leading Exposition**–You'll see the latest in office automation equipment, systems and services from the leading suppliers at Washington's only exclusively OA Exposition.

Britton-Lee introduces server for office data sharing

By John Gallant
CW Staff

Britton-Lee, Inc. is slated today to extend its data base machine line into the office arena with the introduction of a relational data base server for a local-area network.

Scheduled to be unveiled at a press briefing this morning, Britton-Lee's Relational Server RS310 was designed to support data sharing in an office environment, a spokesman said. Compatible with the firm's existing high-end IDM 500 series data base machines, the RS310 utilizes a high-density 10-MHz data base processor and 1M byte of direct access memory.

The system reportedly will come equipped with up to 170M bytes of Winchester disk storage and a 60M-byte cartridge tape drive. With its Ethernet local-area net, the RS310 is said to act as a relational data server for an entire departmental net. The system offers the capability to process up to 10 simultaneous queries and can serve up to 50 network users.

Like Britton-Lee's other data base machines, the RS310 is said to operate simultaneously with computers from different manufacturers, allowing users on diverse processors to tap into a common data source. The RS310 is slated for general availability in the first quarter of next year and will be priced at $45,950.

At today's press briefing, Britton-Lee is also expected to announce Release 3 of its host data base machine software with support for eight different hardware and operating system environments. The host interfaces for Britton-Lee's processors include Digital Equipment Corp. VAX processors under VMS; University of California at Berkeley Unix 4.2; DEC's Ultrix implementation of Unix; AT&T Unix System V; IBM Personal Computers under Microsoft Corp.'s MS-DOS; and AT&T's 3B20, 3B5 and 3B2 under System V.

Release 3 of Host Software allows the Britton-Lee machines to attach to and support the above computers.

Britton-Lee is also slated to introduce a faster 10-MHz data base processor and a disk controller for its 500 series systems.

Britton-Lee is located at 14600 Winchester Blvd., Los Gatos, Calif. 95030.

Japanese defended

By Susan Blakeney
CW Staff

Shuji Masuda is fond of saying that when the U.S. economy sneezes, Japan catches a cold. After speaking with Masuda, one might get the impression that Japan is busily stockpiling its medicine cabinet with cold remedies.

Masuda, Hitachi America Ltd.'s manager of peripheral systems marketing department, was at the National Computer Conference this week. He used the occasion to dispel some of the negative coverage that Japanese companies have suffered in the U.S. press lately, to argue for better trade relations between the U.S. and Japan and to announce three Hitachi products: the MT310-X tape storage subsystem, called MT300-X; the OL301-2 optical disk library system; and the Intelligent Peripheral Interface-3 storage controller.

With respect to the present economic confrontations now plaguing Japanese and U.S. electronics companies, Masuda said the Japanese are trying to move as fast as they can.

"It's like a horse race. You don't have to be the top runner to be competitive — or to be rewarded."

As for allegations that Japanese firms are guilty of dumping their products in the U.S., he responded strongly by saying that the U.S. economy, and therefore its pricing, is artificially ma-

Our network can give your network the right connections.

Now there's an easy way to open your company's data network to new opportunities.

Connect your network to our network– the IBM Information Network. It's your connection to a number of computers—from small personal computers to large mainframes, both inside and outside your company.

And our network enables your company to do business in new ways, with new levels of sophistication.

Your Connection to Customers, Suppliers and Dealers

Through our network you can hook up to your customers, suppliers and dealers. And how will that benefit you?

One way might be a system of automatic reordering that could give all parties the advantages of leaner inventories and greatly reduced paperwork. You'll be able to coordinate on-demand delivery dates and production schedules. And to exchange drawings and technical specifications to speed the process.

Your Connection to Industry Networks

There are also cases where an industry benefits from the efficient exchange of information.

In the property and casualty insur-

Bridge unwraps communications tools for TCP/IP nets

By John Dix
CW Staff

Bridge Communications, Inc. introduced, at last week's National Computer Conference, communications servers and network gateways for Ethernet-type networks that use the Department of Defense's Transmission Control Protocol/Internet Protocol (TCP/IP).

TCP/IP, standardized for use by the DOD for defense networks, are higher-level protocols that provide net and transport services above the physical and data link protocols defined and used with Ethernet. The protocols are an integral part of the University of California at Berkeley's Unix 4.2 operating system.

The products include the following:

- The GS/3-IP, a gateway used to interconnect remote TCP/IP-based Ethernet networks.
- The CS/1-SNA-TCP/IP server, which enables hosts on a TCP/IP network and products with Bridge server interfaces to access IBM Systems Network Architecture (SNA) hosts over Ethernet.
- The CS/100-TCP/IP terminal server that connects up to 14 RS-232 devices to a TCP/IP-based Ethernet net.

These products reportedly complement Bridge's previously announced CS/1-TCP/IP server that supports from eight to 32 devices.

The GS/3-IP gateway enables up to eight TCP/IP-based Ethernets to be interconnected using dial-up or leased lines. Line speeds supported range from 1,200 to 64K bit/sec. Data transfer rates between Ethernets can reportedly reach 175K bit/sec.

The CS/1-SNA-TCP/IP was designed to enhance communications between engineering and traditional data processing shops, according to the vendor.

The server reportedly enables users of engineering workstations that support TCP/IP — such as Sun Microsystems, Inc. and Masscomp Co. equipment — to use Ethernet to establish a TTY window for IBM 3278 screen emulation.

This new SNA server is said to provide full network connection and the necessary protocol conversion, enabling terminals and personal computers on the network to emulate IBM 3278 displays. The protocol conversion function is reportedly provided on a port-contention basis.

Available immediately, the CS/100-TCP/IP costs $5,400 for a 14-port box, plus a $250 annual software fee. The CS/1-SNA-TCP/IP costs $13,000 and carries a $1,000 annual software license fee. The GS/3-IP will reportedly be available in October for $10,500 with a $250 yearly software license.

Bridge is located at 1345 Shorebird Way, Mountain View, Calif., 94043.

JAPAN

from page 18

nipulated. "[The U.S. government] is keeping the interest rates high, and it is keeping the exchange rate high. This hurts U.S. companies as well as Japanese firms that are doing 30% to 40% of their business overseas. It's to everyone's benefit that high U.S. interest rates and the foreign exchange imbalance be addressed very quickly."

In addition, he claimed that pricing products low enough to be successful in a market was not unfair if the prices remained low after the vendor had captured that market. "That is the real challenge to Japanese companies," he said.

Furthermore, Masuda contended that a truly competitive environment does not just mean pricing products strategically, but making the product superior in several ways: product performance, reliability, service and support, availability and uniqueness.

"If people come by our booth, they will see that Hitachi has good products. This undoes some of the bad image we've gotten lately," Masuda added.

ance industry, for example, the IBM Information Network improves communications between major underwriters and independent agents.

Your Connection to
Data Bases and Software

The IBM Information Network also makes other information and resources available.

These can include data bases such as Dow Jones News/Retrieval,* as well as access to software products for the business and data processing professional.

To give your network the right connections, use the coupon below. Or for literature, call 1 800 IBM-2468, Ext. 90/KZ.

WORLD DIGEST
CW International
News Network

RANGOON, Burma — One of Asia's least automated countries is taking a cautious step into the computer age with the installation of three superminicomputers at key government ministries. Until now, government users here have had to line up for scarce time on an old Model 1902S computer from the UK's International Computers Ltd. (ICL), reputedly the last of its kind in operation anywhere in the world.

This machine, located at Rangoon University, suffers frequent breakdowns and lacks spare parts, since ICL no longer makes parts for it. However, since 1971, the 1902S has been the mainstay of government computing here.

Still, Burma's leaders reportedly remain largely ignorant of computing and apprehensive as to its effects on this nation's rigidly planned and controlled economy. Computer imports have to be cleared individually at the cabinet level — it is estimated that there are just 10 minicomputers and 35 microcomputers in this country of 37 million people. Visitors arriving at Mingaladon Airport here carrying personal computers have them impounded by Burmese customs officials until they leave.

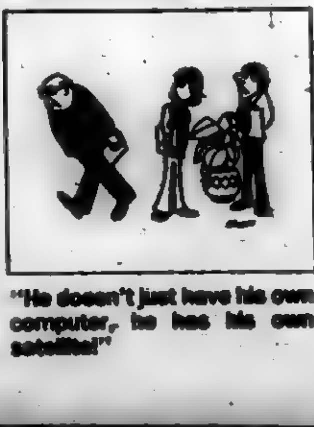
OTTAWA — Bell Northern Research (BNR) has announced the opening of a $3.5 million laboratory where prototypes of advanced circuits will be built. The lab is part of a $14.4 million project to develop the capability to produce gallium arsenide semiconductor circuits for high-speed logic and memory applications. Cost of the project is being split by BNR and the National Research Council of Canada.

Research will focus on optimizing the operational speed of gallium arsenide circuitry in communications systems while increasing the number of tasks the circuits can perform. Potential applications for the circuits include use in high-speed data processing systems and fiber-optic transmission systems.

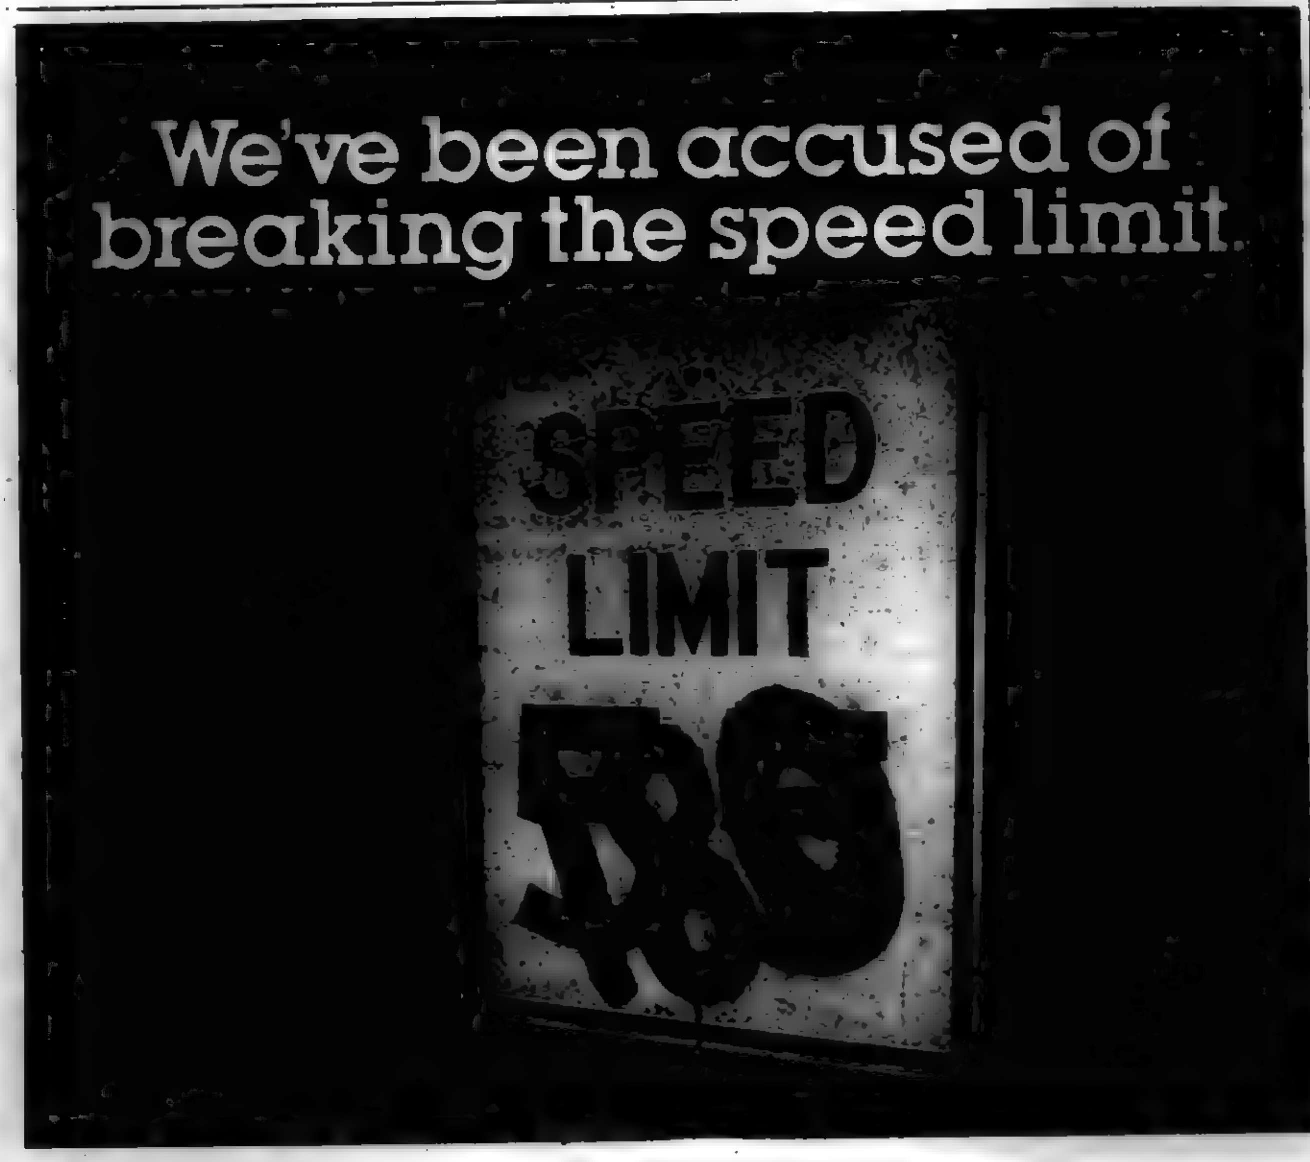
TOKYO — Sales of the top 10 computer manufacturers in Japan, including mainframe, mini and microcomputer makers, increased an average of 24% in 1984, according to *Computerworld Japan*. IBM Japan was bumped from second to third place in domestic sales by NEC Corp. Export sales grew more than domestic sales, and IBM Japan was the leading Japanese exporter.

BANGKOK, Thailand — The state-owned Krung Thai Bank, which serves rural areas of the country as well as the capital, will install approximately 250 automated teller machines nationwide over the next five years. The ATMs are leased machines bearing the label of N.V. Philips, a Dutch firm. The machines are made by Diebold, Inc. of the U.S. They will be linked to Philips PTS 6813 processors at six regional centers, which in turn will be hooked up to a Tandem Computers, Inc. Nonstop II configuration here, acting as a message switch. This decentralized network approach minimizes the number of expensive long-distance leased lines required, while permitting full interbranch communication.

BANGKOK, Thailand — In a surprise switch, long-time IBM stronghold Siam Commercial Bank has become the second bank in Thailand to buy Nixdorf Computer AG's automated teller machines, following the lead of Bank of Ayutthaya, which recently became the West German manufacturer's first Thai customer. The ATMs will be linked to a Nixdorf 8864 mini, which will act as a front-end to the bank's two IBM 4381s. The bank would not say how many of the Nixdorf terminals it will install.



"He doesn't just have his own computer, he has his own satellite!"



You Be The Judge.

Until now, if you wanted true letter quality printing, you needed a daisywheel printer. Then you waited and waited while it plugged along at speeds of about 55 cps.

Now the waiting is over. Because the Genicom 3320 dot matrix printer offers true letter quality printing at an incredible 160 cps. It's the fastest impact letter quality printer available.

And the Genicom 3320 offers full graphics capability...impossible with a daisywheel.

It also features up to 300 cps data processing, high throughput, heavy duty cycle printing, quiet operation, and Hex dump diagnostics.

Plus the 3320 comes standard with Diablo® 630 and IBM® PC Graphics protocols and works with most major PC software packages such as Lotus®, Wordstar 2000® and Multimate®.

Call our Toll Free number for all the evidence. You'll find Genicom has five other 3000 models for everything from color printing and bar codes to speeds up to 400 cps.

NEWS

SURVEY from page 1

tle change in this category over the previous year.

There were a few notable exceptions, however. As the rise in its users' overall satisfaction rating indicated, Harris appears to have made a remarkable turnaround during the past year. In the 1984 survey, only 57.14% of Harris users polled said their systems met expectations. This year, that percentage rose to 85.71%.

The news was not as rosy for McDonnell Douglas Corp.'s Microdata division and Sperry Corp. Both showed dramatic declines in the category, according to Datapro. In 1984, 91.03% of Microdata users polled said their systems fulfilled expectations. This year, that percentage slipped to 88%. In 1984, 81.96% of Sperry users polled said their systems lived up to expectations. This year, 74.29% said they did.

Datapro also asked the respondents to its 1985 minicomputer user survey whether they were willing to recommend their systems to others. Eighty-seven percent said they would. There were two exceptions to the generally positive response, however: Sperry's System 80 and Digital Equipment Corp.'s VAX-11/785.

According to Datapro, its survey disclosed that 65.71% of System 80 users responding were willing to recommend that system to others, while 14% said they would not. Twenty percent said they were undecided. Of VAX-11/785 users who responded, 63.64% said they would recommend their system, while 27.27% said they were undecided.

Three vendors were omitted from this year's Datapro survey. MAI/Basic Four, Inc. and MDS Qantel Corp. processors were not included because, according to Datapro, these vendors were not listed on at least five responses to its questionnaire, as the survey firm requires. A total of 9000 questionnaires were sent to minicomputer users. Motorola/Four Phase Systems, Inc. was also eliminated from this year's survey because, a spokesman said, Datapro felt Four-Phase was no longer a major contender in the minicomputer market.

The Datapro survey, "User Ratings of Computer Systems," costs $29 and is available from the company at 1805 Underwood Blvd., Delran, N.J. 08075.

DATAPRO RESEARCH CORP. CHARTS

CALENDAR

WEEK OF AUGUST 18

AUGUST 18-22, DALLAS — Systems Development: Information Modeling. Contact: Arthur Young & Co., Arthur Young Education Center, 1950 Roland Clarke Place, Reston, Va. 22091.

AUGUST 18-23, LOS ANGELES — The International Joint Conference on Artificial Intelligence. Contact: Claudia Mazzetti, American Association for Artificial Intelligence, 445 Burgess Drive, Menlo Park, Calif. 94025.

AUGUST 19-20, BOSTON — Data Communications II: Digital Communications Systems. Contact: Business Communications Review, 950 York Road, Hinsdale, Ill. 60521.

AUGUST 19-20, DETROIT — Information Centers: End User Computing. Contact: Software Institute of America, Inc., 8 Windsor St., Andover, Mass. 01810.

AUGUST 19-20, HASBROUCK HEIGHTS, N.J. — Unix/Xenix. Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 21-22 in Hartford, Conn.; Aug. 26-27 in St. Louis; and Aug. 28-29 in Philadelphia.

AUGUST 19-20, PORTLAND, ORE. — Principles of Prototyping. Contact: Association for Systems Management, 24587 Bagley Road, Cleveland, Ohio 44138. Also being held Aug. 22-23 in Calgary, Alta.

AUGUST 19-21, NEW YORK — SAS Computer Performance Evaluation Course. Contact: SAS Institute, Inc., Box 8000, SAS Circle, Cary, N.C. 27511.

AUGUST 19-21, NEW YORK — Telecommunications Management. Contact: Business Communications Review, 950 York Road, Hinsdale, Ill. 60521.

AUGUST 19-22, SAN ANTONIO — Vsam: Its Structure and How to Use It. Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Aug. 26-29 in Fort Lee and Los Angeles.

AUGUST 19-22, SAN FRANCISCO — Data Base Development Workshop. Contact: Elise Rabelais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2800 N. Loop W., Houston, Texas 77092.

AUGUST 19-23, PHILADELPHIA — Advanced Systems Analysis. Contact: Thomas J. Bisacquino, Director of Education, Association for Systems Management, 24587 Bagley Road, Cleveland, Ohio 44138.

AUGUST 20, NEW YORK — CICS/VS Application Design. Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Aug. 22, 27 and 29 in New York; and Aug. 26-29 in Denver.

AUGUST 20-22, NEW YORK — SAS Processing Course. Contact: SAS Institute, Inc., Box 8000, SAS Circle, Cary, N.C. 27511.

Two Reliable Systems

Nothing is more reliable than the predictable path of the solar system.

And nothing is more reliable than your LAN system using these GENERAL INSTRUMENT components.

X-2000 LAN Amplifier—the only mainstation that offers fully redundant two-way communication, as well as plug-in status monitoring in one amplifier. Redundant power packs assure continuous operation.

Status Monitoring System—continually tests every active LAN component from the headend. It provides instant reports on how the system is functioning and offers the capability to make changes in the system remotely.

Transverter Redundancy Switch—continuously tests the primary and back-up transverters. It instantly switches to the back-up, when needed, allowing continued data flow at all times.

Standby Power—the SPS-RS redundancy switch offers automatic switchover to a back-up system power supply. Or…the STPS standby power supply offers integral battery back-up.

Whether upgrading or developing a new LAN system, trust these General Instrument products to maximize your system's reliability.

For complete information on our expanding line of modem, distribution, and headend products for broadband local area networks, ask for our new LAN catalog.

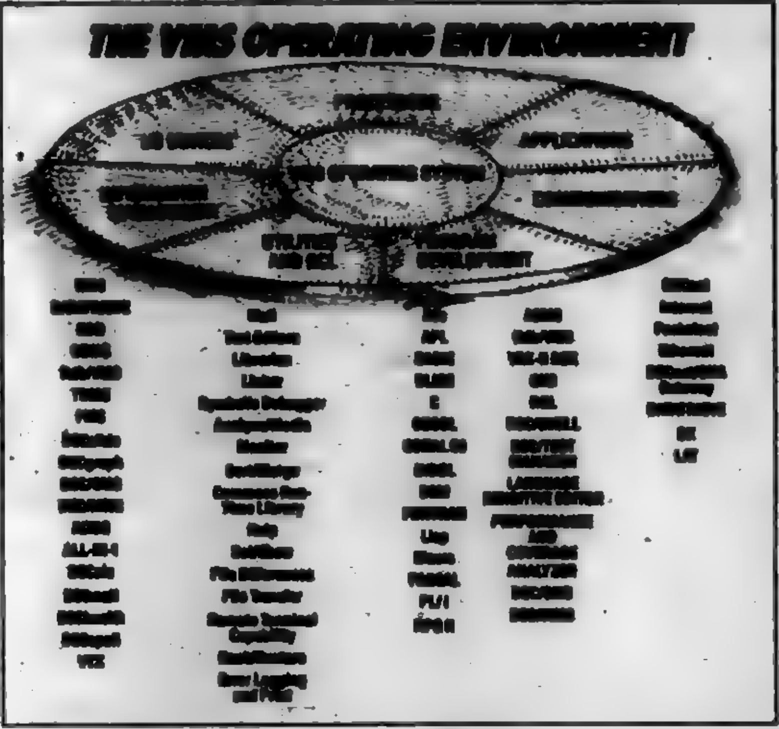
VMS. AN OPERATING SYSTEM THAT SIMPLY DOES MORE WORK.

In business, there's one sure way to measure the value of anything: by how much work it actually does. This standard applies equally to corporations, departments and individuals – as well as to the tools they work with.

When it comes down to getting things done, Digital's VMS™ Virtual Memory System software towers above the rest. VMS software was designed exclusively with Digital's VAX™ computer family – the industry's widest range of compatible systems. That's why more real work, more applications development has been done with VMS software than with any other software.

VMS software does more work because it gives you more to work with. It's not just an operating system; it's a complete operating *environment.*



THE VMS OPERATING ENVIRONMENT

OUR OPERATING ENVIRONMENT SPANS YOUR BUSINESS ENVIRONMENT.

The VMS operating environment is a perfect representative of Digital's style of computing. It lets you meet a universe of needs with a single investment.

VMS software lets you expand and distribute your solutions along the biggest software-compatible growth path in the world. You can move your applications among the VAX family, from the smallest MicroVAX™ systems to the largest VAX 8600 and VAXcluster™ systems – without ever having to rewrite or modify your code.

Within the VMS operating environment, you can handle just about every type of application your organization will ever need. This goes far beyond realtime applications for the factory floor. It extends to a vast selection of interactive applications for all your professional, administrative and executive personnel.

The VMS environment can handle all your office automation needs. Our query language gives your users the power to access databases, generate reports, and even create applications prototypes on their own. There's a variety of software for decision support. Plus software for forms management and business graphics. And it's all available to your users now.

VMS PUTS PROGRAMMER PRODUCTIVITY ON A HIGHER LEVEL.

Our VMS software is a programming productivity tool without peer in the industry today. It gives your programmers the freedom to do their best.

First of all, the VMS environment gives you a choice of 16 advanced languages – more than any other system marketed today. And through the common calling standard, you can combine different languages within the same program.

What's more, it gives you the industry's most complete set of utilities and software products for system management and program development. Which not only helps you write new programs faster. It also cuts the time you need to spend on program maintenance by a substantial margin. So it's no wonder our VMS software is the development environment programmers prefer most.

WITH VMS, YOU CAN START FRESH WITHOUT STARTING OVER.

When you bring the VMS operating environment into your shop, you won't have to start everything over from scratch. We designed it to complement your current investments – including IBM systems. Specifically, you can exchange data files between VAX systems and other vendors' systems. A vast selection of protocols – including SNA – makes this easy to do.

If you need UNIX® software capabilities as well, the VMS environment can readily provide them through the VNX™ option.

You won't have to worry about compromising your systems and data security when you use VMS software to distribute information company-wide, either. We've designed VMS software to include some of the most effective measures in the industry. This protection even goes beyond VMS software because it's based on privileges enforced through VAX system architecture.

So consider the advantages. Right now, you are being measured by the quality and volume of the work you and your staff produce. Don't you want the best environment in the world to produce it with?

BEST ENGINEERED MEANS ENGINEERED TO A PLAN.

Digital's VMS operating environment, like all Digital hardware and software products, is engineered to conform to an overall computing strategy. This means that our systems are engineered to work together easily and expand economically. Only Digital provides you with a single, integrated computing strategy direct from desktop to data center.

For more information about how you can benefit from our VMS operating environment, contact your local Digital sales representative. Or call 1-800-DIGITAL, ext. 219.

THE BEST ENGINEERED COMPUTERS IN THE WORLD.

EDITORIAL

Whale watching

Call me Ishmael.

I'm vice-president of marketing with a major mainframe applications software vendor. For the past few years, I've spent more time than I care to total, grappling with this great white whale known to people everywhere as the "Major Computer Trade Show."

National Computer Conference, Comdex — whatever their proper names, they are big and buoyant. I have enjoyed the hunt, but now I hear dire warnings that the breed may be nearing extinction.

The demise of the major computer trade show has been predicted at least since the Houston Horrors of 1983 and the time when Comdex became a bigger Las Vegas draw than Liberace. When things become large and powerful, people tend to enjoy taking easy shots at them, which helps explain pursuits such as whale hunting or the moose season in New Hampshire.

Frankly, the computer industry should be little alarmed and marginally concerned by the fact that the erstwhile trade show titans no longer draw the numbers of exhibitors they once did. It is a sign of industry maturity and enhanced user sophistication that both forces are responding to real problems with real solutions by using the trade show medium to advance the information management revolution.

Some vendors see a horizontal show like NCC or Comdex as a perfect vehicle for dealing with OEMs, value-added resellers and retailers with multiple-product needs; others prefer the vertical technology- or application-focused shows, having come to grips with the ego-bruising reality that not every computer-related product is ideal for every business computer user.

Maturity and sophistication can be as becoming to technologies as to people. I was in Chicago for NCC last week. I came back with some meat and some blubber. Exhibitor ranks were reduced.

Maybe they were, compared to the halcyon years of 1983 and 1984. But compared with those days, *everything* about the computer industry is now subdued. This NCC was good for some vendors, not good for others. Next year, the latter may go somewhere else, or go nowhere at all.

One of the appealing facets of the computer industry is its absence from arbitrary (read: government) restraints and its quicksilver response to freewheeling market forces — just as whale hunters respond instantaneously to forces of nature.

So, call me Ishmael. Or maybe Pollyanna?

Roadblocks to relational DBMS

In the article, "Symposium panel fields DBMS questions," [CW, June 24] its author, George Schussel, attributed to me the statement that "born-again" DBMS, including IDMS/R, Datacom DB and TIS are *not relational*. As a report of what I said, this is largely incorrect.

I stated that the present release of Cullinet Software, Inc.'s IDMS/R is not relational, but I did not make any such description of Applied Data Research, Inc.'s (ADR) Datacom DB or of Cincom Systems, Inc.'s TIS or of born-again DBMS in general.

What I did say about the born-again DBMS was that, so long as they continue to allow data base access via their lower level languages, there would be a serious problem: Users of these lower level languages would be able to subvert many integrity constraints specified in the higher level relational languages.

This means that ADR's combination of Ideal and Datacom DB or Cincom's TIS cannot become fully relational unless and until the vendors of these products solve the integrity subversion problem in addition to supporting any functions from the relational model not yet implemented.

The assertion that many of these points are only of academic interest reminds me of nontechnical criticisms of earlier years, especially the one: "The relational model is a religion." Such criticisms are usually made by people who have little or no understanding of the relational model.

Computerworld is a member of the CW Communications/Inc. group, the world's largest publisher of computer-related information. The group publishes 58 computer publications in more than 20 major countries. Nine million people read one or more of the group's publications each month. Members of the group include: Argentina's *Computerworld/Argentina*; Asia's *The Asian Computerworld*; Australia's *Computerworld Australia, Australian PC World* and *Macworld*; Brazil's *DataNews, MicroMundo,* and *PC Mundo*; China's *China Computerworld*; Denmark's *Computerworld/Danmark, PC World* and *Run (Commodore)*; Finland's *Mikro*; France's *Le Monde Informatique, Golden (Apple), OPC (IBM)* and *Distributique*; Germany's *Computerwoche, Microcomputerwelt, PC Welt, Softwaremarkt, CW Edition/Seminar, Computer Business, Run* and *Apple's*; Italy's *Computerworld Italia* and *PC Magazine*; Japan's *Computerworld Japan*; Mexico's *Computerworld/Mexico* and *Compumundo*; The Netherland's *Computerworld Benelux* and *PC World Benelux*; Norway's *Computerworld Norge* and *PC Mikrodata*; Saudi Arabia's *Saudi Computerworld*; Spain's *Computerworld Espana, PC World* and *Commodore World*; Sweden's *ComputerSweden, Mikrodatorn,* and *Svenska PC*; the UK's *Computer Management, Computer News, PC Business World* and *Computer Business Europe*; Venezuela's *Computerworld Venezuela*; the U.S. *Computerworld, Hot CoCo, inCider, Infoworld, MacWorld, Micro Marketworld, PC World, Run, 73 Magazine, 80 Micro, Focus Publications* and *On Communications*.

VIEWPOINT

Resting on the laurels of American technology

LECHT ON SCIENCE
Charles P. Lecht

I had begged off accompanying my friends through the American Pavilion at Japan's International Exposition at Tsukuba (Tsukuba Expo '85) by saying that I had already toured it on several occasions, was tired and would prefer to wait out their visit at a nearby coffee shop. While all this was indeed true, I did not tell them that the main reason for my reluctance to revisit our national pavilion was that I find the exhibit depressing. The picture of American science that it presents, in comparison with what can be found elsewhere at the fair, is more Stone Age than Space Age.

Tsukuba Expo '85 is a fair dedicated to help further understanding of the benefits brought to humanity by today's scientific achievements. It is also an expression of our hopes and aspirations for what these benefits might bring to tomorrow's world.

The expo's theme is "Dwellings and Surroundings — Science and Technology for Man at Home," and its participants include more than 47 foreign countries, 37 international organizations and 28 domestic (Japanese) corporations. The exhibits sprawl over 252 acres, making it the largest science fair of its kind.

During the expo's first four weeks, four million people visited the fairgrounds — indicating that the forecasted attendance of 20 million is certain to be exceeded before the show closes in mid-September. The expected attendance at the U.S. pavilion is sure to exceed five million, and I wouldn't be surprised if it approached 10 million — most visitors are intensely curious as to what the country that put a man on the moon is up to these days.

Before I first visited the fair, I was certain that our national pavilion would be the finest one there. In view of our yelling "foul" at Japan over its international trade practices in computer and communications systems, could there be any doubt that we'd do anything less than our best to win a gold medal at a scientific olympics and thus substantiate our case in front of the world scientific community? Tsukuba Expo '85 presented an excellent opportunity for America to put on a high-quality performance to help prove its case.

So what did we do? We created a pavilion that is so awful that one foreign friend suggested that it appeared to be the "child of an American-hating saboteur bent on destroying our world-renown space-age scientific image. The outer pavilion is a tent-like structure whose message is a dedication to days of yore and gore when men proved their masculinity by bashing each other, and damsels had ample cause to be in distress."

But, if the exterior of our national pavilion is sad, what's inside is enough to make a patriotic citizen weep.

In addition to official government showpiece exhibitions, presumably sponsored by the U.S. Department of Commerce, it houses a cluster of American corporate exhibits from the likes of Dupont Co., Polaroid Corp., Texas Instruments, Inc., Digital Equipment Corp. and Thompson Ramo-Woolridge, to name a few of the 40 U.S. companies said to have supported our pavilion.

Yuppies on vacation

Manned by what appears to be yuppies on vacation, the exhibits are laid out in a manner reminiscent of Tokyo's Akihabara [CW, May 13 and May 27]. They are strewn about as though our pavilion's planners hadn't been given a hint that they were creating a space-age science show dedicated to the future.

Consequently, the designers have created a disorganized, tasteless mess of scientific paraphenalia, some of which may qualify for space-age antiquity (circa 1960). Adding insult to injury, some are annotated by claims to their invention by a bearded bevy of dead Nobel Prize laureats — indeed, the pavilion sports a touch-sensitive monitor dedicated to the lives and works of America's 133, which would have been great had Expo '85 been a historical event.

After promising a journey through the world's foremost achievements in artificial intelligence, the exhibits — amazingly — take visitors back in time so that they may learn of American contributions to the origins of this important science without suggesting what it may hold for the future. Missing is any kind of solid statement about the future of robotics, medicine, agriculture, energy and so on as found in the Japanese government's pavilion. Posters and jazzy displays featuring photographs and ill-conceived graphics surround an occasional hard-wired push-the-button-and-watch-the-lights diagram similar to what one might expect at a high school science fair.

Show is mindless

The 12-minute show, titled "To think" is mindless. Our pavilion offers a sorry statement of accomplishments in science in a world enjoying a scientific renaissance brought about by American ingenuity. Not that it says *nothing*, but when a country is supposedly No. 1, the public rightly expects something more.

My biggest fear is that, in the absence of anything as substantial in our national pavilion, visitors may wonder whether America's competitiveness hasn't been replaced by a contentment to rest on our laurels.

Whether we've been so busy yelling "foul" at any and every nation that's out there hustling, we seem not to have taken the time to notice that other nations may be making real progress in science and may well be catching up. The U.S. will have to do much better than it has done at Tsukuba Expo' 85 next time around, or we'll give foreign competitors a big assist by sending potential customers elsewhere.

I sit awaiting my friends. On their arrival, I know that I am not alone in my feelings. They express their own dismay by saying, "We now know why you begged off. The show was senseless, and the sole American robot in it was out to lunch."

Lecht is chairman of Lecht Sciences, Inc., a New York-based think tank specializing in computer and communications technologies.

Certification: a gauge for computer professionals?

READER'S PLATFORM
Robert R. Cromer

With so many corporations and DP shops reporting positive experience with certified computer professionals during the past few years, it's about time for the antiprofessionalism faction to have its say.

Especially remarkable is the claim that certification does not even make the list when hiring entry-level people. In fact, there is no such thing as an entry-level certified data processor or computer programmer.

As for other negative attitudes reported by researchers, any of those interviewed may have — with or without their knowledge — had contact with "closet" certified data processors or computer programmers within their organizations.

One of the best-kept secrets within the computer information systems community is the plethora of tales told about erstwhile competent, productive staff members suddenly becoming incompetent upon discovery of their certification. The only change was knowledge of an individual's status by coworkers and supervisors.

Home-grown testing

With regard to implications that an organization's home-grown testing better indicates an applicant's potential productivity within the shop than does industry certification, the claim may be correct — if the search is for technical specialists rather than for knowledgeable professionals.

From the availability viewpoint, "fast-fingered Franks and Frankies" outnumber practicing certified professionals by 95 to one.

The purpose of the Institute for the Certification of Computer Professionals (ICCP) continues to identify those individuals who are truly knowledgeable, responsible and professional. In support of this purpose — and consistent with its character — the Data Processing Management Association Special Interest Group for Certified Data Processors produces a complete, knowledge-based, review course package.

Used by colleges and universities, corporations and local ICCP chapters, the "Uniform Review Course" material is consistent with the knowledge level of certified data processor candidates with a master's degree in MIS. Remarks from those who present the review course "in the field" suggest that even certified data processor candidates who find themselves unsuccessful in the certification effort claim greater respect for the breadth and depth of the subject covered in the review and tested in the exam.

For companies and individuals — whose hiring practices continue to discriminate against certified computer professionals — the self-fulfilling prophecy will continue. They are unlikely to encounter many resumes that identify the applicant as a certificate holder and are unlikely to discover a certified data processor or computer programmer within the organization until just before or after the certificate holder's departure. Such is the case where an inability — or unwillingness — to distinguish between technician and professional persists.

Advertisements with disclaimers

I suggest that organizations that choose to avoid interviewing or employing industry-certified computer professionals do so by qualifying their recruitment specifications and advertisements with the disclaimer: "Industry certification not recognized here." In fact, I urge such a practice for organizations whose internal and public financial policies and practices may be in conflict with public perceptions of privacy or with the law.

Because of the certificate holders' ethical and legal obligations, they are automatically placed in jeopardy when employed by organizations whose policies and practices cannot tolerate close scrutiny.

For those organizations seeking to employ the best-qualified, professional people — and for those that wish to include certifed computer professionals — I suggest that properly identify themselves in recruitment specifications and advertising. ‡

Cromer is the education director for the Data Processing Management Association Special Interest Group for Certified Data Processors.

DP employers on the wrong track with job histories

READER'S PLATFORM
John Callahan

A major factor that potential employers rely upon is an applicant's job history — labeled most often as the track record. The very term denotes a race that can be objectively evaluated as though one were racing a measured distance, being checked at various checkpoints against a stopwatch.

This a false concept. Applicants are not animals in a race nor are they runners in a track meet. Yet these false analogies carry over into the working world where they prevail as accepted standards. Falsely premised, however, are the assumptions of that standard.

Just as machines, sprinters and racehorses can be measured against a clock, so, too, people are measured by their work histories against some kind of clock.

Those applicants who have reached a certain job level within a certain time frame are considered to be the winners — and all companies want winners. Those who have failed to attain the proper level within the time frame are the losers. The company management would never consider interviewing people like that, let alone hire them.

Never mind that many companies today are in deep financial trouble facing the prospects of bankruptcy. Yes, just continue to ignore the mass evidence in DP, showing that DP is for the most part in a sorry state in spite of all the super technology changes pouring from the pipelines.

All this sends out a clear message that even the most die-hard theorists arguing in behalf of the track record cannot hide from this evidence: There are serious troubles in data processing in U.S. industry, and the track record as a tool has failed to accomplish the job attributed to it.

In spite of these repeated failures to identify potential employees, personnel department managers and DP department managers cling to this sacred track record tool.

As a result, the job track record has become enshrined as the major tool for selecting applicants for interviews. It is not difficult to assume that the track record also weighs heavily in the final choice of applicants. So, it has a dual function that compounds the extent of the false premises upon which the track record is founded.

It is a false assumption that top performers can readily find new jobs. Therefore, any applicant who has been unemployed for any extended period is not a top performer, hence not a suitable applicant.

There is a gross failure to recognize that even top performers will work only when economic conditions are favorable. These people must also undertake extensive job searches.

There is the failure to recognize that even top performers are sought out only when there is an existing need by companies for their services. Jobs do not just drop into the applicants' laps. Job searches are the rule — yes, even in data processing — and especially if the applicant is seeking a higher level job.

> 77
>
> *There is a serious flaw in the assumption that a person with many job changes is an unstable employee.*

There is a serious flaw in the assumption that a person with many job changes is an unstable employee.

No track record will ever reveal the factors that motivate an applicant. Job histories do not allow applicants to express what they strongly liked or disliked about particular jobs, nor do they give any indication of the kinds of tasks the applicant enjoys.

DP is a first target for budget reductions. It should not be surprising that unexpected job changes occur within an industry marked with high instability.

Isn't it time to take a hard look at the use of the track record as a major basis for applicant selection? Isn't it time to relegate this tool to an ancillary aid to help balance out applicant selections?

Why not use other means to gather information for applicant evaluation, such as a possible questionnaire that could be mailed to applicants to glean a fuller and clearer picture before meeting with them? Such a questionnaire could identify job tasks and environmental and managerial factors that are strong motivators for an applicant.

If improved conditions in hiring, job stability and productivity are desired, then new means need to be developed to relegate the track record method to its proper ancillary role. It is time to dethrone it and its overbearing importance.

Callahan is an Arlington, Texas-based DP consultant.

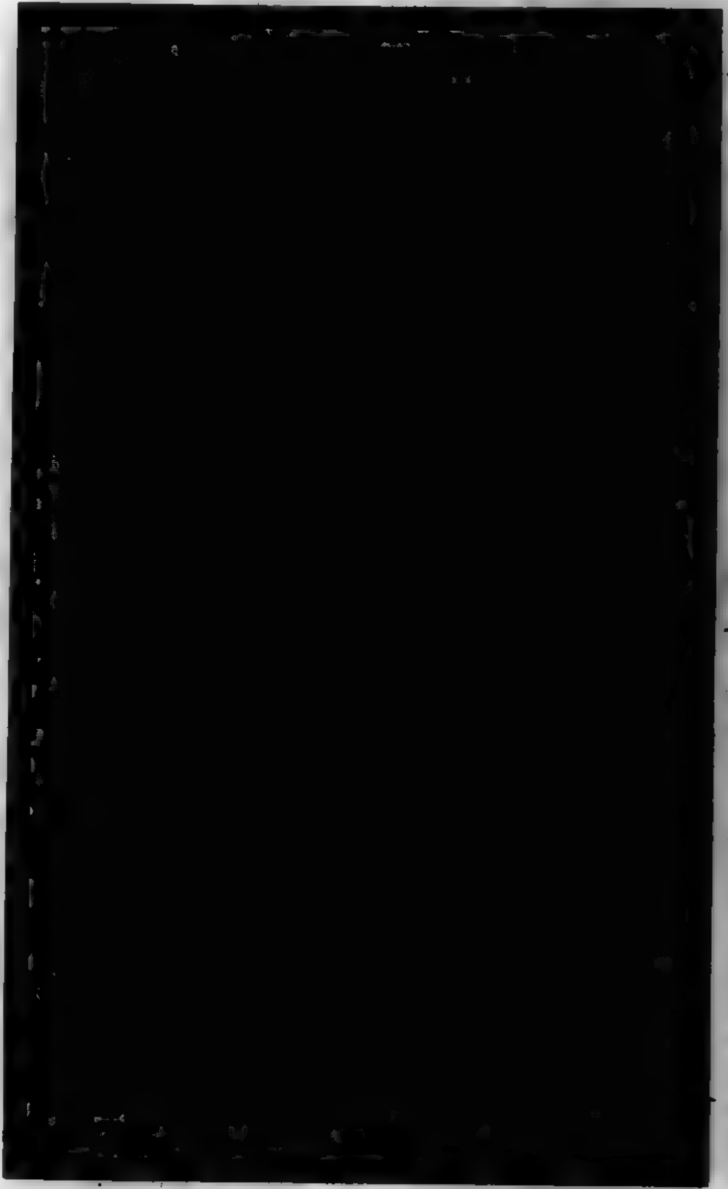
Box 70, Douglas, Isle of Man, (851) 628356

The time has come for straight talk about database management systems.

"The only reason to buy a database management system is to build better applications."



Throughout the history of the software industry, proponents of one database architecture after another have promoted their respective systems as the sole solution to a company's application backlog problem.

The early debate centered on hierarchical versus network architecture. Advocates of inverted file entered the argument in the 70's. And today, relational is the architecture of choice.

While this discussion about architecture is interesting, it's just not the issue.

Database management systems, beginning with the very first, were created to do one thing and one thing only—they were created to build better applications. *Building applications—efficient, online applications, faster, with fewer people—is the only real issue.*

Today corporations have a huge backlog to contend with. And the applications they need to develop have different characteristics. Some may be retrieval only. Some may be heavy on update. Some will run the company, and will require professional development. Some can be created by end users to satisfy their own needs.

It is extremely important to have a database management system that can handle all applications. *It is essential* that a database include tools rich and comprehensive enough to accommodate both the professional developer and the end user. It's the richness and power of these tools that's critical to the successful implementation of highly responsive fourth generation applications. What's demanded, in fact, is software that goes a *step beyond* today's conventional relational database systems.

With a comprehensive database management system and the appropriate tools like the kind I'm talking about, you'll make the data processing department a *strategic asset* instead of corporate overhead. You will make your company succeed in a highly competitive world.

In Cullinet's new Annual Report, Presidents and CEO's of major corporations speak about the positive impact Cullinet has had on their operations. For a copy that you might like to read and pass along to your company president, write to me. I'll see that you get one.

J J Cullinane

John J. Cullinane
Chairman of the Board

© [illegible] Cullinet Software, Inc., Westwood, MA [illegible]

The only database management system worth buying is one that meets these six requirements.

Stated simply, IDMS/R is a step beyond today's conventional relational DBMS because it meets these key requirements for building successful applications.

1. MIS Application Development Facilities

The application development system required to build high performance production applications requires more than a fourth generation language. Cullinet's ADS/OnLine is a comprehensive application development environment for the MIS professional combining fourth generation language with a menu-driven modular development approach. Integrated with the data dictionary, this minimizes not just the programming but the entire design, development and documentation of an application. Furthermore, this approach produces a dramatic reduction in maintenance and support.

2. End-User Application Development Facilities

Because Cullinet recognizes the difference between production and end-user applications, as well as the need for both to share common data, we provide an easy to use end-user oriented development and inquiry system. The Automatic System Facility of IDMS/R is a non-procedural, menu-driven tool designed for end-users. Once data tables are defined, an application is automatically generated. The query facility of IDMS/R provides menu-driven query capability and full online help, so end-users can build working applications in minutes and get reports easily and efficiently.

3. Relational Architecture

IDMS/R allows for the definition of databases using the relational data model. Data tables and associated user views are easily defined online. Additionally, any number of key fields may be defined. IDMS/R also supports advanced relational features including referential integrity and domain definition. This architecture provides the capability to address all application requirements.

4. High Performance Database and Application Tuning Facilities

IDMS/R is a full multi-tasking, multi-threaded system providing for concurrent processing of on-line and batch, update and retrieval applications. Additionally, tuning facilities provide efficient indexing techniques, space management, page management, and buffer management. No conventional relational DBMS has these capabilities.

5. Dictionary Driven DBMS

Data integrity and data independence are essential in a DBMS environment. The dictionary actively controls the source and use of all data. Data definitions, data validation criteria, data formats and security are all defined within the dictionary and exist only once, eliminating redundancy and ensuring integrity. This information is then automatically used throughout the system. Examples of the functionality of this facility include never needing to define output formats for query; never needing to define field attributes for screens; never needing to code validation and editing criteria when using ADS/OnLine. Only IDMS/R provides this level of dictionary integration.

6. Open System Architecture

With the unique Open System Architecture of IDMS/R you can maximize your investment in existing software. IDMS/R accepts data from outside the database environment with direct access to VSAM files. In addition, applications written to access other databases like IMS, DL/1, TOTAL, or VSAM can directly access IDMS/R without modification. IDMS/R is designed to work in virtually all IBM mainframe operating systems and teleprocessing monitor environments.

IDMS/R: More than a relational DBMS

To compile or not to compile? IBM now agrees with Cincom.

It's the age-old question in application development.

Is it better to have the many advantages of interactive, flexible, compile-free application development? Or do you sacrifice these valuable benefits for the sake of a perceived performance improvement?

At Cincom, we don't think you can afford the sacrifice. That's why we developed MANTIS®, our industry-acclaimed, interactive interpretive application development system.

Released in 1981, MANTIS provides invaluable application development support that compiler technologies simply can't match. Powerful end-user prototyping capabilities. Interactive end-user involvement during development. The ability to make changes quickly and easily—without great expense.

Now, with their most recent release of (and obvious commitment to) the compile-free Cross System Product, another software vendor appears to agree. IBM.

To which we say, "Congratulations, IBM."

Because IBM now acknowledges what Cincom has been saying all along—interactive interpretive technology is the right way to go.

And MANTIS is the right way to go in interpretive technology.

A key component in our TIS™ family of application development and information control systems for business, MANTIS truly is the industry's premier application development technology. Just ask our 1,800+ satisfied MANTIS customers around the world.

So call Cincom today. Now that IBM is finally endorsing interactive interpretive technology, we're sure you'll want to learn more about the power and performance of MANTIS—the leader in interactive interpretive application development.

After all, now that IBM is on our side, how can you go wrong?

Cincom Systems

A world of experience for today's business world.

SOFTWARE & SERVICES

Flexibility key to Bendix' HRMS

By Mitch Betts
CW Washington Bureau

ARLINGTON, Va. — Bendix Aerospace, a unit of Allied Corp., recently developed a human resource management system (HRMS) that puts report generation in the hands of personnel officers, rather than in those of the MIS department.

"We wanted flexibility, and we wanted to enhance the productivity of our personnel people," explained Janie S. Tremlett, manager of human resource systems, in a recent interview here. Consequently, the HRMS is designed to permit the human resource unit's 130 users to create routine and ad hoc reports from the data base.

"This way, you don't have to spend your whole life negotiating between the MIS department and users on a report," Tremlett said.

About three years ago, Bendix Aerospace realized it needed to modernize its 15-year-old, batch-oriented personnel system and began to transform it into an on-line system, Tremlett said. The new HRMS, she said, has three major components:

Tremlett

- The personnel management system and benefit plan administration system software from San Francisco-based Tesseract Corp., both of which are on-line, interactive systems that allow users to input, update and access data through customized screens.
- An in-house report library that consists of programs used to produce major administrative reports.
- A facility for ad hoc queries based on Intellect, the natural language query software from Artificial Intelligence Corp. of Waltham, Mass.

Each of the systems has its own security facilities, Tremlett noted, so users have separate passwords for each system. Tremlett said she requires password changes every 30 days, monitors activity logs and emphasizes security in training sessions and user manuals.

Ron Armstrong, MIS project manager at Bendix Aerospace, praised the Tesseract software for its fast response time. He said response time is between one and three seconds for most searches through the data base of approximately 250,000 records. "It's the most efficient system I've ever seen," Armstrong said of Tesseract.

Armstrong said the Tesseract screens organize information in a logical way, so that all insurance data is presented on one screen, for example.

Tremlett and Armstrong said the company is moving toward a paperless human resource system. The ease-of-use features of Tesseract have helped to wean personnel officers from their traditional paper forms, they said. In addition, the natural language query features of Intellect make the data base more manageable and accessible to novice users.

The HRMS runs on an IBM 3081 mainframe at a data center in Teterboro, N.J., with the CICS teleprocessing monitor and Cullinet Software, Inc.'s IDMS data base management system, according to Armstrong. He added that the Teterboro center

Slump moves to software

SOFTALK
John Gallant
CW Senior Editor

Like a rumor of war, the computer industry slump has finally reached the software heartland.

Accustomed to annual revenue and profit growth in the range of 35% to 50%, software manufacturers are now moderating their optimistic estimates for the year and steeling themselves to deal with delayed — if not canceled — sales and reduced revenues.

How closely early-quarter shortfalls experienced by such companies as Management Science America, Inc. and Applied Data Research, Inc. are tied to the slump remains to be seen. The software industry is prone to first- and second-quarter doldrums, but any additional problems caused by the slowdown put extra pressure on vendors to make up lost ground at year's end.

Fortunately, software makers have not had to resort to the severe cost-cutting steps many of their hardware counterparts have already taken. Indeed, there is little evidence thus far that software companies will need to do anything more drastic than tighten their belts for the leaner, though far from desperate, days ahead.

The past months have been euphoric ones for software mak-

Wouldn't it be nice to have a couple more terminals on your desk?

You could eliminate the inconvenience, lost productivity, and system overhead associated with logging off and on to different applications!

BIMWNDOW permits multiple terminal sessions to be active concurrently at the same physical 3270 CRT, under DOS or OS VTAM. The user may switch back and forth instantly between the terminal sessions by hitting a PA or PF key. The terminal sessions may be in the same or in different VTAM-connected partitions/regions. For example, one session might be logged on to a CICS partition or to TSO to do program editing, and another session connected to a test CICS to test the application program being developed.

Call for full documentation or free 30-day trial.

Price: OS — $3600 or $180/mo., DOS — $2400 or $120/mo.

Notes from the software industry front

Software International Corp., in conjunction with General Electric Credit Corp., is providing financing assistance to customers looking to purchase its mainframe and minicomputer applications, including the recently announced Masterpiece series [CW, July 1].

Through GE Credit, Software International will extend credit to help buyers finance their software acquisitions. Andover, Mass.-based Software International is a subsidiary of General Electric Software Products Co.

■

Digital Equipment Corp. of Maynard, Mass., and Information Builders, Inc. have penned a cooperative marketing agreement for the newly unveiled VAX version of N.Y.-based Information Builder's Focus fourth-generation language. The companies will conduct joint product seminars, cooperate in trade show activities and develop joint marketing support materials.

■

Pansophic Systems, Inc. of Oak Brook, Ill., will be investing more than $1 million in Schonfeld & Associates, Inc. and will expand the marketing of that company's Ingot decision support system, which runs on a variety of mainframes and minis. For its role in the joint marketing and financial agreement with Evanston, Ill.-based Schonfeld & Associates, Pansophic has received an option to acquire certain assets of the company, including the Ingot product line.

■

In recent weeks, Wang Laboratories, Inc. of Lowell, Mass., and Nashua, N.H.-based BKW, Inc. have inked two agreements. One is a development pact that calls for BKW to design a series of "banking-related software communications products." The second is a joint marketing agreement that enables Wang to sell BKW's software to banks using Wang hardware.

■

McLean, Va.-based Verdix Corp. and Intellimac, Inc. signed an agreement that allows Rockville, Md.-based Intellimac to acquire the source code of the Verdix Ada Development System. Intellimac plans to host and target the Verdix product on both its commercial Ada development processors and its Milspec multiprocessor computers.

■

Motorola/Four Phase Systems, Inc., a Cupertino, Calif.-based subsidiary of Motorola, Inc., will be marketing and distributing Software Research Corp.'s Documpower network software for Four Phase office equipment. The Four Phase version of Natick, Mass.-based Software Research's software will be marketed under the name of Transtext.

■

Two units of the Schlumberger Computer-Aided Systems Group, Applicon and Factron, will begin marketing HHB Softron's design evaluation software. Applicon will market HHB Softron's Cadat logic and fault simulation software with its Applicon Bravo very large-scale integrated circuit and Bravo printed-circuit board computer-aided design, engineering and manufacturing systems. Factron will market Cadat as part of its Automated Test Program Generation facility for its line of circuit board testers.

"It keeps saying it's shut down in honor of Einstein's birthday."

SOFTWARE & SERVICES

Tool identifies potential buyers from mailing list

WOBURN, Mass. — Persoft, Inc. has announced More, an expert system direct marketing tool that identifies potential customers from mailing lists. The package runs in IBM MVS and DOS environments.

Designed for direct mail marketers and service bureaus, the More system includes three modules: list segmentation and selection, decision support with marketing and financial output reports and a data base foundation that maintains list information on individuals.

According to a spokesman, More improves direct mailing responses and reduces mailing costs by selecting the best prospects. The package weighs relevant information about individuals on a mailing list, considers when the individual last purchased something via direct mail and determines the average purchase amount for an individual, according to the vendor.

The package also reviews how often the individual has responded over a series of mailings and evaluates the type of products the individual has purchased by direct mail. Merchandise return information and other factors are also included in evaluations.

The More package is priced at $375,000.

More information is available from Persoft, located at 600 W. Cummings Park, Woburn, Mass. 01801.

Motorola, IBM link debuts

CUPERTINO, Calif. — Motorola Information Systems, a division of Motorola, Inc., has introduced Transtext, a program that allows users of its Series 4000/5000 minicomputers to communicate with an IBM Office Systems Network via IBM's Distributed Office Support System (Disoss).

Transtext provides Motorola users with document management capabilities and permits the integration of data files with text. Capabilities for document manipulation, filing and electronic distribution of documents are also included.

The product consists of software that runs on the host within the IBM network and one of three programs that runs on the Motorola Series 4000 and 5000 systems. The Transtext interface resides on an IBM host running CICS and Disoss Version 3.

Motorola users can transfer documents in native, revisable and final form versions. Transtext Native Form allows Series 4000 and 5000 users to assemble and transfer Motorola/Four Phase Systems, Inc.'s Foreword word processing documents in native mode to other Series 4000 and 5000 systems in the network.

Transtext Revisable Form allows documents to be exchanged between users where they can be edited and returned to the originator in a form compatible with IBM's revisable form text document architecture. Transtext Final Form allows users to exchange, display and print documents in a form compatible with IBM's final form text document architecture.

The Transtext Interface, Native Form and Final Form are priced from $800 to $6,000. Transtext Revisable Form will be available in November and is priced at $1,500.

More information is available from Motorola Information Systems, located at 10700 N. Deanza Blvd., Cupertino, Calif. 95014.

CDC enhances analysis program for Cyber 200 supercomputers

MINNEAPOLIS — Control Data Corp. has announced that the UAI/Nastran program, designed for advanced general-purpose finite element structural analysis, has been enhanced to run on the CDC Cyber 200 series supercomputers.

UAI/Nastran was developed by Universal Analytics, Inc. (UAI), which adapted the National Aeronautics and Space Administration's Structural Analysis (Nastran) program to create the product. CDC also announced a companion version that runs on the Cyber 180 series computers.

UAI/Nastran is designed for a variety of engineering applications, including static and dynamic structural analysis, steady state and transient heat transfer analysis, three-dimensional fluid-structure interaction problems and buckling.

The program is used for the analysis of structural designs for aircraft and spacecraft, automobile frames and bodies, turbine and jet engines, bridges, high-rise buildings, nuclear power plants and power transmission towers.

With enhancements in the product for the Cyber 200, structural problems of virtually unlimited size can be analyzed, a spokesman said. An automated multistage substructuring feature reduces the difficulty of setting up large structural models.

UAI/Nastran for the Cyber 180 Model 810 is available for an initial $2,550 fee and a monthly fee of $2,100. For the Cyber 180 Model 860, the initial fee is $2,550, and the monthly fee is $2.95 per CPU minute, or $2,100 per month, whichever is greater. For the Cyber 205, the initial fee is $12,000, and the monthly fee is $10.25 per CPU minute of $6,000 per month, whichever is greater, the vendor said.

CDC is located at 8100 34th Ave. S., HQW10H Systems Division, Minneapolis, Minn. 55417.

IBM Users...

Color your graphics with the Dataproducts 8052 printer for sale, lease or rent from MTI.

- IBM color printer & IBM graphics printer compatibility standard.
- Multiple color, high resolution raster and bit image graphics.
- 200 cps data processing mode.
- 110 cps text quality mode.
- 35 cps letter quality mode.
- 18 ips graphics print speed.
- Centronics parallel interface.
- 8000-byte buffer.

The Dataproducts Model 8052 printer is one of the most economical yet highly versatile IBM-compatible color printers available for use in today's microcomputer applications environment.

MTI is an authorized distributor for Dataproducts, so we can meet your requirements with professionalism and in a timely fashion.

Whether you buy, rent or lease, MTI is the one source for all computer printers. And our prices are hard to beat. Call MTI and save.

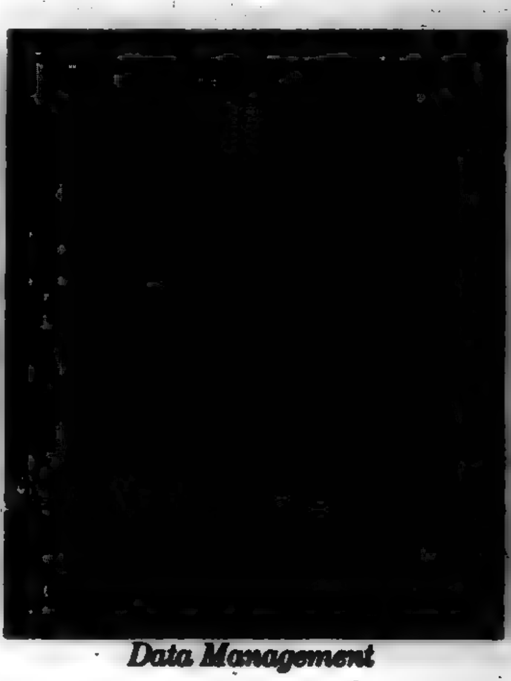
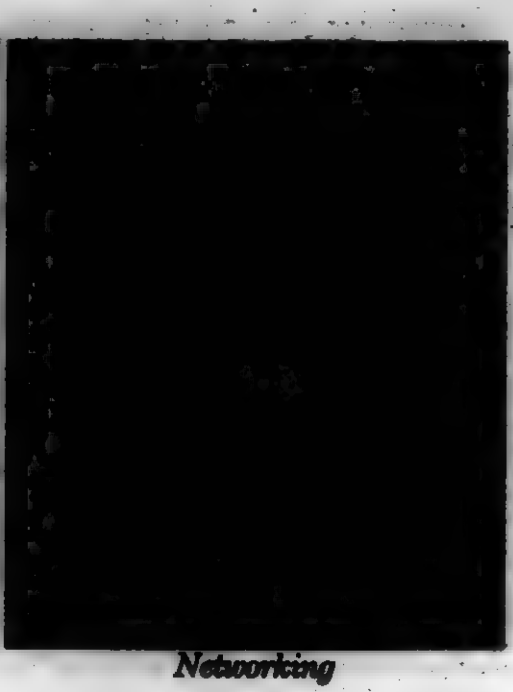
Voice Management



Data Management

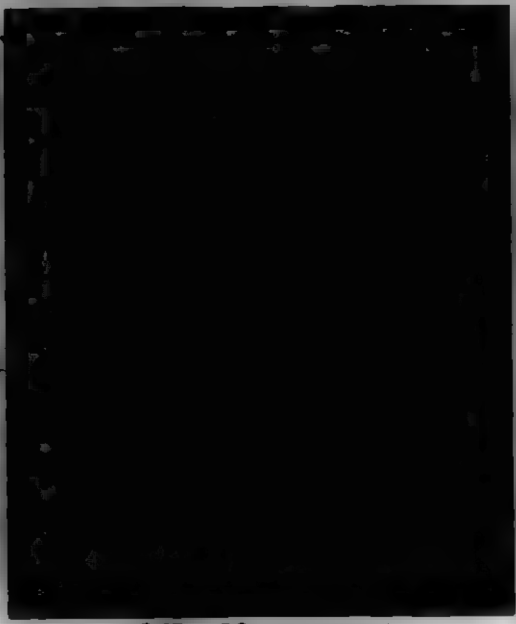


Networking

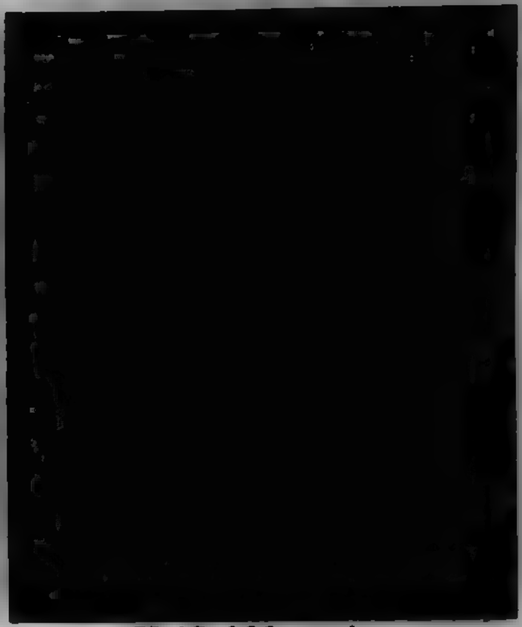
WHAT THE MOST POWERFUL, MOST FLEXIBLE COMMUNICATIONS SYSTEMS IN THE WORLD CAN DO FOR YOU.

© [illegible] AT&T Information Systems

System Management



Office Management



Unified Messaging

ONLY AT&T SYSTEM 85 AND AT&T SYSTEM 75 FULLY INTEGRATE SO MANY VITAL MANAGEMENT FUNCTIONS.

Decisions, decisions, decisions. It wasn't too long ago that if you wanted the most sophisticated office communications equipment in the world, you'd get a telephone.

Now it's a whole new ball game. You've got to have more than a telephone. You've got to have an entire communications and information system. You've got to choose from among a number of vendors and justify a substantial capital investment. You've got only one chance to make the right decision. And you've got to be right.

Relax. The decision is easy. System 85 and System 75 from AT&T Information Systems offer you more power, flexibility and control than any other system in the world. Because they can grow and change as technology advances, you can be sure your investment is protected. And because they're from AT&T, you know they meet the highest standards of manufacturing quality and reliability.

Here are just a few ways they can help your office operate more efficiently and effectively.

Voice Management Our experience in voice communications speaks for itself. There are over 150 calling features to choose from, so you can custom-tailor a system that meets the particular needs of your business.

Data Management This ties the whole system together. Our Digital Communications Protocol integrates voice and data transmissions, resulting in more productive use of your equipment and easy future expansion.

Networking Different businesses need different networks. Our Distributed Communications System and Electronic Tandem Network let you link all your locations, either across the street or across the country.

System Management Adaptability is the key here. You'll have a hands-on ability to monitor and change the entire system day by day, to respond to your changing needs.

Office Management This streamlines your everyday office procedures into one easy-to-use system. By integrating Electronic Document Communication, Message Center, and Directory, you can create, store and send information easily and more productively.

Unified Messaging This complete, easy-to-use service is the answer to unanswered calls. It completely integrates all your messaging services, including Message Center Coverage, Leave Word Calling, and AUDIX, our powerful voice mail service.

100 YEARS OF EXPERIENCE

There's another aspect of our system which you can look at as something of an insurance policy. It's called Information Systems Architecture. It is this framework that ensures that anything new we develop for your system will fit right in. System 85 and System 75 are designed according to its guidelines, as our future products will be. That's protection.

We've been the undisputed leader in communications for over 100 years, and we plan to keep it that way. Today, more than 4000 systems designers and others formerly at AT&T Bell Laboratories are working exclusively to develop new business products at Information Systems Laboratories. And they're supported by the largest sales and service staff in the industry to help you along every step of the way.

There are two ways you can distinguish yourself in the business world—either get a little gray at the temples worrying about it, or choose AT&T Information Systems.

To find out more about System 85 and System 75, call your AT&T Information Systems Account Executive or 1-800-247-1212.

AT&T
The right choice.

Nixdorf announces series of software

WALTHAM, Mass. — Nixdorf Computer Corp. last week announced a series of software products for various systems in its product line.

The following were included in the announcement:

■ Release 2 of Nixdorf's Nidos/VSE operating system for the Nixdorf 8890. Release 2 includes two features that extend the 8890's capabilities in a distributed-processing environment: a job transfer program and a file transfer program. Release 2 also supports a multihost facility, said to provide terminal networking capabilities, the company said.

Release 2 also provides enhanced support for IBM-type Fixed Block Architecture storage devices. Release 2 costs $12,000 for a one-time fee and is available immediately.

■ An enhanced Programmer Workstation Partition Data Set, called PWS II, for Nidos/VSE Release 2. The package provides an on-line interface to the PWS library and features support for accessing system functions like console support, spooling and transaction control programming. The package costs $3,750 and can be leased for $125/mo.

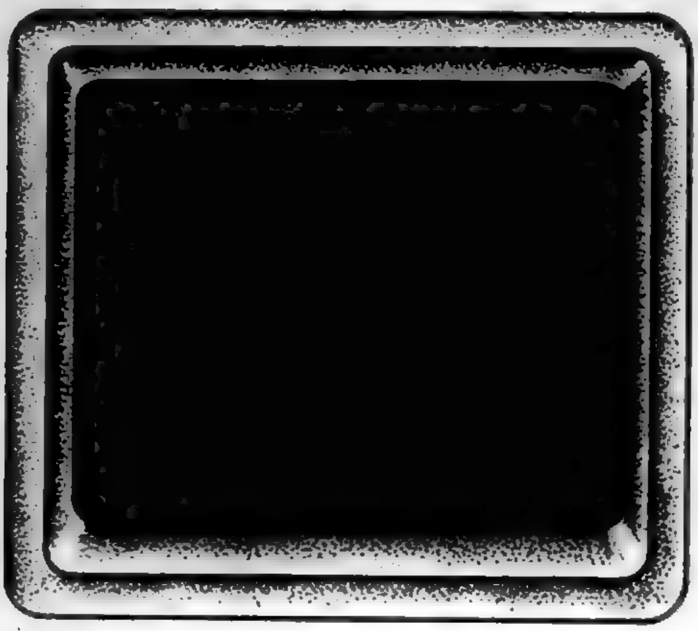
■ Market Master, a property appraisal and tax collection package for the 8850. The property appraisal segment of the package costs $16,000, and the tax collection costs $7,300, the company said.

■ An applications development package for the 8890 called Hibol/TCP. The package runs under Nidos/VSE Release 2 and is supported by Nixdorf's Task Control Program. Hibol/TCP is said to generate all of the code required for Cobol/TCP programs by producing Cobol source code. The company claimed use of the package can reduce debugging time by as much as 80%. It costs $15,000 for a one-time license fee or can be leased for $500/mo.

■ Comet Calc, a spreadsheet program for the company's 8870 minicomputers. It costs from $350 to $750, depending on the 8870 configuration.

Nixdorf is located at 300 Third Ave., Waltham, Mass. 02154.

Introducing INTELLECT/FOCUS.



In plain English, it makes FOCUS work for anyone.

Until now, FOCUS* has been a 4GL/DBMS for Information Center and data processing professionals. But now *everyone* in your organization can get the benefits of working with FOCUS. Through new INTELLECT/FOCUS.

INTELLECT/FOCUS automatically translates plain, everyday English into sophisticated FOCUS command language. So even nontechnical end users can get their own data from FOCUS and make decisions faster. Data processing and Information Center professionals can be free to spend time on their own productive tasks rather than chasing down data for others.

New INTELLECT/FOCUS also generates its own lexicon automatically, then builds and maintains the lexicon in everyday English, so it's as easy to install as it is to use.

CALL 617-890-8400 FOR A DEMO DISKETTE.

If you'd like, we'll send you a free INTELLECT/FOCUS demo diskette. Once you've seen for yourself how easily our new product can get everyone in your organization into FOCUS, you'll realize how much more you can get out of this powerful program.

Just by using a little INTELLECT.™

artificial intelligence
100 FIFTH AVENUE • WALTHAM, MASS. 02254 • (617) 890-8400

*Focus is a product of Information Builders, Inc.
INTELLECT/FOCUS runs on IBM and IBM-compatible mainframes.

SYSTEMS SOFTWARE

■ Unipress Software, Inc. has introduced the Amsterdam Compiler Kit for AT&T Unix-based processors.

The Amsterdam Compiler Kit is a package of Basic, C and Pascal native and cross-compilers for a variety of processors, including Zilog, Inc.'s Z8000 and Z80; Intel Corp.'s 8080; and Motorola, Inc.'s 6502. The kit includes complete source code for programs as well as internal documentation for modifications or programming language additions, the vendor said.

The Amsterdam Compiler Kit is priced at $9,950.

Unipress Software, 2025 Lincoln Highway, Edison, N.J. 08817.

■ BMC Software, Inc. has announced two packages in the Superoptimizer product family, systems software said to reduce the size of messages going to and from an IBM IMS/VS or CICS/VS system and its 3270 family screens and printers.

The Superoptimizers improve end-user response time on remote 3270 terminals by sending smaller messages faster, according to a spokesman. Queuing or other network delays are reduced because smaller messages mean less load on the network.

The products allow older IBM printers, such as the 3268, to begin printing sooner by reducing the time it takes to transmit a page of data. For Systems Network Architecture character set printers like the 3287, which begin printing when they receive data, the Superoptimizers examine the data to be printed and send tabbing orders to boost printing speed.

In other features, Superoptimizer detects outbound or inbound data stream errors; supports 3270 functions like program-defined symbols, extended attributes and windows; and exploits IBM's MVS/XA, the vendor said.

Superoptimizer/CICS, available now, is priced at $17,250 for the first CPU. Superoptimizer/IMS is scheduled for fourth-quarter availability.

BMC Software, P.O Box 2002, Sugar Land, Texas 77478.

■ Westinghouse Electric Corp. has announced Multsess software for increasing the productivity of network terminal users.

Executing as an IBM Vtam application program under the MVS operating system, Multsess provides single-key switching between multiple applications without rendering them inactive, the vendor said. With Multsess managing sessions, one terminal can to do the work of several and reduce system overhead.

Multsess allows ACF/Vtam users to execute multiple and concurrent applications sessions such as TSO, CICS and IMS without logging off and on. Full security system interfaces, with cross-domain support and automatic profile execution, are included with Multsess. To enhance security, the Multsess directory restricts terminals to predefined applications.

The perpetual license fee for Multsess is $14,000.

Westinghouse, Management Systems Software, 777 Penn Center Blvd., Pittsburgh, Pa. 15235.

See TOOLS page 43

SOFTWARE & SERVICES

TOOLS

from page 42

■ **Data 21, Inc. has announced CICS-Help 4, an IBM CICS windowing package that provides Help windows for CICS applications and allows multiple applications to run on a single CICS terminal. The package runs in IBM MVS and DOS environments.**

Release 4 allows Help screens to be added and updated while the application they document is executing, a spokesman said. Help screens can be added to conversational programs with no program modifications. Multiple CICS applications may be active on a single CICS terminal and toggled using a function key. CICS applications can be initiated with a dedicated key without affecting the transaction currently running on the terminal.

CICS-Help windows can be designed to replace the entire application screen or a portion of the screen, the vendor said.

The perpetual license fee for CICS-Help is $3,995 for DOS systems and $7,995 for MVS systems.

Data 21, 3868 Carson St., Suite 309-5, Torrance, Calif. 90503.

■ **University Computing Services Corp. has announced that its interactive Cobol/Cobol 74 debug facility is available for Burroughs Corp. Burroughs A series, as well as B5900, B6900 and B7900 mainframes.**

The product includes the ability to display or change program variables and interrupt program execution at user-selected breakpoints. It also includes on-line Help facilities and the ability to perform line-by-line or multiline program continuation, reference and display of source code.

It is priced at $7,500.

University Computing Services, 254 E. Main St., Newark, Del. 19711.

■ **A+ Software, Inc. has announced the Systems Programmer series for IBM's MVS. The product provides Dasd analysis and management facilities.**

Product features include Dasd configuration flow analysis, tuning aids, component failure impact analysis and a variety of cross-reference reports, a spokesman said. Utilities aid load module analysis, job control language validation and date conversion.

A disaster recovery planning facility supports IBM component failure impact analysis methodology. All resources required to run a job or system, such as tape drives, Dasd and work space, are identified. On-line and batch analysis tools are provided for flowcharting single jobs or an entire system.

The tools run under MVS. Systems Programmer series software is priced at $7,500.

A+ Software, 16 Academy St., Skaneateles, N.Y. 13152.

■ **Lawson Associates, Inc. has announced the Access/38 and Access/DB business management software for IBM System/38 users.**

The Access/38 package allows users to define and execute their own on-line inquiries and generate reports using standard System/38 data. The software costs $9,000.

The Access/DB package, geared to the data processing professional, is said to enable the creation of on-line, interactive IBM RPG-III programs allowing for additions, changes and deletions to the data base. It costs $4,000.

Lawson Associates, 2021 E. Hennepin Ave., Minneapolis, Minn. 55413.

■ **Adpac Computing Languages Corp. has introduced Version D1.00 of its Diagraphics for Data Processing (DFDP) for developing system specifications on an IBM 3270 or compatible terminal under IBM's MVS/TSO operating system.**

DFDP Version D1.00 includes an extended data definition library that stores information about an analyst's specifications, including record and file layouts and data elements.

Information in the data definition library can be uploaded into any of the major data dictionaries. The system can also download information from the data dictionary and provide the analyst with a list of data elements and their corresponding codes.

DFDP D1.00 is priced from $9,500 to $30,000.

Adpac, 340 Brannan St., San Francisco, Calif. 94107.

■ **Advanced Systems Concepts, Inc. has announced an enhanced version of its Probe analysis tool for IBM System/38 applications.**

Probe allows users to display all programs referencing physical data elements, regardless of logical view or file redirection. The product also allows users to view programs that access particular data elements or fields within a file group.

Probe is priced at $1,000.

Advanced Systems Concepts, Suite 3, 1350 Remington Road, Schaumburg, Ill. 60195.

■ **On-Line Software International, Inc. has introduced Verify, a system for regression testing IBM CICS application programs on IBM mainframes under DOS or OS.**

Verify is said to eliminate the need for repetitive operator input by providing automatic testing capabilities. Screen I/Os are logged to the disk for examination, either as full screens or field by field with character and hex formatting capabilities. Previously logged data can be used to retest modified applications programs, the vendor said.

How can they understand your product if they can't understand your language?

Try responding effectively to the Japanese text above. Without knowing Japanese.

It's the same problem for your clients abroad who may not be able to decipher your language.

That's where computer-aided translation (CAT) systems and services from Weidner Communications Corporation (WCC) can help. Whether you need to translate 5,000 words or 500,000. In *Japanese. French. Spanish. German. Italian* and *Portuguese.*

Our MicroCat single-user system lets your personal computer translate up to 1800 or more words per hour. Accurately and cost-effectively.

To support multi-users and heavier work loads, MacroCat does the same remarkable job. Only at even faster speeds of up to 8,000 words per hour.

Or, when you'd rather not do it yourself, our Translation Service Bureau combines state-of-the-art technology with native-speaker expertise to give you precise translations. Fast.

Very simply, with WCC you'll sell more in the global market—because you'll communicate more. And that makes a lot of sense in *any* language.

Call toll-free 800-323-4945, or return the attached coupon, to learn more.

WCC, you're speaking my language.
☐ Send me more information on your computer-aided foreign language translation systems and services.
☐ Have a WCC Account Representative contact me for an appointment.

The product can print I/O screen displays in a variety of formats that can be used for generating programmer documentation and user-reference manuals.

Verify is priced at $25,000 for DOS and at $35,000 for OS.

On-Line Software International, Fort Lee Executive Park, 2 Executive Drive, Fort Lee, N.J. 07024.

■ Morino Associates, Inc. has introduced Release 2 of its MVS Problem Alert System (MVS/PAS) for diagnostic support of IBM's DMS and DB2 data base management systems.

MVS/PAS Release 2 includes a Program Temporary Fix Chain Management Facility that provides a resolution set of fixes required to correct software problems and can automatically generate System Modification Program control statements for application of the fixes. The product also includes enhanced reporting capabilities for identification, prioritization and solution of systems maintenance problems.

MVS/PAS costs $12,000.

Morino Associates, 8615 Westwood Center Drive, Vienna, Va. 22180.

PRODUCTIVITY AIDS

■ Manifold, Inc. has introduced Version 1.2 of Ada-Quick, an applications development tool for users of Software AG's Adabas data base management system and Natural fourth-generation language.

Version 1.2 of Ada-Quick allows users to access Adabas through a menu-driven environment. User views can be incorporated into other on-line systems, and user-generated profiles can be saved for later use, the vendor said.

Ada-Quick is priced at $7,500.

Manifold, Suite 7, 1655 Greenfield Ave., Los Angeles, Calif. 90025.

■ Advanced Systems Concepts, Inc. has announced that its Productivity Plus package for IBM's System/36 now includes a device configuration flowchart. Productivity Plus offers System/36 programmers additional functions, such as display file recompilers and file re-creation modules.

According to a spokesman, the flowchart produces a diagram of the relationships between all devices configured on a System/36. Devices listed on the same path are listed in ascending address order. System devices, as well as devices connected to any workstation controller, are detailed.

Each module is priced at $95, and the entire package costs $600.

Advanced Systems Concepts, Suite 8, 1350 Remington Road, Schaumburg, Ill. 60195.

APPLICATION PACKAGES

■ Digital Equipment Corp. has announced Version 2 of its VAX VTX videotex software for its VAX line of computers.

VAX VTX Version 2 allows users to create personal menus to go directly to frequently accessed pages and select more than one choice per menu. It also includes an unlimited keyword search facility to find information residing on a remote system.

The product will be available in September. Prices for VAX VTX range from $9,000 for the Microvax to $37,500 for the VAX 8600 systems.

Digital Equipment, 146 Main St., Maynard, Mass. 01754.

■ Expanded on-line capabilities have been added to Release 5.5 of Software International Corp.'s Accounts Payable package for Wang Laboratories, Inc. Wang VS minicomputers.

The enhanced Accounts Payable system is said to take advantage of the Wang system's internal capabilities, as well as Wang's native keyed-file access method. Expanded inquiry capabilities give users immediate access to information in the data base.

Accounts Payable provides the ability to perform inquiries by vendor name, invoice or voucher number. Software International's Accounts Payable system is priced from $12,000 to $21,000, depending on configuration.

Software International, 1 Tech Drive, Andover, Mass. 01810.

■ Control Data Corp.'s Business Information Service has added a market analysis module to its Marksman decision support software for marketing executives.

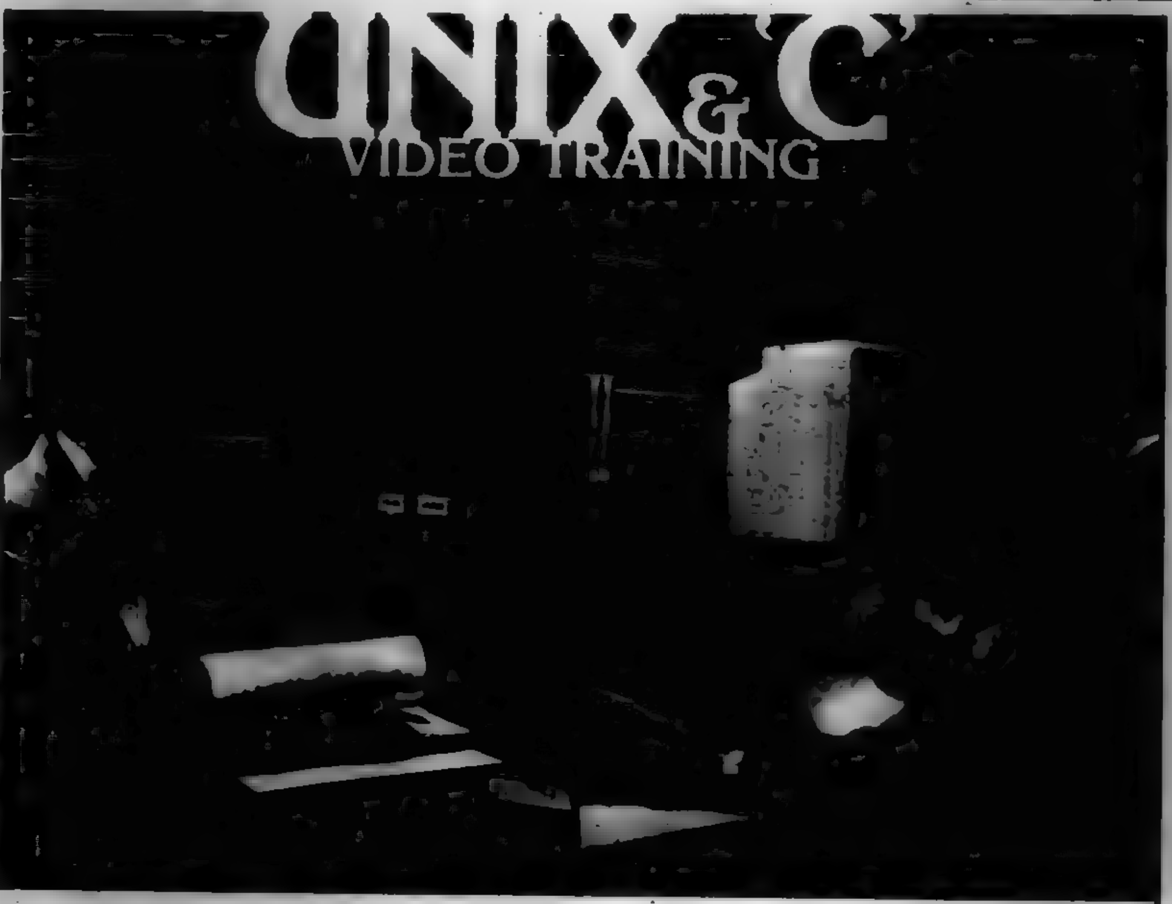
Marksman is available for the IBM 4361 mainframe or Wang Laboratories, Inc. VS minicomputer and includes advertising support and promotion modules.

The market analysis module includes a Nielsen analysis feature that allows users to view various Nielsen measures. The module can perform percentaging, consolidation and indexing operations, exception reporting, market segmentation analysis and can support "what-if" analyses.

The module also provides analysis capabilities using data for warehouse, withdrawals, share and pricing information, data for weight value, number of ads and feature pricing. It also includes a brand development index/category development index facility.

Marksman is priced at $250,000 and is also available through the Control Data Shared Network.

Control Data, 500 W. Putnam Ave., Greenwich, Conn. 06830.



SELF-PACED TRAINING
AVAILABLE WHENEVER YOU NEED IT

The Computer Technology Group offers an extensive library of video courses on UNIX and 'C' language subjects—for managers, end users, applications developers and technical support. Depending upon the type of training you prefer and the number of people to be trained, select Video-Based Training or Interactive Video disc Training.

VIDEO-BASED TRAINING
- Consistent training every time
- Ideal for self-paced or group instruction
- Professionally produced with a variety of graphics techniques for training effectiveness
- Available in all cassette formats and all international standards

INTERACTIVE VIDEODISC TRAINING
- Benefits of both Video-Based Training and microcomputer access
- Dynamic tailoring of each course to the individual student
- Increased student comprehension in reduced training time

THE COMPUTER TECHNOLOGY GROUP
Three factors make the Computer Technology Group the experts in UNIX and 'C' language training:
- Experience, through training thousands of students worldwide in live seminars, with thousands more using our video training at their own locations.
- Extensive Curricula Supporting All UNIX Versions, creating a client base of manufacturers, software developers and end users.
- Quality of Instruction, with instructors and course developers who are experts in teaching UNIX and 'C', as well as in designing and implementing a variety of UNIX-based systems.

ASK FOR OUR 48-PAGE COURSE CATALOG, WHICH PROVIDES:
- Comprehensive course outlines
- Course prerequisites
- Curriculum recommendations for multiple audiences
- Guidelines for cost effective training media selection

SOFTWARE & SERVICES

SLUMP

from page 37

ers. Profit and revenue figures attested to the health of the independent large systems software industry and the growing importance of software itself. In-house software development has become, for many organizations, prohibitively expensive, and qualified software professionals are increasingly scarce. Both factors continue to fuel the growth of the packaged software industry.

But while the specter of slowdown may only be standing in the doorway for now, its visage is sobering.

Although analysts are still predicting seemingly healthy 25% to 30% growth for the remainder of the year, many software companies based their 1985 spending on earlier, more sanguine revenue forecasts. Expenditures for training, hiring, customer service and research and development were founded on revenue assumptions that may soon be shaken.

In the short run, those fixed costs will take their toll on profits if revenues sag. In the long run, should the slowdown in users' capital spending worsen, software vendors may look to trim costs through reductions in training programs and hiring. If the slump continues unabated, many vendors will have little choice but to lay off staff or pare R&D programs. Such steps are taken at both the vendor's and the user's peril.

"The software companies have their training, hiring and development efforts running at pretty aggressive levels right now," said Peter Cunningham, president of Input, Inc., a Mountain View, Calif., market research firm.

"People are the biggest factor," Cunningham continued. "They have to develop, sell, install and support the software and train the users. Software vendors cannot afford to stop development, hiring and training. If they try to turn off their staffing and development projects because of variations in orders, they could be in deep trouble."

So could users. The backlog of tasks awaiting automation and the applications needs uncovered daily demand a constant and increasing flow of new software products. A bottleneck in the development pipeline would ensure plenty of lost opportunities for both vendors and users.

According to Cunningham, the growing maintenance income of the large software companies, which represents a substantial chunk of revenue for a vendor like Computer Associates International, Inc., will act to dampen the oscillations spawned by the slump.

And there is one bright spot for users amid the bad news. Several analysts and company executives cited the possibility of more drastic price cutting due to increased competition among vendors.

Overall, the onus for weathering whatever forces hit the industry rests on the shoulders of the management of software companies. Those executives who can effectively corral costs without overreacting — and slashing staff and development projects — will probably find it quite comfortable living with more moderate, but still enviable, growth.

HRMS

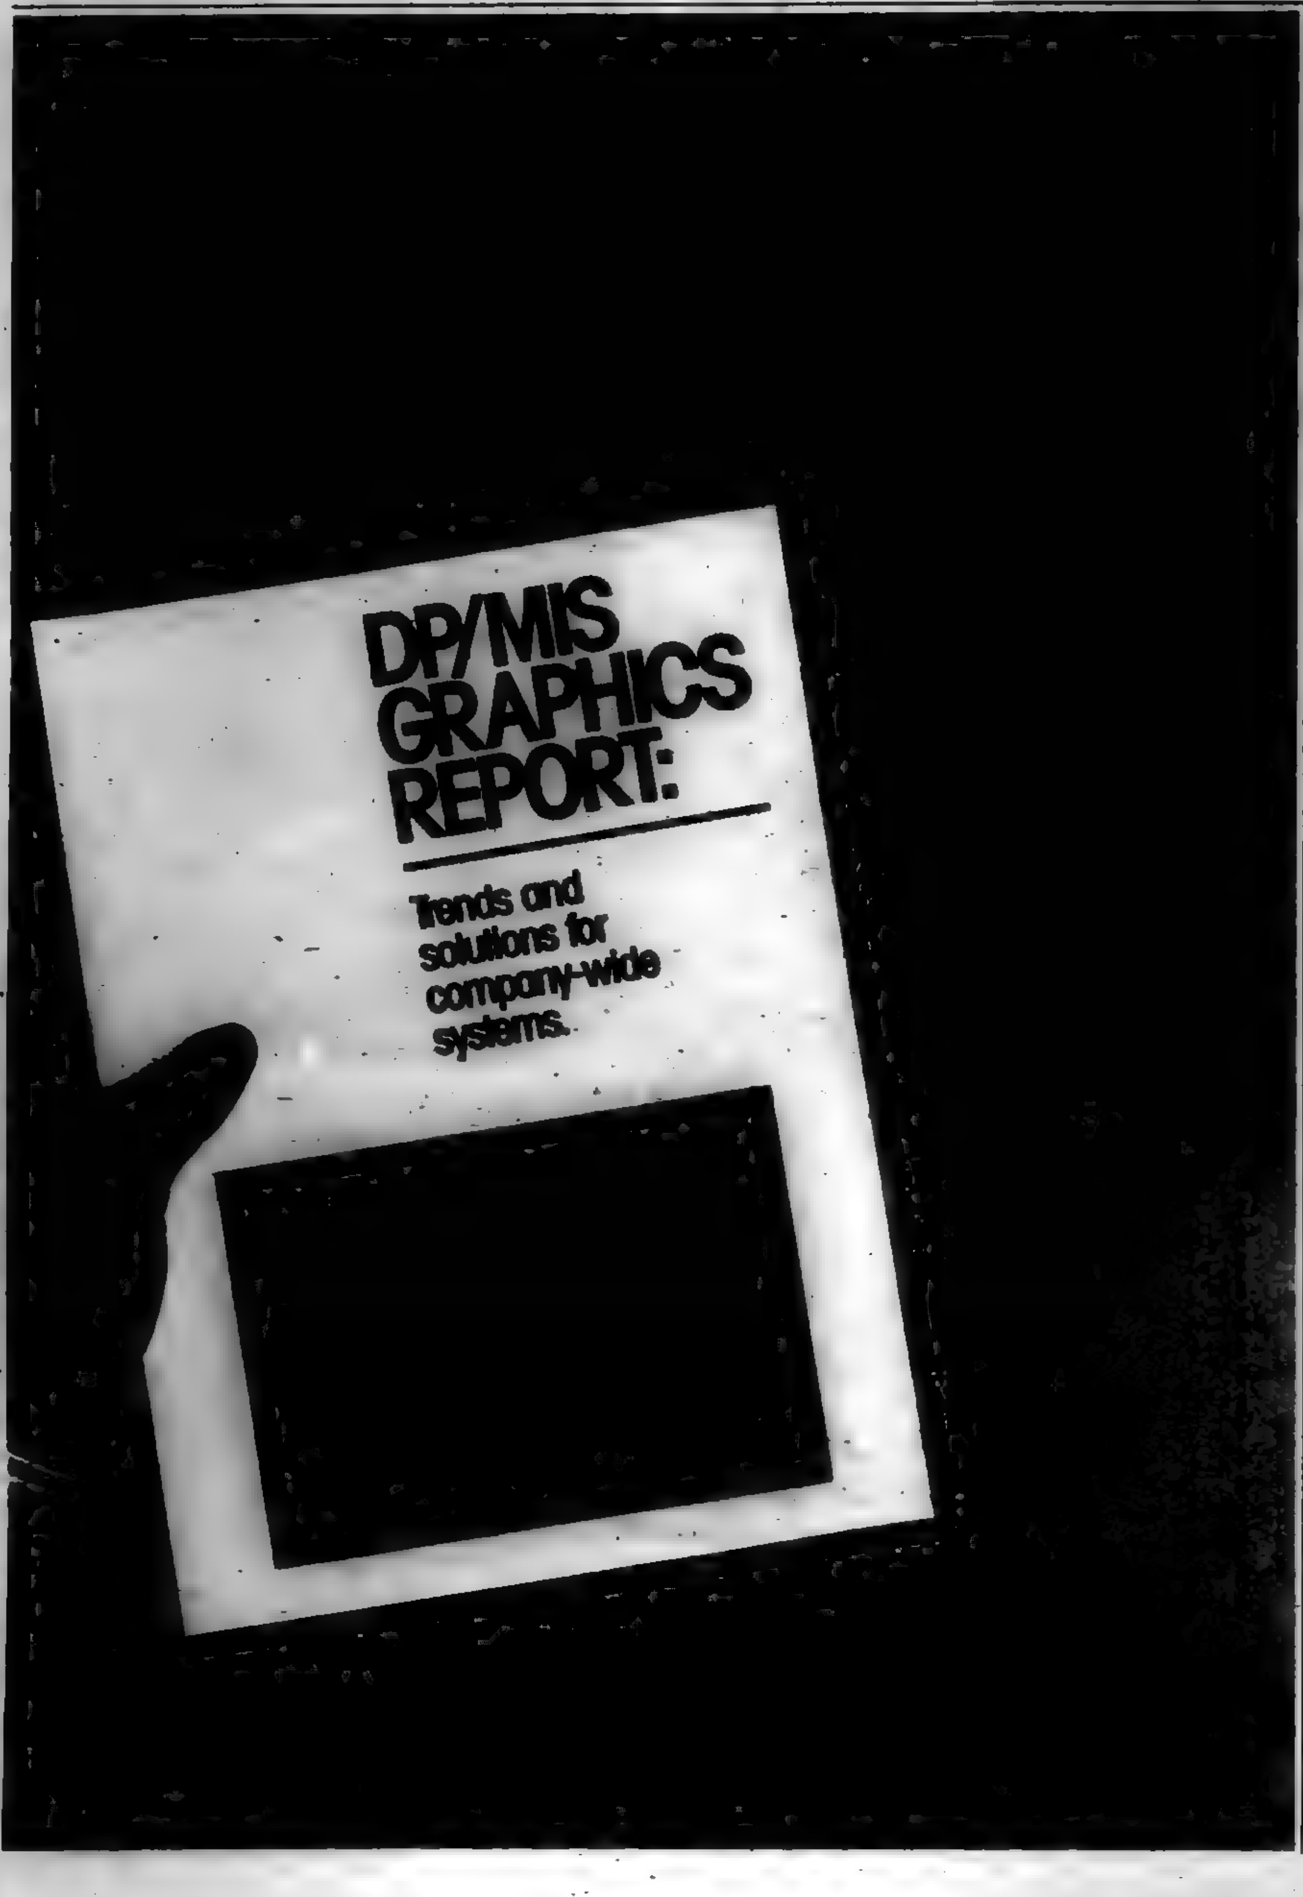
from page 37

will be a beta test site this fall for IBM's forthcoming 3090 mainframe and will migrate from CICS to Cullinet's IDMS-DC teleprocessing monitor.

A big advantage of IDMS is that it is structured for easy expansion, an important consideration for an acquisitive corporation like Allied, Armstrong said. IDMS is a "natural blend" with the Tesseract software, he said.

In the future, Tremlett and Armstrong said they will continue to fine-tune the HRMS and bring hourly and international employee records into the system. Armstrong added that downloading mainframe data to personal computers may be arranged in the future — for statistical modeling and forecasting, for example — but only if a strong need is proved.

"Which would you rather believe, an old computer printout or me?"



MICROCOMPUTERS

Martin Marietta expands IT micro software line

PRINCETON, N.J. — Martin Marietta Data Systems' ITSoftware division has expanded its line of IBM Personal Computer software with the introduction of Runit, a PC-DOS shell, and Mailit, a document conversion and transfer program.

The $100 Runit package provides a consistent user interface among various applications and simplifies program selection, use of PC-DOS utilities and mainframe logon, according to ITSoftware President Norm Agin.

With function keys and pop-up menus, the package allows users to design a customized main menu that is displayed when the micro is turned on. Users can select a program with a mouse or cursor command, and they do not have to remember the program's directory or how to start it, Agin said.

Runit pop-up menus also reportedly permit users to execute most PC-DOS operating commands without knowing the command syntax or typing in commands. Additionally, the package lets users design their own applications directories.

After writing logon scripts with the Runit logon language, the user is presented with the scripts in a pop-up menu when the logon option is selected from the main menu. The only action required to attach to a mainframe operating system or application program is to provide a password, according to the vendor.

The logon feature is currently available for IBM MVS/TSO and VM/CMS operating systems and Digital Communications Associates, Inc. (DCA) and CXI, Inc. 3270 emulation boards. Forte Communications, Inc. boards, Hayes Microcomputer Products, Inc. modems and Renex Corp. protocol converters will be supported in a subsequent release, scheduled for third-quarter delivery. That release also will support virtual disk storage on the mainframe, according to Agin.

Runit requires 64K bytes of internal

MICRO BITS/THOMAS MADRON

PC-DOS 3.1 offers added functionality

IBM's PC-DOS 3.1 operating system for the Personal Computer and Personal Computer XT and AT provides several new features and resources, including two additional commands for end users and six new PC-DOS function calls that directly support networking.

Excluding the utility programs distributed with PC-DOS, the operating system itself consists of four components: the boot record; the read-only memory Basic Input/Output System (ROM Bios) Interface; the PC-DOS program file, IBMDOS.COM; and the command processor, Command.COM.

IBMDOS.COM provides, among other things, a variety of built-in standard functions accessible by user programs. The PC-DOS functions are available through various interrupts, with interrupt 21H being standard across various implementations of MS-DOS, including PC-DOS.

Some PC-DOS networking functions were provided in PC-DOS 3. The additional required functions, 5E00H through 5F04H, are implemented in PC-DOS 3.1. None of these six functions will work without IBM's Netbios, and they are irrelevant in stand-alone personal computer environments. Those functions obtain a machine name on the network, set and get printer setups on a print server and carry out other network housekeeping.

Machine name here means the server name on the PC Network as specified in an Ascii string containing a path

Signs of saturation increase

SMALL TALK
Eric Bender
CW Senior Editor

Everyone seems to have a list of reasons for the current computer industry slump, typically beginning with the nationwide slowdown in capital investment. This long, slow summer will give us all plenty of time to polish those explanations, but "saturation" keeps cropping up in discussions of micro purchasing with MIS personnel.

In this case, saturation obviously doesn't mean that a personal computer now sits proudly on every desktop in corporate America or that the multitudes of machines out there are anywhere near reaching their potential.

It does mean that after several years of struggling to equip a suitable suite of micro equipment for word processing, financial analysis and data base management, many companies have filled the pipeline to their users. And the other emerging stand-alone applications just have not created anything like that level of demand.

"You're not seeing the kind of helter-skelter buying you saw in '83," commented Rich Reed, manager of office systems at Cigna Corp.'s employee benefits and health care division in Bloomfield, Conn. "Everybody was caught up in this buying frenzy. That's changed; purchases now are much

IBM SQL/DS and DB2 relational DBMS now on PC

ORACLE, the relational DBMS compatible with IBM's SQL/DS and DB2, is now available on the IBM PC/XT and PC/AT. While SQL/DS and DB2 run only on IBM mainframes, ORACLE runs on IBM mainframes as well as on DEC, DG, HP and most other minis and micros. Any application written for SQL/DS or DB2 will run without modification on the complete range of systems supporting ORACLE, including PCs.

SQL/DS and DB2 are relational database management systems; ORACLE is a relational DBMS plus an integrated set of 4th generation software tools for application generation, report writing, color graphics and network communications.

Oracle Corporation introduced the first relational DBMS in 1979. Now, ORACLE provides the only complete implementation of the IBM-standard SQL language available for the PC.

Oracle Corporation cites three principal application areas for its product's capabilities:

■ The ORACLE Application Development Center provides a PC-based development center for the creation of DB2 and SQL/DS applications. The flexibility of the personal computing environment is made available to programmers creating applications for use with IBM's relational database products.

■ The ORACLE Personal Information Center extends the Information Center concept to the Personal Computer. ORACLE's application generator, graphics, spreadsheet and other end-user tools provide a SQL/DS and DB2 compatible Information Center on the desktop.

Users can become acquainted with the facilities and power of the Information Center in the personal computing environment, and transfer their knowledge and skills as the MIS Information Center facility evolves. The ORACLE Personal Information Center provides the facilities for MIS to develop the cooperative relationship with end users so vital to the success of the Information Center.

In addition, with ORACLE on departmental superminis, users can create identical Information Centers at the department level.

■ The ORACLE Distributed Information Center provides an intelligent set of communication links among multiple systems, with ORACLE running on IBM mainframes and various minis and PCs.

Using ORACLE's SQL*LINK networking facility, ORACLE on such diverse systems as MVS, VM/CMS, VAX/VMS, UNIX and PC/DOS can selectively exchange database information using the full capabilities of the SQL language. Applications, portable across all environments, can be run identically on any system, and data can be intelligently extracted for use at any site.

ORACLE is currently installed on over 1000 supermini and mainframe systems around the world, as well as on thousands of PCs and compatibles. Oracle's customers include 8 out of the 10 largest U.S. corporations, as well as major foreign companies and many government agencies.

For further information, contact Oracle Corp., Dept. C, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350.

Ricoh unveils printers, scanner for micros

WEST CALDWELL, N.J. — Ricoh Corp. has unwrapped a laser printer, a thermal transfer printer that can be changed to a color printer with optional software and a digital image scanner for microcomputers.

The Ricoh LP4060 tabletop laser printer costs $3,000 and has both RS-232 serial and parallel ports for use with microcomputers. The 8 page/min printer is said to produce either portrait or landscape output at a resolution of 300 by 300 dot/in. from either four on-board fonts, host-data downloads or cartridge-loaded fonts.

The printer emulates the Diablo Systems, Inc. Diablo 630 impact printer and has a bit-mapped memory that is said to permit printing forms, logos and other forms of graphics data in areas of up to 35 sq in. Downloaded graphics can be printed with up to four times the magnification, the vendor said.

Ricoh's TP2051C, which costs approximately $400, is a thermal transfer color printer that is said to print text and graphics in seven colors on either plain paper or transparencies.

At a print resolution of 180 dot/in. using a 24-dot print head, the TP2051C prints bit-by-bit CRT-displayed graphics and character-by-character IBM CS1 and CS2 plus nine international character sets.

A parallel Centronics Data Computer Corp. interface is standard.

The company's flatbed digital image scanner, the IS30, is said to provide a basic reading density of 300 by 300 dot/in. It also can produce 180, 200 and 240 dot/in. for compatibility with a variety of output printers, including ink-jet, laser, thermal transfer and dot matrix printers.

The IS30 is said to be able to read books, sides of boxes and thick documents that can be placed on the 8½- by 11½-in. flatbed. Maximum reading speed is approximately 14 sec. for an 8-½ by 11-in. document at 300 dot/in. The unit, which will cost approximately $2,000, comes with a parallel interface and will be available in fourth-quarter 1985.

Ricoh is located at 5 Dedrick Place, West Caldwell, N. J. 07006.

SERIX

ANNOUNCING SYSTEM V UNIX™

...puts your IBM Series/1® ahead of the pack!

SERIX is the high performance CMI version of AT&T's UNIX™ System V operating system with Berkeley 4.1 enhancements ported to the IBM Series/1 minicomputer.

SERIX transforms your Series/1 into an even more powerful, flexible, and convenient processor for general data processing, office automation, communications, and process control. Its advantages are outstanding:

Reduced software costs

Long term growth path
- Software is highly portable
- Provides access to a large, growing software base

More power from the Series/1
- Optimizing C compiler uses native code features
- All code reentrant
- Dynamic memory allocation without fixed partitions

Increased programmer productivity
- Large set of utilities
- Hierarchical file structure
- Pipes, forks, semaphores, and shared data segments

Other CMI Series/1 software
- RM/COBOL™
- UNIFY™ database management system
- ViewComp™ spreadsheet
- vi visual editor
- EDX™-to-SERIX™ conversion kit

CMI Corporation is a Master Value-added Remarketer of IBM Series/1 equipment. Leasing and other financial arrangements are available.
Contact us for further information.

CXI beefs up Pcox tool

PALO ALTO, Calif. — CXI, Inc. has announced an upgrade to its Pcox 3270 PC software which gives users of Digital Communications Associates, Inc.'s Irma 3278 emulation board the functionality of an IBM 3270 Personal Computer terminal.

The Pcox software upgrade, for IBM Personal Computers, Personal Computer XTs, ATs and compatibles, permits simultaneous viewing of up to five interactive host applications, two notepads and a Personal Computer session on a microcomputer screen.

With the Pcox 3270 PC upgrade, information can be transferred from one window to another or at variable spots within the same window. Users can combine information from one or more host sessions, as well as a Personal Computer spreadsheet in the form of a customized report in a notepad session.

Attached parallel or serial printers can also be transformed into host-addressable IBM 3287 printers, CXI said.

The product reportedly gives Irma users an interface to the IBM 3270 Personal Computer Application Program Interface (API), permitting them to run softare developed for the API.

Available in August, the software also is compatible with CXI's Pcox 3278 and Pcox 3279 Standard and Plus coaxial connections, the vendor said.

Typical usage of the Pcox 3270 PC requires about 264K bytes of memory. Maximum usage requires 327K bytes of memory.

Pcox 3270 PC software costs $395.

For more information, CXI is located at 3606 W. Bayshore Road, Palo Alto, Calif. 94303.

Micro Focus' math aid out

CHICAGO — Micro Focus, Inc. last week introduced Co-Math, a library of mathematical functions that works with the company's microcomputer Cobol offerings.

The new software will permit programmers who design and maintain financial and mathematical programs to stay within the standard Cobol environment and create programs utilizing extended mathematical functions, according to the vendor. Priced at $200 and available immediately, Co-Math works with Micro Focus' Professional Cobol, VS Cobol Workbench or VS Cobol.

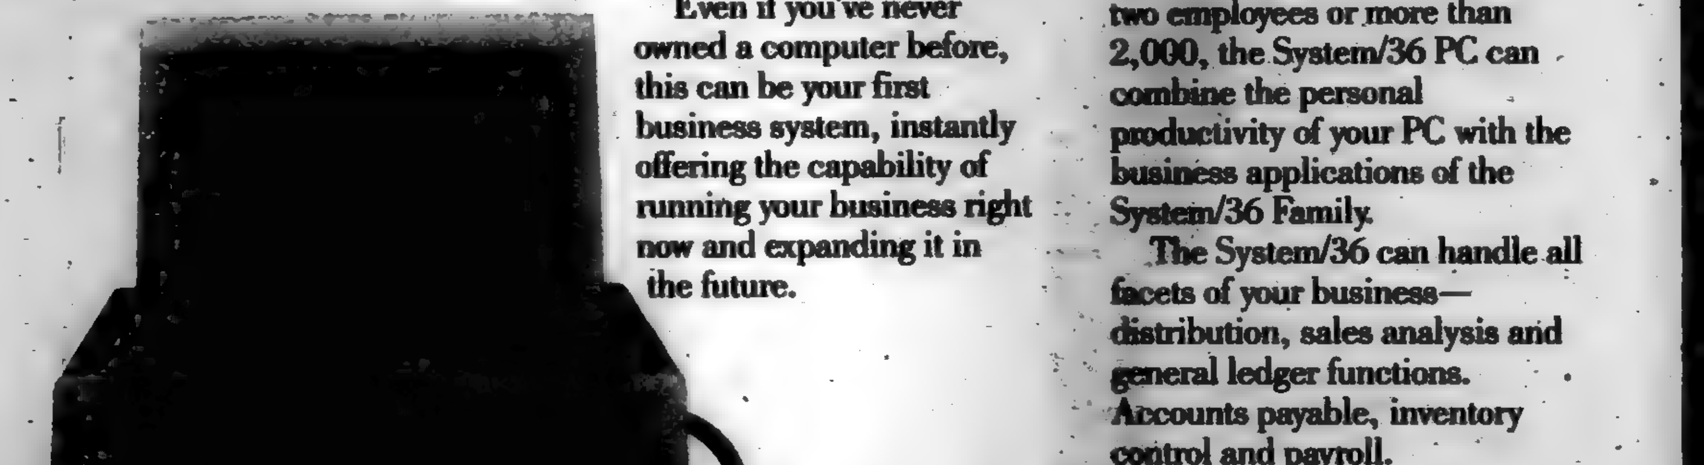
Co-Math's mathematical functions reportedly include exponentiation, power, square root, natural log, log 10, sine, cosine, tangent and arctangent XY. The product can be used in conjunction with Micro Focus' Co-Graphics software, the company said. Co-Graphics is said to provide access to Virtual Device Interface standard graphics routines supplied by Graphics Software Systems, Inc.

More information is available from Micro Focus at 2465 E. Bayshore Road, Palo Alto, Calif. 94303.

Introducing the

The best of both worlds.

For owners of IBM Personal Computers, combining personal productivity and business applications is now less of a leap than ever before.



There's a new IBM product that marries the IBM System/36 and the IBM Personal Computer to give you the best of both worlds.

Meet the newest member of the System/36 Family.

It's called the IBM System/36 PC.

Very small but it opens up new worlds for your personal computer. Very affordable with a price starting at $5,995, yet capable of running System/36 programs that will help you run your business.

Even if you've never owned a computer before, this can be your first business system, instantly offering the capability of running your business right now and expanding it in the future.

Multiuser system.

System/36 PC can be a standalone computer for small companies or a departmental system or even part of a distributed network for larger companies, providing multiuser access to data.

The System/36 PC is made up of a 5364 Processor attached to an IBM PC, PC XT or PC AT. And you can connect up to three more of these personal computers. Or you can connect terminals such as System/36 printers or displays.

Flexibility.

Whether your business has two employees or more than 2,000, the System/36 PC can combine the personal productivity of your PC with the business applications of the System/36 Family.

The System/36 can handle all facets of your business—distribution, sales analysis and general ledger functions. Accounts payable, inventory control and payroll.

IBM System/36 PC.

And you can get traditional PC functions such as spreadsheets and word processing.

Software for the System/36 has been developed over the years and has proven invaluable in all kinds of businesses of all sizes. And with the thousands of programs written for both IBM PC and System/36, the sky's the limit for business and planning applications.

The System/36 PC even provides you with data security features so that the right data gets into the right hands.

Small yet powerful.

All of this processing power can sit right on a desk or under it—either horizontally or vertically. It measures a mere 21¼"x16¾" x6½"—about the size of a small suitcase.

Yet as small as it is, this little box has multiple processors, with main memory that can be dedicated to running your business functions. In plain English, this means you can get better response time. The System/36 PC comes with a 1.2 MB diskette drive and either 40 or 80 MB disk storage, depending on your information storage needs.

Easy to use.

The System/36 PC is easy to learn and to use. If you need assistance, it has over 2,800 "help" screens that take you step-by-step through any rough spots. You can merge data you've generated on your PC with information that's on your System/36 PC. And you can share information that is stored in the System/36 PC with other attached IBM Personal Computers or System/36 terminals.

Compatibility is high so that you can keep on using many of the PC peripherals and programs you may already own.

Easy growth.

What happens when your small office becomes bigger?

That's what the System/36 Family is all about. No matter what size your business, there's a member of the System/36 Family that can help you do whatever you do, better.

As your needs become greater, there's the mid-sized 5362 processor that offers greater performance and can handle up to 22 personal computers or System/36 terminals.

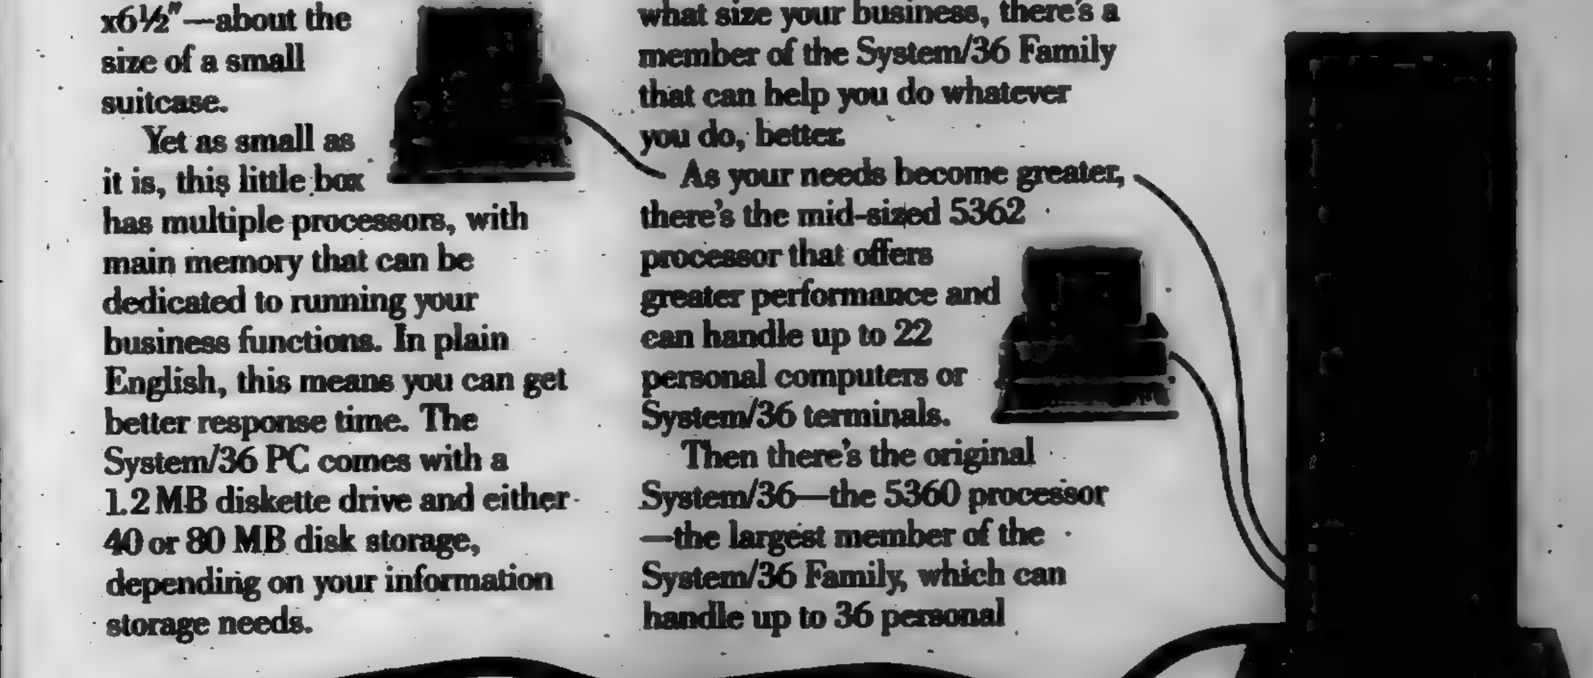
Then there's the original System/36—the 5360 processor—the largest member of the System/36 Family, which can handle up to 36 personal computers or System/36 terminals.

Any one of these processors can function as the central processor in your office. Each can communicate with PCs or larger systems, giving communication and connectivity new meaning by allowing departments to share data.

So if your dreams are big but your office is small, the new System/36 PC is the perfect step for you to take. You not only get the best of both worlds, you also get IBM product reliability. And authorized IBM on-site service is available anywhere in the U.S.A.

For a free brochure on the IBM System/36 PC or for information on product availability from participating IBM Product Centers, Authorized PC Dealers or Value Added Dealers, call 1 800 IBM-2468, ext. 90, LL. Or call your IBM marketing representative.

IBM®



Firms join in funding human resources tool

By Edward Foster
Special to CW

PRINCETON, N.J. — Corporate managers concerned with white-collar productivity have joined a consortium to fund the development of Productivity Map, a program for the IBM Personal Computer that will help track the performance of managers in the way other programs track inventory or sales.

The program is in the early stages of development at Pacesetter Software Co. here. Participants in the consortium include 3M Corp., Westinghouse Electric Corp., GTE Corp., Northern Telecom Inc., Nabisco Brands, Inc. and the U.S. General Accounting Office.

Productivity Map is being designed for "somebody who has to track managers or functions in areas of a company that are difficult to measure," according to Michael Hierl, president of Pacesetter. "What we're hearing from our beta test group is that the big need is not for tracking productivity in manufacturing but in systems, research and development, human resources and other knowledge- and worker-intensive areas."

Consortium members are paying Pacesetter a one-time $12,500 fee for an organizationwide license to use the software and qualify as a beta test site. The members are also providing Pacesetter with feedback and technical assistance on the various approaches to productivity management that they want to see in the package.

Hierl said he has not decided about pricing or distribution policies for the final product, which is expected by the end of the year, but his inclination is to continue the one-time corporate license fee, probably for a higher price than the beta testers are paying.

Productivity Map will not concentrate on one approach to tracking performance but will instead integrate many different methods now employed by consortium members, using up to 20 different kinds of graphics representations built into the system. A large part of the program will be tutorial in nature.

Pacesetter originally formed its consortium based on experience with Organization Map, a program it sells for producing organizational charts and analyses. Organization Map customers, Hierl said, suggested the outlines of the new program and formed the original consortium membership.

Amy Archambeau, manager of organization and manpower planning for GTE's human resources staff, said that she expects the consortium itself to have a great deal of value, whatever the final result of the software development. "The consortium aspect is a hidden benefit just in terms of the affiliation with other people in the group," she commented.

Foster is a senior writer with Computerworld's *sister publication* Infoworld, *where this story first appeared.*

Micro modeling program bows

BREA, Calif. — P-Cube Corp. has announced ISP Methodology, an information systems planning method supported by microcomputer software running on IBM Personal Computers and compatibles.

The ISP Methodology uses a model that shows the relationships between different systems and organizational processes. The model highlights opportunities for improving an organization's information infrastructure and for using computer technology to improve the organization's competitive position, according to the vendor.

The model also is said to simulate the impact of new systems, changes in existing systems and changes in organization processes and functions.

ISP modules allow users to set priorities on systems projects, to develop corporate data bases and to define the specific set of systems an organization should be developing to meet near-term and long-range information needs. The modules also help users evaluate alternative funding strategies for information systems development.

The package operates under IBM's PC-DOS 2.1 and requires 256K bytes of random-access memory.

The basic price for ISP Methodology is $12,000.

P-Cube is located at 915 Kings Canyon Road, Brea, Calif. 92621.

SOFTWARE

■ **Micro Focus has announced enhancements to its Sourcewriter, a Cobol applications generator for use on the IBM Personal Computer line.**

Enhancements to Sourcewriter reportedly include the ability to produce programs that permit multiple users to access the same file simultaneously. Also added were systems security features, including password protection, logging and recovery, the latter of which permits files to be restored.

Sourcewriter reportedly generates U.S. General Services Administration (GSA)-certified standard Ansi 74 Cobol source code. It is completely compatible with Micro Focus' GSA-certified Cobol compilers.

A data dictionary-based tool, Sourcewriter is said to allow applications prototyping.

Sourcewriter costs $1,395 until July 31 when the price increases to $2,000. It is also offered in a package with Professional Cobol for $3,000 until July 31.

Micro Focus, 2465 E. Bayshore Road, Palo Alto, Calif. 94303.

■ Ashton-Tate has introduced Courseware training materials for use with its Framework and Dbase II and III business software products.

Courseware reportedly can be used for self-paced study or classroom instruction. It provides an introduction to Ashton-Tate applications and instruction in Dbase II and III programming.

Courseware is offered in three packages of increasing complexity, each consisting of a student workbook and an associated instructional diskette. Administrative teaching kits for instructors include overhead materials and course notes.

Courseware costs $39.95 for an introductory-level package, $48.95 for the intermediate Framework package, $49.95 for the intermediate Dbase II and III packages and $59.95 for the advanced-level package. The teaching kit is $185.

Ashton-Tate, 10150 W. Jefferson Blvd., Culver City, Calif. 90230.

■ Marc Software International, Inc. has introduced two word processing programs for the IBM Personal Computer and personal computers running under Microsoft Corp.'s MS-DOS operating system.

Wordmarc Composer, a word processor for use with complex documents, reportedly supports multiple-font printing devices for laser and dot matrix printers and the use of mathematical and scientific symbols.

Wordmarc Author is said to be a simple word processor designed specifically for use by managers. All of the formatting functions of Wordmarc Composer are said to be included.

Both programs reportedly were designed in accordance with the University of Chicago Dissertation Office's Manual of Style.

Wordmarc Composer costs $495. Wordmarc Author costs $295.

Marc Software International, No. 200, 260 Sheridan Ave., Palo Alto, Calif. 94306.

■ Structured Software Solutions, Inc. has introduced Facet, a software package for the creation of windows on the IBM Personal Computer XT or AT that link into an AT&T Unix application running on a host.

The package, which consists of a module for the host and for the Personal Computer under IBM's PC-DOS, reportedly permits users to create up to 10 individual session windows, even while running a PC-DOS application.

The package resides in memory and allows users to configure windows of any size, color or screen placement they wish, according to a spokesman.

The software relies on the X.PC protocol for communication between the Personal Computer and the host, reportedly permitting concurrent file transfer while interactive work continues in other sessions.

The software costs $195 for the Personal Computer module. Host modules are currently available only for the Personal Computer XT or AT under Unix; they cost $249.

Structured Software Solutions, Suite 205, 4031 W. Plano Pkwy., Plano, Texas 75075.

■ Gimpel Software has announced a diagnostic program for C-language applications running under the Microsoft Corp. MS-DOS operating system.

PC-Lint is said to analyze C programs and to report on bugs, glitches and inconsistencies. The product reports on errors such as type inconsistencies across modules, parameter-argument mismatches, library usage irregularities, uninitialized variables, value-return inconsistencies and variables declared but not used.

PC-Lint is delivered with user-modifiable standard library descriptions for most major compilers, according to Gimpel.

The product requires a minimum of 128K bytes of memory.

The cost of PC-Lint is $139.

Gimpel Software, 3207 Hogarth Lane, Collegeville, Pa. 19426.

■ Keyword Office Technologies, Inc. has announced an IBM Personal Computer software program that reportedly allows users of the Keyword 7000 disk-to-disk conversion system to translate documents for transmission to remote, incompatible word processing systems.

Com-File is said to operate on users' existing telecommunications facilities or networks to allow transmission of documents in revisable form.

Using a diskette from the source machine with the Keyword 7000, users may create Com-File documents on an IBM micro's PC-DOS format floppy or hard disk drive. The Com-File version of the document is transmitted by standard telecommunications services to a remote micro with Keyword 7000, which converts the text from Com-File form to the target word processor format.

At each end of the transmission, Com-File requires the Keyword 7000 disk drive unit and controller board, an IBM micro with minimum internal memory of 256K bytes and communications hardware and software that support 8-bit transparent transmission.

The cost of Com-File is $495. Bundled with Keyword 7000 hardware, Com-File costs $9,995.

Keyword Office Technologies, 2047 Hamilton Ave., San Jose, Calif. 95125.

■ Viewlogic Systems, Inc. has announced that its Workview series computer-aided engineering (CAE) software is now compatible with Data General Corp.'s DG/One per-

No other Conference can touch it for Quality...Depth...Scope.

TWO SPECIAL TRACKS

Special Theme Track—
Tying It All Together
The first public discussion of work at NBS and elsewhere aimed at permitting the exchange of data, text and graphic information in a multi-vendor environment — that could ultimately lead to tying together computer systems throughout the Federal government.

3rd Year Special DOD Track—
Going Beyond the State-of-the-Art
Focusing on the cooperative efforts of government, industry and academia, this track will cover how major Consortia are working to bring about the next-generation of computing capabilities necessary to meet DOD's goals for the 1990's.

This year's Conference is the most comprehensive yet!

PLUS— Full 3-day Seminar program with over 150 speakers and 50 sessions on microcomputers, software, networks, management issues, products and new technologies.

PLUS— Washington's largest Exposition of computer and communications equipment, systems and services representing every leading company in the industry.

"The Exposition is an education in itself."

ACT NOW— Send in the coupon below to receive the 1985 Program Brochure — or
CALL TOLL-FREE TODAY
800-343-6944*
*In Massachusetts 617-358-5355 Collect

It's the Conference you can't afford to miss— The Federal ADP Community's #1 educational event that offers a once-a-year opportunity to Catch Up on What's New...And Prepare for What's Ahead.

table computers.

The Workview series, which includes an entry-level system, a digital design system and an analog design system, allows electronic design engineers to generate documentation and to communicate to other CAE and computer-aided design workstations, the vendor said.

Engineering functions include schematic entry, interactive logic simulation and wave form processing. Workview can also run on the IBM Personal Computer XT and AT and compatibles.

Viewlogic's Workview series costs from $3,500 to $8,500, depending on the module.

Viewlogic Systems, 33 Boston Post Road W., Marlboro, Mass. 01752.

■ The Key Board has announced a version of its data base management system for the IBM Personal Computer, Personal Computer XT, AT and PCjr.

The Data Base package is said to feature full disk-file capacity, relative files, 32,000 records per file, 4K-byte record size and 100 fields per record. Functions include sort, append, reformat, field calculations, count and totaling, sequential file interface capability and multiple logical field queries. The software reportedly includes report and mailing label printing capabilities.

The Data Base resides in 128K bytes of memory and runs on most IBM-compatible systems.

Cost of the software is $49.95.

The Key Board, P.O. Box 753, Cedar Crest, N.M. 87008.

■ Burt Woolf Management, Inc. has introduced its Team System, data base management software for the IBM Personal Computer.

Designed for small to medium-size nonprofit organizations, Team System reportedly stores business and home addresses and phone numbers, birth dates and the prefixes and salutations used in correspondence. The ability to print continuous labels or business envelopes is included for use in bulk mail projects.

Users are reportedly able to store up to 10,000 records using Team System in an IBM Personal Computer with a hard disk. On a Personal Computer without hard disk, 250 records can be stored per diskette.

Team System is priced at $495.

Burt Woolf Management, Suite 214, 167 Corey Road, Brookline, Mass. 02146.

■ First Byte, Inc. has announced enhancement and a price cut for its Smoothtalker speech synthesis software for the Apple Computer, Inc. Macintosh.

Smoothtalker Version 2 reportedly now offers a female voice, along with the male voice previously featured.

Smoothtalker reportedly converts English language text, input via the keyboard or an Ascii file, into speech that is output by the Macintosh's built-in speaker. It reportedly works on either the 128K-byte or 512K-byte Macintosh models.

Smoothtalker's price is $99, down from $149.95, the vendor said.

First Byte, 2845 Temple Ave., Long Beach, Calif. 90806.

■ Vertisoft Co. has introduced a version of its LLS Legal Billing/Office Accounting software for IBM Personal Computers equipped with a hard-disk storage unit.

The software is said to be an integrated time and client billing and general ledger program. The entry of a transaction into the software at one location can automatically cause the entry to be entered at other locations in the package.

The hard-disk version of the package reportedly retains all itemized transactions of each month.

The software in its hard-disk version is priced at $1,395. The dual-diskette drive version is $995.

Vertisoft, 447 Willis Road, Saline, Mich. 48176.

■ Wyman Associates, Inc. has introduced Ontime scheduling software for the IBM Personal Computer.

Ontime reportedly schedules jobs using any of six methods including FIFO, minimize average completion time, weighted completion time, average job lateness, range of job lateness and number of late jobs.

Actual times can be accumulated and reported along with budgets, profits, time remaining, work loads and capacity forecasts.

Ontime is priced at $495 and requires 128K bytes of memory and two double-sided, double-density diskette drives.

Wyman Associates, Suite 221, 181 Second Ave., San Mateo, Calif. 94401.

■ SBT Corp. has announced professional time and billing accounting software designed for use with the Ashton-Tate Dbase III or Dbase II data base management systems on the IBM Personal Computer and other microcomputers that run Dbase software.

Dprofessional can also be run independently or with other SBT accounting software programs such as Dpurchase, Dpayable and Dledger. SBT provides source code for user modification and customizing.

Dprofessional is a menu-driven program that allows users to enter and analyze data and generate reports. Other reports include client ledger listing, transaction analysis, billing analysis, cash receipts register, accounts receivable aging and work in progress.

The software requires either the Microsoft Corp. MS-DOS or Digital Research, Inc. CP/M operating system, two floppy drives or one hard disk drive and a minimum total disk capacity of 720K bytes of memory.

The software costs $395.

SBT, 3 Harbor Drive, Sausalito, Calif. 94965.

■ STSC, Inc. has introduced a version of its APL-Plus UNX system for the AT&T Unix PC.

An enhanced APL interpreter and applications development system for Unix, the program is said to offer partial compilation of APL code.

Also reportedly offered are true concurrent file sharing, nested arrays compatible with IBM's APL2 and a communications facility that lets users log on to a remote host and transfer data.

The software costs $995.

STSC, 2115 E. Jefferson St., Rockville, Md. 20852.

■ Vertical Solutions, Inc. has introduced several software products for use with Software Publishing Corp.'s PFS:File data base and IBM's Filing Assistant software.

The packages announced included Importer, which reportedly permits PFS:File users to import data from column-oriented Ascii files, and Forms, which reportedly prints invoices, checks, purchase orders and other forms from a PFS:File or Filing Assistant data base.

Also announced were Market Prospector, which reportedly permits a predefined PFS:File or Filing Assistant data base to support the needs of sales workers, and the Market Prospector Plus service, a Vertical Solutions list of potential sales contacts. That list, provided on diskettes, is priced from $200 to $2,000.

Also introduced was Startup, which reportedly lets the user develop customized software menus.

Importer and Forms each cost $140. Market Prospector and Startup each cost $50.

Vertical Solutions, P.O. Box 5061, Evanston, Ill. 60204.

■ Sophco, Inc. has introduced its Protec 3 system security software for the IBM Personal Computer XT and AT.

Protec 3 reportedly offers audit trails that track user names, program used, date used and other criteria. Also included are features to block users from copying software from a shared hard disk and to provide access control via passwords and logon identification codes.

Protec 3 is priced at $350 and requires Microsoft Corp.'s MS-DOS 2 or higher and 128K bytes of memory.

Sophco, P.O. Box 7430, Boulder, Colo., 80306.

■ Systems Compatibility Corp. has unwrapped two software products that allow documents to be shared by several microcomputer word processors.

Software Bridge lets users convert among Multimate International Corp.'s Multimate, Micropro International Corp.'s Wordstar, Samna Corp.'s Samna Word and IBM's Displaywrite III on IBM Personal Computers and compatible computers without a protocol translator.

W-Link reportedly provides compatibility between Multimate and Wang Laboratories, Inc.'s Professional Computer Advanced Word Processing. The software converts documents created on either system to a format

HANDS-ON TRAINING THAT ISN'T SECONDHAND

When you learn the UNIX™ System directly from AT&T, you learn it firsthand—from the people who develop it.

For over fifteen years, we've been teaching our people to use the UNIX System—which makes us the best trained to help you learn.

Whether you're a first-time user or a system developer, you'll get hands-on experience with courses that keep you up to date on the latest information. At AT&T Information Systems, you get your own terminal, teachers that can stay late at night, and your choice of training centers. Or center your training right around your own office.

So take your training from AT&T. And discover the power of UNIX System V—right from the source. Call us today to reserve your seat or for a free catalog.

MICROCOMPUTERS

Continued from page 84

recognized by the other.

Software Bridge and W-Link each cost $495.

Software Compatibility, 410 N. Michigan Ave., Chicago, Ill. 60611.

■ Burroughs Corp. has unveiled three software packages for its B25 micro — Enhanced Multiplan, B20 Draw and Context Manager.

An upgrade to Multiplan, Enhanced Multiplan reportedly adds the ability to solve formulas containing circular references and to retain spreadsheets. In addition, the package increased Multiplan's memory capacity from 32K bytes to 1M byte.

B20 Draw is said to allow users to create pictures and templates from a selection of lines, squares, points, triangles and sine curves.

Context Manager lets up to 10 application programs run concurrently on a workstation under multiple operating systems, including Burroughs' Btos, Microsoft Corp.'s MS-DOS and Digital Research, Inc.'s CP/M 86, according to the spokesman.

Enhanced Multiplan, B20 Draw and Context Manager each cost $250.

Burroughs, One Burroughs Place, Detroit, Mich. 48232.

■ Systemware, Inc. and Forecasting Planning Associates have announced an inventory data base system for data centers that is said to support disaster recovery planning, budget forecasting and analysis, configuration management and component failure impact analysis.

Called Data Center Manager/I (DCM/I), the software consists of four separately priced components: Basic Inventory Module, Budgeting Module, Configuration Module and Maintenance Module.

The Basic Inventory Module is the first available and prerequisite to the others. Its functions include the ability to track equipment and software in-house and on order, purchase and lease costs and financial commitments.

DCM/I runs on IBM Personal Computer XT and compatible computers. The Basic Inventory Module licenses for $4,995.

Systemware, Suite 1000, N. Central Plaza II, 12770 Coit Road, Dallas, Texas 75251.

SYSTEMS

■ PC Technologies, Inc. has announced an enhanced version of its multiuser expansion system for the IBM Personal Computer XT and AT.

The Xtender II expansion board and software reportedly allow the XT or AT to serve as the CPU for up to nine terminals, compared with the five users supported by Xtender I on the XT. Other enhancements include compatibility with, rather than emulation of, IBM's PC-DOS 2.1, and support of asynchronous communications software.

The standard system consists of Intel Corp. 80286 and 80186 microprocessors with an optional 80287 math coprocessor; 1M byte of system random-access memory, expandable to 4M bytes; an I/O interface unit with eight RS-232 ports; and system and utilities software.

The system is said to support most standard Ascii terminals, allowing them to run micro application programs under PC-DOS 1.1, 2, 2.1 and 3 and Digital Research, Inc. CP/86, MP/M and Concurrent DOS.

The cost of Xtender II is $4,995.

PC Technologies, Box 2060, 704 Airport Blvd., Ann Arbor, Mich. 48106.

COMMUNICATIONS

■ Decatek, Inc. has announced a half-duplex, two-wire, 9.6K bit/sec. modem that fits into an expansion slot of an IBM Personal Computer.

Zipmodem is equipped with protocol conversion software that translates Ascii data into Ebcdic data that conforms to System Network Architecture/Synchronous Data Link Control protocol. The menu-driven package provides IBM Logical Unit 1, 2 or 3 emulation.

Used with a mainframe Zipmodem, a user is able to monitor transmission errors.

An IBM Personal Computer Zipmodem costs $2,995 and a mainframe Zipmodem sells for $1,995.

Decatek, P.O. Box 600, Mountain, Ga. 30083

■ Excore Corp. has introduced its Excore-Net baseband local-area network for use with IBM Personal Computer Network software and IBM's PC-DOS 3.1.

Excore-Net reportedly consists of plug-in network interface cards and can link up to 16 machines in the Personal Computer line, with up to 1,000 feet between each machine.

The net is said to be based on a token-passing ring architecture and to offer 2M bit/sec. data transfer rates.

Each interface card to the network is priced at $349.95.

Excore, 10 Victor Sq., Scotts Valley, Calif. 95066.

■ Data General Corp. has announced an internal 1,200 bit/sec., 300 bit/sec. modem for the Data General/One portable micro.

The modem is said to include an autodial/autoanswer feature. The product allows direct connection with telephone lines through a standard modular jack or can be used with a DG acoustic coupler at 300 bit/sec.

The modem allows users to access DG's Comprehensive Electronic Office (CEO) automation system

through the DG CEO Connection.

The 1,200 bit/sec., 300 bit/sec. modem is priced at $525.

DG, 4400 Computer Drive, Westboro, Mass. 01580.

■ Network Software Associates, Inc. has introduced AdaptSNA PCcom II communications software for the IBM Personal Computer.

AdaptSNA PCcom II reportedly uses IBM's Synchronous Data Link Control protocol and offers transmission speeds up to 19.2K bit/sec. Also offered are multidrop capabilities, password protection and the use of Help screens.

Other features of the software are said to include autodial capabilities on some modems and a timer/alarm clock. The software can execute IBM PC-DOS commands on a remote Personal Computer from a local Personal Computer.

The package costs $475.

Network Software Associates, 19491 Sierra Soto, Irvine, Calif. 92715.

■ Honeywell, Inc. has announced a version of its PC 7800 software that reportedly allows Apple Computer, Inc. Macintosh micros to serve as workstations for Honeywell mainframes using the Honeywell GCOS 8 operating system.

The software enables a Macintosh to emulate a Honeywell VIP 7800 terminal by emulating function keys, attributes and special-purpose switches on the terminal, allowing the micro to access a Honeywell DPS 8, DPS 88 or DPS 90 mainframe. The software accepts character input either from the Macintosh keyboard or from a remote information processor through a communications network.

PC 7800 transfers time-sharing files for interaction with the micro, with protocols for error detection and recovery. Attached printer support allows the transfer of Macintosh screen images directly to a printer.

The cost of the PC 7800 software for the Macintosh is $295.

Honeywell, P.O. Box 8000/A-79, Phoenix, Ariz. 85066.

■ US Robotics, Inc. has announced enhancement of its Telpac communications software for the IBM Personal Computer line.

Telpac reportedly now gives users five subject headings: file, telephone, utility, settings and a Help mode. Also new are windows that can be displayed for each subject heading to guide the user through the heading's functions.

Telpac reportedly gives users access to files on remote computers and permits them to transfer files to a remote system or move files within their Personal Computers. It was designed to work with US Robotics modems and compatibles and stores an unlimited number of telephone numbers for autodialing.

Telpac costs $149.

US Robotics, 8100 McCormick Blvd., Skokie, Ill. 60076.

■ Yourdon Software Engineering Co. has announced a version of its Analysis Tool Kit program development software for the IBM Personal Computer XT and Personal Computer AT.

Analysis Tool Kit, originally developed for the Wang Laboratories, Inc. Personal Computer, is a micro-based computer-aided design (CAD) system for software developers. The product reportedly enables systems analysts to create data-flow, entity relationship and state transition diagrams and free-form graphics. The mouse-driven graphics allow the user to create symbolic graphics models for real time, on-line and batch processing systems, the vendor said.

The IBM micro version requires with a high-resolution bit-mapped graphics controller, a 10M-byte Winchester disk drive, 640K bytes of main memory and a graphics printer. Software drivers for the printer and plotter interface are included in Analysis Tool Kit utilities.

Analysis Tool Kit for the XT and AT costs $3,500.

Yourdon Software Engineering, 1501 Broadway, New York, N.Y. 10036.

■ Quam Corp. has introduced its QC1018 board for networking IBM Personal Computers under the Datapoint Corp.'s Arcnet token-passing scheme.

The QC1018 reportedly is a half-size board for use in a slot in the Personal Computer's expansion chassis.

The QC1018 node and passive hub cost $449 and $499, respectively.

Quam, Suite 208, 900 W. 128th St., Minneapolis, Minn. 55237.

■ Graphics Software Systems, Inc. (GSS) has announced GSS-Grafstation communications software for microcomputers running Microsoft Corp.'s MS-DOS, IBM's PC-DOS or AT&T's Unix.

According to a spokesman, the package allows personal computers connected to host processors to operate as distributed intelligent graphics workstations.

The GSS-Grafstation is priced at $250.

GSS, 25117 S.W. Pkwy, Wilsonville, Ore. 97070.

■ American High-Tech Industries, Inc. has introduced Magnum MCS-A, a communications hardware and software system for the IBM Personal Computer.

Magnum MCS-A reportedly includes an asynchronous modem and a multifunction board that fits into one of the Personal Computer's expansion slots. Also included is the firm's

NOW IT ONLY TAKES ONE TO TANGO.

Say hello to PhoneMail™ and say hello to the One Party Phone Call. No more waiting for the phone to ring, waiting for someone on the other end, waiting for your telephone partner in another city, another meeting, another time zone. Waiting.

PhoneMail is not your basic phone answering gadget.

It's a digital voice-messaging system for your entire company that you can access from any Touch Tone* telephone anywhere in the world, any time.

PhoneMail can answer your phone with your personal greeting. (If you'd prefer, your secretary can take the call and direct the caller to PhoneMail.)

It will let you answer messages automatically. It can forward them, along with your comments, to dozens of your associates. It lets you send messages to a whole roster of

*Trademark of AT&T.

4900 Old Ironsides Drive, M/S 520 Santa Clara, CA 95054.

MICROCOMPUTERS

Turbocom software, which provides asynchronous terminal emulation using character translation.

Emulation of the Digital Equipment Corp. VT52 and VT100 terminals and the IBM 3101 and Data General Corp. Dasher 210/211 terminals is included. Users can also construct any other terminal emulation.

The Magnum MCS-A costs $1,195, the vendor said.

American High-Tech Industries, Suite 201, 11111 Wilcrest Green Drive, Houston, Texas 77042.

■ MCI Communications Corp. has announced Commdesk, a program that allows IBM Personal Computers to access MCI data services while running other applications.

The package works with modems that transmit data at speeds of 110, 300 and 1,200 bit/sec. and is compatible with Hayes Microcomputer Products, Inc. communications protocols.

The software reportedly provides multitasking capability so that a user can run a second application with Commdesk. The package costs $295.

MCI, 1133 19th St. N.W., Washington, D.C. 20036.

■ Business Computer Network, Inc. announced three personal computer software products. Called Telpath, the software replaces Superficent and includes electronic updating via a toll-free number through the firm's host computer.

In addition, Telpath can be configured with two software upgrades, Telgate and Telmail. Telgate allows users to access most on-line data base services with one keystroke and Telmail lets users send and receive electronic messages by accessing electronic mail services, with a single keystroke.

Telpath sells for $99.95; Telpath with Telgate costs $139.95. Telgate is also available as an upgrade to Telpath for $39.95. Telmail, which is only available as a Telpath upgrade, costs $69.95.

Business Computer Network, 1046 Central Pkwy. S., San Antonio, Texas 78247.

■ Percom Data Corp. has announced a storage and expansion unit for IBM's Personal Computer.

The Expander Plus includes four expansion card slots and can be configured with up to two combinations of Winchester hard disk, removable cartridge or streaming tape backup, according to the vendor.

The product can be configured by the dealer for any two combinations of 10M-, 20M- or 30M-byte Winchesters; 10M-byte ¼-in. streaming tape backup; or 10M-byte removable hard disk drives.

The unit sits on top of the micro and includes a 130W power supply, four ac receptacles, five front-panel control switches, an ac power surge suppressor, a frontpanel static discharge plate and space for the two drives. Expander Plus costs $995.

Percom Data, 11220 Pagemill Road, Dallas, Texas 75243.

■ Alloy Computer Products, Inc. has introduced its Microstor-73, an external hard disk drive and tape backup subsystem for the AT&T Unix PC.

The Microstor-73 reportedly integrates a hard disk drive, in a choice of several capacities, with a file-oriented, streaming tape backup unit, giving a formatted capacity of 20M bytes per cartridge.

The Microstor-73 costs $3,295 for a version with 20M bytes of formatted hard disk storage and $4,295 for a 40M-byte version. The data encryption chip sells for $300.

Alloy Computer Products, 100 Pennsylvania Ave., Framingham, Mass. 01701.

■ Data Technology Corp. has added several models to its Transmate line of removable hard disk storage subsystems for the IBM Personal Computer and Personal Computer XT.

Each of the units uses removable 10M-byte cartridges, each incorporating a dedicated servo pattern that reportedly permits users to interchange cartridges between compatible subsystems. The cartridges may be removed for storage as well, the vendor said.

Models in the line include the 1400/R102 dual 10M-byte cartridge system, priced at $3,195; the 1300/R10, an internally installed

10M-byte system priced at $1,695; and the 1400/R10, an external 10M byte system priced at $1,995.

Data Technology, 2525 Walsh Ave., Santa Clara, Calif. 95051.

■ Magnetic Memory Corp. has announced a streaming tape backup system for Winchester hard disk drives used with the IBM Personal Computer and Personal Computer XT and AT.

The ST/20 is said to be a half-height internal tape drive using digital tape cassettes. It includes a controller board for the standard IBM expansion slot and menu-driven software running on Microsoft Corp. MS-DOS and IBM PC-DOS systems.

The cost of the ST/20 is $795.

Magnetic Memory, 2550 Ninth St., Berkeley, Calif. 94710.

■ Data Technology Corp. has introduced ¼-in. cartridge tape drives, in externally and internally installed versions, for use in the IBM Personal Computer.

The Teammate Models 1300/T60 and 1400/T60, both add-on versions, reportedly use 45M-byte or 60M-byte tape cartridges and can conduct a backup at the rate of 5M byte/min. A software utility that permits files to be restored individually or in an image backup is included.

The 1300/T60 costs $1,395. The 1400/T60 costs $1,695.

Data Technology, Teammate Division, 2775 Northwestern Pkwy., Santa Clara, Calif. 95051.

PRINTERS/PLOTTERS

■ Alphacom, Inc. has introduced the Alphapro 401 daisywheel printer, which offers built-in Centronics Data Corp.-type parallel and RS-232 serial interfaces.

The Alphapro 401 reportedly prints at 35 char./sec. and includes a bidirectional forms tractor feeder. A cut sheet feeder is optional.

Also included is a 2K-byte buffer, expandable to 16K bytes, according to the vendor. The unit supports proportional spacing, boldface, overprinting, superscripts, subscripts and single pass underlining.

The Alphapro 401 costs $599. The cut sheet feeder costs $149.

Alphacom, 2323 S. Bascom Ave., Campbell, Calif. 95008.

■ Princeton Graphic Systems has unwrapped four color monitors for the IBM Personal Computer, Personal Computer XT, Personal Computer AT and compatibles.

The HX-9 and HX-9E are both 9-in. diagonal red-green-blue (RGB) color monitors with 160mm by 120mm display areas. Each monitor has 20 MHz bandwidth and 0.28 dot pitch, 16 colors and noninterlaced operation. The HX-9E is for use with the IBM Color Graphics Card, the vendor said.

Both monitors are compatible with Apple Computer, Inc. microcomputers with the addition of an RGB 80 card.

The SR-12P is a 12-in. diagonal analog RGB color monitor for use with the IBM Professional Graphics Card or equivalent. It has a 215mm by 160mm display area, 30-MHz video bandwidth and 0.26 dot pitch. Resolution is 640 by 480 dots at 30.48-kHz scan and 640 by 400 dots in emulation mode, the vendor said.

The HX-12E is a 12-in. diagonal RGB color monitor with 215mm by 160mm display area, 18-MHz video bandwidth and 0.28mm dot pitch.

The HX-9 costs $650, and the HX-9E costs $750. The SR-12P costs $990, and the HX-12E is $795.

Princeton Graphic Systems, 170 Wall St., Princeton, N.J. 08540.

■ Crosstech, Inc. has introduced a seven-color graphics printer for the IBM Personal Computer.

The Model CTI-7180 Color Printer reportedly allows combined text and graphics and software-selectable graphics modes of 816, 1,632 and 3,264 dot/line. Text is printed at 180 char./sec. in the pica type style and 90 char./sec. in the near-letter-quality type style.

The software controls individual colors. The unit is priced at $1,145 with a parallel interface and $1,295 with a serial interface.

Crosstech, 2730B Aiello Drive, San Jose, Calif. 95111.

■ Facit, Inc., a subsidiary of L. M. Ericsson, has introduced its 4509 printer for use with IBM Personal Computers or compatible machines.

Facit 4509 reportedly features two operating modes, a mode emulating the Epson America, Inc. RX-80 printer and an IBM/Epson emulation mode. The 80-col. dot matrix printer prints at 120 char./sec. and includes multiple font and pin graphics capabilities.

Character printing in 10, 12 and 17 pitch reportedly is possible in varying heights. Three resolution settings — 60, 120 and 240 dot/in. — are available for graphics reproduction. The unit costs $495.

Facit, 9 Executive Drive, Merrimack, N.H. 03054.

■ Datasouth Computer Corp. has announced its Daisywheel 36 medium-speed letter-quality printer with both Centronics Data Computer parallel and RS-232C serial interfaces.

The Daisywheel 36 has a maximum speed of 36 char./sec. and an average speed of 32 char./sec. It features bidirectional logic seeking, full stops for each character, proportional spacing, autounderlining and shadow printing.

Red/black printing is available.

The Firebreathers continue on the cutting edge of high performance computers.

The most powerful line of computer systems made. Gould PowerNodes™ and CONCEPT/32s.® Any way you slice it they beat VAX.™ Not just by a little. By a lot. Whether you're comparing power, price or availability, we've got just the edge you need to ax the VAX.

For starters, our mainframe PN9000 and CONCEPT 32/97 are up to twice as fast as the VAX 8600. And even though the mid-range PN6000 and CONCEPT 32/67 are 30-50% smaller than the VAX 11/780, they're still up to three times more powerful. Which means they'll run your applications faster, much faster, than VAX.

More power for a slice of the price.

Despite their superior power, Gould computers cost quite a bit less than the equivalent DEC computers. Just take a look at the chart on your right.

Our mid-range models cost 40% less than the VAX 11/780. Our mainframes cost about 30% less than the new VAX 8600.

In fact, all Gould computers come with a price that won't come to blows with your budget. The bottom line is more power for less money. You don't need a computer to figure out what an advantage that is.

Operating environments that are a cut above the rest.

There's also a choice of system software to consider. Gould offers a unique implementation of the UNIX* operating system – UTX/32.™ It's the first system to combine the UNIX standards of System V with Berkeley BSD 4.2. Which also makes it the only system that allows you to access virtually

Only Gould computers have a big enough edge to ax the VAX.

MICROCOMPUTERS

The printer reportedly handles cut sheets up to 16.5-in. wide with a friction feed platen. Options include an automatic sheet feeder and a forms tractor for perforated fan-fold forms.

The printer costs $895, the vendor said.

Datasouth Computer, 4216 Stuart Andrew Blvd., Charlotte, N. C. 28210.

■ Ziyad, Inc. has announced Paperjet 400, an automatic sheet and envelope feeder that works with Hewlett-Packard Co.'s Laserjet printer, and Paperjet 2000, a 47 char./sec. daisywheel printer.

The Paperjet 400 reportedly consists of two paper trays and an envelope tray that are housed underneath the printer. The product holds up to 450 sheets of paper and 75 envelopes. The adjustable paper trays store standard, legal, executive and European paper.

Paperjet 400 sells for $1,395 and the Paperjet 2000 costs $4,495.

Ziyad, 100 Ford St., Denville, N.J. 07834.

■ Sakata USA Corp. has announced a high-resolution amber monochrome monitor for the IBM Personal Computer.

The Sakata SA-1500 reportedly is 12-in. high and completely portable. It features resolution of 800 dots by 780 dots, a 2,000-char. display, horizontal frequency of 18.43 kHz, vertical frequency of 60 kHz and video bandwidth of 25 MHz.

Cost of the SA-1500 is $179.

Sakata USA, 651 Bonnie Lane, Elk Grove Village, Ill. 60007.

■ Wang Laboratories, Inc. has announced a color matrix printer and a daisywheel printer for the Wang Professional Computer.

The Colorwriter 19 is said to be an eight-color dot matrix printer that attaches to the micro through a parallel port interface and operates in draft, memo and near-letter-quality modes. Print speeds, depending on pitch, range from 154 to 200 char./sec. in draft mode, 90 to 108 char./sec. in memo mode and 30 to 40 char./sec. in near-letter-quality mode.

The PC/WOA-PM015 is a bidirectional, letter-quality daisywheel printer that reportedly prints at 40 char./sec. The product uses a serial RS-232 interface and also operates with the Wang Office Assistant micro.

The Colorwriter 19 is priced at $1,395 and the PC/WOA-PM015 is priced at $995.

Wang Laboratories, One Industrial Ave., Lowell, Mass. 01851.

■ NEC Home Electronics (U.S.A.) Inc. has announced two 12-in. monochrome monitors that are transistor-transistor logic compatible with the IBM Personal Computer, Personal Computer AT and compatible computers that have monochrome display/printer adapter cards.

The green phosphor JB-1280DA and amber phosphor JB-1285DA monitors can display 80-char. columns by 25 lines, a spokesman noted.

Video bandwidth is said to be 20 MHz; resolution is 720 horizontal dots by 350 vertical lines.

The monitors cost $189.

NEC Home Electronics, Suite 16, 700 Nicholas Blvd., Elk Grove Village, Ill. 60007.

BOARD-LEVEL DEVICES

■ Tecmar Memory Products Corp. has announced Fastcard, a 384K-byte memory board for the AT&T PC 6300. The board is said to expand main memory to a maximum capacity of 640K bytes.

Fastcard reportedly includes 16 32K-byte dynamic random-access memory (RAM) chips and a 16-bit bus interface for improved read/write access. The product contains 384K bytes of RAM for system use, with an additional 16K bytes for caching and print spooling.

The package also includes the Brightbill-Roberts and Co. Grafix Partner graphics editing software.

The product is priced at $595.

Tecmar Memory Products, 7345 E. Acoma Drive, Scottsdale, Ariz. 85260.

■ STB Systems, Inc. has announced the Super Res 400 video adapter board that reportedly allows IBM Personal Computer XT and AT users to display high-resolution monochrome text on color monitors.

The board is said to emulate the IBM Color Graphics Adapter to allow all software to run on a single display monitor. It reportedly works with color monitors with horizontal scan rates of 25 kHz and 640- by 400-line resolution, such as the Mitsubishi International Corp. AT-1341A and Dynscr Corp. 14 CHI.

The Super Res 400 is said to provide users with 32K bytes of video display buffer memory in all text and graphics modes.

The product, packaged with STB's PC Accelerator print buffer and RAM disk utility software, is priced at $595.

STB Systems, Suite 125, 601 N. Glenville, Richardson, Texas 75081.

any command you want whenever you want.

Or if your application demands a real-time environment, Gould's MPX/32™ operating system offers performance that's unmatched in the industry. And that puts Gould far above the rest.

Delivery that's right on the mark.

Unlike the VAX 8600, that has up to a 12 month wait for delivery, when you order either a Gould PowerNode or a CONCEPT/32 system they will be shipped within 90 days ARO. And that's a schedule we'll go to any length to meet. Because we know how annoying it can be to wait months, and years, for something you've just agreed to pay a healthy sum of money for. Especially when the only thing you can do while waiting is watch your work pile up.

You can also be sure with Gould you're getting a computer that's backed by years of experience. It's the kind of experience we used to develop the first 32-bit real-time computer. The kind of experience that has the competition running to keep up.

If you need more information or just have a few questions, give us a call at 1-800-327-9716.

See for yourself why VAX no longer cuts it. Go with a Gould computer and ax the VAX.

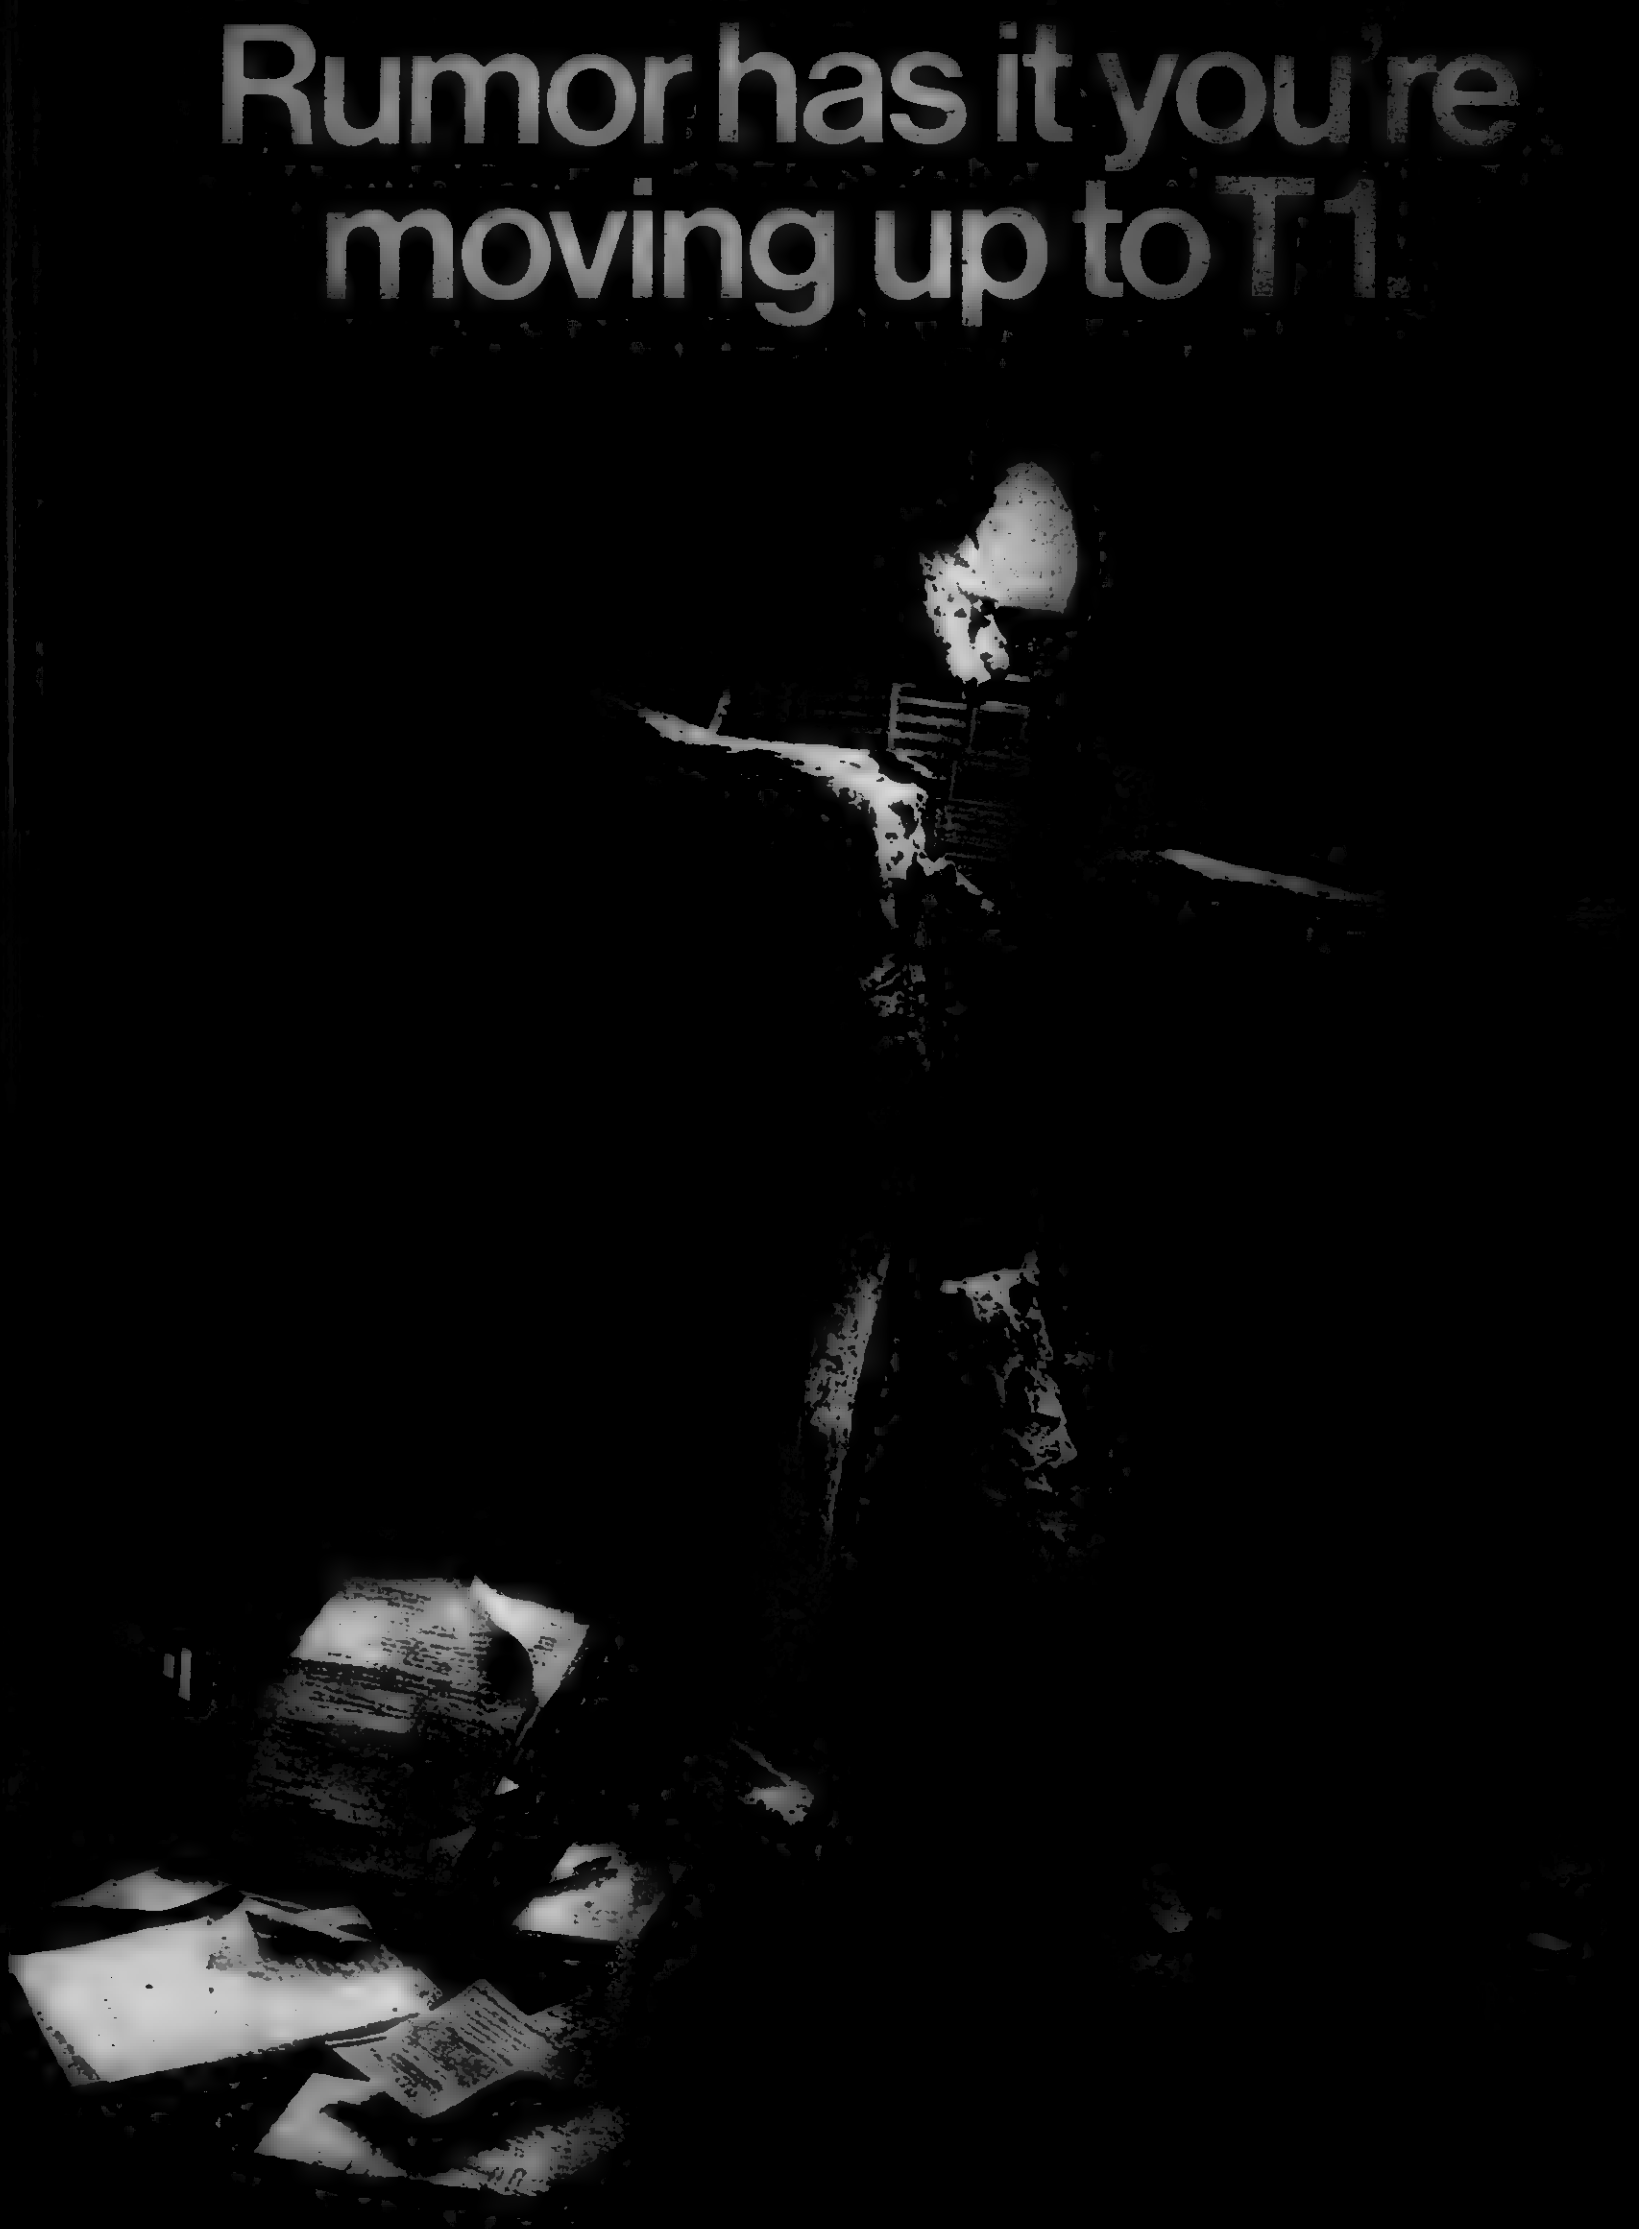
CCI (213) 389-2069

TSO/COBOL/BAL/VSAM AVAILABLE.



Rumor has it you're moving up to T1.

Come back.

T1 speed.

It doesn't have to be as scary a project as everyone thinks. Fact is, installing T1 can be a fairly simple chore.

We're Infotron. We design, build, and install communications networks. Reliable. Compatible. Sophisticated T1 networks that support data and compressed digital voice.

Our newest system, InfoStream™, introduces an open architecture to T1 networking based on Infotron's long-established strengths in multiplexing and switching.

We'll take care of you every step of the way. Before. During. And after the sale.

Calm down. Dust yourself off. Then call: 800-345-4636.

INFOTRON SYSTEMS

PC-DOS from page 47

specification. Networking software sometimes must find out what and where a server machine is, and this function call provides that information.

The two new commands for end users are Join and Subst (substitute). Of the two, Subst is potentially the most useful.

Join connects a drive to a directory on another drive to produce a single directory structure from two separate directories. Join supersedes the Assign command. Subst allows the use of a different drive specifier to refer to another drive or path.

Both commands have relevance for the general user but greatly simplify some network access within an IBM PC Network environment. The Subst command appears to be particularly useful since it is possible to specify a pseudo drive name to a path specification.

To use the Subst command it is first necessary to use the Lastdrive command in a Config.SYS file so that PC-DOS will be able to deal with more drive names than its normal default. Lastdrive can be set to any character in the alphabet.

On a local-area network the path might go to a network server. On a stand-alone system, Subst allows a program that does not understand paths (Micropro International Corp.'s Wordstar, for example) to actually access a file through a complicated path structure.

Unfortunately, at least one frequently used command, Mode, which has never been very user friendly, must be described as user hostile in PC-DOS 3.1.

Among other things, Mode initializes the serial port or ports. There is no way, however, to obtain a report of the current status of the port assignments. Mode should be able to read the ports and report the current status when Mode is typed without parameters.

When used in tandem with another command, CTTY, the communications hardware apparently is not initialized immediately by Mode until something is shipped to the serial port. Thus, CTTY may appear not to work when, in fact, it will.

Another minor complaint is that the numerous references in the PC-DOS 3.1 manual to the technical reference manual suggest that the two should be packaged together even for casual users.

Without the technical reference book it is not even possible to use or understand the Ansi extended screen and keyboard control, which can be useful in constructing batch commands, among other tasks.

On the other hand, except for a few minor glitches, the documentation is complete and attractive.

On the whole, PC-DOS 3.1 seems to have taken care of most of the problems in Version 3 and extends considerably its power over all PC-DOS 2 versions.

The new version is likely to run directly on some compatibles. I tested PC-DOS 3.1 on both a Personal Computer XT and a Tandy Corp. Model Tandy 1200HD. It worked equally well on both machines.

RUNIT from page 47

memory and PC-DOS 2 or higher.

Mailit, priced at $300, was designed to simplify electronic mail and other office automation tasks for companies with IBM mainframe-based electronic mail systems, according to ITSoftware.

The initial release works with IBM's Scripts and Professional Office System (Profs) and DCA and CXI emulation boards.

Mailit is said to translate documents prepared with a microcomputer word processor into IBM formats. Additionally, it permits nondocument files, such as programs and data files, to be sent to and from the mainframe for routing to other personal computer users via Profs, the vendor said.

The software requires 128K bytes of internal memory and PC-DOS 2 or higher.

More information is available from Martin Marietta Data Systems through P.O. Box 2392, Princeton, N.J. 08540.

SATURATION from page 47

more measured."

While Cigna's micro purchasing hasn't slowed substantially in the past year, a random — and statistically insignificant — round of interviews earlier this month generally found significant declines.

Microcomputer purchasing "has slowed down dramatically since the first of the year," reported the MIS manager at a large East Coast consulting firm. "There's no corporate policy on it; it's starting at the bottom of the company. There's just no demand." After buying many systems last year, "we went to a level of saturation," he said.

In the early days of corporate personal computing, even highly paid employees would wait to use a machine, but "nobody's standing in line anymore," said Ron Goldfarb, office automation manager at Pratt & Whitney Co. in East Hartford, Conn.

"That goal of one [personal computer] per person seems further off than it did a year ago," he added. "Maybe we don't need one [personal computer] per person."

For many firms, the next step for desktops is a plunge much further into the deep waters of office automation, networking and distributed computing. These are dangerous waters and not everyone likes what they find when they dip a toe in.

Among the biggest corporations, "a very, very large contribution to the slump is the lack of delivery on announced products," said Thomas Billadeau, founder of TRB & Associates in Ogunquit, Maine.

Office products often arrive not only late but oversold, and customers have grown very skeptical in the past few years, he said.

"End users are more involved in the decision-making process, and they're more impatient than people who've been involved in the industry for years," Billadeau maintained.

BE A COMPUTER ENTREPRENEUR

"The AMI Agent Program absolutely met all our expectations."
Glen W Carden,
Computer Resources International, Inc.,
Monroe, LA

"We're an independent computer systems house, and over the past 20 years have evaluated just about every market and product for mini and microcomputers. Today's powerful microcomputers and the vertical market for accountants clearly hold the strongest potential for revenue. AMI's Agent Program lets us enter this lucrative market quickly and profitably."

AMI's Certified Agent Program is a unique opportunity for you to profit from the microcomputer revolution with only a small investment in the tools to get your business going. You'll sell powerful turnkey solutions including AMI's Software for Professionals™ and hardware like the IBM PC-AT. There's no franchise fee, inventory, nor accounts receivable to worry about. You're backed by extensive national advertising and AMI handles all customer support. Become a computer entrepreneur. Call or write today for your Opportunity for Professionals™ Pack.

How to make FOCUS look-it-up in the Dictionary.

Introducing FOCUSOUT and FOCUSIN.
The new FOCUS*–Dictionary extensions.

FOCUSOUT frees FOCUS users from redefining existing file definitions or coding new ones by using information already in the IBM DB/DC Data Dictionary. FOCUS file descriptions can be created for:

- O/S Flat Files
- IMS Data Bases
- CMS Files
- PC/FOCUS Files

And FOCUSIN can be used to populate the Dictionary with information regarding your current systems.

Call Productivity Products, Inc. today for more information, (312) 367-7350.

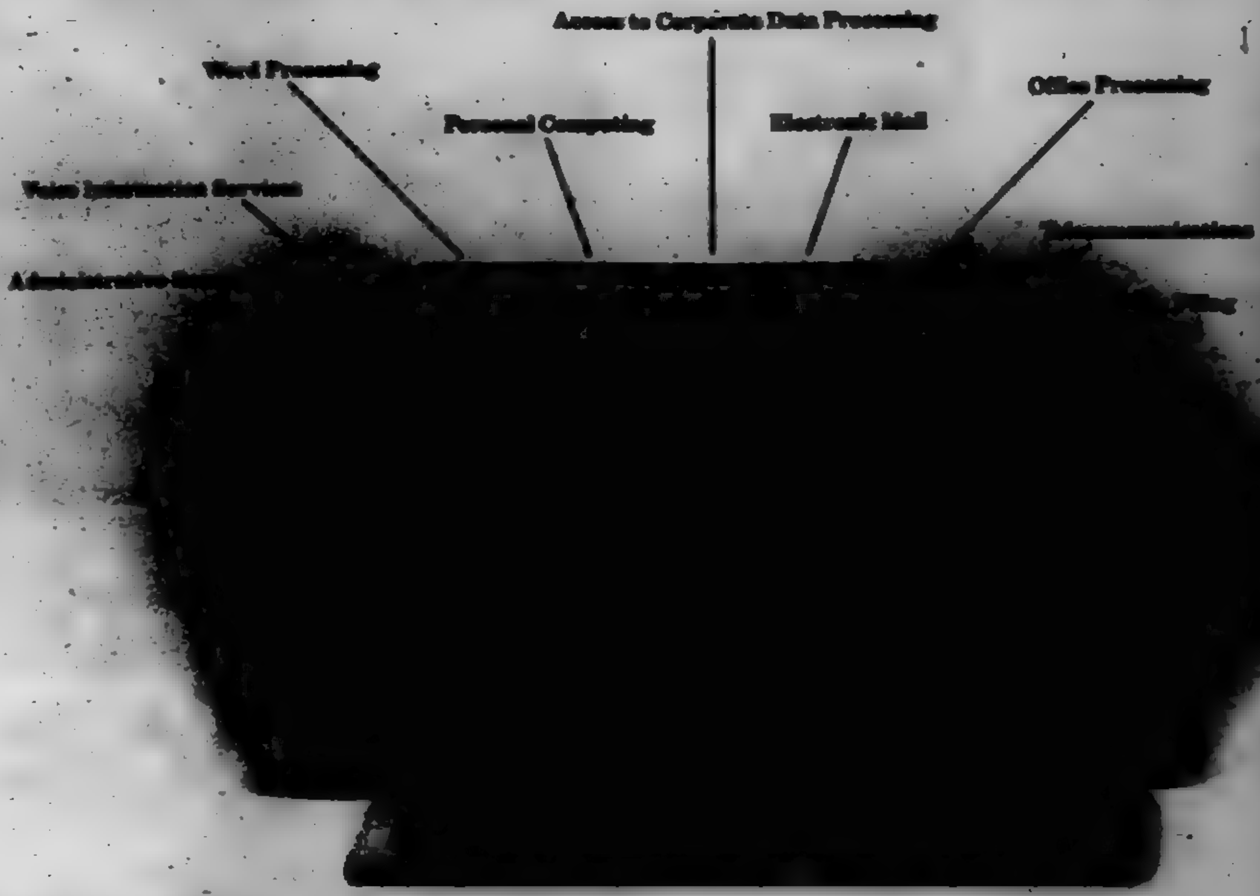
SPERRYLINK™

OFFICE SYSTEM



No job too big, no job too small.

SPERRYLINK. The one office automation system that can do just about everything around the office. For just about everyone, from top management on down.

It ties into a central computer for mainframe information and mainframe support.

It's a personal computer that does all of the things you'd expect of a personal computer. And a few that you wouldn't.

It's a telecommunications terminal for electronic mail and digitized voice messages.

It's a word processor and a data processor. Both at once, if need be.

It handles filing and retrieval with startling efficiency.

And, with access to outside data bases, it's your window to the world.

But most important, any desk station in the system can be any or all of these things. With the right amount of intelligence for whatever jobs it has to do.

No matter how big or how small.

SPERRYLINK.

Growing up with MS-DOS

Kathleen Sullivan
CW West Coast Bureau

> *At the outset, IBM's head of corporate relations explained why he had come along. It was because "this is the most unusual thing the corporation has ever done." Gates thought it was about the weirdest thing Microsoft had ever been through, too. Once again, Gates, Ballmer and the other Microsoft attendees had to sign a legal document, this time stipulating that they would protect in confidence anything they viewed at the meeting. Then they saw the plans for Project Chess. IBM was going to build a personal computer.*
>
> — from *Fire in the Valley* by Paul Freiberger and Michael Swaine

In the annals of the personal computer industry, this meeting would be recorded as a momentous occasion.

Mainframe powerhouse IBM had gone courting, looking for a microcomputer software virtuoso. Its search ended in the evergreen forests of the Northwest, where a young programmer named Bill Gates ran a company that sold personal computer languages.

In August 1981, when IBM entered the market with its Personal Computer, the importance of this earlier rendezvous would become clear. Every computer rolling out the IBM factory doors carried the imprint of Microsoft Corp., which was outfitting IBM's machine with its 16-bit operating system.

By 1985, the creator of MS-DOS was celebrating its 10th anniversary, an event that made it an elder statesman in the personal computer industry. Unlike many companies felled by competition, Microsoft has prospered, charting impressive gains each year (see chart ID/4).

In revenue, Microsoft is the second largest independent microcomputer software company. Lotus Development Corp., the Cambridge, Mass., firm that catapulted to the top of the market with its 1-2-3 spreadsheet program, has led the field for the past two years.

Although the No. 1 position eludes Microsoft, the company has built a solid foundation for future growth by developing a diverse product line. Expected to post revenue of $150 million this year, a $40 million increase over 1984 levels, Microsoft enjoys some advantages over rival Lotus.

"In the long run, Microsoft is in a stronger position than Lotus because it is the only independent company that has been successful in systems software as well as applications products," says Bob Lefkowits, an analyst with Infocorp, a Cupertino, Calif.-based market research firm. "That means Microsoft will be in control of its own destiny on both sides of the shop."

Currently, Microsoft's revenue is drawn equally from its systems software

(Continued on ID/4)

MICROSOFT

A conversation with Bill Gates

> *"We're a multiple-product microcomputer software company. We've never believed that any single product is key to our future; rather, it is our tools, our approach, our reputation, our people. There's no single product at Microsoft that's even close to 15% of our revenue."*

What are your present responsibilities at Microsoft?

Our goal is to get a workstation running our software onto every desk and eventually in every home. A lot of the vision of how we get there in terms of evolving the hardware, the software and the tools we will use is my responsibility.

What issues are important to your key customers?

They want the same thing we want. They want to see a workstation on every desk top. They want to keep this a growing business that attracts whole groups of end users that we haven't had yet. We're all focusing on issues related to networking and to a graphical user interface.

As you know, we moved up to the [Intel Corp. 80286] for a lot of the systems, and the [80386] comes after that. There are some exciting things with custom graphics chips and the new types of screens, where we have to get software not to be dependent on that stuff. That ties in pretty closely with what we're doing with Windows.

What does Microsoft hope to accomplish with Windows?

Commonality is one of the things we're missing in a big way. Once the stuff is common, everything is going to be identical, whether it is the way you start something up or switch or scroll or select a menu. That's one of the primary goals of Windows. We didn't see any way to get that with the current generation of applications, because some of them are so popular. Why should somebody change unless there was something really new? We've gotten a strong reception because everyone agrees that the hardware — the display, the graphics chips, the printers — are going to be there.

Why is a graphical interface important?

There have to be a variety of common tools that are used in common situations, so that everybody builds on top of those common tools. If you're still talking about a spreadsheet where you have to know to put a formula in a cell and to make this variable refer to that variable, there's a certain level of complexity that exists there, irrespective of how much sugar coating there is with a great user interface. So we think it's crucial to get a graphical user interface.

Once we're there, we'll focus on other questions. Do you have to think of your data as being in separate files? Do you have to remember which application built it? Do you have to know which data relates to other data, or will you be able to refer to it more like you would in talking to a human — for instance, the financial officer about financial data?

Windows was first announced in November 1983, but its release has been delayed several times. Has Windows been eclipsed by other products?

No other product has gotten any significant number of third parties to build graphical applications. In our systems software group, we are building the pieces that are important for people to build applications on. So we're ahead of where the needs are because we need to build our foundation well in advance.

IBM just introduced the [Personal Computer] AT, which has that really super level performance. Six months ago, IBM introduced the Extended Graphics Adapter, and it's just starting to sell.

To do graphics, the more performance you have, the better off you are. You need things like laser printers and pointing devices. If you look at the trade-off between character-oriented applications and graphics applications, it's only with extra speed and resolution that you can start to say everything will eventually be graphical.

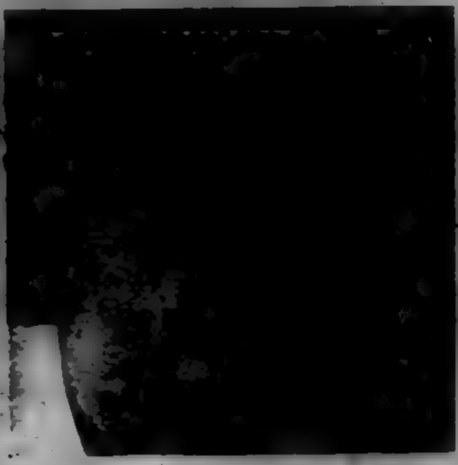
How has Microsoft changed over the past year?

Our systems group has about doubled in size over the last two years. The company two years ago had about 250 employees; today it has 900. We've been very successful in applications and have met our goals in that area.

We have this product philosophy of depth applications. Programs like Project, Chart and Access are very serious depth applications. I think that philosophy is being more accepted.

The all-in-one type of philosophy is less successful than many people had anticipated, particularly as we get to environments like Windows, which allow multiple applications to work together and exchange data.

(Continued on ID/10)



CW PHOTOS BY [illegible]

group and its applications group, according to Bill Gates, Microsoft's 29-year-old chairman and chief executive officer. Once known primarily for its work in languages and operating systems, Microsoft has also demonstrated its success as an applications developer.

"Applications is an area of high growth for us," says Gates, whose fascination with computers surfaced in the late 1960s while he was still a teenager in Seattle. As a high school student, he worked — without pay — debugging programs in a local firm's Digital Equipment Corp. minicomputer.

The company Gates started in 1975 with friend Paul Allen recorded its first sale when the two sold their Basic to Micro Instrumentation Telemetry Systems, manufacturer of the Altair computer.

Microsoft and Macintosh

Today, Microsoft is ringing up sales of applications software. The firm has found particular success with packages for the Apple Computer, Inc. Macintosh.

"We've sold more than one application for every Macintosh that's been sold," Gates says. "You can look at any personal computer at any time anywhere — there's nobody that's ever sold one application onto every single [computer]. Not even close."

The company recently surprised the industry with Excel, a spreadsheet package for the Macintosh. When Excel was announced the first week of May, Microsoft stole some thunder from Lotus, which was late in delivering its long-anticipated Jazz integrated software program.

CW CHART BY MITCHELL J. HAYES

Yet one accomplishment in the applications arena still eludes the firm, according to Jon Shirley, Microsoft's 47-year-old president.

"We need to have a hit applications product in the DOS marketplace," he says.

Microsoft Word has come close, but it hasn't achieved the kind of "hit status" Shirley is looking for. "I'd like to be able to say unequivocally that something is number one," he says.

Shirley, a 25-year veteran of Tandy Corp., became Microsoft's president two years ago. When he arrived, his primary task was to bring order to what had been a loosely run company.

"At the time, Microsoft was essentialy run by Bill, who liked to spend his time on technical matters, not on matters related to running the company," Shirley says.

Today, Shirley handles the day-to-day business matters of the growing firm. Microsoft now employs about 900 people, having added 300 workers to its payroll since 1984. Next year it will move its staff into new quarters on a 53-acre site in nearby Redmond, Wash.

In an industry that thrives on creativity and an entrepreneurial spirit, increasing size could present problems. So Microsoft makes an effort to keep bureaucracy from creeping in, Shirley says. For Microsoft employees, that means Friday afternoon beer busts, companywide meetings, flexible working hours and ongoing technical sessions.

"We try not to let the business of running the company change the way we do software," he explains.

At its sprawling headquarters in Bellevue, Wash., Microsoft has assigned each programmer a private office, which can be decorated to the person's tastes. Many are colorful; some boast impressive stereo systems. When working on unannounced products, the windows that open onto the common hallway are papered over or draped with fabric.

Projects are organized around small groups of people, Shirley says. "We believe good microcomputer software is done by small numbers of people. The largest development group at Microsoft is the Windows group, which got up to 22 people. Even in that group, the people were split into four separate modules."

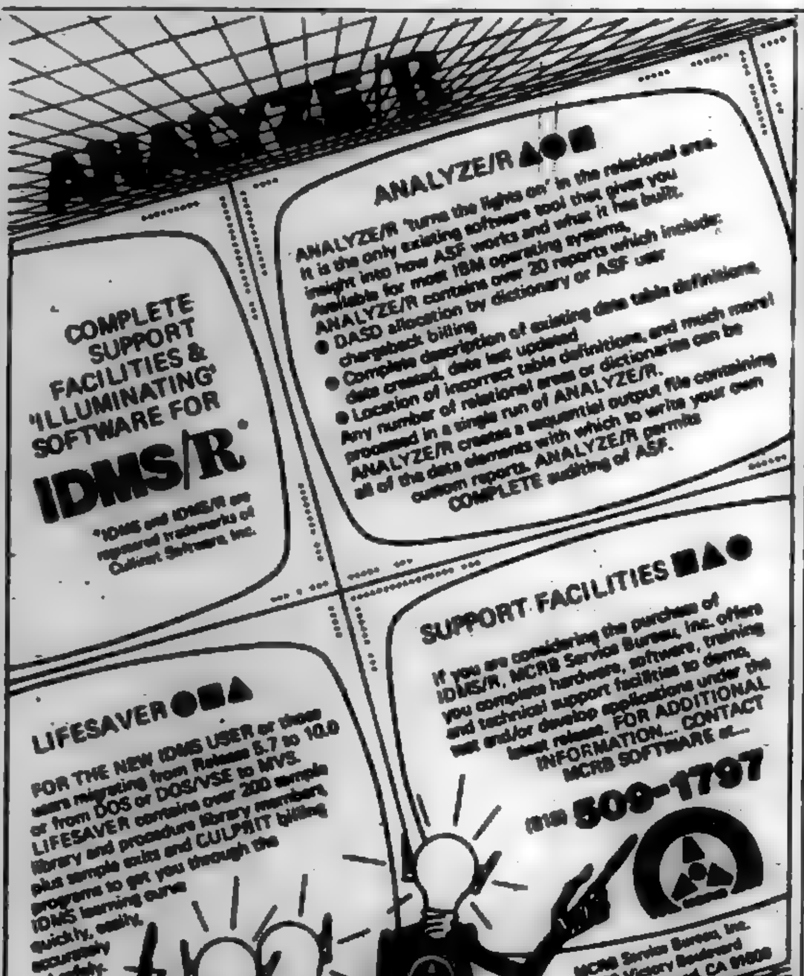
Windows

Windows, an extension to the MS-DOS operating system that seeks to provide a graphics user interface, was introduced with great fanfare more than a year and a half ago.



ANALYZE/R

ANALYZE/R ▲●■

ANALYZE/R "turns the lights on" in the relational area. It is the only existing software tool that gives you insight into how ASF works and what it has built. Available for most IBM operating systems. ANALYZE/R contains over 20 reports which include:
- DASD allocation by dictionary or ASF user chargeback billing
- Complete description of existing data table definitions, date created, date last updated
- Location of incorrect table definitions, and much more!

Any number of relational areas or dictionaries can be processed in a single run of ANALYZE/R. ANALYZE/R creates a sequential output file containing all of the data elements with which to write your own custom reports. ANALYZE/R permits COMPLETE auditing of ASF.

COMPLETE SUPPORT FACILITIES & "ILLUMINATING" SOFTWARE FOR IDMS/R*

*IDMS and IDMS/R are registered trademarks of Cullinet Software, Inc.

SUPPORT FACILITIES ■▲●

If you are considering the purchase of IDMS/R, MCRB Service Bureau, Inc. offers you complete hardware, software, training and technical support facilities to demo, test and/or develop applications under the latest release. FOR ADDITIONAL INFORMATION... CONTACT MCRB SOFTWARE at...

(818) 509-1797

LIFESAVER ●■▲

FOR THE NEW IDMS USER or those users migrating from Release 5.7 to 10.0 or from DOS or DOS/VSE to MVS. LIFESAVER contains over 200 sample library and procedure library members, plus sample exits and CULPRIT billing programs to get you through the IDMS learning curve quickly, easily, accurately and safely.

Microsoft has endured criticism for the project's many delays and postponed delivery dates.

In June, Microsoft finally released Windows to hardware manufacturers and independent software developers. A retail version will be readied within the next several months, says Steven Ballmer, the company's vice-president of systems software.

Since Windows was first announced in late 1983, IBM and Digital Research; Inc.; the Pacific Grove, Calif., firm that created the CP/M operating system, have joined the fray. From Shirley's point of view, however, neither product stands up as a worthy competitor. "Of those two products, Topview is clearly a failure, and Gem is relatively unambitious in its goals," he notes.

According to Kathleen Lane, an analyst with Dataquest, Inc., a market research firm based in San Jose, Calif., Windows faces an uncertain future in an unproven market. "With Windows the question is, 'Who wants it?' " Lane says. "The market has not yet decided the acceptance of this type of product."

Although Gates is sure that Windows will generate enthusiasm, he says it is sometimes hard to describe the benefits of a graphical interface to the uninitiated. But the level of skepticism would be dramatically higher if it weren't for the existence of the Macintosh, he says.

"Having seen the Macintosh, people can imagine, 'Wow, this is going to be great!' It will have all the benefits of DOS and have something that, in fact, even goes beyond what the Mac's doing in terms of being a multiple applications system and working with color," Gates says. "[Windows] is a super, complete system that goes beyond what people have seen."

Gates concedes that the problems the company had encountered in meeting its original deadline for Windows were unfortunate. But the product will be able to stand on its own merits, he says. "Any product lives on its quality once it comes out," he notes.

Infocorp's Lefkowits was also optimistic. "Even though it's late, it will be competitive with Topview," he says. "Windows will be a product to be reckoned with."

Lefkowits does not expect Microsoft to suffer as a result of its delayed shipment of Windows. But the company's credibility could be compromised if its relationship with IBM changes.

"If the bloom goes off the rose, and IBM adopts a proprietary operating system or stops working with Microsoft, that will hurt the firm, even though its base is strong."

Both Gates and Shirley dismiss speculation that IBM might abandon its open systems approach. In August, when IBM introduced the Personal Computer AT, it chose Microsoft's Xenix operating system as well as the newest version of MS-DOS for the machine, they note. "IBM is enthusiastic about where we're taking DOS," Gates says.

Microsoft has a number of objectives regarding future versions of MS-DOS, according to Gates. "It's safe to assume that Microsoft will introduce a multitasking version of DOS, but we're not ready to announce it yet," he says. The firm is also devoting its efforts to getting around the current 640K-byte address space limitation of DOS and adding protection, Ballmer adds.

Whether the issue is enhancements to DOS or new applications programs, most analysts believe Microsoft is prepared for the long haul. "We're not at a point where we're going to see a stable industry," notes Dataquest's Lane. "There are still huge, huge steps in technology to be taken that will require a lot of research and development."

The firms that will thrive will be those that are able to adapt to change. "Microsoft is perceived as a company that has always had vision," Lane says.

The next three to four years are crucial, Gates agrees. "Some people still see the software industry as a flash in the pan," he said. "But the innovative group of companies that have taken the long-term approach will prove to the world that the software industry is a great thing."

MITRON'S STD 1600 Simplifies Data Transfer By Communicating Off-Line Tape-To-Tape

Mitron's STD 1600 provides an efficient method for sending and receiving data anywhere in the world. STD 1600s communicate with each other and with other companies' bisynchronous terminals and computers.

The STD 1600 solves machine compatibility problems. It transfers data reliably without mailing tapes. It can communicate off-line to relieve an overworked computer.

STD 1600s transfer data at speeds up to 56KB. Double-buffering eliminates delays caused by read/write cycle times.

The STD 1600 can be leased or purchased.

STD 1600 features:
- Easy-to-install
- Needs no software
- Data rates to 56KB
- RS-232 or V.35
- Dial-up or private line
- Multiplexers
- 800 or 1600 bpi
- 1200' or 2400' reel sizes
- Bisynchronous protocol
- Transparent or non-transparent
- Space compression
- Variable size records to 16K
- Labels and multiple files

STD 1600 options:
- Autodialing
- Asynchronous
- Code conversion
- Modem eliminator

CALL 800 638-9665 FOR PRICING & DELIVERY.

Since 1969, Mitron's magnetic tape systems have been used in a wide variety of data communications applications. Let us explain how you can connect the STD 1600 to your system or data communications network. Call 800 638-9665, 9666 (in Maryland, 301 992-7700).

MIS at Microsoft: Building from the micro up

Sitting in a sunny conference room a few doors away from the computer systems room, Neil R. Evans, Microsoft Corp.'s director of corporate systems/MIS, recalls his first impressions of the company.

"When I came to Microsoft two and a half years ago, it was chaos," he explains. "They really didn't know what MIS was when I first arrived."

At the time, the firm was doing its bookkeeping on a personal computer and handling inventory control through a time-sharing service. It had no business plan to serve as a guidepost for its next phase of development.

"The company had no capacity planning for personal computers, electronic mail or MIS," Evans says. "It was a situation of uncontrolled growth."

The situation presented a unique opportunity for Evans, who left a job as application development manager at DEC's disk manufacturing plant in Colorado Springs, Colo., to work at Microsoft. In his new position, he would be able to build a data processing department from scratch.

Under Microsoft's president, Jon Shirley, a blueprint for growth was put in place. It was a critical step, Evans says. "A system reflects the business and should be keyed to the business. Our ability to plan for growth is only as good as the business' ability to plan. The MIS department has to know the key issues."

Even during his short tenure, the changes have been significant. "Before, it took 40 days to close the general ledger and publish the monthly financial statement," he says. "Now it takes 10 days. It used to take three weeks to complete and ship an order. Now it takes only one to two days."

Managing Microsoft's computer systems has proven to be challenging, because the company is more dependent than most on its computers, Evans says.

"The systems here are a lifestream system," he explains. "If they weren't working, the company couldn't run." Of its approximately 850 employees, 500 have personal computers, and all personnel — including workers in six foreign countries — are tied into the firm's Xenix-based electronic mail system.

According to the 37-year-old Evans, his primary challenge at Microsoft is coping with the intensity of the company's work environment. "It's a double-edged sword," he says. "In this company, you're more needed, but you're also more under the gun."

Evans' department serves an experienced and sophisticated set of personal computer users. Their livelihood depends on Microsoft's fortunes in a fast-paced industry where product life cycles are measured in months.

> **"**
>
> *'The systems here are a lifestream system. If they weren't working, the company couldn't run.'*

"Users at Microsoft are overly demanding," Evans says. "They're impatient. They're intense. They're used to getting instant gratification, because they work with personal computers and expect fast feedback."

Two systems groups

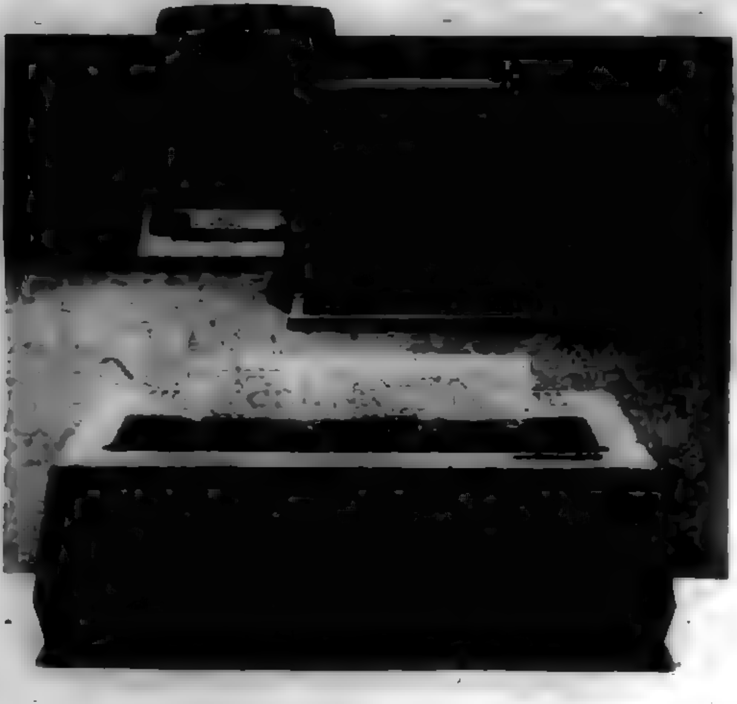
There are two systems groups at Microsoft: corporate systems and MIS. All personal computers, electronic mail systems and software development machines fall under the corporate systems group; accounting, order entry, distribution and manufacturing systems are managed by the MIS staff. Twelve people work in the corporate systems group; 18 handle the MIS operation.

At Microsoft, each software programmer has an IBM Personal Computer AT; the developers also share workstations designed by Sun Microsystems, Inc., a Mountain View, Calif.-based firm.

In the MIS department, Microsoft has installed two DEC VAX-11/780s. The company is using Maxcim, an integrated financial, distribution and manufacturing program developed by NCA Corp. Next year, Evans says, the firm plans to trade in the systems for a VAX 8600, which would double the MIS group's computing power.

Evans says his experiences at Microsoft have changed his outlook on how a company should manage its computer systems. "Working here has opened up my ideas of who should use computers and how they should be controlled," he says.

In general, he notes, a firm's systems can be divided into three categories, each with a different level of control. Although there should be very strict controls on access to corporate data base — no uploading of information, for instance — the policies governing departmental computers should be less restrictive, and computers should be only loosely controlled.



YOUR IBM 3270 AND YOUR IBM PC NOW HAVE SOMETHING IN COMMON BESIDES THEIR PARENTS.

THEIR PRINTER.

It's one thing for a high speed dot matrix printer to be plug-compatible with the IBM 3270 system.

It's quite another for the same printer to work in the ASCII universe where IBM's PC communicates.

But the Datasouth CX 3180 is quite another kind of printer.

First, the CX 3180 does more for less. Because while the 80 cps version of the IBM 3287 costs $4800, and the 120 cps version costs $6000, the CX 3180 cruises at 180 cps and costs only $3195.

Second, the CX 3180 is truly plug-compatible, with a coax interface for the 3270 world and a parallel interface for the PC world. With no black box and no extra cables.

The CX 3180 even features dual legends on its sophisticated front panel controls. One set emulates the IBM 3287 and the other works for your PC—or for any other ASCII computer. And the parameters are switch-selectable.

The CX 3180 is also a printer in the Datasouth high performance tradition. Which means it's one of the most rugged and sophisticated printers ever made.

So if you want the best of both worlds, get the one printer that does it all: the Datasouth CX 3180.

For more information about the CX 3180 and the whole family of high performance Datasouth printers, call toll-free.

This is no way to manage a network.

It takes more than wishful thinking to keep a network up and running. Particularly if you're working with more than one vendor and coordinating resources in many locations. Just by adding users, small problems can turn into big ones and, before you know it, your network's down from here to Hong Kong.

Not to worry. Now, there's the new Codex 4800 Series Network Management System. It monitors your network and detects and helps correct potential problems before they foul up your operation.

There's more. The Codex 4800 Series can generate reports for tracking, analysis, and forecasting...all of which you need for making the right decisions at every organizational level.

The Codex 4800 Series Network Management System is so fast and so smart, you can spot potential problems and react much more quickly to changes in the environment. And, since it's totally independent of your mainframe, you get status information without affecting ongoing operations.

The system works with the industry's most-preferred networking modems from Codex, and includes a raft of other features to make your network more effective. You have greater operational control, improve your cost efficiency, and ensure optimum network uptime.

Whether your network is large or small, Codex has the network management system that will meet your needs and grow right along with your business.

So uncross your fingers and reach for the phone. Call **1-800-426-1212, Ext. 281**, for more information on the new Codex 4800 Series Network Management System. Or write

Announcing Masterpiece:™ A Powerful Mainframe Application Software Product Built Upon A Simple Idea Called Intelligent Architecture.™

What do you call a mainframe application software product designed with such patient attention to detail that it will register the effects of one transaction on every other business transaction in a company?

What do you call software architecture so artfully conceived it will someday enable a person using an application to move from one database management system to another, or from one teleprocessing monitor to another, without a single change in his work style?

What do you call query and reporting tools so simply and powerfully rendered that even a novice will find them no more difficult to work with than a personal computer spreadsheet?

Only one name fits…

Introducing Masterpiece.

The Masterpiece series is a family of mainframe business software products—a classification and a category which may lead you to conclude that it is like other mainframe software products.

Don't leap to that conclusion.

The Masterpiece design is so clean and uncluttered that it makes current and future applications efficient to develop and easy to use. Masterpiece comes with none of the excess baggage, inherent short-comings or system limitations that have traditionally plagued the people who need business information and the people who manage it.

Masterpiece is, in every aspect, a new family of software products.

And, in every aspect, an *improvement* over the software packages you may be used to.

Or are, in fact, now using.

Intelligent Architecture Design: The Fundamental Difference.

Previous software designs have been developed to better utilize the power of the computer.

Masterpiece was designed to mirror the methods and styles of the work place and to anticipate the *inadequacies* of the computer.

Masterpiece design is called Intelligent Architecture. It's a new term. And a new way to build software. Now, Intelligent Architecture brings new meaning to concepts like "modularity," "borderless integration" and "event-oriented processing."

Only application-specific code is contained in the application…other coding (system code, interfaces, code common to multiple applications) is separated out and coordinated by the Intelligent Architecture itself.

This means that ultimately a user can adopt a new database management system without the slightest change in either his way of working or in the application code itself.

Only software built in this manner, is software that will endure.

The Intelligent Architecture design means that all menus and screen prompts become common to all Masterpiece applications. It means that the way users interact with an application will be the same from application to application—a significant factor contributing to greater ease-of-learning and ease-of-use.

It is this capacity, present now in the Masterpiece Intelligent Architecture design, that lifts Masterpiece beyond the promise of other software products in its class.

And *that* is the fundamental difference.

Masterpiece is a trademark of Software International Corporation. Intelligent Architecture is a trademark of Software International Corporation. MasterQuery is a trademark of Software International Corporation. MasterSecurity is a trademark of Software International Corporation.

Masterpiece: Common Functions.

The reason Masterpiece works so well is because each of its pieces work so well together.

And apart.

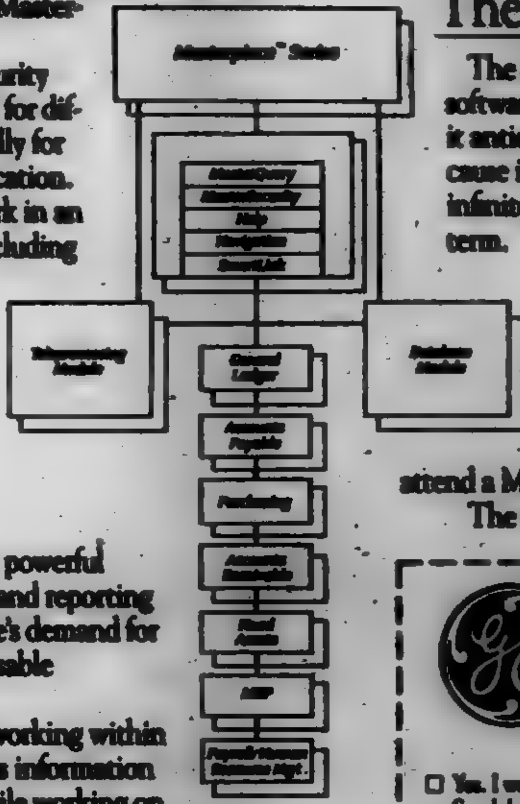
The MasterSecurity™ system, Online Help and Navigation features work across (and are common to) all Masterpiece applications.

But because they are separate from all applications, Online Help, for example, can be custom modified or even translated into different languages.

The Navigation feature lets you move from screen to screen with direct access from one Masterpiece application to another.

Levels within the MasterSecurity system can be determined not only for different applications but set specifically for transactions within the same application.

Everything is designed to work in an intelligent and modular fashion including what may now be the industry's most advanced query tool… MasterQuery.™



MasterQuery System.

The MasterQuery system is a powerful fourth generation borderless query and reporting tool designed to satisfy an executive's demand for instantly accessible and instantly usable information.

MasterQuery gives a person working within one application the ability to access information from another (accounts payable while working on general ledger, for instance) and to merge information from separate applications in a single report.

It also gives that person the ability to arrange his information in whatever form, format, or fashion he chooses. In whatever sequence or order. With whatever computations or projections he wants to make. With only the barest bit of computer know-how.

Masterpiece Integrated Applications.

The Masterpiece series will include these fully integrated, functionally rich business applications: General Ledger, Accounts Payable, Purchasing, Accounts Receivable, Fixed Asset Accounting, Human Resource Management and MRP software products.

Masterpiece: The Promise The Future Holds.

The Masterpiece series is truly "built from the ground up" software. Because its architecture is so well thought through it anticipates future enhancements and applications. Because it's a product designed to be completely modular and infinitely improveable it represents a real value over the long term.

It won't, in short, fall prey to technological or design shortcomings. Won't dead-end at some point. Won't fail to perform as your needs expand.

For a Masterpiece demonstration, clip the coupon below or call toll free 1-800-343-4133 (in Massachusetts, call 1-800-322-0491) and arrange to attend a Masterpiece executive briefing.

The sooner you call, the further ahead you'll be.

Uptime

Provide 24 hour CICS access

CICS Dynamic File Allocation is a must for effective CICS scheduling. It is the gateway to non-stop, round-the-clock CICS systems. It eliminates batch update constraints. It guarantees bullet proof restarts. It allows you and your batch jobs to add and remove CICS files at will, without disrupting your user community. Site license $4,000.

Read JES Reports from CICS

Give your CICS terminals and PCs access to JES reports. Let end users (1) browse time critical reports, (2) control report distribution, and (3) schedule and submit their own jobs. The CICS Queue Command Facility (CQCF) is an efficient, cost effective tool for previewing and controlling JES II reports. Site license $3,000.

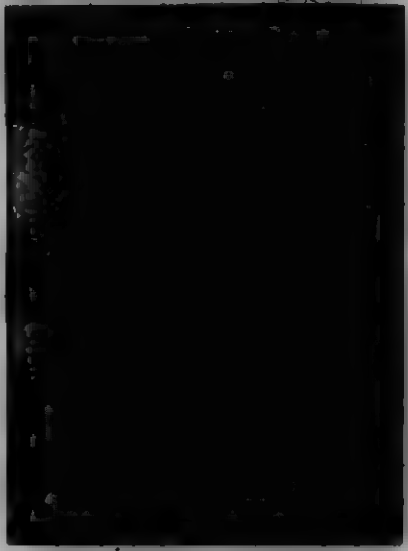
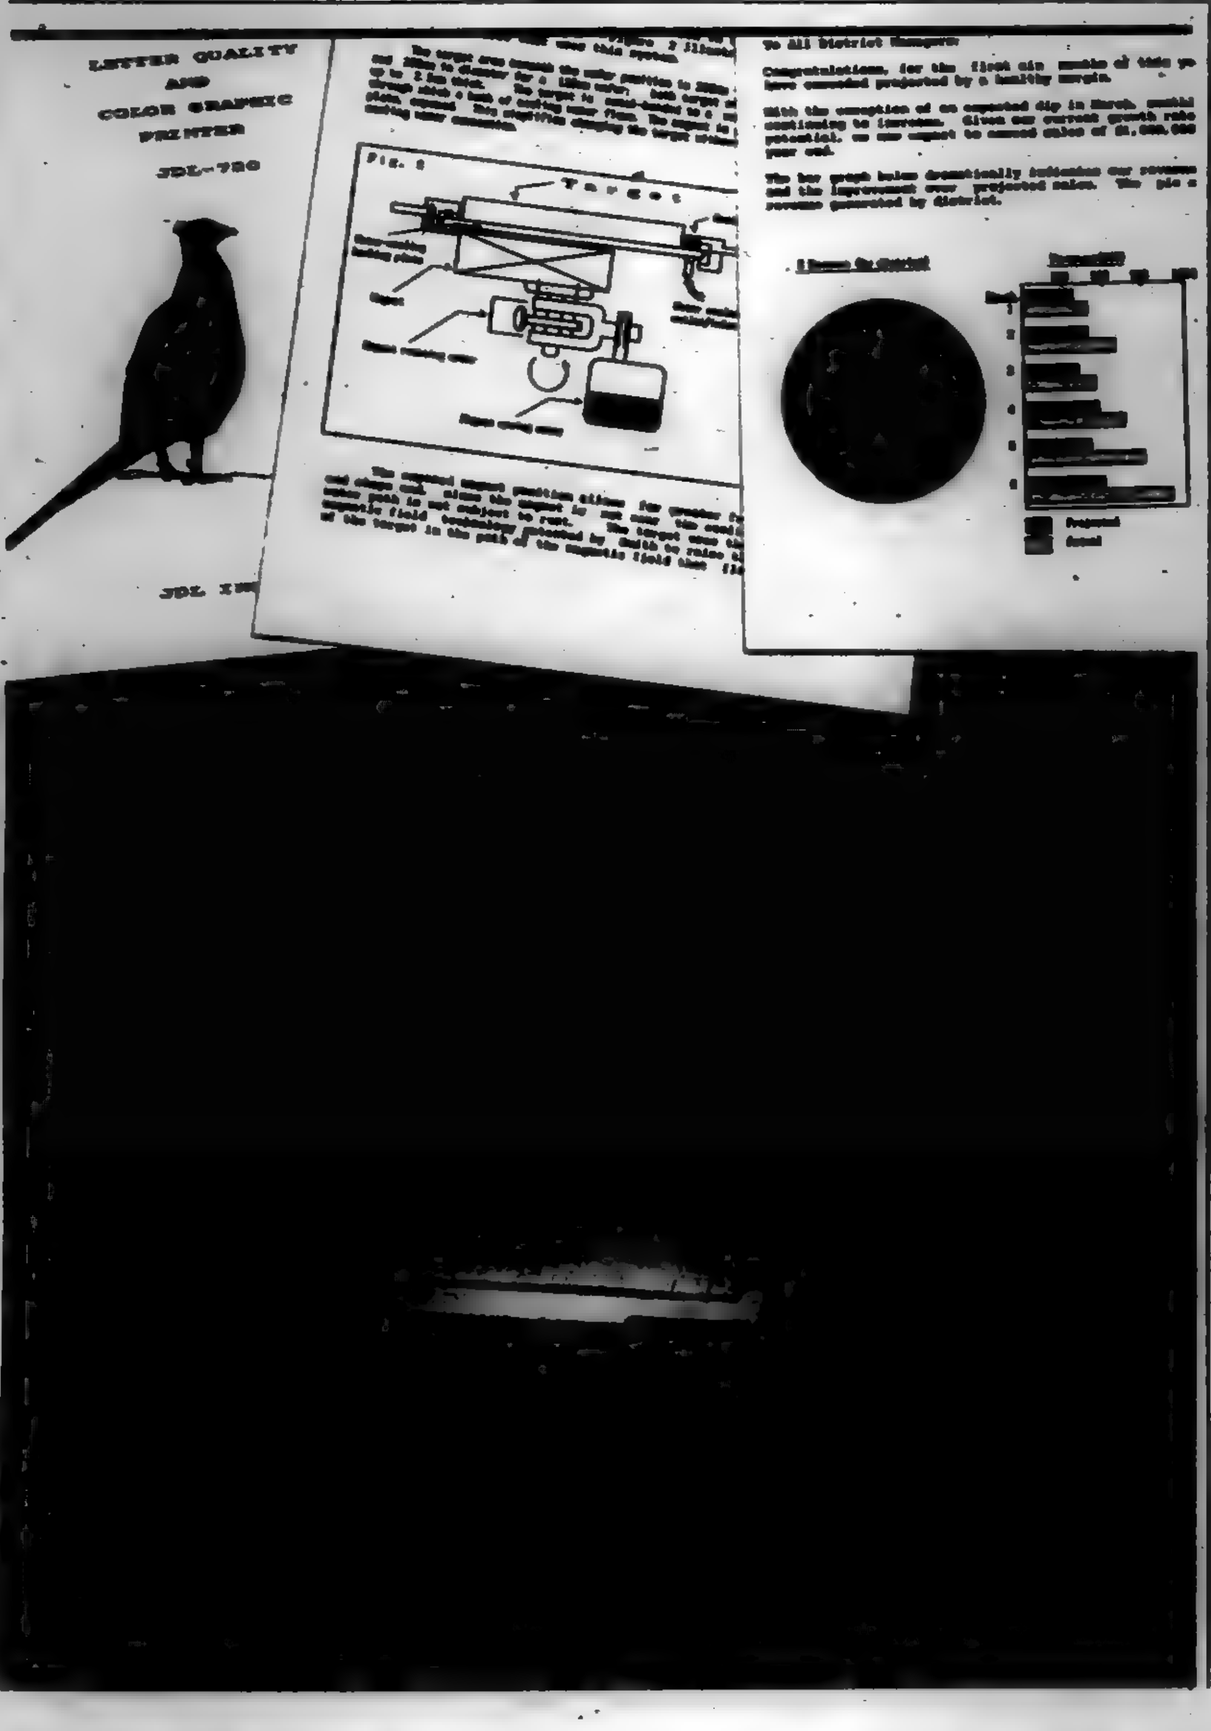
> ”
>
> *Our goal is to get a workstation running our software onto every desk . . . A lot of the vision of how we get there in terms of evolving the tools we will use is my responsibility.*
>
> — Bill Gates





(Continued from ID/3)

In Europe, we have the most successful applications; our Multiplan spreadsheet is No. 1 in France, Germany and Japan. Our Macintosh software line is incredible. We continue to have very ambitious plans in the applications area.

What kinds of ambitious plans?

Mainly those plans have to do with getting the applications really using networks and helping people to use the benefits they can get out of that.

Also, getting our applications to use graphics more; using the newer version of DOS; doing data interchange the way that Windows supports it. There are a lot of fairly clear things that users are asking for.

One analyst says the biggest challenge facing Microsoft during the coming years is finding quality software to bring under its label. What is your reaction to that statement?

I don't think that's a problem. We already have a very complete product line that we're committed to evolving.

We've always had the philosophy of training people to use our proprietary development techniques instead of just relying on getting people who already have a way they want to do things. That's worked very effectively for us.

We're a multiple-product microcomputer software company. We've never believed that any single product is key to our future; rather, it is our tools, our approach, our reputation, our people. There's no single product at Microsoft that's even close to 15% of our revenue.

When do outside acquisitions make sense for Microsoft?

When you take something that requires expertise that we don't have, where you get some brand name support and you get to work with somebody who really knows what they're doing, like our work with AT&T on Unix.

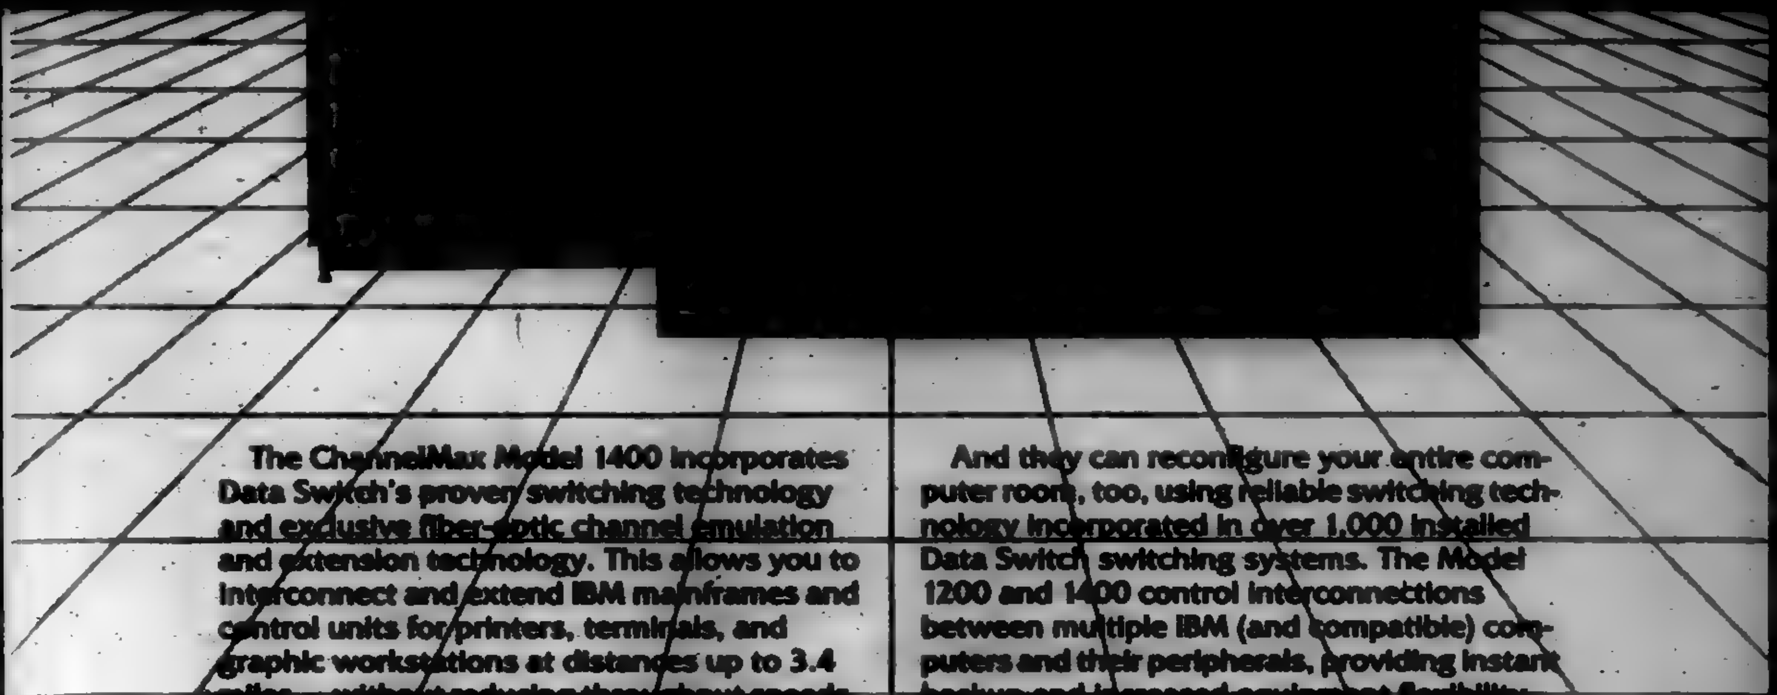
The guys who worked with us on the Access communications program had done mainframe communications work for about eight years. We also have a certain set of projects we decided to do in-house; things like Word and DOS and Windows are totally in-house developed.

If I see a really good product that we can integrate with our data exchange strategy, align with our user

How do you switch and extend IBM channels?

You can't.

Unless you use a Data Switch Model 1200/1400.



The ChannelMax Model 1400 incorporates Data Switch's proven switching technology and exclusive fiber-optic channel emulation and extension technology. This allows you to interconnect and extend IBM mainframes and control units for printers, terminals, and graphic workstations at distances up to 3.4 miles — without reducing throughput speeds.

The Model 1400 is an extension of our standard switch, the Model 1200. Both monitor channel activity of attached computers and control units and allow you to balance data traffic loads to optimize overall system performance. They safely test your peripheral subsystems, avoiding the risk of bringing down your on-line system. They even have a matrix that can be partitioned into logically independent systems for ease of operation.

And they can reconfigure your entire computer room, too, using reliable switching technology incorporated in over 1,000 installed Data Switch switching systems. The Model 1200 and 1400 control interconnections between multiple IBM (and compatible) computers and their peripherals, providing instant backup and increased equipment flexibility. They can be controlled from a local CRT terminal or from our Configuration Management System, which manages up to 36 Model 1200s/1400s located across the room or across the country.

Call for a free brochure: Sandy Pacyna, (203) 926-1801, or write to our new address: CCMS, Data Switch Corp., One Enterprise Dr., Shelton, CT 06484.

[illegible] Six Point Remote Temperature Scanner
• Display and trip preset in °F (0-199) or °C (0-100)
• AC line operated, rechargeable battery back-up
• Over or under temperature trip - relay and logic output
• Ambient or surface mount sensor - standard wiring to sensors

Dorlen Products

interfaces and offer with international support, then there are some good opportunities. Our licensing stuff has worked out very well for us. We've always believed in the mixed model. We'll continue to have that balance.

Does Microsoft have in-house expertise on artificial intelligence?

Yes. We're the most active in that area as far as a microcomputer software company goes. It's our future work. It's something that I'm personally pretty involved in.

The opportunity to blend our success as a company that offers software out in the commercial world with these AI techniques is very exciting, particularly since we're now in a position to influence hardware architecture so that it will work well for that.

We take a very pragmatic approach to how we can apply learning techniques to productivity packages. They could be running on present-day hardware in less than two years. These learning techniques can help us get over the low-level things that machines can't do today, things that make them real troublesome to work with. That's what we call softer software.

What will softer software let us do that the current generation of software will not allow?

Present-day software doesn't allow you to refer back to previous actions and say, "Let's do what we did at the end of the month last time, but this time let's do pie charts on each of the regions, and let's do an in-depth breakout on the products that lost money." You can't communicate like that. You have to say, "OK, which file did I have, which record is it in, which tools should I use, what graph command should I give again that I gave last month?"

> ”
>
> *We take a very pragmatic approach to how we can apply learning techniques to productivity packages. . . . These techniques can help us get over the low-level things machines can't do today, things that make them real troublesome to work with. That's what we call softer software.*

In softer software, the fact that you've done something before allows you to refer back and explain how you want to do things differently in terms of high-level concepts. It requires a view of data that doesn't exist yet. And it requires a degree of pattern-matching activities that don't exist yet. It's hard stuff.

Does softer software bear any resemblance to expert systems?

No. Expert systems don't learn. They are a fixed encoding of the knowledge of an expert into a programmatic tool. That's a different thing. What you have now is just rote. If you want to do exactly the same thing to exactly the same data, then you can use things like keyboard macros. But there's no flexibility there; it's just rote repetition. In truth, no, there's nothing like softer software out there today.

Managing The Software Crisis

Part 2

By Ken Orr

Software development is in a state of flux. Information systems managers have too much to do, too little time to do it, too few people and too many options. Among the suggested solutions are systems development methodologies (SDM) and fast-track development approaches based on the use of fourth-generation languages and rapid prototyping.

In part one of this series last week, I discussed the evolution of various competing systems development approaches: traditional, structured, process-oriented, data-oriented and fast-track. In this second part, we will look at representative experiences of large organizations in dealing with the move from traditional implementation tools such as Cobol, Fortran and PL/I to fourth-generation languages and fast-track development.

In addition, we will look at strategies for integrating fourth-generation technology

with structured SDMs and consider the possible impact of computer-aided software engineering (Case) tools on software development in the near future.

Almost everyone has seen write-ups in the technical journals on some major success using one methodology or another. I will not attempt to recap those stories here. Rather, I will cite three to draw some conclusions, perhaps, about the effectiveness of the various approaches to systems development.

A fourth-generation pioneer

Our first example is a Fortune 500 corporation that pioneered the use of fourth-generation languages. Frustrated after years of difficulty with the centralized information systems organization, the management of one of the large user organizations within the corporation persuaded top management to try a new approach — using a new user-friendly language on a different computer, one dedicated to a single application.

Top management agreed, and the user organization put a team of bright users together to build its own system. The experience was a major success. The application was completed largely without the help of the centralized information systems department and within a very short time. The system itself enabled the organization to improve clerical operations and to reduce the clerical staff throughout the corporation.

As a result of this success, the corporation began to introduce fourth-generation languages to an ever-widening user and data processing framework. But application of the languages on the core or "backbone systems" was restricted to those that could be safely interfaced with the corporate data base. The major functions that updated the corporate data base were still developed using more traditional third-generation languages and data bases.

A year or two ago, information systems management, by now composed of the same people who had brought the fourth-generation systems into the organization, found they needed some way to integrate the control techniques.The organization then installed a data-oriented SDM to control the management of information systems throughout the company.

A fourth-generation follower

Our second example, a government organization, shows what can happen when a new technology is employed without an understanding of its strengths and weaknesses and without good management.

In this case, information systems management attempted to develop a production payroll system on an extremely short deadline.

Here, the ease with which a fourth-generation language could be applied justified a fast-track development schedule. But because of user pressures, information systems management threw away the textbook — there was very little in the way of requirements definition, design or documentation. Although the initial version met the schedule, there were problems after the system was installed.

The first sign that something was seriously wrong came when the organization attempted to bring up one of the major organizational entities on the centralized payroll. This entity had a great many temporary employees, and the system simply couldn't handle the data. This inability caused considerable embarrassment for the information systems organization, because the difficulties were reported in the newspapers.

The next and fatal problem occurred when information systems management had to go back to top management and ask for another computer. Just two years earlier, they had recommended the purchase of a $5 million computer to run the fourth-generation system. It was supposed to last from seven to nine years.

Now, information systems management was back, hat in hand, asking for another computer — only this time the price tag was $12 million to $15 million. The increase in computer requirements could be traced directly to the inefficiencies of the fourth-generation language that had been used to implement the system and to the limitations of the data base available with the language.

Needless to say, top management was not pleased. Outside consultants were called in, and consequently, the information systems director left.

The best of both worlds

The third example, also a government organization, uses fourth-generation languages in conjunction with a data-structured SDM, with very encouraging results. Over the last five years, productivity has increased by more than 300%. Management attributes this success to the

adoption of a consistent design approach: a data-oriented SDM coupled with implementation through a mixture of an efficient fourth-generation language, Cobol and CICS.

The manager of the organization says, "Because of the power of [fourth-generation languages], there is the danger that users and programmers will begin to avoid doing requirements and design. Our experience has been that if anything, the need for good requirements and design is greater using [fourth-generation languages] than using traditional languages.

"We've experimented with prototyping," he adds, "but we plan to use it only for very small applications, especially where the problem is very uncertain. We're convinced that prototyping is a tool, not a panacea."

Winners and losers

In the world of fourth-generation information systems, there are winners and losers. The first and third organizations are clearly winners in the use of fourth-generation techniques, and the second is a loser. Why? The differences have to do with management's understanding of software development.

In the first and third organizations, management understood that fourth-generation tools and techniques offered the opportunity to improve performance dramatically, particularly in the build and test phases. But they also recognized the need for disciplined development using SDMs to ensure that critical factors would not be ignored in the rush to implement.

SDMs were created, in large part, because those involved in developing systems recognized that good systems require a number of things that are not immediately evident to their users or to inexperienced analysts and programmers. Among these key elements are requirements and design documentation, back-up and recovery procedures, security, controls and audit trails.

The indiscriminate use of fast-track development techniques produces gains in productivity primarily by omitting many of these items, items that the school of hard knocks has taught experienced software managers to build into their systems. While such omissions may or may not be acceptable for small, personal systems, they are clearly unacceptable for the major backbone systems of the organization.

Future directions

It is clear from our experiences that tools such as fourth-generation languages, prototyping and high-speed analysis have a place in modern systems development. Indeed, any tool that makes it possible to speed the requirements, design, implementation or maintenance process is truly valuable.

In many organizations, however, fast-track development techniques have been sold without qualification. Experience indicates that fast-track development works best on small to medium-size systems. On large systems or on systems where performance is a critical issue, fast-track techniques and tools can still be used, but they must be used with caution.

One organization with whom we work made a commitment to using fourth-generation languages for all new development, only to find that in cases where performance was an issue or where there was a great deal of complex computation, it had to resort to Cobol. In the end, approximately 60% of the finished product was done in a fourth-generation language and the remaining 40% in a mixture of second- and third-generation languages.

Recommendations

Today, we are recommending to our clients that they adopt a data-oriented SDM with a framework that allows for the integration of high-speed analysis, prototyping and fourth-generation languages within a controlled life cycle (Figure 1). Doing so ensures that the major elements required for quality software development are present. The data-oriented methodology should have a strong logical data base component.

If the organization is currently using and/or committed to a process-oriented SDM, we recommend that it integrate its structured analysis with a state-of-the-art logical data base design methodology (Figure 2).

We are also recommending that our clients begin planning to install Case tools to aid in the requirements definition and design phases of their systems. Moreover, we recommend that they plan to interface these tools with system and program generators as well as fourth-generation languages (Figure 3).

In many respects, the information systems field is confronting the same problem faced by car manufacturers. In the late '70s, U.S. automobile companies found that to meet Japanese competition, they not only had to produce cheaper, more advanced cars more quickly but also had to improve quality at the same time. They invested heavily in new plants and procedures, installing computer-aided design and manufacturing systems to improve speed and quality.

Case systems

Similarly, if information systems managers are to speed development and improve software quality simultaneously, they will have to invest in Case systems for their analysts, programmers and users.

One of the common complaints about SDMs has been that they create too much paperwork, and since that paperwork includes graphics as well as text, it is laborious to create and maintain. Case systems overcome this problem. They provide the user with graphics workstations linked to design data dictionaries and host computers for compilation,

Meeting all your information needs requires total systems integration knowledge and experience.

Meeting information needs has become a major international concern. One in which maintaining compatibility and unity is a difficult task. That's why Boeing Computer Services offers a unique combination of integrated information services to government and industry. To help you obtain precisely the systems, services, and software you need.

For example, we design, implement and maintain large-scale communications networks — integrating the best technology without hardware bias. Our Office Information Services can help you at any stage in the office automation process. With all-new or existing equipment.

We've also enhanced our MAINSTREAM® teleprocessing network to offer you today's leading operating systems and programming languages. No other remote computing firm gives you as many valuable options.

And we're linking microcomputers to our MAINSTREAM service in exciting new ways: workstations involving the IBM® PC/PC XT and XT/370, combined with our EIS® business management software. And our Micro/8410 Workstation for structural engineers.

Finally, we provide a full range of Software Solutions. Complete Education & Training. And a variety of Professional Support Services.

In each area, Boeing offers you integrated solutions, designed to harmonize with your overall operation. For more information or the location of the sales office nearest you, call toll-free 1-800-447-4700.

Or write BOEING COMPUTER SERVICES, M.S. CV-26-208, 7980 Gallows Court, Vienna, VA 22180.

BOEING COMPUTER SERVICES A Division of The Boeing Company

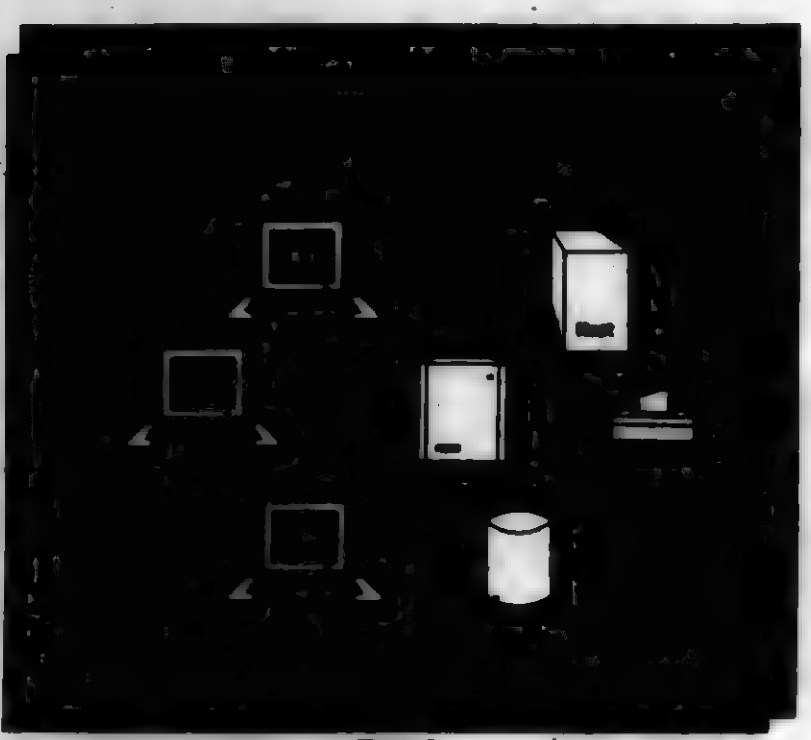

Figure 3

testing and interface with corporate data dictionaries.

In our own organization, we have been using the Nastec Corp. Design-aid system for nearly three years, and all of our internal documentation is currently on the computer. Changes can be made quickly to our systems design documentation at a very low cost, and camera-ready copies can be produced at any time.

Key to the fourth generation

In our experience, one characteristic distinguishes highly productive information systems organizations from those that are not as productive — discipline. Without exception, those organizations that do the best job of delivering high-quality software on time and under budget are the ones that have a systematic approach to all development and maintenance. They apply that discipline whether they are doing a 100-man-year project or a one-man-month one.

A second characteristic of more productive organizations is their commitment to planning. They plan for the future. Rather than viewing a new tool or technique, such as a fourth-generation language, as if it were going to answer all their problems, they research the new product and then integrate it within the basic framework of their disciplined approach.

A third characteristic of these organizations is that they are data-oriented. The data base design philosophy that underlies the application systems of the organization is clearly the key to the fourth generation.

In the next 10 years, we are going to be redoing many of the large backbone systems in our organizations. To prepare for this undertaking, we need to make sure that our data bases are organized around a business communications model that will facilitate business rules and relationships now and in the future.

New technologies typically evolve through three stages: proceduralization, mechanization and automation. If we are to improve systems development speed and quality, we will have to adopt an engineering — in other words, disciplined — approach to building systems. We will have to invest in implementing a good fourth-generation structured SDM and automating it with Case tools.

Integrating past and future

There is no such thing as a free lunch — remember the saying, "If it sounds too good to be true, it probably is." Software tools and technology are getting better; undoubtedly, this trend will continue. But tools and techniques will never become a substitute for intelligent management. Indeed, the faster things change, the more important intelligent management becomes.

We have a saying at our company. What we want for ourselves and our clients is to be able to "float on the technology." When technology changes, we want to be able to incorporate those changes into our way of doing business. We want to avoid becoming anchored at one level in the technology.

At the same time, we recognize that one of the jobs of intelligent management is to preserve that part of the past that works. There are some lessons to be learned here from when the Japanese introduced the robot. They discovered that the organizations that made the best use of robots were those that had the best manual manufacturing systems.

We're finding that the same holds true in the information systems business — those organizations that make the best use of the fourth generation are the ones that have been doing the best job of information systems engineering all along.

About the author

Ken Orr, president of Ken Orr & Associates, Inc., is one of the principal developers of the data structured systems development methodology.

Orr has held various positions, including vice-president of Advanced Systems for Langston, Kitch and Associates, Inc.; director of information and communications for state government; vice-president of a management consulting firm and manager of software development for Service Bureau Corp.

He is the author of Structured Systems Development, Structured Requirements Definition *and* The One Minute Methodology.

DATA STREAMS

SBS: Making its way back to the MCI nest

By John Dix
CW Staff

Satellite Business Systems (SBS), 16 years in the making, has come back to roost with MCI Communications Corp.

A little-remembered fact in the recent deal — where IBM sold SBS to MCI in exchange for 16% of MCI's stock — is that MCI was one of the three companies that founded SBS back in 1969.

The history of SBS is interesting. John D. Goeken, one of the original founders of Microwave Communications, Inc., said in an interview [CW, Oct. 29] that "MCI thought that satellites would be ideal for long-haul telecommunications services. To try to make MCI into a more uniform company, in 1969, we formed a company with [Communications Satellite Corp. (Comsat)] and Lockheed Corp. called CML."

Faced with legal battles against established communications giants like AT&T — the monolith feared the gnat and, in retrospect, rightly so — MCI sold CML to IBM and Comsat General in July 1974.

Under the terms of that deal, Comsat General was to up its stake in the company to 45%, and IBM was to obtain a 55% share for $3.2 million. It was not to happen. Bowing before the hue and cry raised by competitors, the Federal Communications Commission blocked the acquisition in February 1975. In that ruling, the FCC established conditions under which the sale would be allowed.

Enter Aetna Casualty and Surety Co. On September 26, 1975, this subsidiary of Aetna Life and Casualty Co. joined the former partnership, diluting IBM and Comsat's interest in the company as required by the FCC. Three months later, the newly named Satellite Business Systems had submitted a system proposal to the FCC.

In January 1977, the FCC approved the SBS application. After a few court battles brought by competitors and an antitrust investigation conducted by the U.S. Department of Justice, SBS was ready to fly.

Eight years later, the investment in SBS topped the $1 billion mark, with most of that money coming from the original three investors. But the company had yet to earn a profit. In 1984, SBS revenue was $290 million, and losses were estimated at $100 million.

The financial burden was getting too heavy, and last July, Comsat bowed out, selling 20% of its share to Aetna and the remaining 80% to IBM, giving the mainframe maker a controlling interest.

IBM replaced the SBS president with a Big Blue veteran, who didn't turn, and really couldn't have turned, the company around. The fundamental problem with SBS was that it was founded on the belief that demand for data communications, particularly high-speed data, was about to explode.

SBS believed that by 1980 it would have 126 earth stations installed, 375 by

Equatorial unveils two-way satellite service

MOUNTAIN VIEW, Calif. — Equatorial Communications Co. has announced the addition of two-way satellite services to its one-way packet-switched satellite network product line.

Featuring a 4-ft transmitting and receiving micro earth station, the network service is designed for private corporate data networks with large central processing sites and hundreds or thousands of dispersed sites. Geared primarily to transaction response and data collection applications, the system supports terminal-to-host and terminal-to-terminal communications, the vendor reported.

Four application areas are being targeted by Equatorial — financial transactions, process monitoring and control, retail point-of-sale and branch office administration.

The company's C-200 transmit and receive micro earth stations have been tested since December 1984. Earlier this year, the company reached an agreement with Farmers Insurance Group of Los Angeles to sell an Equatorial interactive network to support data transactions from 3,000 agent and branch claim offices, a spokesman said.

Once equipped with an earth station, interactive network customers purchase the amount of network capacity required in each direction, reflecting the differences between transaction inquiries and the typical response. Capacity is available in increments of 9.6K bit/sec. Terminal reception of data sent over the network from the host computer may be continuous at up to 19.2K bit/sec.

Customer networks are operated from the company's Network Control Center here. The center provides redundant transmitting and receiving electronics, an uninterruptible power source and continuous network monitoring and diagnostic analysis. Customer data is transmitted via Equatorial-owned and operated satellite transponders, 12 on Galaxy II and four on Westar IV.

In a typical packet-switched interactive network, users at remote locations use the C-200 micro earth stations to communicate through a geostationary satellite, which relays the message to a customer's central data base or to another micro earth station via an Equatorial master earth station. The 36-ft master earth station receives the response, packetizes the incoming data and transmits the signal to the designated receiving site.

The company's use of spread spectrum transmission technology permits the use of

Telebit introduces asynchronous error correcting modem

Trailblazer offered in circuit card, stand-alone versions

CUPERTINO, Calif. — Telebit Corp. announced recently an asynchronous error correcting modem for use with dial-up lines that is said to provide an average throughput of 10K bit/sec.

The Trailblazer, targeted at Fortune 1,000 corporations, is available as a stand-alone device or as a circuit card for IBM Personal Computers and compatibles.

Trailblazer is based on a Motorola, Inc. 68000 microprocessor and uses a Texas Instruments, Inc. 320 signal processor, the company reported. It combines a proprietary modulation technique with two standard modulation methods as well as a patented technology to achieve the 10K bit/sec. throughput over voice-grade dial-up lines. The product is said to have adaptive duplex capability that enables it to transmit in half or full duplex.

At high speeds, Trailblazer uses a Dynamically Adaptive Multiple Carrier Quadrature Amplitude Modulation, a proprietary technique the company developed. At lower speeds, which the modem falls back to in 100-bit increments as line quality degrades, the device uses Differential Phase Shift Key or Frequency Shift Key modulation.

Trailblazer also relies on a patented technology that divides the bandwidth of a voice-grade dial-up line into 512 communications carriers, according to Telebit President H. R. Johnson. Other modems typically use only one or two carrier signals, the president claimed.

The speed of transmission between Trailblazers is determined at the outset of a transmission as the modems test a telephone line and analyze the quality for each carrier in terms of the signal-to-noise ratio. Each of 512 carriers, which are actually 7.8Hz channels divided by frequency, is capable of carrying six bits when the line quality is good, the company reported. Individual carriers may be of a lower quality and may be capable of supporting only two bits.

Incoming data, which is sent in the form of packets, is analyzed by a receiving modem to find out whether the transmission has been corrupted. If an error is detected — using a cyclical redundancy check character — the receiving modem rejects the contaminated packet and requests a retransmission.

After each packet is successfully sent, the modems reanalyze each channel and, if necessary, adjust the data rate to conform to any interim changes in its signal-to-noise ratio, Johnson said.

Because Trailblazer can match a channel's data rate to its current interference level, the product has access to a 50% wider bandwidth than conventional modems, the company reported. Trailblazer uses line bandwidth ranging from 300 Hz to 3,400 Hz, compared with a spread of 700 Hz to

See TELEBIT page 66

MULTIPLEXERS/ MODEMS

■ **Racal-Milgo, Inc. has announced the Omnimode 1614 modem with built-in diagnostic and test features that supports data speeds of up to 16.8K bit/sec. in point-to-point applications.**

The 1614 has fall-back speeds of 14.4K bit/sec. and 12K bit/sec., the vendor said. It features a Remote Modem Control Option to allow modem speed, configuration and transmit level to be adjusted at remote sites with no operator present. The Omnimode 1614 also features an unattended testing capability for fault isolation.

The Omnimode 1614 is priced at $10,000 and is scheduled for fourth-quarter availability.

Racal-Milgo, 1601 N. Harrison Pkwy., Sunrise, Fla. 33323.

■ **Telebyte Corp. has announced that the Accelerator Series 31 asynchronous data compression unit now supports Wang Laboratories, Inc.'s 2200 minicomputer System Flow Control functions.**

The Accelerator can be installed between the Wang 2236 data terminal and a modem to triple data throughput over existing modem links using the product's data compression algorithm, the vendor said. Used in conjunction with a 2,400 bit/sec. modem, Wang 2200 throughput is said to range from 7.2K bit/sec. to 9.6K bit/sec.

Channel rates supported range from 100 bit/sec. to 2,400 bit/sec. with the terminal set to operate at four times the channel rate. The Accelerator supports synchronous and asynchronous modems. Encoded bit strings are transmitted between Accelerators using a modified X.25 protocol to provide error checking and data security, the company reported.

Prices for the Accelerator Series 31 products range from $995 to $1,095 per unit.

Telebyte, 215 Oak St., Natick, Mass. 01760.

■ **Western Datacom Co. has announced the 424 Error Free full-duplex, 2,400 bit/sec. rack-mount modem that automatically determines the best operating speed for the quality of a transmission line.**

The 424 has fall-back rates of 1,200 bit/sec. and 300 bit/sec., the vendor said. The product is compatible with Bell Laboratories 212A and 103 modems at 1,200K bit/sec. and 300 bit/sec. and with CCITT V.22 modems at 2,400 bit/sec.

The 424 costs $895.

Western Datacom, 5083 Market St., Youngstown, Ohio 44512.

■ **Astrocom Corp. has announced the Astrocom Statistical Intelligent Multiplexer-7 (Asim-7), which supports up to seven asynchronous terminals on one line and transmits data at speeds of up to 9.6K bit/sec.**

Features of the Asim-7 include a menu-driven screen that allows parameters to be set from a terminal keyboard, a spokesman said. In the event of a power failure, the Asim-7 operating parameters are stored in nonvolatile memory to prevent destruction.

A remote terminal setup capability allows the selection of parameters to be controlled from any customer-selected location.

The seven-port system is priced at $1,395.

Astrocom, 120 W. Plato Blvd., St. Paul, Minn. 55107.

■ **Western Telematic, Inc. has announced a four-user automatic-dial Bell Laboratories 212A-type modem, designated the Model MM-41.**

According to a spokesman, each port in the MM-41 has a 20-number directory that lets the user automatically dial by name or number. Edit commands allow the addition or deletion of names from the directory.

The unit also provides a password call-in feature for security.

The MM-41 modem is priced at $795.

Western Telematic, 2435 Anne St., Santa Ana, Calif. 92704.

LOCAL-AREA NETWORKS

■ **TCL, Inc. has introduced a repeater for use with Ethernet-type IEEE 802.3 local networks that enables cable segments to be interconnected. The Model 2210 allows networks to be extended to 2½ km.**

The repeater is said to regenerate missing preamble bits, assuring all controllers time to synchronize, a spokesman said. Frame fragments are extended to 96 bits and are transmitted on both the transmitting and receiving side, thus minimizing collisions and retransmission, the spokesman added.

The TCL repeater is also said to enhance collision detection in both directions. After detecting a collision, the repeater transmits a 32-bit jam signal to both sides, then terminates the transmission to prevent a network lockup.

SERIES/1 EDUCATION
EDX AND CF

For the benefit of those users who are unable to attend the standard Series/1 courses provided by IBM, SSCP is now offering a complete curriculum of Event Driven Executive (EDX) and Communications Facility (CF) education. The classes are conducted at our education center, located in the San Francisco Bay Area. For the convenience of the larger user, we also provide onsite education at the customer's location.

SSCP offers:

- Curriculum prepared by former IBM Series/1 education specialist.
- Small class size for individualized attention
- Courses ranging from basic operator training through advanced programming and systems internals workshops
- Hands-on labs designed to help your Series/1 staff reach a high level of EDX and CF expertise quickly
- Classes conducted at SSCP Education Center or at customer location
- Excellent availability
- Reasonable prices

BUILDING A COMPUTER CENTER?

If you're planning a new, expanded or remodeled DP facility, you need Datasphere's help.

Since 1968 Datasphere's unique combination of services has saved dollars, frustration and time for large and small firms around the world.

From turnkey—design/build computer rooms to consultation on the smallest project, we'll do all or part—on schedule, within budget! Datasphere is unique—we're engineers, consultants, planners and builders specializing in computer facilities.

Datasphere's engineers are expert in all computer support systems including:

- *Uninterruptible Power Systems*
- *Computer Power Centers*
- *Computer Fire Protection Systems*
- *Computer Type Air Conditioning*
- *Gas Turbines/Diesel Generators*
- *Operation Command Centers*
- *Elevated Flooring*
- *Frequency Converters*
- *Line Filters*
- *Security Systems*
- *Systems Monitors*
- *Voltage Regulators*

STOP OVER IN PARIS ON YOUR WAY TO SUCCESS

Because they did their homework. They talked to our customers and found out that for over 12 years, hundreds of Fortune 1000 companies have had exceptional results from financial software systems by Data Design.

They discovered what nationally recognized software surveys confirm year after year: that Data Design has an unsurpassed record of user satisfaction.

They learned they can expect fast, trouble-free implementation with our systems.

They were told that our systems are exceptionally flexible and easy to use.

They found out about our reputation for in-depth training and responsive, knowledgeable support.

They learned that Data Design places only management level people in customer service positions. People who average over 10 years experience—not trainees.

And more.

So, if you're in the process of doing *your* homework on mainframe financial software, call today for our complete customer list, and you too can hear why companies like Alcoa, Amdahl Corporation, Burger King, Estee Lauder, May Company Department Stores, Pillsbury, Sherwin Williams Company, Bankers Trust Company, Central Soya Company, Chicago Tribune, CIGNA Corporation, Federal Express, Litton, Midland Ross, Owens Corning Fiberglas, Perini Corporation, Royal Business Machines, G.D. Searle and Company, Security Pacific National Bank, Warner-Lambert Company, Zayre Corporation, Wisconsin Power & Light and hundreds of others decided on Data Design over other vendors.

And find out why 60% of our customers, who previously had other vendor's systems in place, have now decided to use systems by Data Design.

To learn more about the best financial software available, call toll-free 800-556-5511 or complete and mail the coupon today.

Matt's office has been winning a lot of new business lately. And it's really not much of a secret.

Because he and his co-workers have been able to make more efficient use of their resources. How? Well, Matt brought in Team Xerox.

Which includes Xerox 8010 Star

"I heard you underbid us by half a million. What's your secret?"

Workstations, high speed laser printers, file servers for organizing and storing data and communications servers for accessing mainframe data bases, all linked together with a Xerox Communications Network. For complex analytical tasks, Xerox also included a Xerox Artificial Intelligence System.

So Matt (and the people in his domestic and international offices) could create, access, share and react to information more quickly and more easily than ever before.

And since Matt's office has become so much more productive, he was able to cut costs—and enter a bid that was $500,000 less than anyone else's.

To make Matt's secret yours, call Team Xerox at 1-800-833-2323, ext. 42 or send your business card to Xerox Corp., Dept. 42013, P.O. Box 24, Rochester, NY 14292.

Continued from page 64

A minimum of 96 bits will always be transmitted.

The repeater restores the original signal fidelity by removing timing, symmetry and amplitude distortions before transmitting the repeated signal.

The Model 2210 repeater is available in either 115V/60Hz or 230V/60Hz models and is priced at $1,795.

TCL, 41889 Albrae St., Fremont, Calif. 94538.

AUXILIARY EQUIPMENT

■ Analytics Communication Systems has announced Sherlock, a programmable encryptor.

The product reportedly works for end-to-end or link applications on dedicated or multiport circuits. Sherlock uses the Data Encryption Standard and meets U.S. government Standards 1026 and 1027 for link encryption applications, according to the vendor.

It works with half-duplex or full-duplex, asynchronous and synchronous transmission at rates from 50 to 9.6K bit/sec.

The encryptor features a 24-char. LCD. Physical security includes three pick-resistant locks to protect key entry and logic and locked-in cables. The product reportedly includes automatic testing as well as diagnostics.

Sherlock costs $2,495, the vendor said.

Analytics Communication Systems, 1830 Michael Faraday Drive, Reston, Va. 22090.

■ Bytex Corp. has added packet switching and baseband interfaces to its line of electronic matrix switches.

An X.21 interface enables a user to patch, switch and monitor up to eight ports at speeds up to 38.4K bit/sec. for each card and a maximum line speed of 307.2K bit/sec.

The baseband card supplies full-duplex, synchronous and asynchronous transmission at speeds up to 19.2K bit/sec. It interfaces with digital service units and channel service units. Sixteen ports can be supported on the card, and the card's maximum transmission speed is 76.8K bit/sec.

The baseband port card is priced at $2,640, and the X.21 port set costs $1,750.

Bytex, Southboro Office Park, 120 Turnpike Road, Southboro, Mass. 01772.

TELEBIT

from page 63

2,800Hz for most competing products, Johnson said. The greater bandwidth, in turn, results in increased communications speeds.

Broadened bandwidth also enables the modem to transmit data even over low-quality phone lines and opens up applications that, until now, have remained technologically or financially impractical, the company reported.

Ten large corporations are said to be using Trailblazer already, all of which served as beta test sites for the product. They reportedly credited the modem with delivering an average throughput of 10K bit/sec.

In addition to being manufactured and sold directly by Telebit as Trailblazer, the modem will by marketed by Digital Communications Associates, Inc. under the name of Irma's Fastlink.

Trailblazer costs $1,995 and is available for immediate shipment.

Telebit is headquartered at 10440 Bubb Road, Cupertino, Calif. 95014.

NET

from page 63

small earth stations and C-band (4 GHz and 6 GHz) frequencies. The spread spectrum transmission is said to provide protection against interference from other satellites, from terrestrial microwaves and from signal degradation during rainstorms.

Company spokesmen estimated the savings over leased telephone lines to be approximately 35%. Costs are broken down as follows: $5,800 for the earth station, $900 for the installation, $45 per month for maintenance, $20 to $100 per month for satellite services and $35 per month for network management providing maintenance of the master earth station.

More information is available from Equatorial Communications, which is located at 300 Ferguson Drive, Mountain View, Calif. 94043.

SBS

from page 62

1983 with two satellites in the air and 600 with three satellites and improved technology.

Today the company has achieved roughly what it expected to have achieved back in 1980. And much of the growth in revenues has come from carrying traffic other than high-speed data as was the company's original intent. For example, in 1983, of the 30 transponders on three SBS satellites, only six were being used for the company's Customer Network Services. Of the remaining capacity, 40% was used for cable TV, 10% for SBS' Skyline voice service and 30% was reserved for backup.

SBS based its predictions on detailed case studies involving 415 companies from the Fortune 500. These studies showed the risk the company was taking.

In fact, a company spokesman once admitted that the fate of the company might hinge on the creation and acceptance of new applications such as electronic mail, teleconferencing and direct channel-to-channel computer communications.

Maybe MCI can stem SBS losses by using the system to augment its voice network while waiting for these other applications to become reality.

Looking for a way to develop CICS applications in everyday COBOL even under CMS?

Introducing the most effective way yet to optimize both your programming and mainframe resources: COBOL/XE™ Because now, for the very first time, you can actually develop on-line CICS applications in everyday COBOL with CICS/VS, VM/CMS and VM/PC.

Since COBOL/XE uses standard ANSI COBOL, all your COBOL programmers can learn to write programs with it in hours. Which means no drain on your Command Level resources. Yet the programs are just as mainframe-efficient as those written in Command Level.

And COBOL/XE makes another contribution to mainframe efficiency: it can operate under CMS. Which means a complete separation between the development and production environments. With no "real time" waiting or effect on CICS response time. And since it can also operate under VM/PC, CICS applications can be developed off-line on IBM PC XT/370's or AT/370's.

COBOL/XE is another fine product resulting from the combined resources and experience of Oxford Software and Martin Marietta. For more information, send in the coupon or call 800-257-5171. If you thought you'd have to wait years for a CICS applications development system this effective, you're in for a nice surprise.

It's ready now.

Call 1-800-257-5171 today!

SYSTEMS & PERIPHERALS

Nixdorf hardware announced

WALTHAM, Mass. — Nixdorf Computer Corp. today unveiled a series of hardware additions to various systems in its product line.

Highlights of the hardware announcements include the following:

- An addition to the company's 8870 line of minicomputers called the Model 45. The unit features 256K to 1M bytes of main memory and can accommodate 24 workstations. It can run either Nixdorf's Interactive real-time operating system, Niros Release 5.1, or the company's Terminal Automatic Monitoring Operator System, Tamos.

A basic configuration, consisting of a CPU, 256K bytes of main memory, one 8-in. Fujitsu Ltd. fixed media disk drive capable of storing 66M bytes of data, streaming tape drive, one workstation, an internal modem and emergency power supply, costs $33,400. Volume deliveries will begin in the first quarter of 1986, the vendor said.

- Nixdorf's first IBM-compatible microcomputer, called the 8810/25 Compact Personal Computer (CPC), which, like the firm's System Professional Computer 8810 Model 65 micro, reportedly can be attached to Nixdorf host processors as a native terminal.

The 8810/25 reportedly comes with a 9-in. monitor, detachable IBM Personal Computer-style keyboard, thermal graphics printer, a choice of one or two dual-density disk drives and a 10M-byte hard disk drive.

Other features include 256K bytes of random-access memory (RAM), which is expandable to 640K bytes, an Intel Corp. 8088 microprocessor and support for Microsoft Corp.'s MS-DOS Release 2.11 operating system.

A basic system, consisting of 256K bytes of RAM, dual floppy disk drives, monitor, graphics capabilities, thermal graphics printer, serial port, parallel port, red-green-blue port, operating system, Microsoft's GW Basic programming language and Digital Research, Inc.'s Graphics Environment Manager software, costs $2,500, according to vendor.

The cost of systems that include a 10M-byte hard disk drive begins at $3,900, the company said. The microcomputers will be available in September.

- A low-end addition to the company's distributed processing systems called the 8860/Micro 5. The unit features the same data capture and distributed functions as the 8860 processor and can function as a stand-alone processor or in a corporate network. The 8860/Micro 5 can access centralized 8860 or host data bases.

The system operates under Nixdorf's Distributed Processing Executive operating system and includes a CPU, peripheral control unit, 5¼-in. fixed disk drive, 5¼-in. diskette drive and a workstation. It comes with 128K bytes of main memory and is software compatible with other members of the 8860 product line.

The 8860/Micro 5 costs $10,000 for a basic configuration and will be available in October.

The company is located at 300 Third Ave., Waltham, Mass. 02154.

Pyramid's 98X debuts

Unix-based twin-CPU unit beefs up high end

CHICAGO — Pyramid Technology Corp. last week unveiled a high-end addition to its 90X line of reduced instruction set computer (Risc) processors.

Called the 98X Isoprocessor, the unit consists of two symmetric CPUs, which are said to function equally, as opposed to a master/slave type of operation. The company said the 98X system architecture allows both the kernel and user code designed for the company's AT&T Unix operating system, called OSX, to execute on either CPU.

Capable of supporting up to 256 users and up to 32M bytes of main memory, the 98X has a maximum disk capacity of 5G bytes. The two-CPU configuration, the company said, consists of two equal Risc CPUs, which offer approximately 1.75 times the performance of the company's uniprocessor configuration. A spokesman said current users of the 90X uniprocessor can upgrade to the 98X configuration for roughly $90,000.

Pyramid 98X superminicomputer

The 98X CPUs employ Schottky transistor-to-transistor logic chips and feature a CPU cycle time of 100 nsec. Each Isoprocessor consists of an instruction unit, an execution unit, 32K bytes of cache memory and a microcode sequencer. The instruction units prefetch instructions from a 4K-byte instruction cache and operands from register stacked or immediate fields. The execution units perform as

PE 3200s get array processor

OCEANPORT, N.J. — Perkin-Elmer Corp. has announced that users of its Series 3200 superminicomputers can now attach up to three array processors manufactured by Floating Point Systems, Inc. (FPS) to their systems. The addition of the array processors is said to expedite large-scale arithmetic computations.

FPS-5000 series array processors can be added to the PE systems, a Floating Point spokesman said. Each processor is said to add up to 18 million floating-point operation/sec. of internal performance, according to a Floating Point a spokesman said.

Prices range from $45,000 to $100,000, depending on the number of processors that are added.

Using FPS-supplied library routines or user-developed applications programs, the FPS-5000 processors are said to solve simultaneous equations; to multiply, normalize and invert matrices; to perform single-dimensional and multidimensional Fourier Transforms, digital filtering and convolutions; and to generate tabular functions.

FPS software includes processor

FPS's Standard Math Library software comes with the added processor. Optional applications software includes the FPS Standard and Advanced Libraries, FPS Simulation Library, FPS Signal Processing Library, FPS Geophysical Processing Library and FPS Image Processing Library.

These packages range in price from $975 to $1,275.

More information is available from PE, Data Systems Group, Two Crescent Place, Oceanport, N.J. 07757.

Lee Data unwraps Series 610 processor

MINNEAPOLIS — Lee Data Corp. has launched a number of products, including a multiuser associate processor, a color graphics display terminal for large-scale IBM computer users and two graphics systems printers for use with Lee's Series 300 and 400 controllers.

The multiuser Series 610 Associate Processor is said to form an extension of a company's IBM 3270 network and to offer productivity tools for individual departments by allowing 3270 users to share personal computer-like functions.

The unit allows users to create a shared relational data base and to use common word processing and spreadsheet applications by adding processing at the controller level. The 3270 terminal is connected to a Lee Data 400 controller through an RS-232 interface. This allows the terminal to access the mainframe or the associate processor, which is an Intel Corp. 80286-based processor.

The Model 614 in minimum configuration includes 1M byte of main memory, 40M bytes of hard-disk storage and Microsoft, Inc.'s Xenix operating system. The Model 614 in an average configuration costs $18,990 and includes 1M byte of random-access memory, 70M-byte hard disk storage, a streaming tape drive, the Relational Data Base Systems, Inc. Informix data base applications software and the Xenix operating system. The units will be available in September.

Lee Data also announced a color graphics display terminal for IBM mainframe environments, which also has asynchronous capabilities to connect to other vendor's systems, including systems from Digital Equipment Corp. The terminal has a four-session windowing capability. The Model 2131 Open Window display system provides concurrent access to one or two large-scale mainframes. Using the four windows allows simultaneous display of information from separate host applications or data bases, allowing data to be copied from one window to another. Each window is

We've got thousands of micro communications problems your solutions can fix.

Micro communications is one of the biggest challenges that MIS/DP professionals face today. And that's the problem we'll be addressing in the September 25th Computerworld Extra!

We'll be dealing with all the issues corporate buyers must face. And answering their questions. On micro-to-mainframe links. PC networks and networking software. Gateway software for SNA and Ethernet. Service and support.

We'll take a look at how PCs can function as dumb terminals and intelligent terminals. And help the reader make an intelligent choice.

We'll have a global overview of how micros are fitting into the big picture.

And right in the middle of all this critically-needed information, you can place your ad. Where it will be seen by our 128,000 paid Computerworld subscribers. Plus all our extra pass-along readership.

So if you've got a micro communications solution, our Extra! can supply the people with the problem. And the money to buy a solution. The September 25th Computerworld Extra! on Micro Communications. But hurry, the closing is August 16th.

Call Ed Marecki, Vice President/Sales, at (617) 879-0700 or your local sales representative to reserve your space today.

Leasing offers added cash flow, flexibility, tax breaks

By Kenneth E. Steinback
Special to CW

Computer leasing can be a good business strategy, especially for companies with large data processing equipment needs. Yet, many of the same firms that could benefit the most by leasing their computer equipment are unfamiliar with the advantages of third-party leasing.

Probably the most important factor in leasing is that there is no capital outlay. This often allows business managers to make more profitable use of their cash resources and keeps bank lines of credit intact for the expansions that can't be financed with a lease.

There can also be tax advantages to leasing. For example, lease payments are usually treated as deductible business expenses. For most companies, this means the actual cost of the lease is only half the cost of the payments.

Also, with leasing, system users have less of a chance of getting stuck with outdated computer equipment, which might be worth as little as 10 cents on the dollar.

Such a situation is possible in companies that quickly outgrow computer equipment. The cost of reselling computer equipment can be enormous, especially for users who do not have extensive knowledge of worldwide secondary markets.

Flexibility is another potential user benefit to leasing. Lessors can often get the equipment users need on a timely basis. Third-party leasing companies, for example, often specialize in locating equipment needed by users.

Lease plans can be structured to fit a company's needs, and lease payments can sometimes be arranged to meet a company's particular cash flow needs. For example, some customers need the unique flexibility offered by short-term leases, which run anywhere from six to 36 months.

Third-party leasing companies can give users the flexibility to incorporate mixed vendor's systems. For obvious reasons, most OEM leasing programs do not promote this kind of strategy.

Any data processing executive knows the headache of equipment delivery and set-up. Leasing companies can offer flexible delivery schedules because of their hardware inventories and purchasing networks. Often, early order positions of hard-to-find hardware are available from third parties. Also, if users have existing delivery problems, leasing companies can sometimes help.

Steinback is president of Computer Sales International, Inc., and a director and treasurer of the Computer Dealers and Lessors Association, an industry trade organization.

TURNKEY SYSTEMS

■ Cybernex Ltd. and Microstar have launched a North American Presentation Level Protocol Syntax (NAPLPS) decoder said to be standard reference model compatible.

The NCG1024 decoder allows the user to display information from NAPLPS data bases on a color monitor. The color monitor is not included in the system. An RS-232 interface allows access to the host computer on which the NAPLPS data is available.

The system, which consists of a graphics controller and a CPU module that is VME-card based, a keyboard, switching power supply and Naplps software in a metal desktop enclosure, costs $4,995.

Cybernex, P.O. Box 9066, 1257 Algoma Road, Ottawa, Ont. K1G 3T8

PROCESSORS

■ Dual Systems Corp. has released six VMEbus modules said to be targeted to 32-bit computer system design work.

The VMPU-32 VMEbus CPU module has a 16-MHz Motorola, Inc. 68020 CPU, a 1M-byte, dual-port random-access memory (RAM) with 32-bit data path and parity error detection, paged memory management, optional floating-point coprocessor, real-time clock with lithium battery backup and up to 32K bytes of on-board erasable programmable read-only memory (Eprom). The board was designed to run AT&T's Unix operating system. It costs $5,250 and will be available in the fourth quarter of 1985.

The Vmem VMEbus module offers RAM storage of 2M bytes based on 256K-byte dynamic RAM chips. The Vmem is said to be able to prefetch and cache the next sequential longword. The prefetch cache allows an 85-nsec access time on sequential reads, 290-nsec access time on random cycles and 240-nsec access time on writes. The unit supports 32-, 16- and 8-bit data transfers. The Vmem units cost $3,995.

Also available is a V9TRK VMEbus module for control of a 9-track tape drive in multiuser computing systems, which operates in IBM Ansi standard format. The V9TRK is a four-layer dual-height printed-circuit board built to Revision B of the VMEbus standard. The V9TRK is

Continued on page 72

How is
Duquesne Systems
teaching
Fortune 500
companies
to share?

Continued from page 71

priced at $1,250.

The company's System Controller Module (SCM) is a VMEbus system controller module that connects to the back of slot one on the backplane via the P1 connector. The SCM is said to operate in conjunction with the CPU, memory, I/O, disk controller and other VMEbus modules in Dual's family, but it is not restricted to Dual modules. It is compatible with Revision B of the standard VMEbus specification. The SCM board costs $495.

The Viop I/O processor module can serve as a stand-alone CPU with the functions and features of the Motorola 68000 16- and 32-bit microprocessor. It can also marry a variety of I/O channel-compatible modules to VMEbus systems. It is said to function with either Dual's IO-S8 card or with modules from other manufacturers.

Features include 512K bytes of dual-port dynamic memory with parity error detection, up to 64K bytes of Eprom, 10-MHz operation, and it costs $1,495. The IO-S8 costs $495.

The Optimatrak-32 Storage Module Device (SMD) Disk Controller is said to control up to three Winchester disk drives, which employ the SMD interface. In conjunction with a disk transfer algorithm, a full track can be read or written in slightly more that one rotation of a disk, the vendor said. The controller gives a sustained data rate of approximately 1.5M byte/sec. for reads and 1.1M byte/sec. for writes measured using a 2,048-byte block size with Fujitsu Ltd. 2333 disk drives. The unit costs $2,990 and will be available in the third quarter of 1985.

Dual Systems, 2530 San Pablo Ave., Berkeley, Calif. 94702.

DATA STORAGE

■ **Xylogics, Inc. has introduced two 32-bit bus products, the 751 VMEbus storage module drive (SMD) disk controller and the 772 VMEbus ½-in. tape controller that support VME 32-bit address and data.**

The 751 disk controller supports SMD interface drives up to and including the 2.4M byte/sec. Fujitsu America, Inc. Higher Storage Module Device. It has a direct memory access of 10M byte/sec., achieved via a pipeline architecture and two additional custom very large-scale integration circuits developed by Xylogics. Eight-, 16- or 32-bit modes can be selected in software.

A programmable throttle that controls the length of time the 751 remains on the VMEbus is another software-selectable option. The unit features a separate 2K-byte command buffer and an 8K-byte FIFO buffer. The unit costs from $1,600 to $2,700, depending on discounts.

The 772 controls any ½-in. tape with Pertec Computer Corp. formatted tape interfaces. It supports a variety of reel-to-reel streaming and ¼-in. cartridge tape drives from 12.5 in./sec. phase-encoded models up through 200 in./sec. group-coded recording drives.

The 772 costs from $1,100 to $1,800, depending upon discounts.

Xylogics, 144 Middlesex Tpk., Burlington, Mass. 01803.

TERMINALS

■ **Daisy Systems Corp. has introduced a workstation that is said to integrate Daisy's Personal Logician Dnix computer-aided engineering workstation with Intel Corp.'s Integrated Instrumentation and In-Circuit Emulator (I²ICE) workstation to design, develop and debug both hardware and software for microprocessor-based systems.**

The Personal Logician-Microprocessor Design Station (PL-MD) uses Daisy's Dnix operating system, which is said to be the company's implementation of AT&T's Unix. I²ICE is said to allow software developed on the PL-MD station to be debugged on target hardware. The PL-MD also suppports a set of Daisy microprocessor software development tools.

The basic PL-MD system includes the Personal Logician Dnix workstation with 1.75M bytes of memory and the I²ICE unit with 32K bytes of main memory for $37,000.

The probes range in price from $3,000 to $5,000. Up to two memory boards of 128K bytes can be added for $4,400 apiece. Language compilers for C, Fortran, Pascal and PL/M can be added for $1,000 to $2,000 each, the vendor said.

Daisy Systems, 700 Middlefield Road, Mountain View, Calif. 94043.

PRINTERS/PLOTTERS

■ **Output Technology Corp. has released its OT-777 printer, an addition to the company's 700 series.**

The OT-777 is a serial dot matrix printer that is said to print at 700 char./sec. It comes with parallel and RS-232 serial ports and an internal protocol device that allows direct interaction with IBM System/34, 36 and 38 computers. The unit features dual pass correspondence-quality printing at 350 char./sec., dot-addressable graphics capabilities and front-panel menu programming.

The printer costs $2,995 until Oct. 1, when the price becomes $3,195.

Output Technology, E. 9922 Montgomery Bay 33, Spokane, Wash. 99206.

■ **Intergraph Corp. has announced a photogrammetric engineering stereo plotter workstation that can be used for standard aerial photogrammetry projects and applications such as close-range industrial and terrestrial photogrammetry.**

The Intermap Analytic, up to four of which can be connected to Intergraph's Micro II data processing sys-

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

You can buy a less expensive diskette and not save a thing.

One can understand the temptation to buy a less expensive diskette.

Rather than a Dysan® diskette.

After all, the less expensive diskette is probably almost as good. And should you run into a bad one, well, it didn't cost that much, anyway.

Right? Not quite.

You see, a less expensive diskette is by definition less diskette. And the few pennies you save are worth a great deal less than what you have to lose.

Namely, your data.

That's why it makes more sense to spend a bit more for a Dysan diskette.

Every Dysan diskette you buy will record and retain all your data all the time.

You can be sure of that because every Dysan diskette is certified 100 percent error free and backed by our lifetime warranty.*

So next time you're tempted to buy a less expensive diskette, ask yourself this question.

Can you really afford it?

For the name of the Dysan dealer nearest you, call toll free (800) 551-9000.

Dysan Corporation, 5201 Patrick Henry Drive, P.O. Box 58053, Santa Clara, CA 95050.

Dysan®

Somebody has to be better than everybody else.

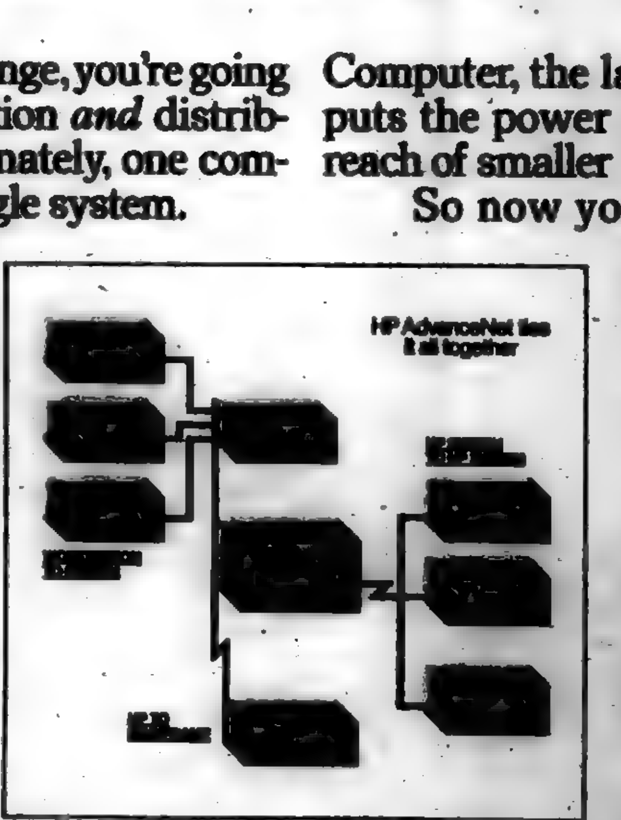
The HP 3000 compu

However much you change, you're going to need both office automation *and* distributed data processing. Fortunately, one company gives you both in a single system.

Hewlett-Packard's HP 3000 is a fully compatible family of computers, ranging from a new system that handles as few as two users to a distributed mainframe that connects up to 400. You can run the same software right up the line.

And our systems can change and grow as you do. When you're ready for upgrades and additions, you simply plug your existing programs into the new systems. No recompiling. No time and money wasted on conversion.



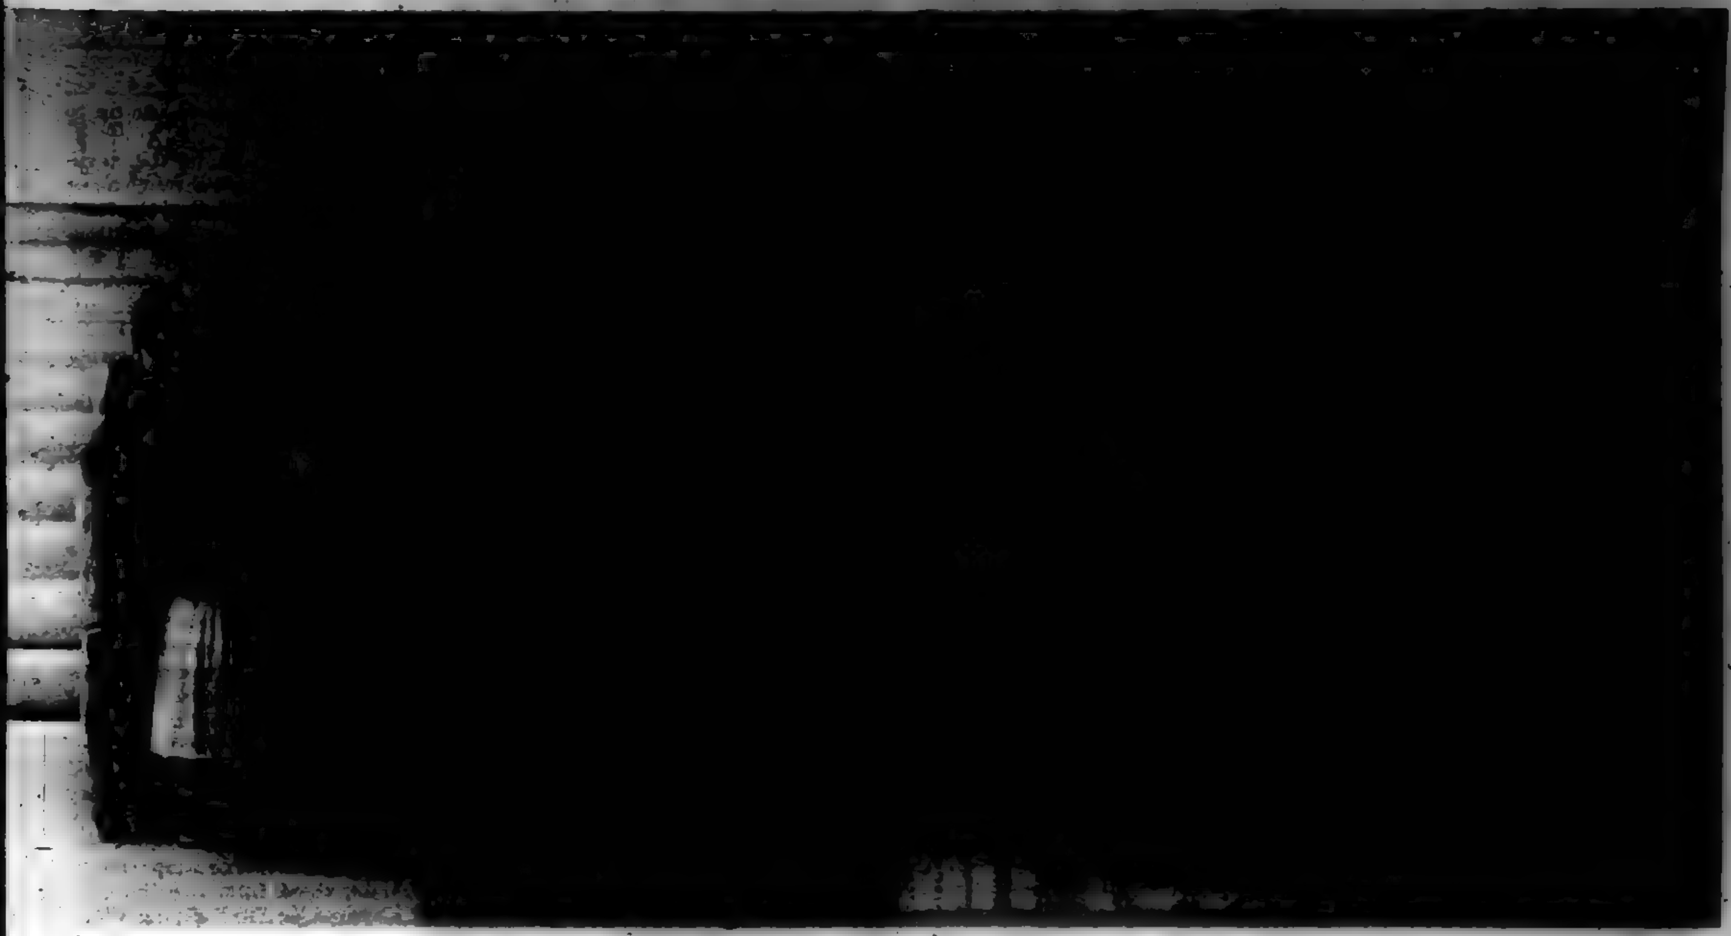
A small, but mighty, addition.

The new HP 3000 Series 37 Office Computer, the latest member of the family, puts the power of the HP 3000 within the reach of smaller budgets.

So now you can afford to give your branch offices and departments their own systems. And they'll still remain part of your overall DP picture with links to other systems.

In the office, the HP 3000 is the heart of our Personal Productivity Center. This integrates the information people need to get their jobs done more productively.

It provides an interface for a wide range of workstations, peripherals and personal computers, including our Touchscreen Personal Computer and The Portable, as well as IBM PCs. And it allows them to interact directly with



ter. One family fits all.

the HP 3000. So your people won't have to learn DP commands.

You'll communicate better with HP AdvanceNet.

Our communications go well beyond this office network. With HP AdvanceNet, they extend to links with other HP 3000s, in the same building or on the other side of the world. And to your mainframe computers, ours or IBM's.

Currently, more than 10,000 HP 3000 systems are working in networks so effectively that our communications were voted #1 in a national survey.

A Datapro poll also rated our service #1. So you get more than office automation and data processing in a single system. You get all the support you need from a single company.

To find out more about the single solution for both sides of your company, send us the coupon. (To make it easier, just attach your business card.) In Canada, call 1-800-387-3867.

We'll send you complete information, including our 12-page brochure. It shows how we can fit you no matter how much you change over the years.

☐ Send me a copy of The HP 3000 Business Computer Systems: *The Hewlett-Packard Approach to Selecting a Business Computer.*
☐ Have an HP representative call me to answer questions.

tem, has a 15-in. super imposition monitor and a 19-in. color graphics terminal and reference display. This display carries the same view as the super imposition monitor when photogrammetry is in process.

The system includes a calibration software package, the Intergraph Aerial Triangulation package, and orientation software. It costs approximately $175,000.

Intergraph, One Madison Industrial Park, Huntsville, Ala. 35807.

POWER SUPPLIES

■ Topaz, Inc. has announced a line of Peak-Current Line 2 power conditioners for protecting micros from malfunctions caused by ac power disturbances.

Voltage is said to be corrected to within -8% and +4% of normal-rated voltage for input variations of 90 Vac to 138 Vac.

Prices range from $410 to $1,590.

Topaz, 9150 Topaz Way, San Diego, Calif. 92123.

■ International Power Machines has released power distribution units that are said to distribute electrical power to mainframe computers and their peripherals and eliminate the need for permanent wiring.

The power distribution unit is placed on the computer room raised floor, with cables, junction boxes and connections located beneath the floor. When equipment is relocated or when the power distribution unit is moved, the cables are adjusted to the new configuration.

Prices range from $7,000 to $22,000.

International Power Machines, 11534 Pagemill Road, Dallas, Texas 75243.

LEE

from page 69

said to be able to use up to eight colors.

When used in the asynchronous mode through a Lee Data 400 controller, the Model 2131 can emulate the Digital Equipment Corp. VT52, VT100 and VT132 terminals and can access up to 32 different asynchronous hosts. The Model 2131 color terminal with windowing capability costs $2,995 and with windowing and graphics capabilities costs $2,995.

Two graphics system printers — the Model 1361 Universal Printer and the Model 1362 Universal Color Printer — were designed for use with Lee Data series 300 and 400 (4.1 level) controllers and offer print rates of 400 char./sec. in draft quality and 100 char./sec. in letter quality, the vendor said.

The Model 1361 will cost $5,995, and the Model 1362 will cost $7,190 when they become available in September 1985.

More information can be obtained from Lee Data, located at 7075 Flying Cloud Drive, Minneapolis, Minn. 55344.

98X

from page 69

defined by the microcode sequencer. The company claims the system includes a pipelining feature that overlaps instruction unit and execution unit operations.

Each CPU contains 528 32-bit registers that are implemented in a stack configuration consisting of 16 levels of 32 registers each. There are also 16 global registers, the company said.

An I/O subsystem, consisting of an I/O processor, disk controller and up to four disk drives, supports a data transfer rate of up to 3M byte/sec. The 98X was designed to operate with the company's 32M byte/sec. message-based I/O bus called Xtend.

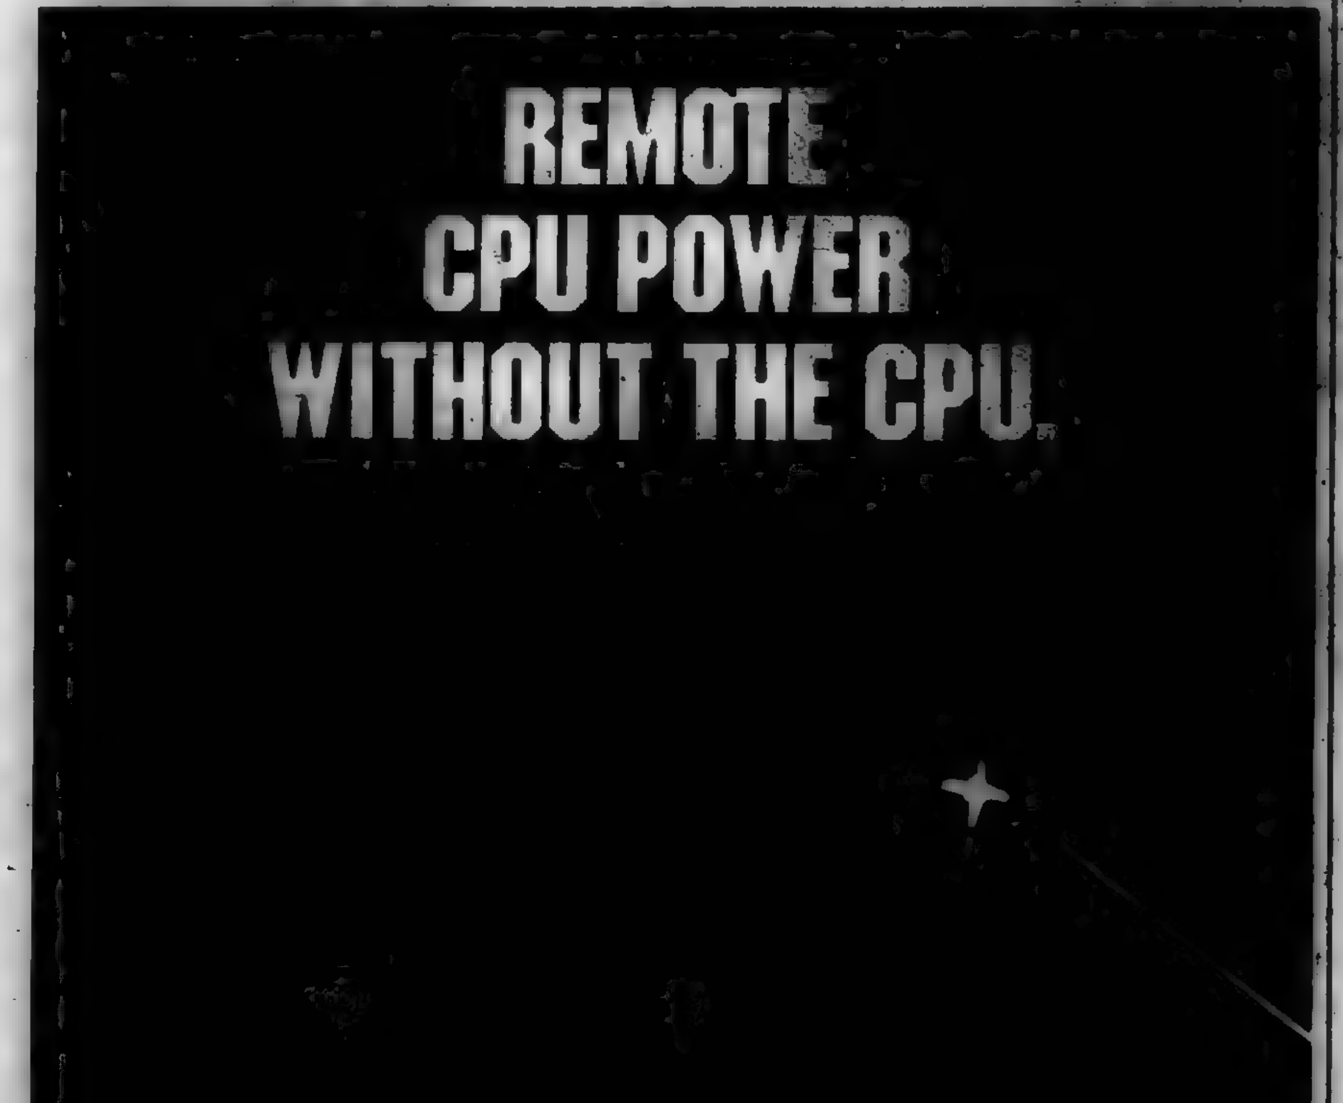
The Isoprocessor OSX operating system uses a proprietary semaphore mechanism to protect critical code sequences and control simultaneous access to kernel data structures.

This semaphore mechanism, the company said, was designed to allow the two CPUs in the 98X processor configuration to operate without major structural changes to the Unix kernel.

Available in October, the 98X Isoprocessor configuration costs from $260,000 to $600,000.

A typical configuration consisting of 8M bytes of main memory, two 470M-byte disk drives, a 6,250 bit/in. magnetic tape drive, 32 RS-232 ports, a color console and a 32-user license of OSX costs $307,000.

The vendor is located at 1295 Charleston Road, Mountain View, Calif. 94043.



PIXNET-XL connects remotely located high-speed devices to IBM mainframes without extra CPU hardware or software.

Run 3800 laser printers and hundreds of CRTs at speeds up to 1.544 Mbps. Throughput goes up, hardware and software costs go down. That's economy.

And to ensure ongoing network performance we cover everything from customer education to worldwide field service.

Cut the costs of remote processing with CPU speed and performance by PIXNET-XL. For information, write

COMPUTER INDUSTRY

U.S. to probe SIA charge of Japanese trade barrier

By Clinton Wilder
CW Staff

SAN JOSE, Calif. — Responding to a recent trade complaint by the Semiconductor Industry Association (SIA), the U.S. government will investigate allegations of Japanese government and industry trade barriers to imports of U.S.-made semiconductors.

U.S. Trade Representative Clayton Yeutter announced July 11 that he will investigate the SIA's allegations and initiate talks with Japanese officials to discuss increasing Japanese market opportunities for U.S. chip makers.

Yeutter, who was recently named to his new position, is expected to submit a report to President Reagan by June 1986.

SIA President Thomas Hinkelman hailed the decision, saying, "Yeutter's decision to initiate this case as one of his first actions is a welcome demonstration of the priority the U.S. government is giving this issue."

Although some U.S. chip makers have urged limits on Japanese imports of chips into the U.S. [CW, June 17], the SIA's official position has been to lobby for actions that would increase the U.S. vendors' share of the Japanese market. Japanese sales accounted for 17.4% of the U.S. market in 1984, and U.S. sales accounted for just 11.4% of the Japanese market, according to Dataquest, Inc., a market research firm based here.

The discrepancy in certain specialized products was much greater. For example, Japanese vendors sold 67.9% of the 64K-byte erasable programmable read-only memory (Eprom) chips sold in the U.S. in 1984, while U.S. manufacturers sold no 64K-byte Eprom chips at all in Japan, according to Dataquest.

In a related development, the U.S. chip industry's woes showed little sign of abat-

Pitfalls of microcode romance

INDUSTRY INSIGHT
Peter Bartolik
CW Senior Editor

Syncsort, Inc. President Aso Tavitian recently declared a victory over IBM and microcode [CW, July 15].

In Tavitian's view, IBM's June announcement of Release 7.1 of DFSort, a product Syncsort competes against, retracted previous claims that microcoded instructions in mainframes running MVS/XA improved performance of Release 7 over Release 6.

IBM sniffed at Tavitian's claim and responded that the initial February announcement of Release 7 had attributed performance improvements to use of additional virtual storage. That may be true, but it was certainly made much clearer with the June announcement that said, "Significant performance improvement . . . is realized through the automatic acquisition of additional virtual storage." The February announcement, after saying the microcode is used "to improve sort performance," a few paragraphs later noted the "capability to" access additional virtual storage.

Tavitian claimed that IBM's February announcement did not clearly tag performance improvements to additional storage, and statements made to users

Bank explores high-tech Europe trade

By Peter Bartolik
CW Staff

BOSTON — In this port city, from which Yankee clippers once sailed forth to wrench a dominant position in world commerce, a leading bank hopes to capitalize on Europe's seemingly insatiable demand for U.S. technology.

State Street Trade Development Co., Inc. (TDC) was formed in 1983 to exploit the export possibilities opened up by a 1982 law. TDC was specifically chartered by its parent company, State Street Boston Corp., to explore high-technology trade opportunities. State Street Boston is the holding company for the $4.5 billion State Street Bank and Trust Co.

"In 1982, when [U.S. Congress] passed the Export Trade Act, the intent was to reinvolve banks in the export process for the first time in 50 years," said Lawrence Meyers Jr., a managing director of TDC. That involvement can include actually taking title to goods and then shipping them overseas for resale, "much like the old Yankee traders," he added.

Alfred S. Woodworth Jr., another managing director, observed, "There just isn't the trading company tradition in the U.S. like there is in Japan." Although there are several established companies, they tend to be small scale and "not generally in the large trading company tradition that exists in other countries," Woodworth said.

The company, which in late 1984 was the first bank-affiliated trading firm to be granted an export distribution license by the U.S. Department of Commerce, has structured a variety of services to promote exports of smaller high-tech firms that cannot afford to create overseas distribution channels independently in the manner of IBM and Digital Equipment Corp.

It operates in three areas: planning and managing international distribution channels; administering master distribution contracts to move large quantities of

Lee Data wins rights to Visual Technology's micro system line

MINNEAPOLIS — Lee Data Corp., which earlier this year was unable to reach a merger agreement with Visual Technology, Inc., announced recently it had acquired exclusive technology, manufacturing and marketing rights to Visual Technology's multiuser microcomputer system line.

Lee Data said the Visual 2000, an Intel Corp. 80286-based supermicrocomputer, will be marketed as the Lee Data System 2000.

Last year Lee Data had reached a preliminary agreement to acquire Tewksbury, Mass.-based Visual Technology in a $16.8 million stock exchange [CW, Nov. 19]. Early this year, however, the deal was terminated [CW, Jan. 28].

In the recent announcement, Lee Data said the agreement with Visual Technology is valued at $3.1 million but that $3 million has already been paid to Visual Technology under an agreement reached in March for the firm to deliver finished products on an OEM basis to Lee Data.

The agreement provides Lee Data with all rights to the System 2000 on an exclusive basis under a 15-year license agreement along with the transfer of certain Visual Technology assets. Lee Data said it has formed a Computer Systems Division to be based in Massachusetts for design and marketing of the System 2000 and has made individual employment offers to 26 current Visual Technology employees. Former Visual Technology employees Jeff Herrmann and Jay Gehrig joined Lee Data as vice-presidents of marketing and engi-

Vertical marts hold promise for micro, mini vendors

By Kathleen Burton
CW West Coast Bureau

MENLO PARK, Calif. — High-growth vertical markets will become targets of microcomputer and minicomputer vendors during the next five years as competitors overcrowd traditional horizontal markets, industry analysts say.

By 1989, U.S. computer manufacturers will ship $14.5 billion worth of minicomputers, up approximately 40% from 1985 shipments, and $8.2 billion worth of personal computer systems, up approximately 70% from 1985 shipments, to domestic vertical users, said Brian Jeffery, research director at International Technology Group, Inc. in Palo Alto, Calif.

According to Jeffery, companies like Digital Equipment Corp., Data General Corp. and Hewlett-Packard Co. now realize that their failure to establish a strong presence in mini and micro vertical markets has given IBM a two-year lead and substantial market share. "They're now trying desperately to decrease IBM's substantial lead in verticals," Jeffery said, adding that IBM now controls 20% of the mini and 40% of the personal computer vertical markets in the U.S.

Aaron Goldberg, a research analyst at International Data Corp. in San Jose, Calif., said 60% to 65% of multiuser computer systems installed in 1985 will directly target vertical markets. "Verticals are a way for vendors to sell systems and leverage their selling efforts in spite of increasing competition," he said.

Goldberg said vertical markets also enable vendors to establish valuable long-term relationships with value-added resellers, independent software vendors and OEM resellers. "[Value-added resellers] leverage selling efforts, add value to products and address wider markets by selling different solutions," he said. "Verticals will let companies enter areas they've never been in before."

Mike Gardner, marketing manager of HP's Information Systems Group, which targets vertical markets with HP 3000 products, said vertical marketing strategies, including solution selling, specialization and market differentiation are what HP "needs to learn as a company."

> ”
>
> *Companies realize that their failure to establish a strong presence in mini and micro vertical markets has given IBM a two-year lead and substantial market share.*

According to Gardner, these concepts are being disseminated into traditionally nonvertical HP groups such as personal computing, medical instrumentation and applications productivity, each of which will establish vertically oriented sales districts sometime this year.

Gardner said vertical markets now represent 20% of HP's total commercial computing business, excluding personal computers and large accounts over $100 million.

Maynard, Mass.-based DEC is increasingly focusing on high-growth office automation vertical markets to leverage its expertise in sales and distribution, said Robert Thaler, industry marketing manager for DEC's legal, retail and construction vertical markets.

According to Hal Feeney, a researcher at Dataquest, Inc., a San Jose, Calif.-based market research firm, vertical markets currently represent almost 35% of DEC's overall business.

Although DEC has been involved in vertical marketing since the early 1970s, the company consolidated its vertical distribution channels under one vice-president last year, Thaler said. During 1985, DEC plans to expand several of its technically oriented vertical markets, including health care, to include business and collections, he said.

Sales representatives in DEC's vertical market and large-accounts divisions now often work together as strategic teams, Thaler added, and the relationship is "synergistic rather than competitive." For example, Thaler said, DEC's vertical legal skills are increasingly being used to help the company's direct sales staff sell to the legal departments of large corporations, with both groups often offering customers the same applications.

Robert Johnson, director of marketing support for the Information Systems Division of Westboro, Mass.-based DG, said the company is increasingly focusing on vertical markets because competition in other areas is getting stiffer, and corporate decision makers are looking for total solutions.

DG is now involved in 20 vertical markets, according to Johnson, including insurance, banking, brokerage firms, health care and telecommunications and is planning on increasing its commitment in these areas. Targeting these vertical markets, DG is heavily recruiting independent software vendors, who number approximately 95 companywide, Johnson said.

DG also recently initiated a pilot vertical marketing sales program that is being tested in New York. Under this system, a single DG sales team concentrates its selling efforts on specific banks or brokerage firms in the New York area, offering these customers any DG product or service.

Mainframe Downloading with Maximum Security.

Emerald's 1/2" 9 track tape subsystem downloads EBCDIC datasets to IBM PCs, ATs and compatibles quickly, conveniently and off-line.

- Best possible security—the receiving micro is off-line.
- *FAST*—10 MBytes/min.
- High capacity—up to 10½" reel size (up to 69 MBytes).
- Conversion to DIF, CSV, Lotus 123, and dBase III.
- DOS 2.X and 3.X.
- Desk top or rack mountable.
- Manual or auto tape loading.
- Complete with tape controller card, cables, software and documentation.

Reach over 40,000 computer professionals in Brazil.

Your ad in CW Communications' Brazilian publications will reach a multi-billion dollar computer market. At the end of 1984, there were approximately 9,000 mini and mainframe installations in Brazil valued at $3 billion. According to International Data Corporation (IDC), the world's leading information industry research firm, Brazil's mainframe market will grow 20% annually and micros are predicted to grow 50% annually over the next five years. CW Communications covers the Brazilian market with two important publications; *Data News* and *MicroMundo*.

Data News reaches 12,500 Brazilian DP professionals weekly. It covers new products and services, current applications and latest industry developments and trends.

MicroMundo is the only microcomputer publication in Brazil. Each month, 30,000 Brazilian micro and personal computer users read *MicroMundo*. The editorial keeps users up-to-date on all current news in the micro world.

CW International Marketing Services makes advertising your new products in Brazil, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon and mail today.

Small firms weather slump as giants remain vulnerable

By David C. Dykstra
Special to CW

Sales and income results for the first quarter of 1985 for publicly stock-traded computer companies reflected slowing growth in computer sales and weaker earnings in the computer industry. Forecasts and preliminary reports for the second quarter indicate a continuing slump.

The surprise is that the industry is having a shake-up, not a shakeout, and many of the smaller companies are weathering the storm better than the giants that many experts view as the survivors of the impending shakeout.

The quarter's results reflect the smallest growth rate in sales and the largest percentage decline in earnings during the last five years.

Only 7% increase

First-quarter sales in 1985 increased only 7% over the corresponding prior year's quarter. This compares with an average annual growth rate of 22% over the past five years.

First-quarter net income declined 22% from the corresponding prior quarter to a 5.6% net profit margin. This, however, is not disastrous when compared with the recently published Fortune 500 net profit margin of 4.9% for 1984.

Although many tout IBM's strength and ability to dominate the market, its profit margin vulnerability and its pressure to maintain market share are also evident.

In the first quarters of 1984 and 1985, with 29% and 28%, respectively, of the industry's total sales, IBM had 48% and 50%, respectively, of the industry's profits. IBM's profit margin as a percent of sales is more than double the average of all other computer industry companies. When IBM quivers, the industry shakes.

IBM's quarterly sales increased only 2% to $9.8 billion. Profits, however, declined 18% to $216 million.

The second tier

The second market tier under analysis consists of 33 companies, each with sales less than IBM's sales but greater than $150 million for the 1985 first quarter.

The sales of these companies grew 7.6%, which was greater than IBM's sales increase of 1.9%. Profits suffered more severely as this group's net profits declined 29% to a 3.8% net profit margin.

The profit impact was most severe on the companies that have increased their efforts to compete head to head with IBM in its various markets. Some of these companies are Texas Instruments, Inc., Control Data Corp., Tandy Corp. and Wang Laboratories, Inc.

Costs force profits down

Apple Computer, Inc. had a strong 45% sales increase from the Macintosh product line. But the costs associated with aggressively trying to penetrate increasingly competitive markets caused its net profit margins to shrink to 2.3%.

Some of the companies that maintained their market direction in niches away from the mass competition had very good performances. Telex Computer Products, Inc., a manufacturer of specialty terminals, had a sales increase of 82% and maintained a 9% profit margin. Automatic Data Processing, Inc. had a 16% sales increase and improved its net profit margin from 9.4% to 9.6%.

The 233 smaller companies, with average sales for the quarter of $26 million, had a greater sales growth rate and a less severe profit decline. Sales grew 14% while net income declined

COMPUTER INDUSTRY

12% to a 4.2% net profit margin.

There were numerous casualties, and the survival of many companies is in question. These companies include many in the IBM-compatible arena such as Eagle Computer, Inc., Fortune Systems Corp. and Vector Graphic, Inc.

> ”
>
> *The keys to success, in both the good times and the bad times, especially for the smaller companies, have been to identify and serve market niches properly, not to try to be everything to everyone.*

Most of the strong performers in the smaller companies segment do not compete head-to-head with IBM and the other giants. Many of the stars, however, supply or support the IBM marketplace.

Strong first-quarter 1985 results were posted by a host of companies, including Apollo Computer, Inc., Ashton-Tate, Compaq Computer Corp., Computer Task Group, Cray Research, Inc., Cullinet Software, Inc., Software Publishing Corp., Sterling Software, Inc., Stratus Computer, Inc. and many others.

The number of successes as compared with the setbacks has taken a backseat in the news. Most of the successful companies are not high-profile companies; this suggests that the low-profile approach — for example, direct sales vs. mass marketing, customer service vs. stock market image, and so on — is a factor to success in a large, highly competitive market.

The outlook

The outlook for the computer industry continues to look strong. The buyers, however, are much more sophisticated than they were one year ago. These buyers are cautious, and they are placing increased demands on the sellers.

The keys to success, in both the good times and the bad times, especially for the smaller companies, have been to identify and serve market niches properly, not to try to be everything to everyone and to avoid mass advertising, IBM-commodity markets.

The largest companies in the computer industry serve the largest organization purchasers with the products that are the largest portion of these organizations' purchases. These, however, are the slowest growing as well as the most competitive markets.

Growth of niche marts

The smaller volume but more rapidly growing newer, niche markets provide greater opportunity for high profit margins and growth.

The demand for increased support and service related to specific needs will create even more varied products and vendors. The number of computer industry companies, in both the bad times and the good times, had grown and will continue to grow. The shake-up will continue.

The Dykstra Consultants' 75-page report, titled First Quarter '85, Public Computer Companies Results, *will be available shortly. The price is $195.*

Kaypro posts $6.2 million third-quarter loss

SOLANA BEACH, Calif. — Kaypro Corp. announced it suffered a net loss of $6.2 million for the third quarter ending May 31.

The portable computer manufacturer said the loss resulted from a revaluation of its inventory. The company said the revaluation prompted a subsequent $9.8 million writedown.

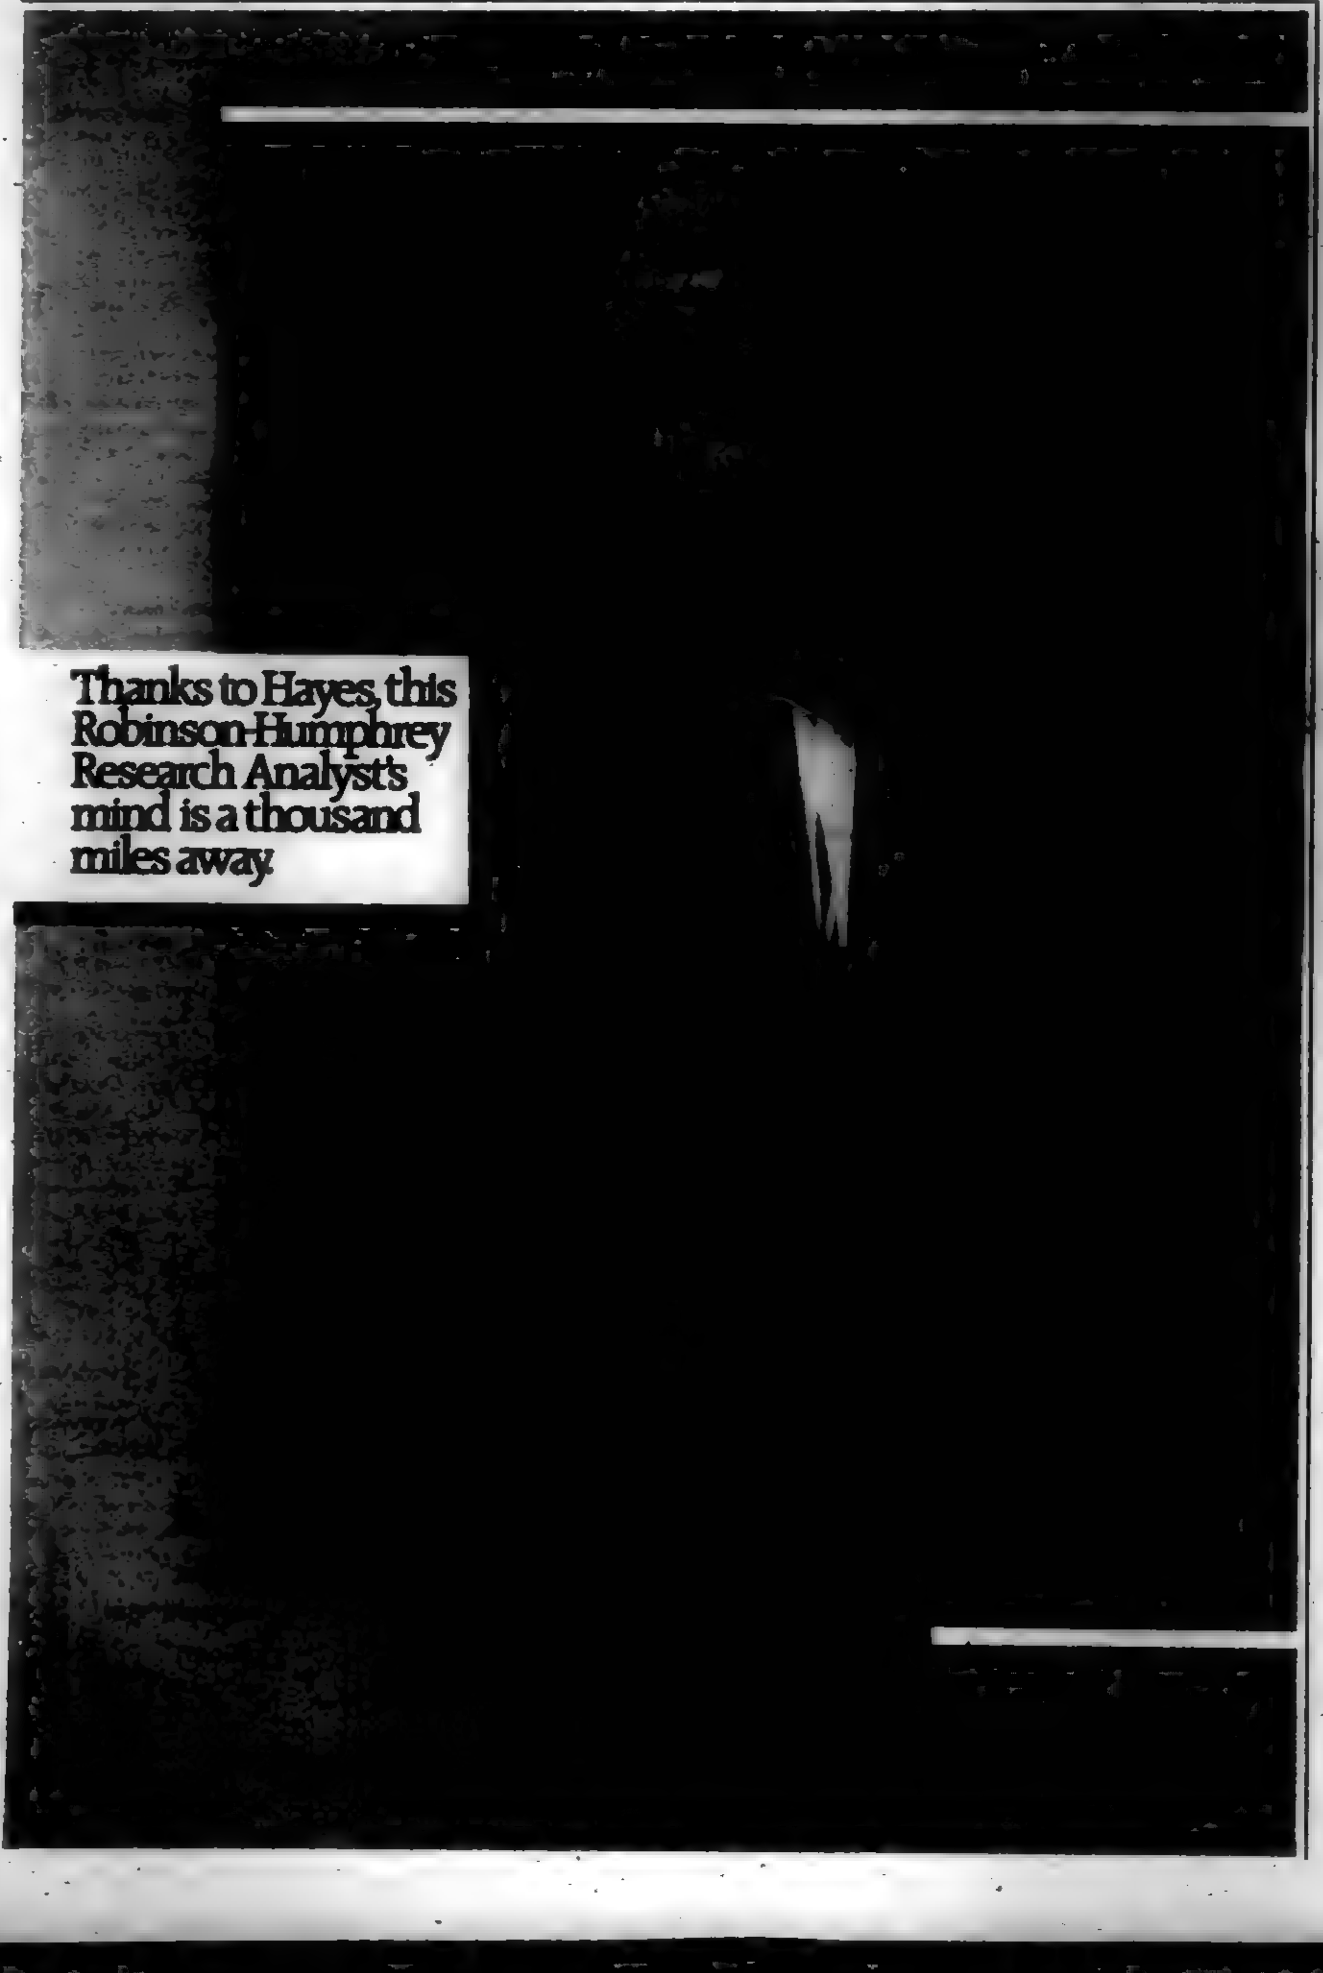
Sales for the quarter totaled $16.7 million, down 48% from $32.5 million one year ago. Profits for the same period last year were $3.2 million.

Robert Gorski, Kaypro's controller, said the generally sluggish computer market and the company's recent introduction of new-model 16-bit computers fueled the revaluation.

The company currently has assets of $38 million and liabilities of $13 million, Gorski said, and "will continue to be a significant player in the marketplace."

According to Gorski, the revaluation will make further adjustments for the rest of the year unnecessary.

Ken Lim, an analyst with Dataquest, Inc., a market research firm in San Jose, Calif., said "this recent loss continues a trend Kaypro has been on for several quarters. [The firm] alternates small losses with break-even periods." According to Lim, the company's problems are caused by having too many overlapping products in the marketplace.



Firm merges CAD/CAM subsidiaries

ANN ARBOR, Mich. — Schlumberger Ltd. recently announced the consolidation of two major units of its Computer-Aided Systems (CAS) group. It combined the operations of Applicon, Inc. and Manufacturing Data Systems, Inc. (MDSI).

Applicon, formerly headquartered in Burlington, Mass., manufactures computer-aided design products. MDSI, headquartered here, is a maker of computer-aided manufacturing products. Both companies were founded in 1969.

According to a Schlumberger spokesman, the combined companies will retain the Applicon name. The spokesman added that the firms will be headquartered here.

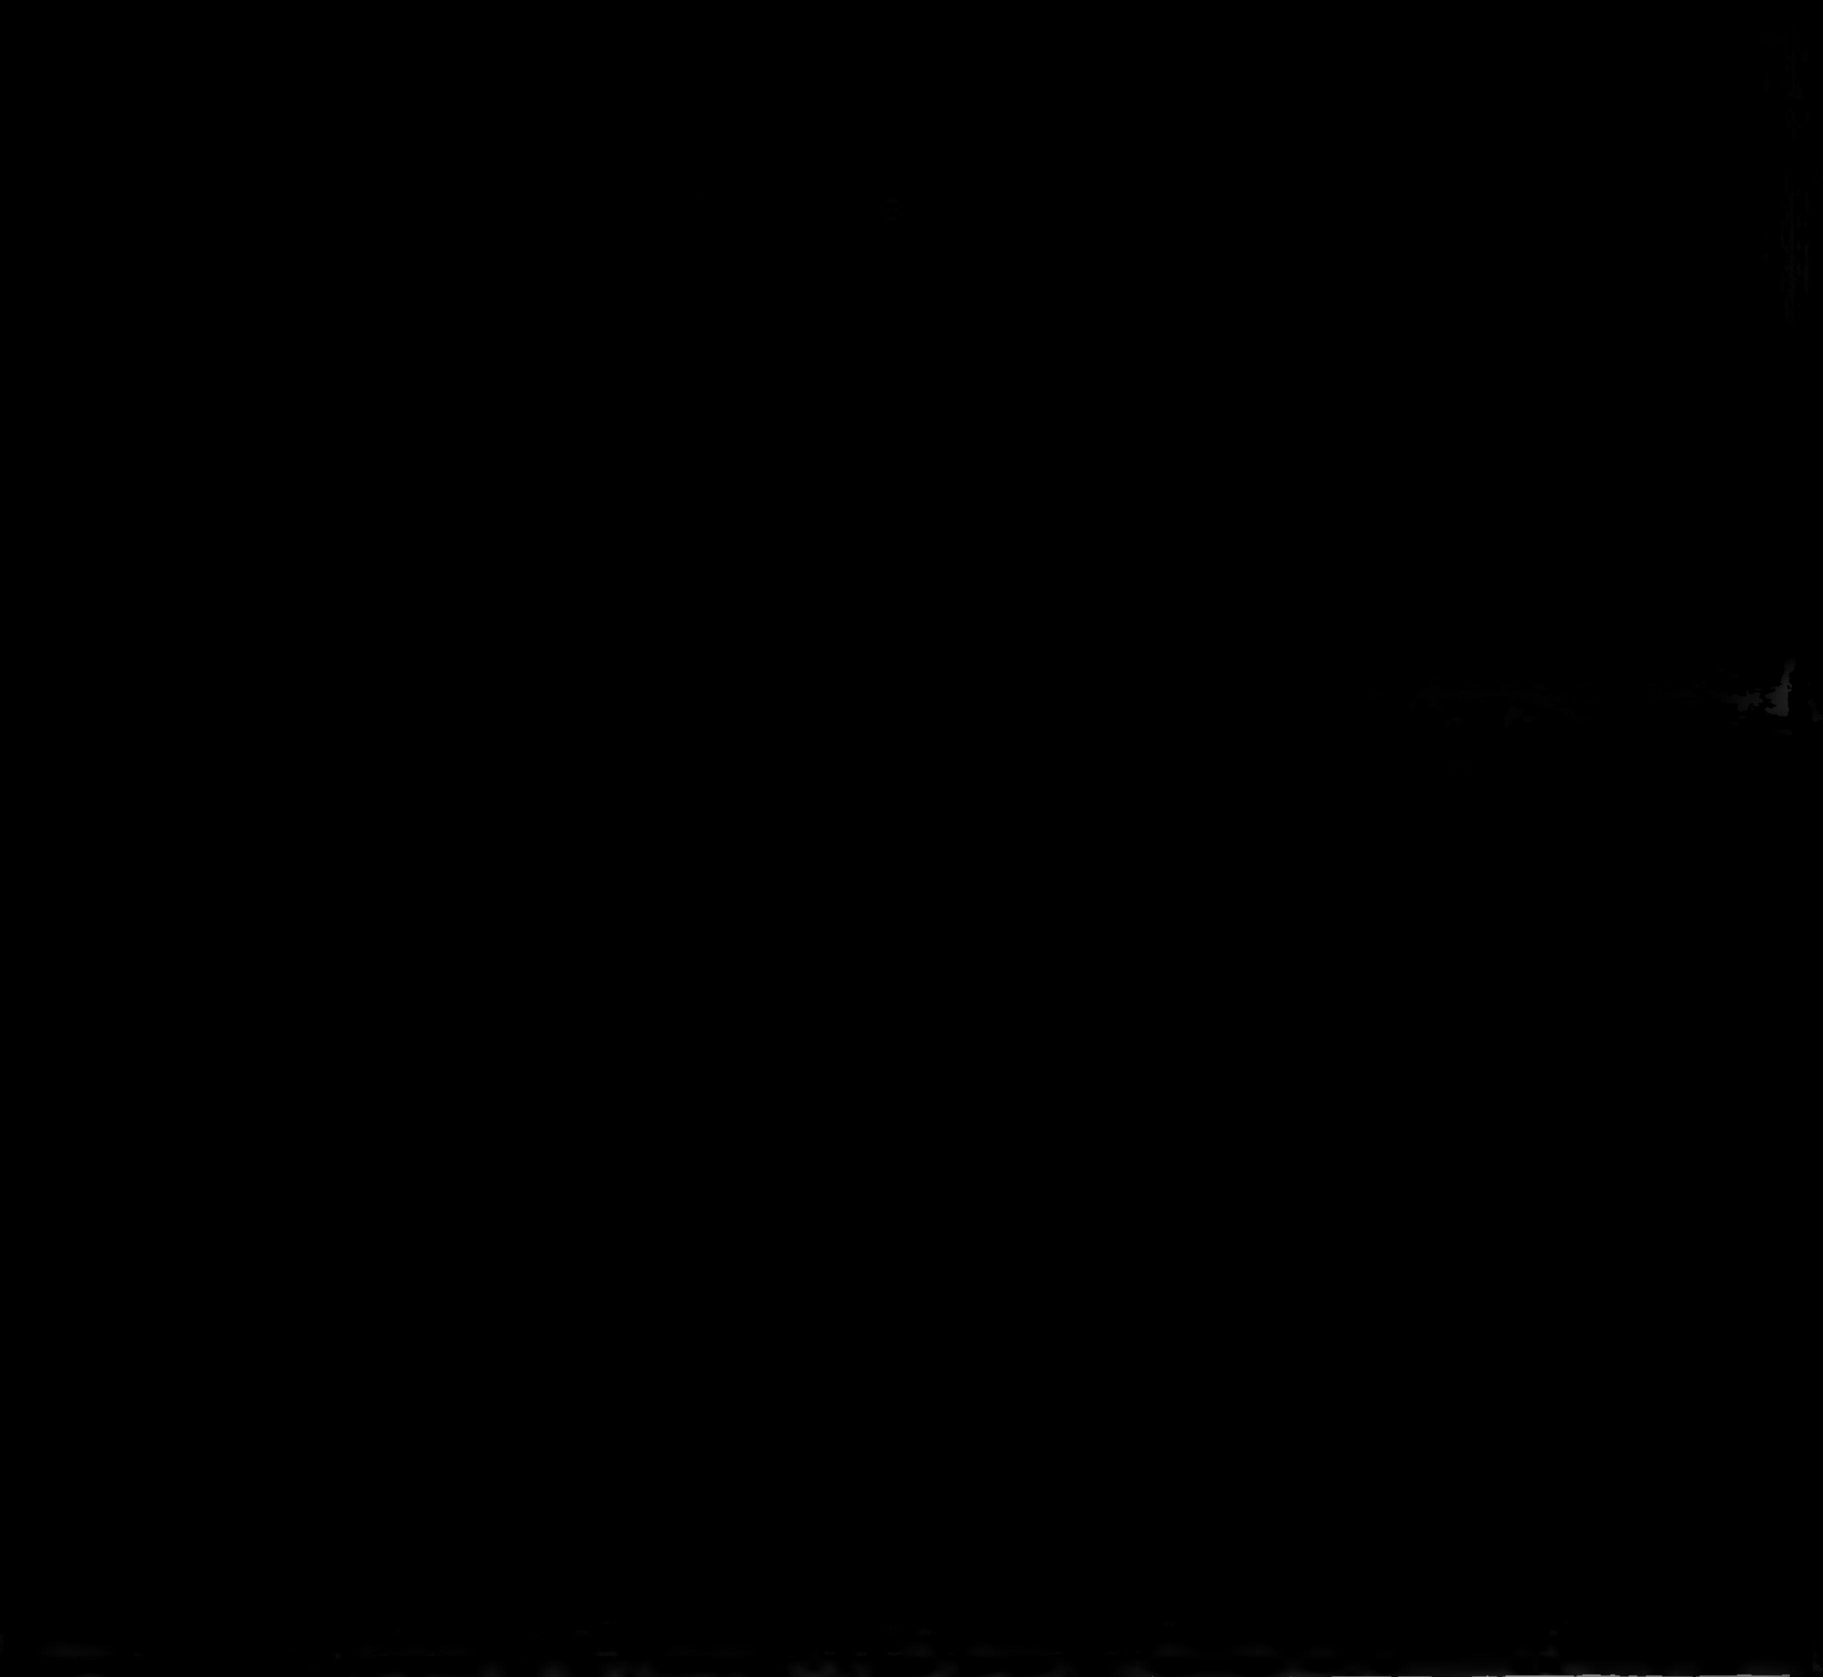
Sales arms left intact

Worldwide sales and service organizations of both companies will remain intact, Schlumberger said, and product development and manufacturing facilities in several states will continue operations.

Dick Morman, former general manager of MDSI, was named vice-president and general manager of the combined company. Alex Beavers, former president of Applicon, was named vice-president of marketing for Schlumberger's CAS group.

Additionally, Schlumberger announced the formation of the Electronic Design Automation group. The operations of the new group will encompass the very large-scale integration product line of Applicon and the automatic test generation facility efforts of Factron, another division of Schlumberger's CAS group.

How to find the formula.



INQUIRE®/Text:

Helps you find what's buried in your database.

You don't have to be an Einstein to realize that numbers are only part of the data your organization needs in order to be effective. As often as not, the information you need consists of a few key phrases buried inside a mountain of written documentation.

Until recently, accessing this information was a nightmarish task, largely dependent on paper filing systems and relatively fallible human memory.

But with INQUIRE/Text, it's easy. Powerful search commands zip through everything from research reports to correspondence—extracting vital information faster and more accurately than ever before.

The result is a quantum leap in the quality and diversity of online information available for decision support. For the first time, textual information can be retrieved and manipulated as easily as numeric data—with an output of up-to-date, integrated management reports.

No wonder INQUIRE/Text users include some of the world's leading scientists and researchers —not to mention lawyers, librarians, engineers, corporate records managers, and entrepreneurs.

And no wonder more and more people everywhere are seeing text management as an indispensable element of the Information Center.

INQUIRE/Text. The only system around that can turn a mass of text into a source of energy.

For more information call or write Infodata Systems Inc., 5205 Leesburg Pike, Falls Church, Virginia 22041, telephone (800) 336-4939. In Virginia call (703) 578-3430. Telex: 899125

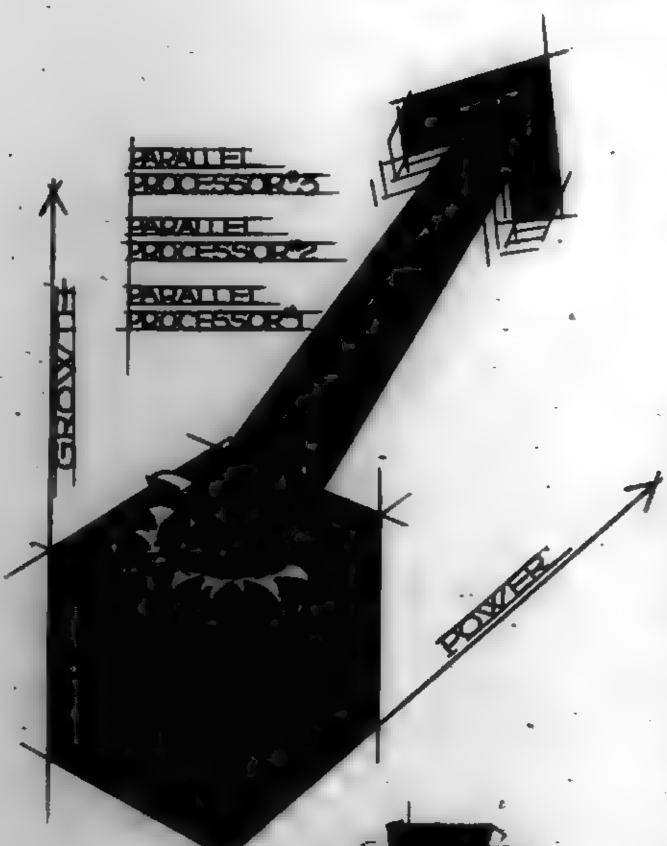
INFODATA®

Parallel Processing. Your Best Computer Investment.



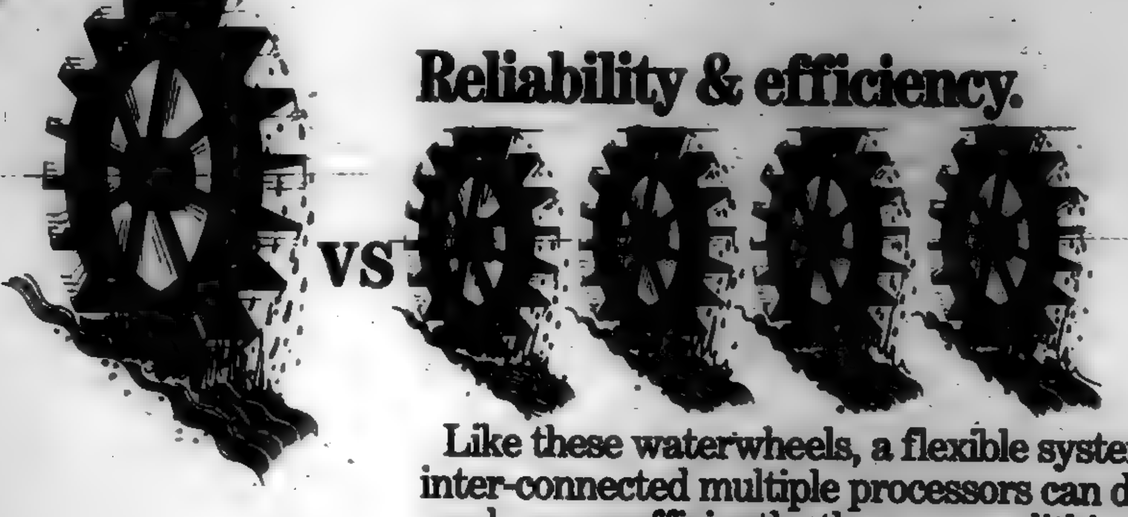
Breaking the performance barrier.

There's no question that uniprocessing has its limitations, particularly when it comes to performance. You can only wring so much power out of a single machine, and no more.

But Perkin-Elmer's Parallel Processing family isn't limited that way. Our unique 32-bit architecture allows you to grow with one high performance processor after another. Easily and economically. Without software changes. Without having to buy an expensive new system.

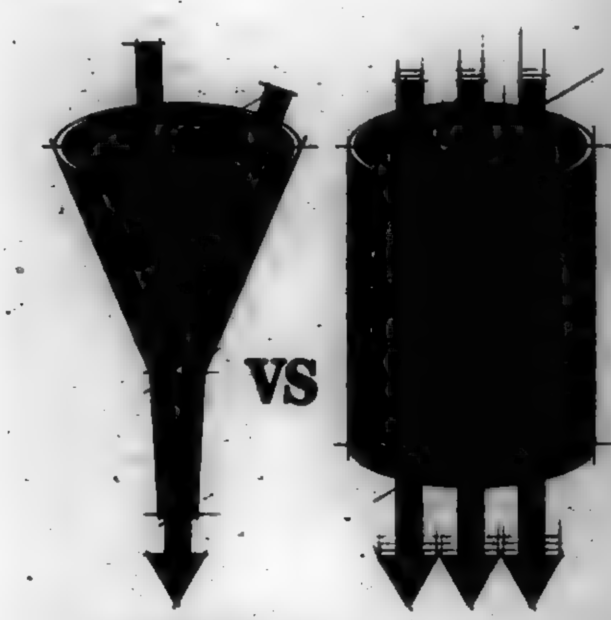
You get all the power and speed you need now. And all you'll need in the future. At a price you can afford.

Reliability & efficiency.



Like these waterwheels, a flexible system with inter-connected multiple processors can do more work, more efficiently, than a monolithic uniprocessor. And they do it more reliably; if one goes down, the others keep working, often absorbing the task of the temporarily lost processor.

Each Perkin-Elmer real-time processor executes a related segment of your overall task. Simultaneously. So total parallel processing time is far less than sequential uniprocessing of the same task.



Opens the bottleneck.

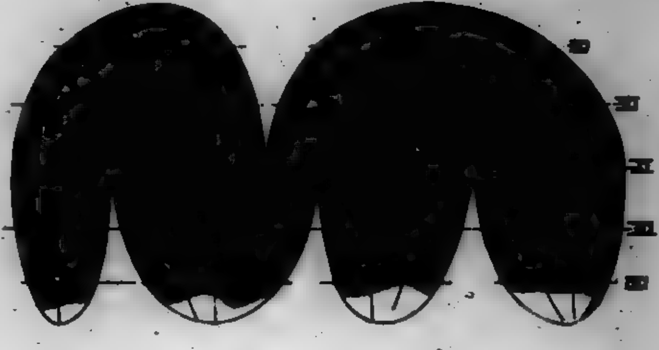
When you've got many users on a system, all competiting for the same limited resources, a uniprocessor can slow to a virtual standstill trying to accommodate all that I/O.

But with a Perkin-Elmer multiprocessing system, each parallel processor can be autonomous, doing its own I/O, sharing memory and resources only when required. So the work keeps flowing.

Growth insurance.

By now you should realize why Perkin-Elmer Parallel Processing is your best computer investment. And like any investment, the real payoff comes in the future.

Across-the-line compatibility and the low cost of adding auxiliary processors make growth painless. Your software investment is protected every step of the way. Even overhead, footprint and operating costs are minimized. That's insurance you can bank on.



Experience to make it work.

All of a sudden, everybody is trying to jump on the Parallel Processing bandwagon. We've been there from the beginning. For over a decade—long before others adopted the technology—Perkin-Elmer computers have been performing Parallel Processing. In versatile shared memory systems. And powerful multiprocessors.

Today there are over 300 Perkin-Elmer Parallel Processing systems installed throughout the world. You can invest in success too. For more information, mail the coupon. Or call toll-free: **1-800-631-2154.**

PERKIN-ELMER

Computers that take
the pain out of growing.

I've been thinking along the same lines.

NICKELS AND DIMES

Inmac Corp. reported revenue for the first quarter ended March 31 of $7.6 million, compared with $5.9 million for the first quarter of last year. Profits were $420,000, or 8 cents per share, compared with $247,000, or 5 cents per share, in the corresponding period a year ago.

■

Software Publishing Corp. announced revenue for the second quarter ended March 31 of $7.2 million, up 59% from $4.5 million in the comparable quarter a year ago. Profits were $972,000, or 14 cents per share, compared with $493,000, or 9 cents per share, in the same period a year ago.

■

AST Research, Inc. reported profits for the three months ended March 31 of $5.8 million, or 55 cents per share, compared with $1.5 million, or 19 cents per share, in the like period a year earlier. Revenue was $37.8 million, compared with $20.1 million in the comparable period a year ago.

■

Computer Consoles, Inc. announced revenue for the quarter ended March 31 of $25.9 million, down from $27.2 million in the same quarter a year ago. There was a net loss of $5.5 million, or 46 cents per share, compared with a net income of $1.3 million, or 11 cents per share, in the comparable quarter a year earlier.

■

Sanders Associates, Inc. reported revenue for the third quarter ended April 26, increased 14% to $219.8 million, compared with $192 million in the like period last year. Profits were $6.1 million, or 32 cents per share, compared with $13.7 million, of 72 cents per share one year ago.

■

Dataproducts Corp. announced revenue for the fourth quarter ended March 31 of $113.7 million compared with $126.4 million in the same quarter a year ago. Profits were $2.6 million, or 12 cents per share, compared with $10.6 million, or 51 cents per share in the comparable period one year ago.

■

Vector Graphic, Inc. reported a net loss of $1.4 million, or 19 cents per share, for the third quarter ended April 2, compared with a net loss of $2.7 million, or 44 cents per share, for the like period a year ago. Revenue was $903,000, compared with $3 million in the same quarter last year.

■

Wicat Systems, Inc. reported revenue for the fourth quarter ended March 31 of $9 million, up 53% compared with $5.9 million a year ago. Wicat posted a loss of $289,000, or less than 2 cents per share, compared with a loss of $6.9 million, or 34 cents per share, in the comparable quarter one year earlier.

■

Micom Systems, Inc. announced revenue for the fourth quarter ended March 31 of $51.5 million, compared with $44,9 million one year ago. Profits were $5.6 million, or 33 cents per share, compared with $6.4 million, or 37 cents per share, in the like quarter a year earlier.

■

Syntrex, Inc. reported revenue for the second quarter ended April 26 of $14.9 million, compared with $12.5 million in the same quarter one year ago. Profits were $56,000, or 1 cent per share, compared with $437,000, or 5 cents per share in the comparable period a year ago.

■

Anacomp, Inc. announced net income of $6.4 million, or 33 cents per share, on revenue of $31.8 million for the quarter ended March 31. A year earlier, the company reported a loss of $27 million, or $2.13 a share on revenue of $35.4 million.

■

Floating Point Systems, Inc. reported revenue for the second quarter ended April 30 of $30.2 million, compared with $29.1 million in the like quarter a year ago. Profits were $3.1 million, or 39 cents per share, compared with $3.6 million, or 41 cents per share a year earlier.

■

ITT announced profits for the first quarter of $113.3 million, or 75 cents per share, compared with $79.3 million, or 52 cents per share, in the same quarter a year earlier. Foreign exchange decreased earnings by 8 cents during the quarter, compared with a 12 cents per share negative impact in the comparable quarter last year. Revenue for the quarter was $4.7 billion compared with $4.6 billion in the first quarter last year. The communications operations and information services segment reported results similar to those for the comparable period last year.

■

Tandy Corp. announced revenue for the third quarter ended March 31 of $670 million, compared with $656 million in the like period a year ago. Profits were $21 million, or 25 cents per share, compared with $62 million, or 60 cents per share, in the comparable period one year ago.

■

Britton-Lee, Inc. reported revenue for the first quarter ended March 31 of $6.5 million, a 76% increase, compared with $3.7 million for the same quarter last year. Profits were $938,000, or 12 cents per share, representing income before extraordinary credit of $534,000, or 7 cents per share, and an extraordinary credit from using tax-loss carryforwards of $404,000, or 5 cents per share. This compares with net income of $386,000, or 6 cents per share, representing income before extraordinary credit of $212,000, or 3 cents per share, and extraordinary credit from using tax-loss carryforwards of $174,000, or 3 cents per share, for the quarter ended March 31, 1984.

from page 86

Rand Information Systems, Inc. announced audited financial results for the fiscal year ended Feb. 24. The company reported a net loss of $1.2 million, or 60 cents per share, compared with net income of $10,000, or 4 cents per share, in the previous year. Revenue was $11.1 million, compared with $12.6 million a year ago.

■

BPI Systems, Inc. reported results for the three-month period ended March 31. The company reported a pretax loss of $441,000, and an after-tax loss of $211,000 or 4 cents per share, on revenue of $2.3 million. The results compared with a pretax loss of $617,000 and a combined after-tax loss of $660,000, or 12 cents per share, on revenue of $2.6 million in the corresponding period a year ago.

■

Dynatech Corp. announced revenue for the quarter ended March 31 of $54.3 million compared with $39.1 million a year ago. Before extraordinary gain, pretax income was $7.7 million, compared with $4 million for the like quarter a year ago, and income from operations was $4.4 million, or 45 cents per share, compared with $2.2 million, or 24 cents per share for the same period one year ago.

■

Gerber Scientific, Inc. reported revenue for the fourth quarter ended April 30 of $64.4 million, compared with $53.7 million in the like period a year ago. Profits were $6.5 million, or 38 cents per share, compared with $5.1 million, or 30 cents per share, one year ago.

■

Computer Memories, Inc. reported fourth-quarter revenue ended March 31 of $39.3 million, a 212% increase over last year's fourth-quarter revenue of $12.6 million.

Computer Memories' profits were $2.6 million, or 24 cents per share, compared with $412,000, or 4 cents per share, in the comparable period one year ago.

■

Continental Information Systems Corp. reported revenue for the quarter ended Feb. 28 of $75.6 million, compared with $29.7 million in the like quarter a year ago. Profits were $2.2 million, or 42 cents per share, compared with $1.7 million, or 32 cents per share, in the previous year.

■

Centronics Data Computer Corp. announced revenue for the first quarter ended March 31 of $63.8 million, compared with $39.5 million in the comparable period last year. Net loss for the quarter was approximately $1.3 million, or 11 cents per share, compared with a loss of $1.9 million, or 17 cents per share, in the like period a year ago.

■

Scientific Micro Systems, Inc. reported a net loss of $175,000, or 2 cents per share, on revenue of $8.7 million for the first quarter ended March 31. A year earlier, the company reported a net income of $950,000, or 18 cents per share, on revenue of $9.6 million.

■

Computer and Communications Technology Corp. announced revenue for the first quarter ended March 30 of $24.5 million, compared with $27.5 million one year ago. Profits before an extraordinary tax benefit were $137,000, or 2 cents per share, compared with $2.3 million, or 30 cents per share, for the first quarter a year ago.

An extraordinary tax benefit of $291,000, or 4 cents per share, increased the 1984 net income to $2.6 million.

■

Western Union Corp. has announced a net loss for the three months ended March 31 of $15.3 million, or 88 cents per share, compared with profits of $14.1 million, or 50 cents per share, in the like period a year ago. Revenue was $284 million compared with $261 million one year ago.

■

Computer Devices, Inc. reported a loss for the quarter ended Dec. 29 of $2.2 million, or 57 cents per share, compared with a loss of $9.4 million, or $2.39 per share, in the comparable period a year ago. Revenue was $1.5 million, compared with $1.7 million a year ago.

EXECUTIVE CORNER

James K. Dutton has been named president and chief executive officer of System Industries, Inc. Dutton's previous experience includes product marketing management at IBM and Storage Technology Corp. and serving as vice-president of marketing at Amdahl Corp. Most recently Dutton served as president and chief executive officer of Caere Corp.

■

Spectrum International, Inc. has announced the appointment of David W. Tuttle as president and chief operating officer, replacing John Zoellner who moves to chairman and continues as the company's chief executive officer.

■

Pertec Computer Corp. has announced the appointment of Edward E. Hale to president. Most recently he was vice-president of marketing at Triumph-Adler North America. He has also served as president of Royal Business Machines.

With more than 70
and enhancements,
complete solutions

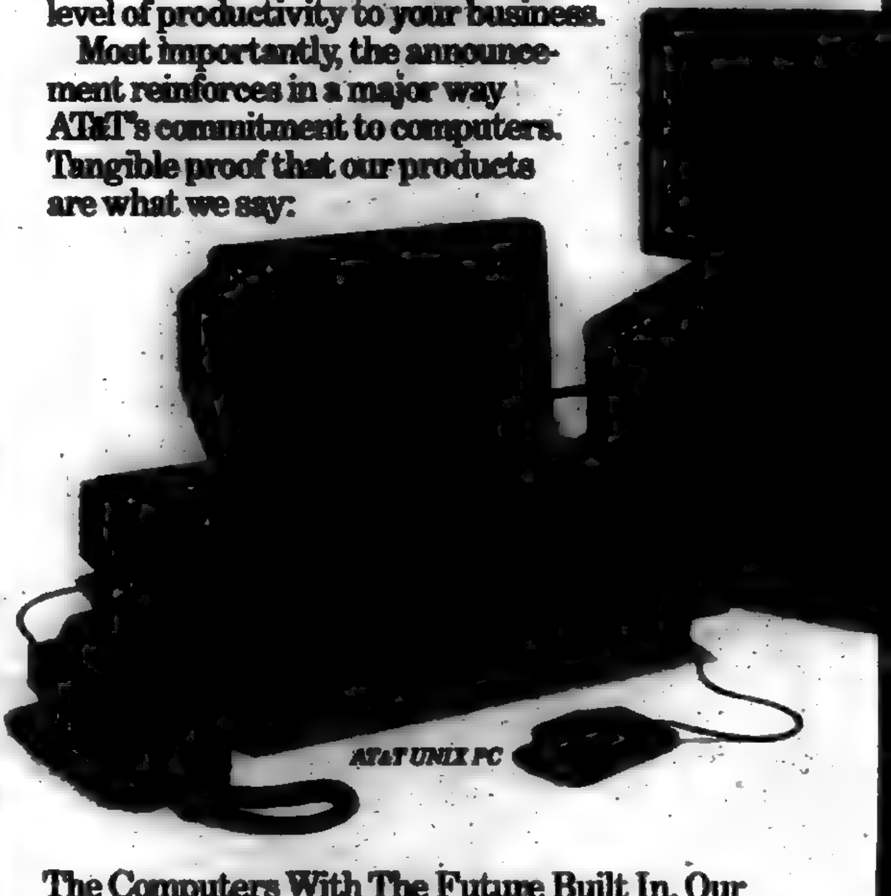
A few weeks ago, AT&T made a major computer announcement. Major in every way.

Certainly in the depth and breadth of the offering —which includes computers, peripherals, software, networking options, communications products and much more.

Major in terms of AT&T's growth as a force in the computer industry. Consider the new, enhanced and existing products. You'll find our line of integrated communications-based computers runs the gamut from PCs to superminis.

What's more, they can be connected easily to each other and to your mainframes. They're readily expandable, too, bringing a new level of productivity to your business.

Most importantly, the announcement reinforces in a major way AT&T's commitment to computers. Tangible proof that our products are what we say:



The Computers With The Future Built In. Our computer line now includes the following:

Computers: To serve an entire office, our recently enhanced line of AT&T 3B Computers puts the flexibility and power of the UNIX™ Operating System to work for you.

There are five models. Our new 3B2/400 can accommodate up to 46 different peripherals (terminals, printers, modems, etc.). The new 3B15 up to 128.

new computer products AT&T is now fully equipped to offer to your computer needs.

The 3B2/300 and 3B5 have both been enhanced with many features for better performance. The former can accommodate up to 18 different peripherals; the latter up to 128. The 3B20 has room for up to 256 peripherals.

The AT&T PC 6300 is for the single user in need of a superior MS-DOS* business computer. It can also run the Xenix* operating system.

For single or multi-user situations, the AT&T UNIX PC offers a unique combination of power, ease of use and advanced communications capabilities.

Communications: AT&T has always led the way in telecommunications. That leadership continues in computers. Our computers and communications products link together, allowing voice and data integration and shared information from PC to mainframe.

We now offer a complete line of low to high-end data communications products and service giving you complete control over the management of your data network.

Those with a major investment in mainframe computers can rest easy. Now you can enjoy complete end-to-end connectivity. We now support popular SNA and BSC protocols, which means our computers and systems can communicate and work with your mainframes. Your investment is protected.

Peripherals: We offer a full line of high-performance, highly reliable synchronous and asynchronous terminals and printers. They're highly compatible, too, with our own and other computers.

Software: Choose from a large and growing list of applications software based on UNIX System V. Some handle general business, such as word processing, financial spreadsheets, and business graphics. And some tackle specific needs of specific industries, including, accounting, automotive and retailing.

You'll also have the ways and means and tools to develop your own software.

The Future Looks Even Brighter

You'll find that all of these computer products are designed to work with your current system, while offering an almost unlimited variety and number of options for growth and change.

You know that when you buy an AT&T Computer product, you're making the right choice—and you're giving yourself more choice. Our flexibility gives you more options when the time comes to expand.

What's more, you'll find these high-quality products comparable, often superior, in price and performance. Which makes them an excellent investment.

AT&T also protects your investment by offering overall comprehensive service and support for computer hardware and associated software products.

This includes Customer Programming Services Centers, where we'll help you to develop your own software or customize existing packages. Implementation Services and Customer Training offer expert advice on the most efficient, productive use of your system.

Our National Software Support Center provides a 24-hour hotline for hardware and software support.

Our service options are another way we're working to help you pull the pieces together in a logical, coherent way.

In every way, we're working to make The Computers With The Future Built In work best for you.

For a more detailed look at what AT&T Computer products can do for you, just turn the page.

THE COMPUTERS WITH THE FUTURE BUILT IN

See how AT&T Computer products can make your system work as a system.

AT&T 4410 Terminal
AT&T 3B2/400
Computer

It's easy to get started putting AT&T to work for your business—in small easy steps or a complete system. These communications-based computer products are designed to work with each other, and with your existing system.

Start with the newly enhanced 3B2/300 or the new 3B2/400 to develop a distributed departmental system. Both are true 32-bit computers that run UNIX System V. The 3B2/400 offers full hardware floating point performance, streaming tape backup, and up to 4 MB of main memory. Supporting up to 10 or 25 users respectively, the 3B2/300 and 3B2/400 offer plenty of room for tape and disk storage growth.

For even higher storage capacity and performance, build your system around the enhanced 3B5 or the new 3B15 minicomputers.

The 3B15 is equipped with a high-performance WE™ 32100 microprocessor with main memory up to 16 MB. It supports up to 60 users on a number of configurations. Other features include demand paging memory management with file and record locking and standard floating point performance.

To over 500 tested software packages already listed in the AT&T Computer Software Guide, we're adding more applications programs, such as UltraCalc** and CrystalWriter.*** For systems developers, high level languages for 3B Computers such as UX-Basic† and Micro Focus Level II Cobol†† open the world to thousands of additional software applications running in the UNIX System V environment. And AT&T can address unique business needs with software solutions specifically for vertical markets such as accounting, real estate, and automotive industries. IBM††† mainframe VM users now have UNIX System V development capabilities through our System V-VM software.

AT&T 4410 Terminal
AT&T Model 4000
MODEM

Dataphone I Modems

It should come as no surprise that AT&T is the leading producer of advanced data communications equipment. To our already large and growing list we've added DATAPHONE* I, a complete line of synchronous, private line, analog, non-diagnostic modems with speeds from 2400 BPS to 14.4 KBPS. Also available is DATAPHONE I Plus Service Management, which provides you with private line network management through AT&T, eliminating the need for an in-house staff.

DATAPHONE II is a family of digital and analog modems, multiplexers, and diagnostic control devices for multilevel network management and control. To the family we just added the DATAPHONE II Model 2600 Digital Data Service Unit, an integrated DSU and Channel Service Unit in one compact, easy-to-install and operate unit. Plus, it is fully compatible with the DATAPHONE II equipment you're using now.

Our 3B Computers work with your IBM mainframes through connectivity products that allow full interactive communication using BSC and SNA/SDLC protocols. The new host connectivity products include the SNA/3270 Emulator + software which emulates a fully configured SNA IBM 3274 controller, and the BSC/3270 Emulator + which emulates the BSC IBM 3274 Cluster Controller. And C language programmers can use a library of AT&T Application Program Interface access routines to communicate directly with a host computer in a 3270 mode.

AT&T 3B5 Computer
AT&T 4410 and 4425 Terminals

Of course, one advertisement can't begin to do justice to the full line of AT&T Computer products. There's much more to talk about.

For more details, contact your AT&T Information Systems Account Executive, authorized AT&T Representative, or call 1 800 247-1212.

Do it today—and start building a completely integrated business communications system. With the one company that can pull it all together.

EXEC from page 89

chief executive officer, has been elected chairman of the board.

■

Steve Tatum has been named president of Seiənar Corp. replacing Founder and former President **Barry Southard**, who moves into the position of vice-president of engineering. Tatum's most recent position was vice-president of sales and marketing for Televideo Systems, Inc.'s Terminal Division and has been employed at Acro, a division of C. Itoh Digital Products, Inc. and Beehive International, Inc.

■

Continental Telecom, Inc. has announced the appointment of **William Y. O'Connor** as president of its Executone, Inc. subsidiary. Also **Ronald E. Silverman**, Executone's current president, will join the parent company's headquarters staff as vice-president, planning of the corporation's business product sector. Both appointments become effective June 1.

■

John J. Schickling has been appointed president of Telesis Systems Corp. Schickling has held positions at General Electric Co. and Computervision Corp.

■

NBI, Inc. has announced the appointment of executive vice-president **Mark J. Stevenson** to the position of general manager of NBI's new office systems division.

■

Computer Communications, Inc. President and Chairman **Raymond E. High** announced that he will step down as president and chief executive officer effective Aug. 1, but will remain active in company affairs as chairman.

■

Charles Skibo has been named president of U.S. Telecom, Inc., succeeding **William Eavey** who will become president and chief executive officer of United Telecommunications, Inc.

■

California Devices has announced the following appointments: **Douglas Ritchie** to president and chief executive officer and **Wilmer Bottoms** to chairman of the board.

■

Gandalf Technologies, Inc. has announced the following appointments effective Aug. 1: **Desmond Cunningham** will assume the newly created post of chairman and chief executive officer, and **Colin D. Patterson** will become president and chief operating officer. Also announced were two appointments effective immediately: **Jan Bartl** has been appointed vice-president of product development, and **Brian K. Penney** has been appointed director of technology.

■

Honeywell, Inc. has named **Peter Dressen** vice-president of software development operations for Honeywell's large computer products division, headquartered in Phoenix.

■

Simon Hunt has been appointed president and chief executive officer of Apricot, Inc. Hunt was previously a partner at Peat Marwick, chartered accountants in England.

■

Scientific Micro Systems, Inc. has appointed **Charles Mathews** president and chief executive officer. Mathews succeeds **Hugh Kern**, who will retire after leading the company as president and CEO since 1972.

■

Edward Watson has been named president and chief executive officer of Higher Order Software, Inc.

■

Robert Stoeber has been appointed president of Digital Learning Systems, Inc. The company also announced that George Black and Ralph Stoeber have each been promoted to the position of executive vice-president.

MERGERS AND ACQUISITIONS

Interface Systems, Inc. and **Nematron Corp.** revealed several details of a financial agreement calling for an investment to be made by Interface Systems in Nematron. In return, Interface will be able to acquire all of the outstanding shares of Nematron by exercising a one-time option. Interface Systems manufactures computer printers that are compatible with IBM 3270 terminals and System/34, 36 and 38 minicomputer systems.

■

Information Solutions, Inc. and **Prime Computer, Inc.** have entered into a warrant purchase agreement. Under the terms of the agreement, Information Systems grants Prime a warrant to purchase 253,050 shares of Information Systems's common stock, representing approximately 10% of the firm's shares outstanding at the time the agreement was announced by the firms.

■

The Dun & Bradstreet Corp. has completed its divestiture of **TSI International Ltd.** to a group headed by **Vanguard Atlantic Ltd.** The name TSI International will be retained by the new company. Terms of the agreement were not disclosed.

■

Genisco Technology Corp. announced it has acquired the custom products operations of **Data Electronics, Inc.** of San Diego. The value of the total transaction was approximately $3.5 million, including certain prepaid royalties, licenses and other tangible and intangible items.

from page 95

Bankamerica Corp. announced the sale of **Decimus Corp.** to **General Electric Credit Corp.** of Stamford, Conn. Decimus, which finances high-technology equipment to major corporate customers, has been controlled by Bankamerica since 1969. It currently has an asset base of about $170 million.

■

Software Integration, Inc. announced that it has acquired Mountain View, Calif.-based **Infotools, Inc.** The price of the acquisition and other terms of the agreement were not disclosed.

■

Zenith Electronics Corp. announced that it has entered into a definitive agreement to acquire **Inteq, Inc.** of Herndon, Va., in exchange for Zenith common stock. The exact number of shares of Zenith stock to be issued could vary from 800,000 to 1 million, depending upon the average closing price of Zenith common stock on the New York Stock Exchange during an agreed base period.

■

Personal CAD Systems, Inc. of Los Gatos, Calif., has agreed in principle to sell its architectural, engineering and construction division to the Anaheim, Calif.-based **Calcomp Group of Sanders Associates, Inc.** in a transaction valued at almost $7.5 million.

■

Ameritech Development Corp. of Chicago announced it has purchased a minority interest in **Davox Corp.**, a privately-held developer and supplier of integrated voice and data workstation communications systems headquartered in Billerica, Mass., for an undisclosed amount.

■

Engineered Systems & Development Corp. of San Jose, Calif., has reached an agreement in principle to acquire the assets and business of the **Seaborn Division** of Santa Clara, Calif.-based **Xidex Corp.** Terms of the acquisition were not available.

■

Seagate Technology, Inc. of Scotts Valley, Calif., announced completion of the previously announced acquisition of **Grenex, Inc.** in exchange for 3.1 million shares of Seagate common stock.

■

Electronic Memories & Magnetics Corp. (EMM), Encino, Calif., and **Titan Systems International, Inc.**, La Jolla, Calif., jointly announced that they have entered into an agreement in principle for a merger of the two companies. The transaction will be structured as a pooling of interests, whereby approximately 4.2 million shares of EMM stock will be issued to Titan shareholders.

■

Computer Task Group, Inc. (CTG) and **Dataware, Inc.**, both based in Buffalo, N.Y., jointly announced they have reached an agreement for the sale of 100% of Dataware stock to CTG.

■

Martin Marietta Corp., Bethesda, Md., and **Verdix Corp.**, McLean, Va., announced that Martin Marietta has agreed to acquire a 10% equity interest and options to acquire up to 24% of Verdix, a company specializing in secure computer and communications systems as well as in software development systems for the U.S. Department of Defense's Ada programming language.

■

Bridge Communications, Inc., Mountain View, Calif., has acquired **Coherent Systems, Inc.**, a Bedford, Texas-based manufacturer of broadband radio frequency modems. Terms were not disclosed.

■

An agreement in principle has been reached that will merge **The Exchange System** with the one-year-old **Northwest Electronic Network**, Seattle. The merger is set to take place in phases over the next three years.

■

General Automation, Inc., Anaheim, Calif., has entered into an agreement in principle with **Helix Circuits, Inc.**, of Toronto for Helix to acquire the business of the National Technology division of Technology Circuit Design, Inc., a wholly-owned subsidiary belonging to General Automation.

■

Wyle Laboratories, El Segundo, Calif., has completed the acquisition of **Applied Research, Inc. (ARI)** of Los Angeles for an undisclosed number of shares of Wyle common stock. ARI has now become an operating division of Wyle's Scientific Services & Systems Group.

■

Ingram Software of Nashville, a division of Ingram Distribution Group, Inc., and **Software Distribution Services, Inc.**, Buffalo, N.Y., announced Ingram's intention to purchase all of the common stock of Wincorp, the parent company of Software Distribution Services, Inc., including Wincorp's 50% equity interest in **Aviva Software Corp., Ltd.** of Canada. The transaction is for an undisclosed amount of cash.

■

Softsel Computer Products, Inc., Inglewood, Calif., announced that it has signed a letter of intent to acquire **Intermicros, Inc.**, Key Biscayne, Fla., a supplier of personal computer software to Spanish-speaking countries.

■

Terak Corp., Scottsdale, Ariz., and **Sanders Associates, Inc.**, Nashua, N.H., announced that they have entered into an agreement in principle for the purchase of Terak by Sanders for approximately $3.7 million, or about 50-cents per share.

As part of the transaction, Sanders will assume Terak's business obligations. Terak has filed for reorganization under Chapter 11 of the U.S. Federal Bankruptcy Act.

■

Intran Corp. of Minneapolis announced the sale of certain assets and related businesses of its information services group to **National Computer Systems, Inc.**, which took effect April 15, 1985.

Terms of the sale were not disclosed.

■

Pactel Info Systems, a subsidiary of Pacific Telesis Group, has signed a letter of agreement to purchase Portland, Ore.-based **Byte Shops Northwest, Inc.**

As part of the agreement, Pactel Info Systems will acquire the eight computer retail outlets and two corporate sales divisions currently being operated in Oregon and Washington by Byte Shops.

■

Database Technology Corp., a company specializing in systems software to improve data processing productivity, has been purchased by its president, **Donald Dean**, through a leveraged buyout.

■

Personal CAD Systems, Inc., Los Gatos, Calif., has agreed to acquire San Jose, Calif.-based **Assisted Technology, Inc.** (ATI) for undisclosed terms. ATI designs and sells CUPL, an industry-standard software package that is used to implement logic designs in programmable logic devices.

■

Resources, Inc., Falls Church, Va., has entered into an agreement to acquire **TKT Communications, Inc.** from **United Brands Co.** The leveraged buyout-type transaction cost Resources approximately $56 million in cash.

■

Central Data Corp., Minneapolis, has acquired **Computer Maintenance, Inc.**, a third-party computer maintenance vendor based in Denver. Terms of the agreement were not disclosed.

■

National Technology, Irvine, Calif., a manufacturer of multilayer circuit boards, has been sold by Anaheim-based **General Automation, Inc.**, to **Helix Circuits (USA), Inc.**, a wholly owned subsidiary of Helix Circuits, Inc., a Canadian corporation. Terms of the sale were not disclosed.

■

SUPERSHORTS

Hogan Systems, Inc. announced the organization of **Hogan Services Corp.** (HSC), a company owned by Hogan and BEI Holdings Ltd., parent of Atlanta-based Bank Earnings International.

HSC will provide those institutions that have licensed Hogan Systems' products with a single source for the resources needed to install and use their products.

■

IBM mathematician **Benoit Mandelbrot**, who originated a major development in 20th century mathematics — the theory of the Fractal Geometry of Nature — was awarded the Barnard Medal for Meritorious Service to Science by Columbia University. The medal is awarded on the recommendation of the National Academy of Sciences.

■

Martin Marietta Data Systems has formed a new business unit, **Mer-it Software**, as the direct marketing arm of the company to establish a business-to-business distribution channel for selling applicable Martin Marietta personal computer software products directly to purchasers and decision makers.

■

The Society of Telecommunications Consultants' Vendor Advisory Council named its 1985-86 officers at the society's spring conference.

The new council officers are **Jolene Witt**, president; **Virginia Murphy**, executive vice-president; **Phillip Kay**, vice-president treasurer; and **Joanne Schultz**, chairwoman of the education committee.

■

Control Data Corp. and **Financial Information Systems** of Richardson, Texas, have announced plans for CDC to provide nationwide on-site hardware and software support for users of FIS System 2001.

■

3M Corp. and **Informer Computer Terminals, Inc.** have signed an agreement for 3M's equipment and service and support division to service Informer 200 series workstations.

Terms of the agreement were not available.

Fujitsu America, Inc.'s peripheral products division announced that **System Industries** has become a field service organization for the Fujitsu M304X line of band printers.

■

Tele-Terminals, Inc. announced that it changed its name to **Ameridata Systems, Inc.**, effective May 15.

Ameridata is headquartered in Minneapolis and has sales and service offices in Minnesota, Wisconsin, Iowa, Utah, Arizona, and North and South Dakota.

■

Cognos Corp. announced the opening of its first wholly owned subsidiary in continental Europe with the creation of Cognos-France Sarl in Paris.

■

American Channels, Inc., a newly formed publishing and distribution company for high-value engineering software, has announced the signing of a North American exclusive license for three mechanical engineering products developed by the CAD Centre Ltd. of Cambridge, England.

■

Wang Laboratories, Inc. announced the formation of its Communications Marketing Division, a new business unit dedicated to the communications marketplace. The unit, under the direction of Jim Harrison, general manager, and Ron Smith, vice-president of business development, is the first division of Wang's Business Development Group, which was formed last fall, to concentrate on new business ventures. The primary mission of the unit is to coordinate Wang's sales activities with the seven regional Bell companies, the 22 divested Bell operating companies and the major independent communications and interconnect companies.

■

Tektronix, Inc. has formed a new subsidiary called **Triquint Semiconductor, Inc.**, following approval by the Tektronix board of directors. Triquint, sponsored by the Tektronix Development Co., will manufacture and market ultrahigh-speed gallium arsenide integrated circuits, according to Tom Long, Tektronix Development's president, and vice-president and general manager of Tektronix's Design Automation Group.

■

TSR, Inc. has signed a six-year facilities management agreement with **American Express International Banking Corp.** TSR will operate IBM computers at its Long Island, N.Y., data center for American Express International Banking. In addition, TSR plans to seek additional facilities management contracts from financial services industry firms.

■

QMS, Inc. announced that both the lawsuit filed by QMS against **Office Automation Systems, Inc.**, George H. Douglas, a former QMS employee and formerly a consultant to QMS, and the related suit filed by Office Automation Systems against QMS and **Merriwether Circuit Designs, Inc.**, have been terminated. James Busby, president of QMS, said, "We are satisfied with the terms of the judge's order in QMS's suit against Office Automation Systems, and we are pleased that the suit against QMS and Merriwether has been dismissed."

CHIPS

from page 77

ing as the June ratio of new semiconductor orders to shipments, or book-to-bill ratio, held at .72, identical to the ratio in May. Average monthly orders from April through June fell 4.1% from the period from March through May to $506.6 million, and the figure for April through June was down 57.4% from the same period in 1984.

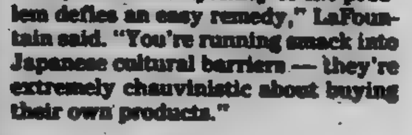
"The lackluster semiconductor orders picture is the result of continuing weak demand for the products manufactured by our end customers," Hinkelman said. "The situation may be stabilizing . . . [but] the signals remain mixed for the near term." Hinkelman predicted, however, that the industry's orders for 1985 will show a decline of less than 20% from 1984.

During the current industry downturn, some U.S. companies have charged that leading Japanese vendors are selling products below cost in the U.S. to gain market share for the future. If proven, the practice, known as dumping, would violate international trade regulations.

The SIA petition, filed June 14, requests that President Reagan adopt policies that would prevent dumping as well as equalize the U.S. and Japanese import market shares in each country by 1986. After that date, the SIA said the president should push for "a dramatic improvement in U.S. semiconductor sales in Japan commensurate with the demonstrated competitiveness of U.S. products in other world markets."

Semiconductor industry analyst A. A. LaFountain III, president of LaFountain Research in Bay Head, N.J., said Yeutter's decision to investigate the SIA charges was expected. He noted, however, that U.S. political pressure would have a minimal effect on opening Japanese markets.

"[The SIA] complaints are legitimate, but the complexity of the problem defies an easy remedy," LaFountain said. "You're running smack into Japanese cultural barriers — they're extremely chauvinistic about buying their own products."



"No, I wouldn't believe your boss laid you off until 11 o'clock to reduce inventory."

goods with mass appeal; and assisting comjnies in developing their own international distribution processes.

In its first full year of operations, focusing mainly on European distribution, the company expects to ship between $15 million and $20 million worthof goods "if we have a good year," Woodworth said.

Although foreign markets offer great potential, many young companies are resistant to export, according to Meyers and Woodworth. "There are a lot of U.S. high-tech companies with international potential, but those companies are not set up to take advantage of that potential, or they are too busy with the U.S. market," Meyers said.

Woodworth said many U.S. companies fail to recognize the value of building an early international presence. "One of the things the Japanese have been so successful in is recognizing the value of market share," he said.

U.S. companies need to invest in market presence for the future, according to Woodworth. "If they take the position that the dollar is too strong right now and they can come back in a year or so, well, that philosophy is not shared by the Japanese, and it's not shared by the Germans or the Koreans."

One company that has finalized a distribution agreement is Canaan Computer Corp. of Trumbull, Conn. Canaan spokeswoman Sherree Parke said the company deals through remarketers.

WIN

neering, respectively.

In a prepared statement, Visual Technology President and Chief Executive Officer Clifford Zimmer said, "This is another significant step in our recovery program. It provides Visual with the ability to concentrate its management and other resources on its core businesses, particularly its recently announced [Digital Equipment Corp.] — compatible terminal product line." Zimmer was not available for further comment.

John Lee, chairman and chief executive officer of Lee Data, said, "Adding a supermicrocomputer division to Lee Data is an important diversification step for us that extends significantly the range of the markets we address."

CODE

from page 77

"attributed the improvements to microcode." Microcode is the big bugaboo of independent software developers that sell into the IBM world because it implies that only IBM-developed software will be able to achieve peak performance in IBM hardware.

In his view, it will never be possible to implement microcoded software fully because it would be practically impossible to maintain and update. "When you talk about microcode, what you are really talking about, in a majority of cases, is additional instructions added to the instruction set, not whole-scale movement of software into microcode," Tavitian said. "That is not economically feasible. It would be prohibitive to maintain because software constantly changes."

Tavitian said his recent campaign against IBM was designed to ensure that users have adequate information to make a decision. He is confident that when they are fully informed, they will opt for products developed by independents. "Our belief is that whenever IBM makes any sort of hardware enhancement, . . . every [independent] in the business . . . will find a way to take advantage of it better than IBM does."

■

If Coca-Cola users could do it, why not PCjr users?

Take note IBM, the consumer is aroused. There are a couple of hundred thousand orphaned users out there who are mad as heck and just won't take it any more.

The Coca-Cola Co. saw the light — or possibly the dollar signs — and decided that consumer bad will was too heavy a burden to bear into the next fiscal year.

If IBM is truly interested in the home arena at some point, as its investment in a videotex venture and more recent investment in MCI Communications Corp. would seem to indicate, then at some point it is going to have to deal with the ill will generated by the, ahem, halt in production of the PCjr.

There were close to 300,000 of the little peanuts sold when IBM, ahem, stopped production. And who knows how many of us out there have picked up, ahem, out-of-production models at bargain basement prices since then.

C'mon IBM. You sold the little devils with the promise of future attachments. So deliver. Bring out a "Jr. Classic," or there are going to be some 300,000 people out there that you'll never migrate to MVS/XA.

Now, Symphony sounds better than

The software that does more, now does more for everyone.

Current users will find Symphony,™ release 1.1 provides the basic functions of spreadsheet, word processing, database, graphics and communications, in a far more powerful package. New users will find Symphony far easier to learn. And you'll find it more valuable because it offers additional options for customization and applications development on personal computers.

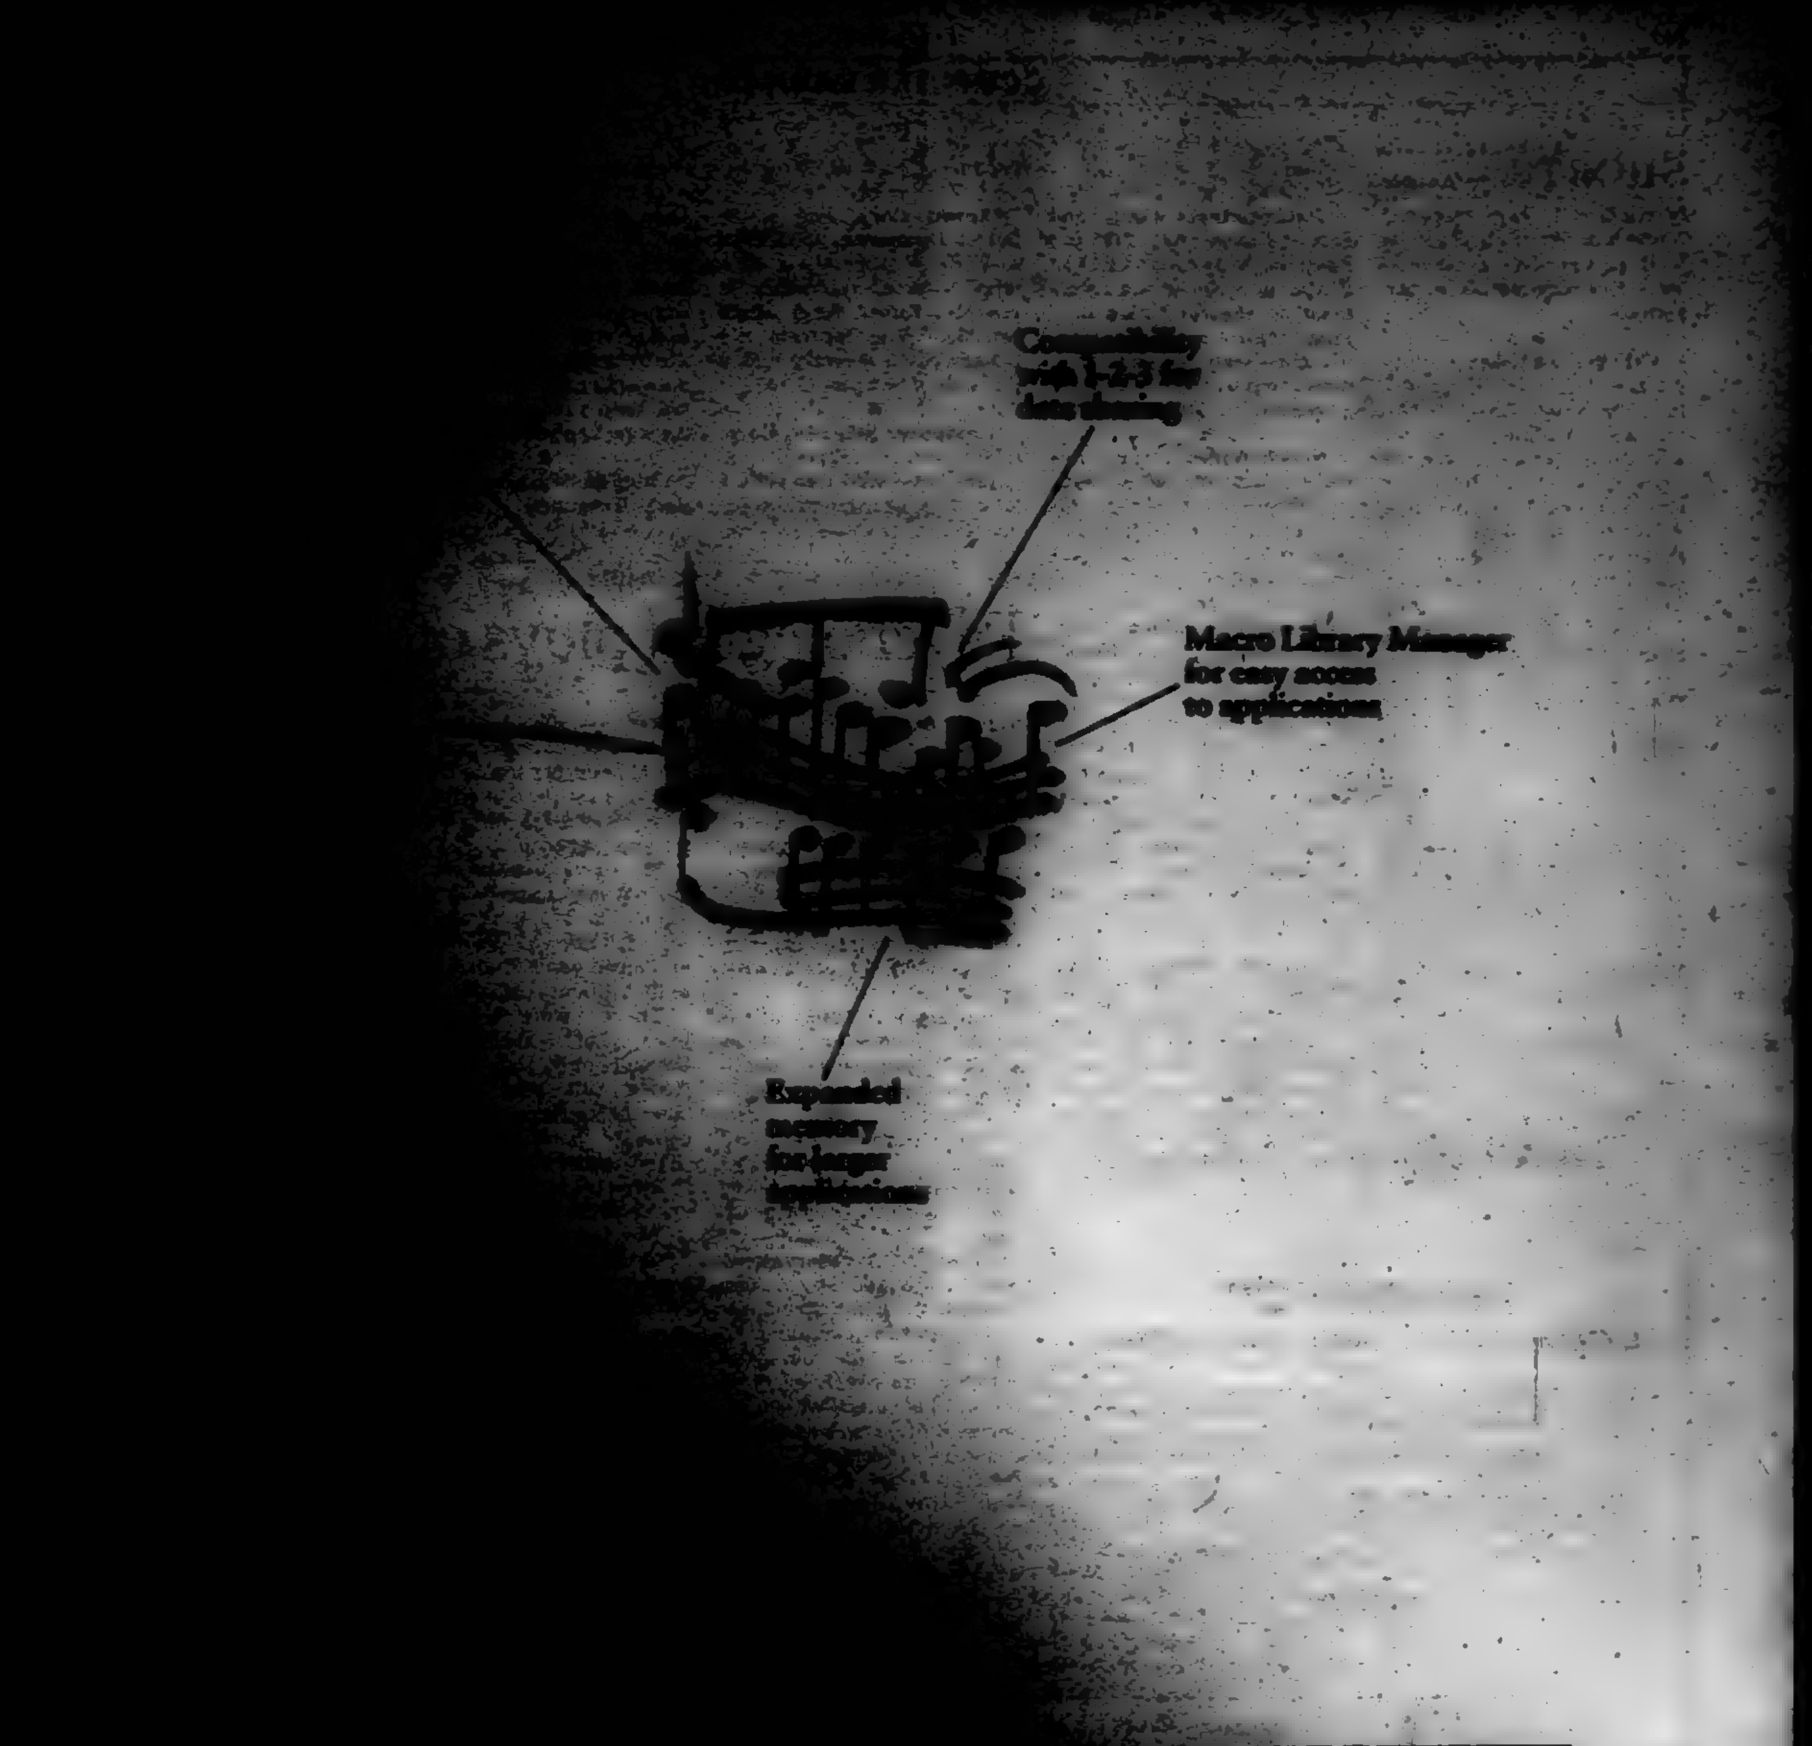
It makes your people more effective.

We've enhanced Symphony's functionality with a Macro Library Manager, so users can now access an unlimited variety of turnkey applications from any file. These applications can also be larger, because Symphony now manages memory more efficiently and can address up to 4 megabytes of additional memory. And Symphony now supports the 8087/80287 microprocessor chips, so users can now process their work up to 60 times faster.

New Symphony fits your existing environment.

Symphony now works with 1-2-3,® so all Lotus® users will be

© 1985, Lotus Development Corporation. Lotus and 1-2-3 are registered trademarks of Lotus Development Corporation. Symphony and Symphony Link are



Compatibility with 1-2-3 for data sharing
Macro Library Manager for easy access to applications
Expanded memory for larger applications

ever.

able to share data. And Symphony also permits remote file access on the IBM® PC Network.

Add our new micro-to-mainframe Symphony Link,™* and users will be able to access mainframe data. And because Symphony Link fits into the 3270 network, you can continue to take advantage of the investment you've already made.

New Symphony and Symphony Link, will help you to meet the information needs of your company.

Symphony, like all Lotus products, is supported by the industry standard in service and support.

If you'd like to see how new Symphony can enhance your operation, contact your Lotus marketing representative or your local authorized Lotus dealer.

Today's new Symphony sounds, and works, better than ever.

Northwest,'" will employ about a dozen researchers, as well as supporting management and administrative personnel.

■

CIE Systems, Inc., a subsidiary of C. Itoh Electronics, Inc., has consolidated its two multiuser business computer systems divisions serving the markets for AT&T Unix and Pick Systems' Pick operating systems, respectively, into a single new operating division called the Computer Systems Division.

Also, CIE Systems changed the name of its division that markets the CIE System family of IBM-plug-compatible terminals, controllers and printers to the Plug Compatibles Division.

■

Hayes Microcomputer Products, Inc. and General Datacomm Industries, Inc. jointly announced that Hayes will voluntarily withdraw, with prejudice, its action against General Datacomm in U.S. District Court in Atlanta.

In its complaint, Hayes alleged that a General Datacomm advertisement had contained false statements comparing a General Datacomm modem with a Hayes modem.

■

Dataproducts Corp. and Exxon Enterprises Printing Systems, a division of Exxon Corp., announced an agreement on the formation of a joint venture to design, manufacture and market business computer printers using advanced ink-jet technology.

■

Spectravideo, Inc. has reached an agreement with its unsecured creditors for the restructuring of approximately $2.4 million of Spectravideo's debt.

■

Rosscomp Corp. announced that it has discontinued the production of its 8-in. form factor tape drive, the Series 80, and has reduced its work force of 55 employees by 17 people. Rosscomp's 5¼-in. drives, currently produced for Rosscomp by its Japanese licensee, Nippon Columbia, will replace the 8-in. drives in all applications.

■

Attache Software Canada, Inc. and IBM Canada Ltd. announced the signing of an agreement that gives IBM Canada exclusive rights to market, distribute and promote a new Attache accounting software product. IBM Canada will market the product thoughout Canada.

■

Xerox Corp. has established **Optimem**, its optical disk drive operation, as a wholly owned subsidiary. It has also named **Peter Lloyd** president. The Optimem subsidiary most recently was a division of Shugart Corp.

■

Computer Sciences Corp. (CSC) and two French companies have agreed to form a joint venture company to cooperate in international data communications. CSC's partners in the venture are **Transpac S.A.**, which operates the French public data network, and **France Cables et Radio S.A.**, a supplier of telecommunications equipment and services. Both companies are owned by the French government, and together they will own a majority share of the new venture.

■

Digital Equipment Corp. and Trammell Crow Co. opened DEC's fifth data protection service center. The center, in Irving, Texas, stores magnetic tapes, disks, microfiche and paper and serves the Dallas/Fort Worth area. DEC also announced plans for opening data protection centers in Atlanta and Parsippany, N.J.

■

Telnet Corp. of Houston changed its name to more accurately reflect the company's products and services. The new name is **Microwave Networks, Inc.**

Psychological ploys of NCC booths

By Peter Bartolik
CW Staff

CHICAGO — IBM's booth at the National Computer Conference (NCC) here last week was practically guaranteed to turn off a "power buyer," but that was okay because the company's goal was to educate as many people as possible about IBM products.

But down the alley at the AT&T Information Systems booth, the goal was to identify as many "hot prospects" as possible, so quick interaction between showgoers and company representatives was deemed vital to weeding out the serious from the casual.

Those NCC observations were delivered by Allen Konopacki, an industrial psychologist and president of Chicago-based Incomm International. As psychologist to the stars at computer conferences, Konopacki's company counsels vendors' sales forces on the dynamics of trade show selling.

Among NCC exhibitors using Konopacki's tactics last week were AT&T, Hewlett-Packard Co., ITT, Honeywell, Inc. and Motorola, Inc.

IBM wants to educate, not sell

IBM was an Incomm customer, but according to Konopacki, the largest computer company did not require his services at this show. "IBM's real job here is to educate, not sell, sell, sell," Konopacki said during a floor tour with *Computerworld*. In fact, he said, when 90% of an audience turns away after the conclusion of a structured IBM presentation, the power buyer is likely to think most were disappointed. If the potential customer still is interested, he is likely to find himself competing for the IBM representative's attention with "the techie who wants to take off the back cover."

For those companies seeking to identify future sales prospects, rather than to educate the mass of "tire kickers," subliminal missteps can range from a slouching salesman to the wrong choice of carpet color.

Showgoers may not have realized it, Konopacki said, but the blue carpet lining the alleyways between booths was a psychological message to step into a booth.

But even blue carpet underfoot may have been preferable to stepping onto a light tan carpet if your mother nagged you about tracking in dirt, Konopacki said.

There were "invisible lines of demarcation" throughout the exhibit floors, but some vendors were using those lines to encourage potential buyers, while others were unwittingly using them to turn customers away, Konopacki said.

The high barrier surrounding much of Eastman Kodak Co.'s booth was an "innovative and gutsy" way of encouraging serious buyers and discouraging tire kickers, Konopacki said. But just down the way, a series of flashing lights bordering a light carpet intimidated most passersby and keep them passing by, he said.

A vendor representative filling out a visitor evaluation form could quickly determine who would merit further attention. But another representative eagerly trying to hand out emblazoned pens was telling prospects, "I'm here to hand out pens," Konopacki said.

A simple company logo served its purpose and told showgoers the company is present, but the cluttered copy adorning some signs would never be read by most people, he said. "Typically a person spends less than 10 seconds reading a sign."

Despite all the subtle and not-so-subtle signals that exhibits gave off, most decision making at trade shows was based on the interaction between attendee and vendor representative, Konopacki said. His counseling often runs into resistance from salesmen because he tells them to drop traditional hard-sell techniques, he said. Rigid eye contact will turn off most people, and an aggressive approach will kill any prospects, he said.

An ironclad rule to salesmen is "shut up and listen," Konopacki said. "The thousands of dollars a company spends on equipment here is irrelevant; it's what the attendee wants to tell them that is important."

GOOD NEWS! Your chance has arrived...

LEARN "C"
COBOL/BASIC PROGRAMMERS

Are you a practicing DP professional or a DP Manager, who recognizes the need for "C" in your Data Processing world? Come to the ASYLUM and take advantage of the universal "C" programming language.

Make your company or department applications portable to all hardware; make networking and telecommunications easier and faster.

Attend a one week seminar during the summer in Fort Lauderdale, to learn "C" in your terms, with code that accomplishes tasks found in business/MIS computing, those applications that you know and understand.

One week and [illegible] will put "C" in your pocket. Write or call for more information.

THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

COMPUTER INDUSTRY

NICKELS AND DIMES

Hadco Corp. announced revenue for the second quarter ended April 27 of $24.7 million, compared with $34.8 million during the year-earlier period. This resulted in a net loss of $1.2 million, or 13 cents per share, compared with a net income of $2.3 million, or 20 cents per share, in the comparable period one year earlier.

■

Gandalf Technologies, Inc. reported third-quarter revenue of $21.4 million, up 23% from $17.4 million from the year-earlier quarter. Profits were $186,000, or 2 cents per share, compared with $1.4 million, or 14 cents per share, in the year-earlier quarter.

■

Point 4 Data Corp. announced revenue in excess of $19 million for the fiscal year ending March 31, 1985. "This represents a 27% increase over last year," said Bill Rigby, president and chief executive officer.

■

Intelligent Systems Corp. reported revenue for the fiscal year ended March 31 of $123.9 million. Profits were $1.8 million, or 16 cents per share, compared with $9 million, or 84 cents per share, in the year-earlier period.

■

General Automation, Inc. announced revenue for the quarter just ended of $13.6 million, compared with $19.1 million in the prior year. A net loss of $4.5 million, or $1.69 per share, was reported, compared with a net loss of $1.4 million, or 51 cents per share, for the comparable period last year.

■

Applied Materials, Inc. announced profits for the second quarter of $3.9 million, or 58 cents per share, compared with $3.1 million, or 48 cents per share, for the same quarter last year. Revenue totaled $49.5 million, compared with $39.2 million in the corresponding period one year earlier.

■

Banctec, Inc. reported revenue for the fourth quarter ended March 31 of $16.2 million, up 69% from $9.6 million for the same period last year. Profits were $345,000, or 8 cents per share, compared with a net loss of $3.5 million, or $1.05 per share, in the year-earlier period.

■

Volt Information Sciences, Inc. announced profits for the second quarter ended May 3 of $716,000, or 10 cents per share, compared with $3.2 million, or 42 cents per share, in the comparable period last year. Revenue was $100.7 million, compared with $99 million in the same quarter one year earlier.

■

Advanced Systems, Inc. announced that revenue for the second quarter was up 34% from 1984 to $11.5 million, and profits were $2.2 million, or 22 cents per share.

■

Micron Technology, Inc. reported revenue for the third quarter ended May 29 of $14.4 million, compared with $29.4 million in the prior year. The firm posted a net loss of $11.6 million, or 30 cents per share, compared with profits of $13.1 million, or 29 cents per share, in the comparable period one year earlier.

■

C3, Inc. announced revenue for the fourth quarter ended March 31 of $18.8 million, compared with $15.1 million last year. The company reported a net loss of $2.6 million, or 27 cents per share, compared with a net loss of $438,000, or 5 cents per share, for the fourth quarter last year.

■

Pansophic Systems, Inc. reported revenue for its fourth quarter ended April 30 of $18.1 million, compared with $15 million in the same quarter one year ago. Profits were $3.3 million, or 39 cents per share, compared with $2.2 million, or 26 cents per share, in the same quarter last year.

■

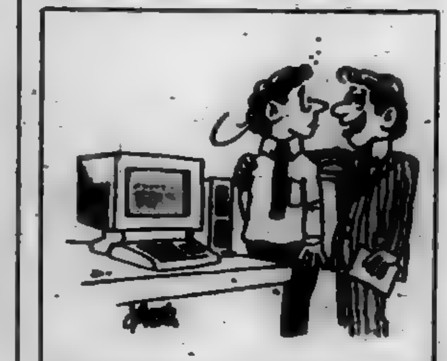
Gandalf Technologies, Inc. reported third-quarter revenue of $21.4 million, up 23% from $17.4 million from the year-earlier quarter. Profits were $186,000, or 2 cents per share, compared with $1.4 million, or 14 cents per share, in the year-earlier quarter.

■

General Automation, Inc. announced revenue for the third quarter of $13.6 million, compared with $19.1 million in the same quarter last year. The firm reported a net loss of $4.5 million, or $1.69 per share, compared with a net loss of $1.4 million, or 51 cents per share, in the same period one year earlier.

■

Hadco Corp. announced revenue for the second quarter ended April 27 of $24.7 million, compared with $34.8 million during the year-earlier period. This resulted in a net loss of $1.2 million, or 13 cents per share, compared with a net income of $2.3 million, or 20 cents per share, in the comparable period one year earlier.



"Remember the computer you talked us into buying? It just talked us into letting you go."

ANNOUNCING THE 2.7 MIPS, 68020-BASED UNIVERSE 32.

BUY BEFORE OCT. 31, GET A 140 MB DISK FREE!

In 1982, we leapfrogged the 16-bit minicomputers when we introduced the first 68000-based supermicro with a true 32-bit architecture. Now, in 1985, that means we can take full advantage of the remarkable performance of the Motorola 68020 microprocessor simply by plugging it into a 32-bit architecture that's already proven in 2,000 Universe installations.

The result is the new Universe 32: a 2.7 MIPS powerhouse that we can deliver now.

To make sure we deliver more 68020-based systems in 1985 than any other company, and to plant the seeds for long-term relationships, we're making an exceptional offer.

You pay for the basic Universe 32 Model UV32/35T (1 Mb RAM, 35 Mb disk, 45 Mb streaming tape, four serial ports; price $24,900).

You get the Universe 32 with a FREE upgrade to 140 Mb (114 Mb formatted) disk; FREE upgrade to 4 Mb RAM; FREE upgrade to 12 serial ports; and FREE UN/System V Operating System (derived from UNIX System V under license from AT&T). Orders must be placed by October 31, 1985, for delivery by December 31, 1985. After October 31, this same system will cost you $43,700. No quantity limit. No additional discounts apply. Offer available only in the United States.

For full details call (617) 626-1000 or write Charles River Data Systems, 983 Concord Street, Framingham, MA 01701, Telex 681-7373 CRDS UW.

How to advertise in every major computer market in the world as easily as you advertise in the U.S.

CW INTERNATIONAL Marketing Services will help you penetrate the most profitable computer markets worldwide — easily, effectively, and economically.

Your ads will receive the attention they deserve. Our network of more than 55 computer publications in over 25 countries is the largest in existence. Over 9,000,000 computer-involved people around the world rely on our publications for the information they need to stay ahead.

With more than 10 years experience in international marketing, we're the only service of our kind. We can help you make your ads more effective. Our local offices can translate your ads for a 15% surcharge on the space you purchase.

We'll help you increase your market penetration. We're also available to advise you on your campaign strategy — such as when to advertise in order to coincide with special-focus issues and trade shows. And you'll be able to advertise in even more markets when you take advantage of our corporate discounts.

All you need to do is send us your advertising materials. We'll handle all the transactions. And we'll bill you in U.S. dollars so you won't have to worry about exchange rates.

Call Diana La Muraglia today if you want to reach the computer buyers in any of the following countries: Argentina, Australia, Brazil, Canada, Chile, Denmark, Finland, France, Greece, India, Israel, Italy, Japan, Korea, Mexico, Norway, People's Republic of China, Saudi Arabia, South Africa, Southeast Asia, Spain, Sweden, The Netherlands, United Kingdom, Venezuela and West Germany.

You can reach her toll-free at (800) 343-6474. In Massachusetts call (617) 879-0700. Or you can reach her through Telex, at number 95-1153. Or, if you prefer, fill out the coupon below and return it today. Do it now. The sooner we hear from you, the sooner you'll hear from our readers.

Software Productivity Packages

August 26

If you sell software or related products, tell Computerworld's 687,000 readers in the August 26th Special Report. We'll examine three aspects of software productivity . . .

First, we'll look at the maintenance tools that keep software packages working.

Second, we'll investigate how managers help programmers increase their productivity . . . as well as how managers determine whether an application is "productive."

And third, we'll explore how MIS/DP personnel implement the latest productivity aids — such as 4th-generation languages, applications generators, report writers, and data dictionaries.

As the chart below shows, many of our subscribers are personally involved in the purchase of software productivity tools and related products:

Type of software	Percent of subscribers at user organizations	Percent of subscribers at vendor organizations
Applications	82	58
Data Base Management	79	57
Graphics	69	30
Decision Support	71	46
Systems & Utility	78	54

So reserve space for your ad today. Fill out the coupon below and return it today to reserve space for your ad. Or call Ed Marecki, Vice President/Sales, at (617) 879-0700. Call now.

Advertising close: August 9

☐ Yes, I want to reach the professionals who buy software and related products. Reserve space for my ad in the August 26th Computerworld Special Report.

☐ Please have a sales representative call me.

ANALYSTS & PROGRAMMERS

CIA . . . where crucial projects program a unique challenge into your career

The opportunity to apply your professional efforts to projects of national importance daily is a unique challenge — a challenge not many jobs can offer.

At the CIA, we offer not only the chance to be involved in projects vital to our country . . . but the satisfaction of knowing your contribution really counts.

We need qualified Systems Analysts, Systems Programmers, and Applications Programmers to join us in our important work. We're dedicated to devising the best solutions first — so your career will be a constant adventure in the very latest professional developments.

SYSTEMS PROGRAMMERS

You will design and develop custom application and systems software in our laboratory-like, research-oriented environment. Requires ability to install, enhance, and maintain sophisticated systems and networks, and to perform configuration management, systems tuning, and performance analysis. You must have a degree in computer science, math, or engineering, or equivalent experience, and in-depth knowledge of one or more of the following areas:

- IBM Operating Systems Internals (OS/MVS, JES2/JES3)
- VM/370 and CMS System Internals
- Computer Systems Measurement and Performance Enhancement
- Assembler Language Programming
- Minicomputer System Internals (DEC-VAX/VMS, UNIX)
- Systems Configuration and Selection

SYSTEMS ANALYSTS & APPLICATIONS PROGRAMMERS

We're looking for individuals who can develop computer application systems that incorporate Data Base Management Systems, expert systems, text retrieval, and computer graphics. You will be directly involved in:

- Technical management of software R&D projects
- Requirements analysis and system design efforts
- On-line systems development efforts incorporating multiple hardware/software products

Requirements include an AS, BS, or MS in computer science, math, or engineering, or equivalent experience, and one or more of the following:

- General knowledge of IBM VM/CMS and MVS operating systems, including EXEC and JCL
- Experience in the analysis, design, software development, and implementation of applications systems
- Experience in Data Base Management Systems (ADABAS, M204, NOMAD2, RAMIS II), PL/1, FORTRAN, or ALC

Program the CIA's unique challenge into your career. You'll receive competitive compensation, excellent benefits, and the opportunity for travel worldwide. And, you'll live and work in the stimulating Washington, D.C. area, where cultural, athletic, and historic attractions provide recreational opportunities year round.

For immediate consideration, please send your resume to:

Teaching DP with the pros.

We're growing fast. And we need skilled data processing instructors with several important qualities to supplement our existing staff located in Hartford, Washington, D.C. and Dallas.

First, in-depth technical knowledge and experience in IMS, CICS, DB2, FOCUS, NOMAD2 or CMS.

Second, the ability to effectively convey what you know to others in a stimulating classroom environment.

Third, the desire to work with a company which, in twelve short years, has become the nationally recognized leader in DP education.

Fourth, the desire to take advantage of possible travel opportunities throughout the U.S. or to teach in your current geographic area.

If you're the person we're looking for, you'll have the satisfaction of teaching with the pros — and helping new people become pros. Sound appealing? Then send your resume in confidence to Mark Gregoire at:

University Center at Binghamton
STATE UNIVERSITY OF NEW YORK

WATSON SCHOOL ACADEMIC PROGRAMMER/ANALYST

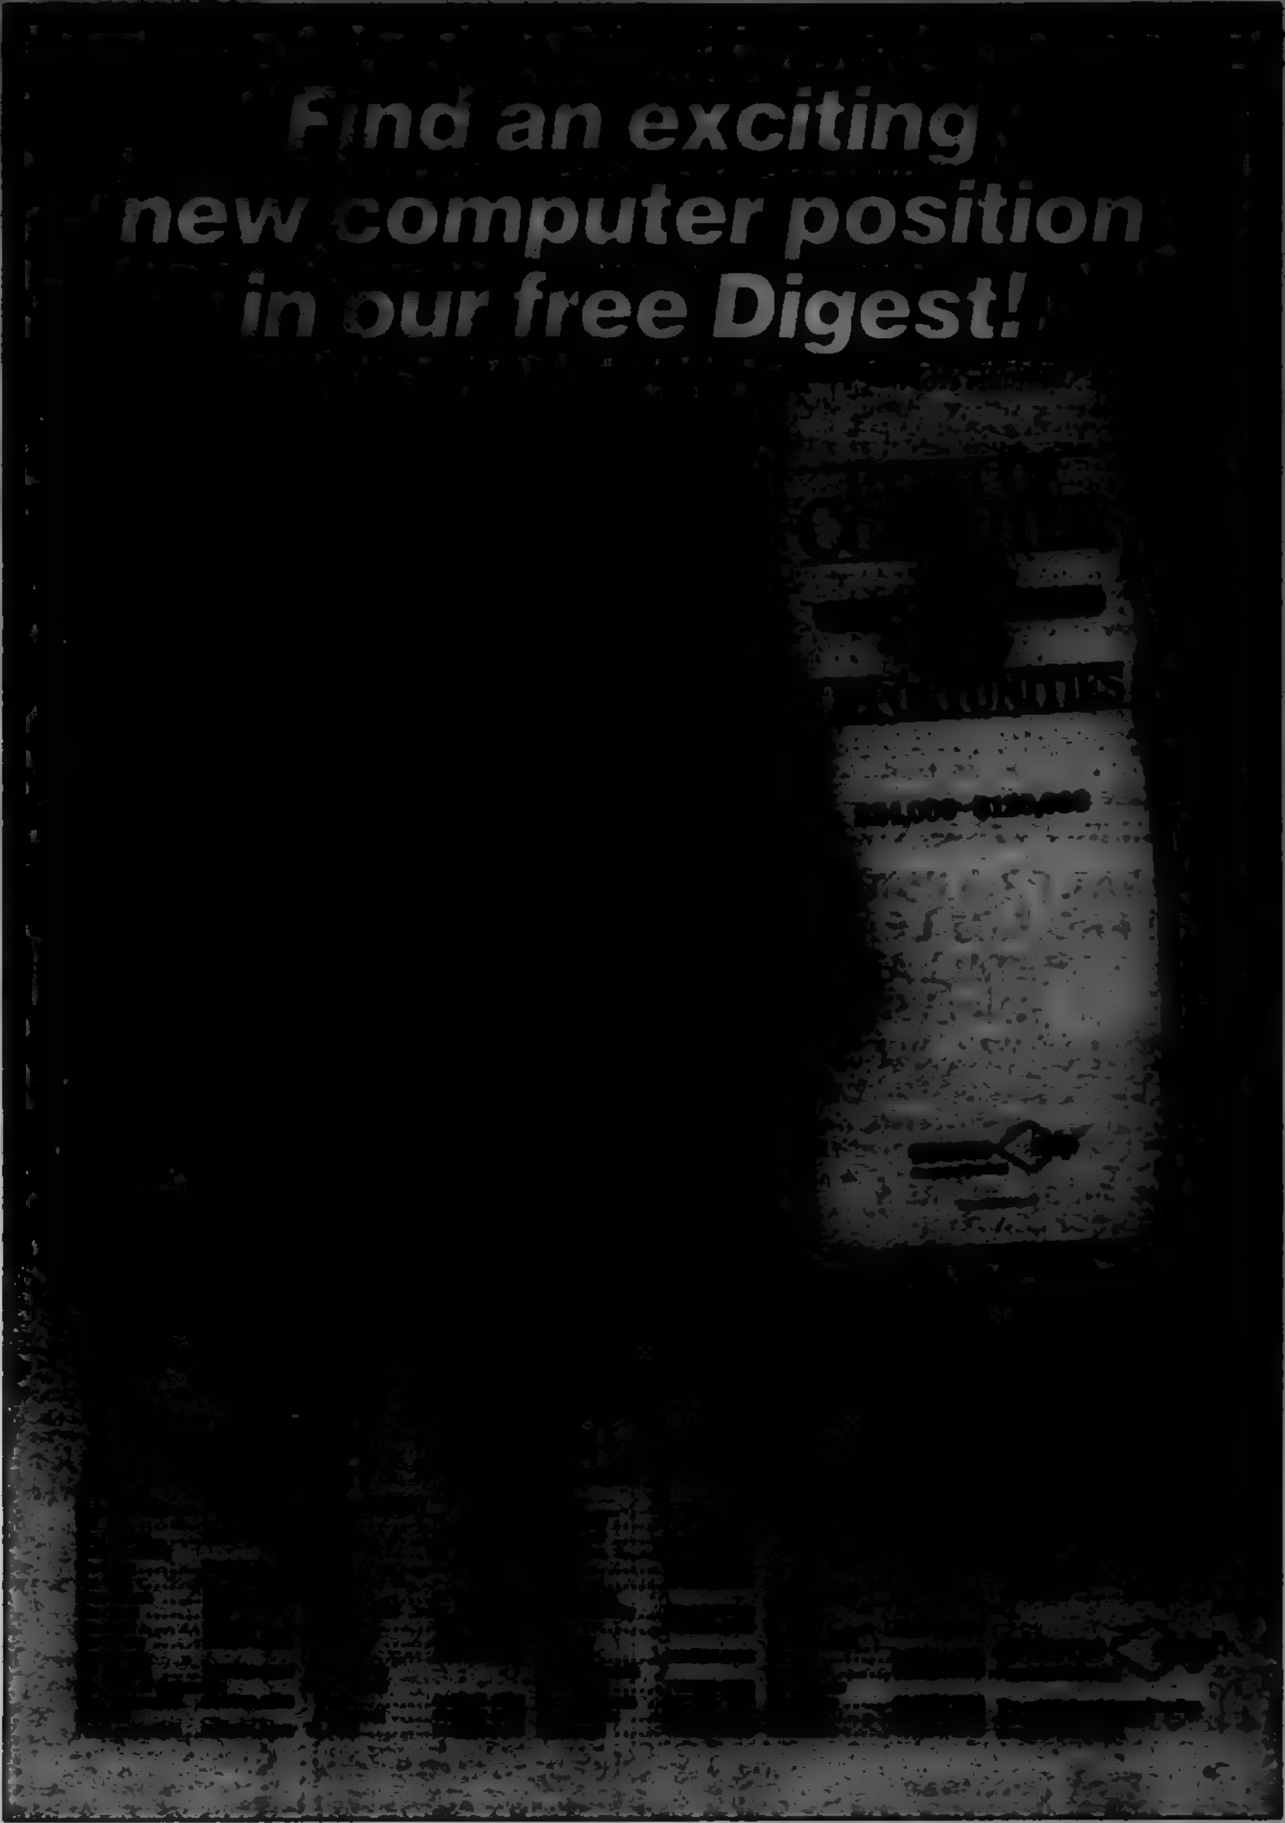
The Thomas J. Watson School of Engineering, Applied Science, and Technology of the University Center at Binghamton, seeks an academic programmer/analyst to assist in support of its computer facilities. The position entails a broad range of responsibilities including systems and applications programming support, writing user documentation, consulting to staff and students, and staying abreast of developments in software and hardware.

The successful applicant, reporting to the Computer Center Associate Director for Academic Support, will provide the primary liaison with Computer Center staff in support of the Watson School's use of the University's IBM 4381's, VAX's, IBM and APPLE microcomputers and associated peripherals. The position also includes primary responsibility for support of the Watson School's IBM 4361, which is used as a research and instructional facility.

Applicants should possess at least a Bachelor's degree and three years of scientific programming experience. Candidates should have an understanding of computing needs of faculty and students, a strong technical background and good communication skills.

Located in scenic upstate New York, the University Center at Binghamton enrolls approximately 11,750 students in undergraduate and graduate programs. In addition to Harpur College, the School of Arts and Sciences, there are professional schools in Nursing, Management, General Studies and Professional Education, and the Watson School of Engineering, Applied Science and Technology.

The University offers an excellent benefit package. Submit resume, along with names of three references, by August [illegible], 1985, to [illegible], Director, Computer Center, University Center at Binghamton, Binghamton, NY 13901. Equal Opportunity/Affirmative Action Employer.



Senior Systems Programmer

$30,043-$48,573

CANDLE CORPORATION™ IS LOOKING FOR MORE GOOD PEOPLE!

Long recognized as the industry leader in the area of high-quality performance monitoring products, Candle Corporation™ relies on the skills of creative, highly motivated software professionals to set standards for others to follow.

INFORMATION SERVICES DIVISION
Software Engineers

Candle Corporation's™ Information Services Division is engaged in research and development related to office automation and information-center products. There are opportunities in all areas of systems software development, depending on qualifications and career orientation.

LANGUAGE/COMPILER DEVELOPMENT

We are seeking a key individual to help us extend and enhance our development tools and to contribute to compiler-oriented R&D projects. The ideal candidate will have substantial compiler development experience, as well as systems programming experience in the MVS environment. Since we have extended the C language run-time environment to achieve compatibility with assembler and PL/I under CICS, knowledge in these areas at the internals level is also a plus.

APPLICATION DEVELOPMENT SYSTEM

We are seeking professionals at several levels to assist in the creation of a sophisticated interactive application development system. Depending on experience and career orientation, these individuals will be responsible for technical leadership, design, or programming, in company with a team of talented and highly motivated software engineers. The people we are seeking must have had substantial system software development experience in a variety of environments—particularly TSO, CICS, and CMS—using both assembler language and structured high-level languages such as C, PL/I, or PASCAL. A strong interest in state-of-the-art user interface technologies, including object-oriented concepts, is also important. Some areas of technical expertise which are especially desirable are:

- Data Communications—VTAM applications using 3270 devices
- Database—particularly relational DBMS internals
- Compiler development—structured HLL, 4GL
- Programming Languages—C, OS/VS Assembler, PL/I
- Operating Environments—MVS, TSO, CICS, CMS, ISPF

Software professionals at Candle® enjoy an excellent compensation and benefits package, a state-of-the-art development environment, and the opportunity to work with top professional colleagues. To apply, please call Caroline Thomas at (213) 470-2277 ext. 287 or send your resume and letter of introduction to:

Candle Corporation™
Human Resources Dept. MW180
10880 Wilshire Blvd., Suite 2404

Southern California

As Northrop Advanced Systems Division continues to grow and expand, exciting new career opportunities evolve within our Information Resource Management (IRM) organization. Here, you'll find a team of the finest computer professionals in the country, working in a high technology environment with the most modern equipment and techniques available. Our facility is located ideally in the heart of Southern California, midway between Los Angeles and Orange County. You have an opportunity to advance your career with one of these immediate openings.

Sr. Scientific Programmers
(Engineering Applications)

You will develop a variety of challenging aerospace software applications for one or more of the following: radar analyses, structural analyses, aerodynamics, propulsion, materials technology, and other engineering/scientific applications. To qualify, you must be able to understand and evaluate engineering requirements as well as develop and/or implement structured software life-cycle plans addressing system design, programming, test, documentation, and implementation. We prefer CRAY FORTRAN or IBM FORTRAN software application development experience.

Sr. Scientific Programmers
(Manufacturing Applications)

These opportunities involve working on Automated Manufacturing Development projects. In our Computer Aided Manufacturing (CAM) environment, you will be designing and programming the integration of micro/minicomputing systems (PC's, Series/1, DEC, HP's, etc.) to mainframe computing environments (IBM 4300's, VAX 750 or 780, HP's, etc.). Your technical background should include programming experience in either PL/1, Pascal, FORTRAN 77 or Assembly languages. Knowledge of Fourth generation and Data Base concepts is beneficial.

Computer Aided Design (CAD) Specialists

You will develop, enhance, install and support graphics design systems operating on large-scale IBM mainframes. Experience is required on large-scale IBM/MVS operating systems, using FORTRAN. Experience in assembly language and graphics systems is highly desirable.

Data Control Systems Specialists

You will participate in the development of data control systems to track and manage the flow of Computer Aided Design data. Experience on large-scale IBM systems using FORTRAN is required. Experience with relational database systems is highly desirable.

Relocation assistance is available.

Northrop provides our employees a competitive, comprehensive benefits package. Please send your resume to: Dave Coffey, Computer Systems Employment Office, Dept. CW [illegible], P.O. Box 1138, Pico Rivera, CA [illegible].

PROOF OF U.S. CITIZENSHIP REQUIRED. Northrop is an Equal Opportunity Employer M/F/H/V.

Don't trust us to keep your classified information secret

Every week, we deliver more of your target audience than anyone else. Over 600,000 computer-involved professionals. Including MIS/DP directors, systems analysts, programmers, and engineers — as well as corporate presidents, treasurers, and general managers.

And we deliver these readers for less. Compare costs and the people reached. You'll see that Computerworld is the number one medium for reaching MIS/DP professionals.

Our readers rely on Computerworld's classified section. In fact, 41% of our subscribers read the recruitment section every week. And 86% of our subscribers read this section regularly.

Readership like this means response. Just ask some of the 4,000 organizations that ran more than 6,000 recruitment ads in Computerworld in 1984.

We make your ads work harder. Because we divide the classified section into logical categories: Position Announcements; Buy, Sell, Swap; Software For Sale; Time & Services; and The Bulletin Board. (Available on request: Software Wanted; Business Opportunities; and Real Estate).

So the people you want to reach will spend less time looking for your ad, and more time reading it.

We'll even typeset your ad at no extra charge. All you need to do is attach clean typewritten copy to your order. (Figure about 25 words per column inch, not including headlines). Or give us your order over the phone. We'll do the rest.

And since we're published weekly, we can offer you a fast turnaround from when you place your order to when your ad appears. As little as 10 days.

The next time you want results, advertise in Computerworld classified pages. Call toll-free at (800) 343-6474. In Massachusetts, call (617) 879-0700. Call now.

Florida Power
CORPORATION

PROGRAMMER/ANALYSTS

Florida Gulf Coast Opportunities

With FLORIDA POWER CORPORATION data processing professionals can experience new dimensions of career and lifestyle satisfaction. Combining a sophisticated information management environment with an ideal location in Crystal River, 80 miles north of St. Petersburg, FLORIDA POWER is a logical choice for Programmer/Analysts who want to have it all.

These growth opportunities require a B.S. degree and four years of applications experience to work in an IBM MVS/XA TSO/SPF environment. (Four years of programming experience may be substituted for a B.S. degree). Applicants should have COBOL, CICS Command Level, and VSAM experience. Background with IDMS data base, CULLINET's ADS/O, FOCUS and/or SAS is highly desirable.

Along with the chance to work on stimulating projects, your off hours will be just as interesting. Located on a quiet stretch of the Gulf of Mexico, Crystal River offers year-round recreation—everything from great fishing, hunting and camping to excellent diving and boating in tranquil surroundings. Additionally, you'll discover a lower cost-of-living than most regions in the U.S. with the average selling price of a 3BR/2 Bath home at $67,600, low property taxes, and no state income tax.

We offer competitive salaries (up to $32K depending on education and experience), excellent benefits and ongoing opportunities for career advancement. Make your move to FLORIDA POWER now. Please send confidential resume with salary requirements to:

William C. Copp
FLORIDA POWER CORPORATION
8202 West 7 Rivers Drive
Crystal River, FL 32629

Minorities and Women Are Strongly Encouraged To Apply.

POSITION ANNOUNCEMENTS

ASSISTANT VICE PRESIDENT FOR ADMINISTRATION AND PLANNING

The University of Illinois office of Administrative Information Systems and Services is looking for an individual with experience managing a group responsible for providing planning, budgeting, and financial management services for an information systems organization. The responsibilities include establishing policies and procedures for operations budgeting and capital expenditures, financial and non-financial reporting systems, and centralized business services for a large multi-campus unit. This position reports to the Associate Vice President for Administrative Information Systems and Services. A bachelor's degree and a minimum of 10 years data processing experience, including at least 5 years in a senior management position responsible for administration and planning in a large data processing organization are required. For full consideration, resumes should be sent by August 30 to Mr. Anthony [illegible], University of Illinois, 447 Administration Building, 506 South Wright Street, Urbana, Illinois 61801. An Affirmative Action/Equal Opportunity Employer.

SENIOR COMPUTER SALES SPECIALIST

A full time, permanent and senior level position is available which requires the applicant to provide a high degree of both technical and marketing support to the district sales force, primarily for three specialized kinds of computer product groups: Process control products, Graphics and Networks. The position requires the continued presentation of these products to industrial customers, particularly in the automotive industry and the technical evaluation of opportunities for new design in these product groups, thus performing liaison between the user and the manufacturing divisions. $45,000.00 per year. Requires a B.S. degree and 5 years experience in the related occupation of systems engineer in electronic data processing. This experience must include sales and marketing. Send resume to 7310 Woodward Ave., Room 415, Detroit, Michigan 48202; refer to No. [illegible]. (Employer paid ad.)

WANTED: EDP EXCELLENCE

Programmers, Analysts, Systems Analysts, EDP Consultants, EDP Auditors, Project Managers/Leaders, Systems Managers, MIS Directors/Managers.

These and many other advantageous positions available for outstanding professionals with Blue-Chip and New Venture companies coast to coast. All fees employer paid.

As a full-service leasing company,
we won't fill you with empty promises.

A lot of leasing companies promise you everything. But, the fact is, if they're not full service, they don't have a leg to stand on. At Greyhound Capital Corporation, we can promise a lot, because we are a full-service leasing company.

That means you get the best advice, the best service, the best financing, and of course, the best equipment we have to offer. And you can only get this kind of complete service from a full-service leasing company.

At Greyhound Capital Corporation, we've been leasing, servicing, refurbishing, maintaining and providing financing for computers and other equipment for over 20 years. In other words, we can deliver the goods. Be it financing, maintenance or leasing terms.

So remember, if your leasing company isn't full service, then they're filling you with empty promises.

Hanson Data Systems

[illegible]

MISSISSIPPI CENTRAL DATA PROCESSING AUTHORITY

Sealed proposals will be received by the CDPA, 508 Robert E. Lee Building, Jackson, MS 39201 for the following data processing equipment and services:

Request for Proposal No. 1084, due Wednesday, August 7, 1985, 3:30 p.m. for the acquisition of WANG microcomputer equipment to be connected to an existing WANG VS100 system at the Division of Disability Determination at the DEPARTMENT OF REHABILITATION SERVICES.

Request for Proposal No. 1085, due Thursday, August 8, 1985, 3:30 p.m. for the upgrade or replacement of the hardware and software of the switching system of the Mississippi Justice Information Center network at the MISSISSIPPI HIGHWAY SAFETY PATROL.

Detailed specifications may be obtained from the CDPA office. The CDPA reserves the right to reject any and all bids and proposals and to waive informalities.

[illegible] or [illegible],
State Central Data Processing Authority

BIDS & PROPOSALS

STATE OF ARIZONA
Request for Proposal
Professional Services

Professional Master Planning and project design services are requested for the [illegible] of [illegible], the development of a long range Master Plan, the [illegible] of design, the preparation of bidding documents and supervision during the course of construction for modifications to the State Data Center.

Firms interested in providing these services should submit a written proposal to the Facilities Planning and Construction Office, 1700 W. Washington Street, Room 604, Phoenix, Arizona 85007, no later than 2:00 P.M. Tuesday, August 6, 1985. Each firm is invited to submit any supplemental data it may desire for the evaluation for the qualifications.

A pre-bid conference and site visitation is scheduled for 1:30 P.M. Monday, July 29, 1985 at the State Center Conference Room, 1510 W. Adams, Phoenix.

The Department reserves the right to change the scope of services on a negotiated basis.

Requests for Proposals and additional information may be obtained by calling John F. [illegible], Facilities Planning & Construction Office, (602) 255-[illegible] Room 604 West Wing, State Capitol.

We'll keep you up to date week, after week, after week, after week, after week.

The Bulletin Board

Our Low-Cost Way to Sell Your Equipment in Computerworld

What is The Bulletin Board?

We have a classified section designed to help you buy or sell individual software and hardware. It's especially suited to companies with a piece of used equipment for sale. For one low price, you can advertise to over half a million Computerworld readers nationwide.

How Does The Bulletin Board Work?

- The Bulletin Board is designed to advertise only one piece of equipment or software per unit.
- Units are one column wide by one inch deep at a cost of $ 140.00 per column inch. Although several units may be purchased for one advertisement, there will be no quantity discount.
- All ads are standard in format and typeface. No special typeface, borders or logos are allowed. Copy may be up to 25 words per unit.
- The Bulletin Board ads are listed by manufacturer or by product type under appropriate headlines.
- Ads are set on a six-column page in our classified section under "The Bulletin Board".

How to Place an Ad in the Bulletin Board:

- We suggest you prepare your ad before contacting us. Here are some guidelines:
  The first line is set in larger, bold type and should contain standard equipment identification.
  The body copy should describe the equipment and state the price.
  The closing should supply the seller's name and telephone number.
  This is all the information an interested buyer needs for follow up.
- Ads are accepted by mail, phone or by telecopier.
- Deadline is 7 days in advance of Monday issue.
- If you have never advertised with Computerworld, we request a check with your order.
- The Bulletin Board ads are not agency commissionable nor may they be applied to contract advertisers inch count.
- We assume no liability for errors beyond the price of the ad.

Here's the Address and Phone.

SOFTWARE FOR SALE

SOFTWARE CONVERSION SOLUTIONS

Dataware provides the software translation system for your complex conversion problems. Over 16 years of conversion experience has resulted in thousands of satisfied customers, worldwide.

- COBOL to COBOL
- AUTOCODER/SPS to COBOL
- EASYCODER/TRAN to COBOL
- BAL/ALC to COBOL
- FORTRAN to FORTRAN
- PL/1 to COBOL
- RPG/RPG II to COBOL
- RPG/RPG II to PL/1
- DOS to OS

Dataware offers services & software to meet your needs. For more information, call or write today.

SHIP A DISK

Are you selling a software package? For the best results, advertise it in the Software for Sale section of Computerworld's classified pages. More than 600,000 computer-involved professionals receive Computerworld each week.

Place your ads today. Simply call toll-free at (800) 343-6474. In Massachusetts call at (617) 879-0700. Call now.

And don't forget to ask for your copy of our "1985 Quick Reference Rate Card" so you can find out how to earn linage discounts.

FIXED ASSETS SYSTEM

Calculating depreciation got you down? Know where all your assets are? Use PLYCOM's Fixed Assets for software that is easy to use, yet effective. Gives you a complete solution. Includes all forms, procedures and programs necessary to give management full control over the asset reporting function. Includes excellent documentation and complete support.

- Easy-to-use menus
- Up to 3 sets of books
- Latest ACRS tables
- Built-in standard depreciation methods
- Multi-division or multi-company
- Disposal reporting
- Property tax reporting
- Depreciation forecasting
- Acquisition reporting
- ISAM File structures
- [illegible] compatible
- Interfaces to general ledger
- Available for VMS, RSTS/E
- Similar versions available for Burroughs and IBM-PC & compatibles

INTERACTIVE DEBUGGING

for S/34 and S/36 RPG II users

SOFTRON's Interactive Debugging Monitor (IDM) Version 3.0 brings debugging out of the dark ages of the DEBUG statement. The IDM lets you "watch" your program run by scrolling the program source statements on the display screen as they execute. You can stop the program anywhere you like, examine/modify the indicators and fields, snap dump them to the printer, trace the statements which execute, and more. The IDM is priced at $795 with discounts for multiple installations. Call or write for a free demo diskette today. SOFTRON, Inc., PO Box [illegible], Austin, TX [illegible], (512) 345-[illegible].

OUR NEWEST SOFTWARE TOOK $20 MILLION TO DEVELOP, 5 YEARS TO WRITE AND WE'RE GIVING IT AWAY.

No, we're not crazy. And no, we're not joking.

We're Management Science America, Inc. The largest independent applications software company in the world. And by Jan. 27, 1986, we plan to give $20 million worth of our newest software to over 2,000 of our customers. Instantly making it the industry standard for fourth generation technology.

If you're particular about what you get for free, here are the particulars.

We call this technology Information Expert.™ Because it allows all your software systems to carry on intelligent conversations. With one another. In English. And thanks to our data dictionary, nothing will ever sound like Greek.

For end users, our system makes it easy to design reports. Our menus guide you through the process with such ease and intelligence, they'll even tell you the proper responses to use for whatever job you need.

Information Expert also provides a fourth generation language that your data processing staff can use for applications development. So you can do in minutes what used to take hours. Or do in hours what used to take days.

It even allows borderless retrieval of information. That way, you can get all the information you need. Not all the information you don't need.

Why are we giving all this away? It's part of our customer support policy. And if that doesn't sound familiar to you, you should obviously become familiar with us. MSA.

Phone company readies high-speed ISDN trial

By Bob Wallace
Special to CW

New York Telephone Co. is planning to field-test an Integrated Services Digital Network that will use an interface different from the type used by most other former Bell operating companies.

New York Telephone's field trial will support the CCITT Primary Rate Interface. Pacific Northwest Bell, Mountain Bell, Illinois Bell and Southern Bell Telephone and Telegraph Co. are all planning ISDN tests supporting the CCITT's Basic Access Interface.

New York Telephone, however, is not the only former Bell operating company planning to support this interface. A spokesman for Bell Communications Research, Inc. in Livingston, N.J., said other telephone companies have plans to support the Primary Rate Interface, but he would not reveal their identities.

AT&T Communications — which has announced plans to offer ISDN capabilities to its customers by 1987 — will support the Primary Rate Interface. The company, however, has not announced support of the Basic Access Interface, a difference that might encourage users to bypass the local telephone companies.

The Primary Rate Interface specifies use of a 1.54M bit/sec. digital link that is subdivided into 24 channels that operate at 64K bit/sec. Voice, data or video can be carried on 23 of these channels, and the remaining channel is used to carry signaling information.

The Basic Access Interface scheme, also referred to as 2B+D, calls for a 144K

Profits dive for most mini makers

By Peter Bartolik
CW Staff

Financial results reported by minicomputer manufacturers last week continued on a mostly downward trend, marked by greater than expected losses at Wang Laboratories, Inc. and Data General Corp.

Further demonstrating the downturn, Prime Computer, Inc. continued to buck the trend with respectable revenue growth but posted only a marginal increase in profits; Gould, Inc. said minicomputer sales were strong, but write-offs in the semiconductor business produced a loss of $126.8 million.

In a more specialized area, fault-tolerant mini vendor Stratus Computer, Inc. remained on its fast-growth track, while industry leader Tandem Computers, Inc. reported a slight revenue growth and a 74% drop in profits. In other areas, mainframe vendor Amdahl Corp. reported a slight upturn, and Storage Technology Corp. announced a 50% drop in sales from a year earlier.

■ **Wang.** Just a few days after founder An Wang resumed the title of president [see story page 71], the company reported a fourth-quarter loss, its first in 12 years, of $109 million, or 78 cents per share, compared with year-earlier profits of $73.7 million, or 52 cents per share. Compounding an 11% decline in revenue for the quarter were pretax charges of $137 million for the write-off of inventory accumulations and additional expenses relating to the recent termination of 1,600 employees [CW, June 10]. Revenue for the quarter declined to $635.2 million from $713.8 million a year earlier.

For the fiscal year, which began to sour in the second quarter, Wang reported a revenue increase of $2.35 billion, up 5% from

Apollo 68020-based units bow

By Tom Henkel
CW Staff

BOSTON — Apollo Computer, Inc., one of the first entrants into the now-crowded 32-bit engineering workstation market, last week upgraded its popular line with two models based on Motorola, Inc.'s 68020 microprocessor.

At the same time, Apollo introduced an open architecture concept that the company claims will enhance Apollo users' ability to access data in other vendors' systems. The architecture will provide Apollo users with a gateway to IBM's Systems Network Architecture and links to Digital Equipment Corp.'s VAX series superminicomputers and IBM Personal Computers.

The significance of the latter introduction is that users of Apollo's top-selling Domain product line — an estimated installed base of 734 end-user systems, largely used by architects and electrical engineers — now have direct access to the DEC and IBM machines. Previously, Domain users had to access other vendors' systems exclusively via Ethernet.

The workstations announced at last week's news conference are the monochrome DN330 and color DN560. The units incorporate Motorola's 12-MHz 68020 CPU, announced last year and recently released, thus making Apollo's one

New life for aging micros

By Edward Warner
CW Staff

Old personal computers never die — they just get new owners.

That motto could be emblazoned on Rich Reed's office wall. Reed, manager of office systems at Cigna Corp.'s employee benefits and health care division in Bloomfield, Conn., said that as the division's 400 IBM Personal Computers get older, they are likely to get passed down to new and less experienced users.

Like Reed, most corporate microcomputer managers contacted recently by *Computerworld* said they will keep their personal computers despite the toll that several years of steady use has taken on their machines. Their strategy was summed up by Alan Gross, president of the New York-based Microcomputer Managers Association: "Most corporations are redeploying and reusing [personal computers] in other areas" of their firms.

Such a strategy reflects a trade-off, according to analyst Chris Christiansen of the Yankee Group, a Boston research firm. While the IBM Personal Computer, the corporate computing mainstay, grows cheaper by the month, the price of repairs on an old Personal Computer remains the same or grows. It costs an average of $400, he said, just to repair one diskette drive, the part of the computer that is often the first to fail.

"You're beginning to look at a machine that is increasingly costly to service," Christiansen observed. "When you have an old car, is it worth it to replace the transmission?"

The answer is yes as far as such firms as Cigna — an insurer — Merrill Lynch,

FEC moves toward standards

By Bryan Wilkins
CW Washington Bureau

WASHINGTON, D.C. — The Federal Election Commission (FEC) next week is expected to take an important step toward establishing voluntary standards for hardware security and performance in computerized vote counting systems.

The action, mandated by the U.S. Congress, follows a series of lawsuits contesting elections and allegations that computerized vote counting systems lack adequate security control features, making them prone to failures and vote manipulation.

Last week, William Kimberly, deputy director of the national clearinghouse on election administration in the FEC, said in an interview that there is currently no uniform set of minimum performance criteria for computerized vote counting systems nationwide.

Kimberly said that, despite efforts to educate state election officials on the technology of computerized vote counting, the level of technical understanding at the precinct level has created "horror" situations.

The FEC does not investigate allegations of vote tampering or fraud involving computerized vote counting, Kimberly said. "This is a very muddy issue. Without a full investigation [of charges], it is very difficult to allocate blame. It is seldom possible to fix what or [find] who is responsible except that management errors are usually the cause," Kimberly said.

> ”
>
> *'It's not true that a programmer can manipulate the system undetected. There are all sorts of security controls.'*
>
> **— Jack Kemp**
> **Computer Election Systems, Inc.**

However, the FEC official said security features in vote counting systems currently on the market, especially when referring to operating system software, are "clearly the areas most vulnerable to attack." Kimberly said local election boards are free to buy and use any kind of vote counting software.

While the FEC's project advisory committee of state election officials is likely to adopt next week the draft hardware standard for the vote counting systems, a similar standard for software is at least one year away from adoption. The FEC recently awarded an $80,000 contract to Granite Creek Technology, Inc. in Scotts Valley, Calif., to produce a draft software standard.

According to Kimberly, once a set of hardware and software standards has been established, state legislatures will have to rewrite state election laws to require that any vote counting system sold to election boards be certified as meeting the standards. Adopting the standards will be a voluntary move by state election officials.

Computer Election Systems, Inc. (CES) in Berkeley, Calif., the country's largest vendor of punched card vote counting systems, counted more than 35 million votes in 40 states in 1984 presidential and local elections. The company said the hardware standards "are pretty stringent" and will raise costs of its Counting Multiplexer System for local jurisdictions.

CES has been named in three election-related lawsuits in West Virginia, Florida and Indiana. It has also been implicated in other contested elections in recent years by losing candidates. The charges assert that the security control features on the company's Votomatic punched card system have malfunctioned, been compromised or been subject to management errors that caused inaccurate vote tallies to be recorded.

CES President Jack Kemp last week defended the security control features of the company's punched card system, technology that he said was introduced to the market orginally in 1964. Kemp refused to discuss the specific lawsuits and allegations raised against the company but defended the security features of his company's punched card voting system. "It's not true that a programmer can manipulate the system undetected. There are all sorts of security controls present at the precinct level that would not permit this to take place," he said.

The FEC's Kimberly said that the majority of problems arising in punched card voting systems lie in the software's inability to handle exceptions to normal ballot counting routines, such as counting crossover votes and rejecting invalidly cast ballots.

In Carroll County, Md., a defeated candidate for the school board, Wayne Cogswell, contested a 1984 vote count where a CES punched card system was used. County election officials denied any problems. But when a consultant took the punched card ballots cast in the election and ran them through a neighboring county's similar CES system, a 13,000-vote adjustment was made.

Carroll County election officials subsequently admitted that a test tape operating system supplied by CES was inadvertently used to count the votes, and the tape did not accurately register the specific contests then under way in the county.

Emily Johnston, the computer consultant hired by Cogswell, said last week that it is possible for a programmer to turn off the CES system at any point when it is counting votes, insert an additional program control card containing vote adjustment totals and then restart the machine. "The subsequent printout of the program will never show that a change has been made," Johnston said.

MAN'S PRODUCTIVITY HAS ALWAYS BEEN LIMITED BY THE LANGUAGE HE USES.

"Do you spell that with a bird or a tree?"

And no one knows it better than a programmer.

With this in mind, we at ADR® realize the best way to make programmers more productive is to provide them with more efficient programming languages.

ADR/IDEAL®, our 4th generation application development system, automates programming, so it makes the computer help programmers be more productive.

ADR/IDEAL applies a 4th generation language to all phases of an application's life cycle, which makes the entire programming process more productive.

And ADR/IDEAL's easy to understand language lets non-programmers develop their own applications. And that gives programmers more time to be more productive.

ADR/IDEAL is complete enough to be the only true replacement for COBOL. But since most of your applications are COBOL-based, you just can't abandon COBOL. So we won't. In fact, ADR is the only software company that offers an enhanced COBOL language as well as a 4th generation language.

ADR/DL™, our high-level extension of COBOL, significantly reduces the amount of coding and maintenance necessary, which makes programmers more productive.

ADR/DL brings the active dictionary support and the powerful data manipulation language of a relational software system to the COBOL environment. Which also helps programmers be more productive.

ADR/DL can produce whole sections of COBOL code with a single command. And that certainly makes programmers more productive.

Both ADR/DL and ADR/IDEAL use intelligent editors to generate bug-free code. So, with an ADR programming language, programmers work faster and better.

Man's productivity may indeed be limited by the language he uses. But by significantly reducing the time it takes to create and maintain an application, ADR programming languages are helping productivity reach new heights.

For more about ADR programming languages, mail us the coupon. Or call 1-800-ADR-WARE and discover that, at ADR, increasing productivity is more than just talk. It's language.

IBM research center: commitment to net standards

By John [illegible]
CW Staff

IBM's recently stated intent to establish a research center to study network standards indicates the firm is serious about working toward the ability to interconnect different makes of computers, analysts said.

The IBM research center, to be built in West Germany, will be used by IBM to experiment with portions of standards that are still ill defined, according to one analyst. The center will be open to members of European academic and nonprofit research organizations free of charge.

The company marked the announcement of the center by saying it will finish development by year end on network protocols that conform to the middle layers — four (transport) and five (session) — of the International Standards Organization's (ISO) Open Systems Interconnect (OSI) seven-layer network reference model.

IBM also reported that it will evaluate OSI layers six (presentation) and seven (application) and will develop products to these standards — based on business decisions — as these standards are ratified. Only the first five layers have been fully specified by the ISO.

Most analysts viewed the announcement as further evidence that IBM is serious about standards. "IBM is as advanced in OSI as any other vendor, if not more advanced," according to Harold Foltz, executive director of Omnicom, a company in Vienna, Va., that advises industry on the application of OSI standards.

But OSI is not a panacea, warned Dale Kutnick, an independent communications consultant in Wayland, Mass. "Many users are under the misconception that if IBM adopts OSI and [Digital Equipment Corp.] adopts OSI that they will be able to connect their equipment," Kutnick said. "It may make it a little easier for that to happen, but it's not automatic."

The Heidelberg, West Germany, research center, called the European Networking Center, will house IBM and non-IBM processing equipment. It will be the company's European focal point for research and experimentation on network standards — particularly for higher layer protocols — and will be available at no cost to academic and nonprofit research outfits. All project results will reportedly be published and shared with appropriate standards organizations.

> *'IBM is as advanced in OSI as any other vendor, if not more advanced.'*
>
> — Harold Foltz
> Omnicom

"People are particularly serious about OSI in Europe," according to Ken Thurber, president of Architecture Technologies, Corp., a local network consultancy.

Today, IBM is delivering products that support the lower three levels of OSI through conformance to X.25, a CCITT standard that, according to an IBM spokesman, has been incorporated into OSI.

IBM products that support X.25 include the 4331 Model 2/11, 4361 and 370 mainframes; the System/36 mid-range system; the Series/1 minicomputer; both the 3705 and 3725 front-end processors; and a number of terminals and terminal controllers, including the 3274.

By the end of 1985, the spokesman said, IBM will have completed work on software that will provide IBM 370 support for two layers above X.25 — the fourth or transport layer and the fifth or so-called session layer. These OSI layers have reached international standard status, the highest form obtainable, according to John Heafner, chief of the systems and network architect division of the National Bureau of Standards.

Experimenting with prototypes

The uppermost two layers of the network reference model, the presentation layer six and application layer seven, are not yet fully specified. Until they are, IBM will experiment with prototypes at the research center, a spokesman said. Because there are so many options at these higher layers, IBM will have to gauge the potential business for each application before adapting its programs to work with OSI, the spokesman said.

IBM will not, however, discount Systems Network Architecture (SNA). "In Europe, people are trying to build to OSI," Thurber said, "so IBM has to support both SNA — which it clearly views as its future — and OSI because of the size of the European market."

In the opinion of Foltz, "IBM will evolve to OSI at a fairly good pace. Whether it migrates SNA completely to OSI or whether it offers OSI as an alternative is yet to be seen."

SNA is not that different from OSI now, according to Kutnick. "By 1986, perhaps 1987, SNA will be an implementation of OSI," the consultant said.

But perhaps the most important thing to keep in mind, according to Kutnick, is that "OSI in no way ensures that networks will work together. Implementations of OSI will be very different. OSI is a skeleton. There is no software. The software is still related to the operating system of each vendor."

OLD

from page 1

Pierce, Fenner and Smith, Inc. and accountants Touche Ross & Co. are concerned. Apparently, only when it is irreparably broken do corporations throw away a personal computer. And only when overwhelmed by charity, or when the machine is bypassed by the current technology, do corporations give personal computers away.

First to be outmoded for corporate use was the Apple Computer, Inc. Apple II line, the machines that originally brought desktop computing to some offices. Several corporations, including Cigna, reported giving their Apple machines to charity when they replaced the units with IBM Personal Computers.

Joe Brophy, vice-president of data processing at Travelers Insurance Co. in Hartford, Conn., estimated that a number of Travelers' 9,000 Personal Computers are reaching the end of what he called the three-year life span of the machine's parts.

So far, though, most corporations are hanging on to their Personal Computers. At Cigna's Bloomfield division, for example, all of the Personal Computers ever purchased, including the first bought 3½ years ago, are still in use, Reed reported.

The machines have held their ground, he said, because they are tough and need few repairs. Cigna employees, he joked, "are going to keep [the Personal Computers] going till they die." Until the Personal Computers wear out, that is.

Micros get organ transplant

Old Personal Computers also never die at Merrill Lynch's New York headquarters. But, they might get an organ transplant in the form of an add-in processor board. Such upgrade boards as the Orchid Technologies, Inc. PCturbo-186 replace the Personal Computer's Intel Corp. 8088 microprocessor with a faster and newer Intel chip like the 80186.

The boards might represent a cost-effective way to give power users more speed and power, but they are not without drawbacks, according to Carol Bass, Merrill Lynch's manager of the personal computer support center. The PCturbo-186, she said, has been proven to be cumbersome in tests at the support center.

One difficulty, she said, is that users must reboot such programs as Lotus Development Corp.'s Symphony integrated package when they want to switch from the standard 4.77-MHz speed to the 8-MHz speed of the board's Intel 80186 processor.

Bass said she has had to return four boards, all for faulty chips, and is turned off by the price of the boards, which retail at $895 for a base model with 128K bytes of memory.

'Two computers on one chassis'

In response, an Orchid product manager said the need to reboot some programs was to be expected because "what you've actually got is two computers on one chassis."

Merrill Lynch has not given away any Personal Computers, Bass said, but firms such as Travelers and Touche Ross have made donations of used personal computers.

Touche Ross, for example, has permitted its local offices to dispose of approximately 150 to 200 Apple Computer Apple II models in recent years, and some microcomputers have gone to charities, according to Jeff Knepper, director of advanced technology/taxation in the company's Washington, D.C., office.

Other working Apple IIs, he said, were sold to employees for personal use, a strategy that Travelers will soon take when it auctions off nearly 100 older Personal Computers to its employees in sealed bidding.

Tax deduction not a factor

Neither Knepper nor Travelers' Brophy cited the gain of a tax deduction as the main reason that their employers donated personal computers to charities. Brophy, in fact, said Travelers' was most interested in being a good corporate citizen.

The lack of interest in a tax write-off for their donations, though, may also come from the fact that, by the time the personal computer is ready to go to charity, it has already been heavily depreciated as a business expense, according to Woburn, Mass., attorney Edward Saltzberg.

In fact, he said, a business usually deducts 40% of the value of the personal computer in the first year of ownership alone. "You're inviting an audit if you're donating to charity and taking a full-value" write-off of the donation, he warned.

Charitable giving can make one popular, though. Brophy said he received about 5,000 letters requesting donations after an article mentioning Travelers' microcomputer donations appeared in a national computer magazine.

Brophy was quick to point out that he is not the person to whom requests for equipment should be mailed; Travelers operates its own charitable foundation for corporate giving.

Sortland Yard warns against "Raffles-type sort programs."

Call (201) 568-9700.

Ask for Inspector SyncSort!

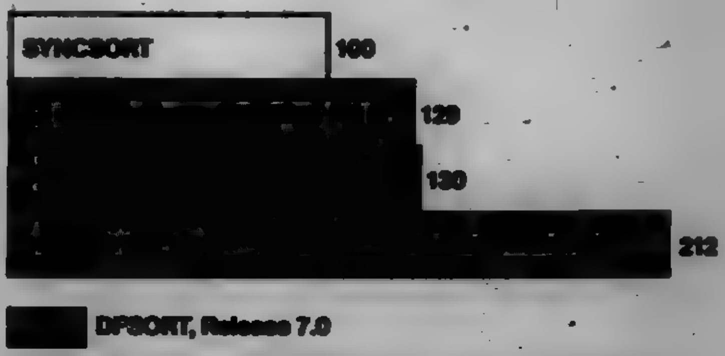
In an extraordinary move, Sortland Yard today warned data processors throughout the world to be on guard against what it termed "gentleman-bandit sort programs."

The warning was issued by one of the Yard's best known figures, Inspector SyncSort, who has sometimes been called "a legend in his own CPU time."

The inspector said, "One of the difficulties in apprehending these chaps is that they look so eminently respectable. They're members of a fine old hardware family. They've been to the right schools. And they invariably carry out their burglaries while wearing a dinner jacket from Savile Row."

EXPERT COMPUTER CRACKERS. "But once the party is underway," the inspector said, "these chaps head straight for the place where the family jewels are kept. They can crack open a computer and make off with a king's ransom in computer resources before you can say 'Hound of the Baskervilles.'"

To indicate "the true cost of this sort of misbehavior," the inspector released the following crime statistics:



SOMETIMES TAKE HOSTAGES. The inspector noted that these black-sheep programs often "take a dreadful toll" of programmers. "They are often tied up for days on end and forced to perform unnecessary coding, compiling and debugging. And they are heartlessly deprived of the labor-saving features that are taken for granted in most parts of the civilized sorting world."

Among these the inspector listed:

- **SORTWRITER**
- **MULTIPLE OUTPUT**
- **RECORD EDITING**
- **FAST FILE COPY**
- **MAXSORT**

TELEPHONE BEST DEFENSE. The inspector urged data processors to call the Yard immediately if they suspect their center is infested by a Raffles-type sort program. "The number is (201) 568-9700. We'll send over one of our highly trained sort detectives to track the culprit down."

Questioned as to what would be done with sort programs caught burglarizing computer centers, the inspector replied, "They will be given a just and speedy trial. If found guilty, they will immediately be transported to Iran!"

DEC builds Information Center from existing products

Analysts question system's ability to offer total solution

By Eric Bender
CW Staff

MARLBORO, Mass. — Digital Equipment Corp. last week rolled out the VAX Information Center, described as a portfolio of existing VAX products and services designed to support end users.

According to Rose Ann Giordano, DEC vice-president of large systems marketing, the offering is "a significant repackaging" of DEC hardware, software, communications and service products.

Based on VAXs, Decnet networking products and decision-support software, the VAX Information Center reportedly was designed to help MIS departments facilitate end-user computing while maintaining the integrity and control of the corporate data base.

The VAX Information Center can be run on VAX products ranging from the VAX/750 to an 8600 cluster or networked VAXs, according to DEC. The center reportedly can be centralized or distributed to multiple locations.

Components include the VAX Toolbox, with integrated software tools such as All-In-One, Datatrieve and Decgraph; personal computer interconnection products; Decnet-to-IBM Systems Network Architecture products; videotex systems; consulting services, training and seminars.

Third-party software products such as SPSS, Inc.'s SPSS-X statistical package and Evaluation and Planning Systems, Inc.'s FCS-EPS financial modeling package also may be integrated within the information center, according to DEC.

The VAX Information Center is one example of DEC's "increased thrust in commercial data processing," Giordano said. "With a business user, you have to make the computer a lot easier to use.

> ”
>
> *'IBM coined the term information center, but [DEC] invented the concept. [DEC's] always had the idea of putting computer power as close to the user as possible.'*
>
> **— Rose Ann Giordano**
> **Digital Equipment Corp.**

"Personal computer users are one of the main reasons for an information center; they've often exhausted the potential of what they can do with the computer without having access to corporate data," she added.

"IBM coined the term information center, but we invented the concept," according to Giordano. "We've always had the idea of putting computer power as close to the user as possible."

Steps untaken

While the announcement is a logical move for DEC, it leaves some steps untaken on the road to a complete IBM-style information center, industry analysts commented.

"The information center has proved a very successful market for IBM, so why shouldn't DEC try it?" asked Steven Smith of Paine Webber, Inc. in New York. However, "I certainly don't see it as a big market for DEC," he said. The corporate data sought by end users is typically on an IBM mainframe, and the VAX Information Center does not provide new tools that ease the task of getting at that data, Smith noted.

"It doesn't really show a strategy for the information center," commented Peter Lowber of the Yankee Group in Boston.

"Whether at the mainframe or the departmental level, an information center has got to be [IBM] DB2 and SQL compatible. . . . I don't see DEC with a [VAX] 8600 cluster competing with IBM," Lowber said.

The VAX Information Center will be on display at the Information Center Conference and Exposition in Nashville, Aug. 18-22, according to the company.

Further information on the VAX Information Center is available from DEC, which is located in Maynard, Mass. 01754.

APOLLO

from page 1

of the first systems to incorporate the microprocessor. The Apollo workstations, which also incorporate a Motorola 68881 floating-point processor, are said to provide two to three times the internal performance of Apollo's Motorola 68010-based workstations, first introduced in 1980.

An Apollo spokesman told *Computerworld* that the company will continue to produce its entry-level 68010-based DN300 workstation but conceded the current 68010-based DN550 color workstation will probably be phased out. However, current users of 68010-based Apollo workstations can upgrade their systems to the 68020 models in the field. A company spokesman said the upgrades cost between $7,500 and $10,500.

The DN300 with 2M bytes of main memory, 17-in. 1,024- by 800-pixel bit-mapped display, two RS-232C serial ports, emulators for DEC VT100-type terminals and other basic prerequsites costs $15,900. The same unit with a 70M-byte removable media disk drive and mouse costs $26,800. The DN560 with 2M bytes of main memory, 1M byte of display memory, 19-in. 1,024- by 800-pixel bit-mapped display and basic prerequisites costs $35,500. The same system configured with a mouse and 86M-byte 5¼-in. removable media disk drive costs $46,400. Both will be available in September.

Apollo also incorporated the 68020 into a server processor called the DSP90. The workstation is also said to be two to three times more powerful than the DSP80A server processor, which uses a 68010. The DSP90 with 2M bytes of main memory, 64M-byte virtual address space, two asynchronous I/O ports and a network interface costs $18,000. It will also be available in September, the company said.

In announcing the 68020-based products, Apollo also lowered the purchase price of its top-end DN460 and DN660 workstations by up to 27%. It also cut its prices for main memory on the entire Apollo line to $3,000/1M byte. A monochromatic DN460 with 4M bytes of main memory, which used to cost $53,500, now costs $39,500. A color DN 660 with 4M bytes of main memory, which previously sold for $65,500, now costs $49,500, the company said.

The company also unveiled the MSD-86M-86M and the slave Add-86M disk drives for its mid-range DN550 and DN560 color systems. The 5¼-in. Winchester drives offer 86M bytes of storage. The MSD-86M-86M costs $12,500 and the Add-86M costs $4,500.

For additional information, Apollo is located at 330 Billerica Road, Chelmsford, Mass. 01824.

Apollo [illegible]

[illegible]

FINANCES

from page 1

$2.18 billion the previous year, when it appeared that the company was well on its way toward the $3 billion mark.

The sudden reversal of Wang's seemingly inviolable 30% growth rate resulted in fiscal 1985 profits tumbling to $15.5 million, or 11 cents per share, compared with profits of $210.2 million, or $1.52 per share for the previous year.

An Wang, in a prepared statement, said the company's business plan had proved too aggressive in light of the rapid slowdown in demand and that cost-cutting measures have repositioned the company to achieve profitable performance.

■ **DG.** The firm reported a third-quarter operating loss, its first ever, of $16 million, compared with operating profits of $28.6 million a year earlier.

Unlike Wang, DG was able to utilize tax credits to reduce the net loss to $8.3 million, or 32 cents per share, compared with year-earlier net profits of $18.6 million, or 71 cents per share.

> 99
>
> *The sudden reversal of Wang's seemingly inviolable 30% growth rate resulted in fiscal-year 1985 profits tumbling to $15.5 million, compared with 1984 profits of $210.2 million.*

One-time severance costs from the dismissal of 1,400 workers [CW, June 24] added $6.3 million to DG's quarterly expenses, and a write-down of inventory added $8.2 million.

Revenue for the quarter was $285.5 million, down 6% from a year earlier.

Edson D. de Castro, president of DG, said current business levels will produce a small profit or loss for the fourth quarter, and he said it is likely that some manufacturing operations will be shut down for up to two weeks in late August or early September.

■ **Prime.** After a contrarily strong first quarter that led the company, at its annual meeting earlier this year, to announce plans almost gleefully to hire 1,000 people, Prime said last week that it is curtailing discretionary expenses and that any nonsales hires will require approval by the board of directors.

The company reported that second-quarter revenue was $187.2 million, up 16% from $161.4 million a year earlier.

But profits showed only a "modest increase" to $13.1 million, or 27 cents per share, compared with year-earlier profits of $12.8 million, or 27 cents per share.

Prime President Joe M. Henson, however, said the company is pleased with its performance in light of the adverse reports from competitors.

■ **Gould.** This company reported that a previously announced write-off incurred by reducing its semiconductor operations amounted to $160 million, or $3.65 per share, and contributed to a second-quarter net loss of $126.6 million, or $2.87 per share. Excluding the write-off, the company had profits of $16.3 million, or 35 cents per share, compared with year-earlier profits of $22.8 million, or 50 cents per share.

The company said it has reduced expectations for the third quarter due to continued weakness for electronic components but added that its information systems products had performed strongly in the second quarter.

■ **Tandem.** The company reported revenue up slightly to $144.1 million, from $141.9 million a year earlier, while product sales declined by almost 2%.

Profits for the third quarter tumbled to $2.4 million, or 6 cents per share, from $9.2 million, or 23 cents per share a year earlier, so growth in expenses outpaced sales.

■ **Stratus.** In contrast, the challenger in the fault-tolerant arena reported second-quarter revenue was up 99% to $18.5 million, compared with $9.3 million a year earlier.

The company said OEM agreements with IBM and others contributed significantly to financial results, and quarterly profits were $1.9 million, or 10 cents per share, compared with year-earlier profits of $1.3 million, or 7 cents per share, which included a tax credit of $500,000.

■ **Amdahl.** This firm reported that second-quarter revenue was up almost 5% to $206.1 million, compared with $196.8 million a year earlier.

Profits were $5.1 million, or 11 cents per share, compared with year-earlier profits of $4.9 million, or 11 cents per share. The company said sales were up but not to the level of earlier expectations.

■ **STC.** The company, continuing reorganization under protection of Chapter 11 of the Federal Bankruptcy Act, posted a second-quarter loss of $15.9 million, or 46 cents per share, compared with a year-earlier loss of $4.8 million, or 14 cents per share.

The company said termination of a printer manufacturing facility in Palm Bay, Fla., contributed $3.5 million to the loss.

Sales revenue was almost halved to $84.1 million, from $161.4 million a year earlier, producing a slide in total revenue to $172.6 million, down 30% from year-earlier revenue of $247.1 million. The company said it had expected a greater loss than it reported.

Edward H. Sussenguth

Chief architect of SNA

Edward H. Sussenguth headed up the IBM team that developed Systems Network Architecture (SNA) for the first 10 years of its existence. SNA, a de facto industry standard, is a strategic IBM product, central to the manufacturer's efforts to interconnect its product line. As the principal architect of SNA in its early days, Sussenguth has seen SNA evolve to accommodate changes in industry and technology. While at the National Computer Conference earlier this month, Sussenguth — now an IBM fellow — ruminated about the history of SNA and networking in general with Computerworld's *senior editor of communications, John Dix.*

Why was SNA developed?
There were three reasons in the beginning, all roughly equal. One was we were basically in a mess at that time. We supported a large number of different protocols and access procedures. That was wrong, it was wrong for us, and it was wrong for our customers.

The second reason is technical. In the early 1970s, the revolution of distributed processing became reality. You could put a minicomputer in a bank, whereas before, you only had dumb devices out there. The way you communicate with a dumb device is different than the way you communicate computer to computer. So we had to change. We had to invent new things in order to communicate with these new kinds of gadgets.

We also foresaw [network] growth, although probably not the rapidity of growth that has happened in the last 10 years. It was clear that the networks were going to get bigger and bigger and [before SNA], there was no way that we would be able to support the customer.

We knew the technologies were changing rapidly . . . and what we really needed was some semblance of structure in order to try to handle that change. That was the reason behind the concept of the [layered network architectures]. When you change something on one layer, you don't have to change everything on either side of it. That's not unique to us.

Is there anything you missed in the development of SNA?
If we missed anything, it was probably network management. I think we didn't realize how significant network management was to our customers, which is probably related to growth [in the] size of networks. If we had it to do over again, we probably would have done network management sooner but not necessarily better. But we've had to really catch up.

There has been a lot of criticism about the complexity of SNA.
Sure, SNA is complicated because it does a complicated thing. Chips are complicated — they do complicated things. The real question is, 'Is SNA overly complex for the level of function that it provides?' I don't believe so. I agree that as you look at it, it is complex, it's complicated. I don't think we have anybody who understands it all; I don't think we need to. As long as the pieces work together.

Do you think there will ever be a single networking standard?
Sure, it's in the best interest of customers to have standards. I can't plug my shaver in the wall in France. The thing that I think the standards community — and we who participate in it — have to be careful of is premature standardization. Premature standardization is likely to be worse than none at all.

I think the press does a disservice in giving people the impression that a standard is going to come about where I can prepare my document on processor X, transmit it to processor Y and then send it to processor Z to be handled. All of the editing commands and the data base [capabilities] that that entails are an awfully long time away.

Working our way gradually up the OSI [Open Systems Interconnect] model is the right thing for the industry to do, but one should be very careful about trying to be unreasonable about what can be expected.

Will SNA eventually be that standard?
No, I don't think so, I think IBM will continue on its own course with SNA, and other vendors will continue to develop their own internal architectures. At the same time, we will try to be sure that we match the international and national [standards].

Do you have any general prognostications about how networking might eventually take shape in the future?
The single-word answer to that is size. It seems fairly apparent that someday, we are going to get to the point where consumers have terminals. Maybe it will get as far as videotex and other things associated with home television sets; maybe it won't get that far.

When you start thinking about home banking, using your [personal computer] or your TV set, the network could be enormous, reflecting back on technical attributes like reliability and availability. [It would also require] more sophisticated mechanisms inside of the network like directory management, [finding out] where you are, [finding out if] you are eligible to receive this information.

Future networking will be end-user driven then?
I don't know how fast it is going to get to the real consumer, but it is already happening rapidly in the office. In Japan, Western Europe, the U.S. and Canada, we'll soon get to the point where there is a terminal for every two workers.

How close are we to that now?
Obviously, in this case, the cobbler's son has shoes. In IBM I would guess that we are approaching at least one terminal for every two workers today, if not one to one. Banking and insurance industries should approach that ratio.

I heard that PC Network came out of the Entry Systems Division in Florida with little or no interaction with the SNA folks in Raleigh, [N.C.].
IBM has separate business units that make decisions based on their general businesses. The chairman does not go up and shoot somebody if they come out with non-SNA-compatible products. We have guidelines where we try to tell people, 'We would like you to do it this way.' The [personal computer] guys did their own networking, but they didn't do it completely unbeknownst to Raleigh. It was a decision that was tactically best for the [personal computer] at that time and was done in such a way that would not dead-end itself.

Is SNA a strategic product for IBM?
SNA is clearly a strategic direction. What we are

See SNA page 9

Undefined upper layers reduce OSI's usefulness

Market fragmentation said to confuse users

By Paul Korzeniowski
CW Staff

"Despite what some companies are claiming, users are only being provided with four-sevenths of a solution," according to a speaker at a session on networks at this month's National Computer Conference (NCC).

Although the lower layers — one through four — of the International Standards Organization's (ISO) Open Systems Interconnect (OSI) network reference model have been specified, unclear standards for the upper layers — five through seven — are a concern to vendors and end users, said Leonard Magneson, marketing manager for OEM products at Intel Corp.

> *'Whenever a user wants to run a session, the network should identify the resources that are needed and establish the data path.'*
>
> — **Wendall Turner**
> **TRW, Inc.**

Magneson's remarks came at a technical session at NCC, titled "Communication Software for LANs."

The marketing manager stated that the local-area network market is fragmented, riddled with many vendors and has users so confused that they are reluctant to purchase products.

Magneson noted that the OSI lower level standards supply useful interconnection capabilities. However, because the upper levels are still undefined, there is little opportunity to integrate data on a network, according to Magneson. "The upper level layers do not effectively use network resources and permit limited data sharing," he noted.

A number of different net types

Despite vendor claims, there must be compatible equipment across the network for data to be effectively shared, according to Magneson. "When it was first proposed, many people thought that there would only be one type of network. Instead there will be a number of different types of networks," he predicted.

Wendall Turner, chief protocol architect at TRW, Inc., defined ISO networks as having a 1- to 10-mile diameter, being owned and operated by a single company, providing point-to-point communication and being self-contained.

Turner noted that physical connections between ISO model devices have been established, but how data moves through a network is unclear. "Whenever a user wants to run a session, the network should identify the resources that are needed and establish the data path," he said.

The protocol architect listed two methods of achieving this goal: One method would have a central server that would supply the names and addresses of each file.

"The problem with this approach is that there is no backup if the central server fails and data at the server has to be updated constantly," Turner stated.

A second method would work with a distributed design. A major problem with this type of design is that not every session would be able to respond to it, he said.

SNA

from page 8

trying to say with SNA is that we intend to use SNA as the main, but not only, vehicle for our set of communications products.

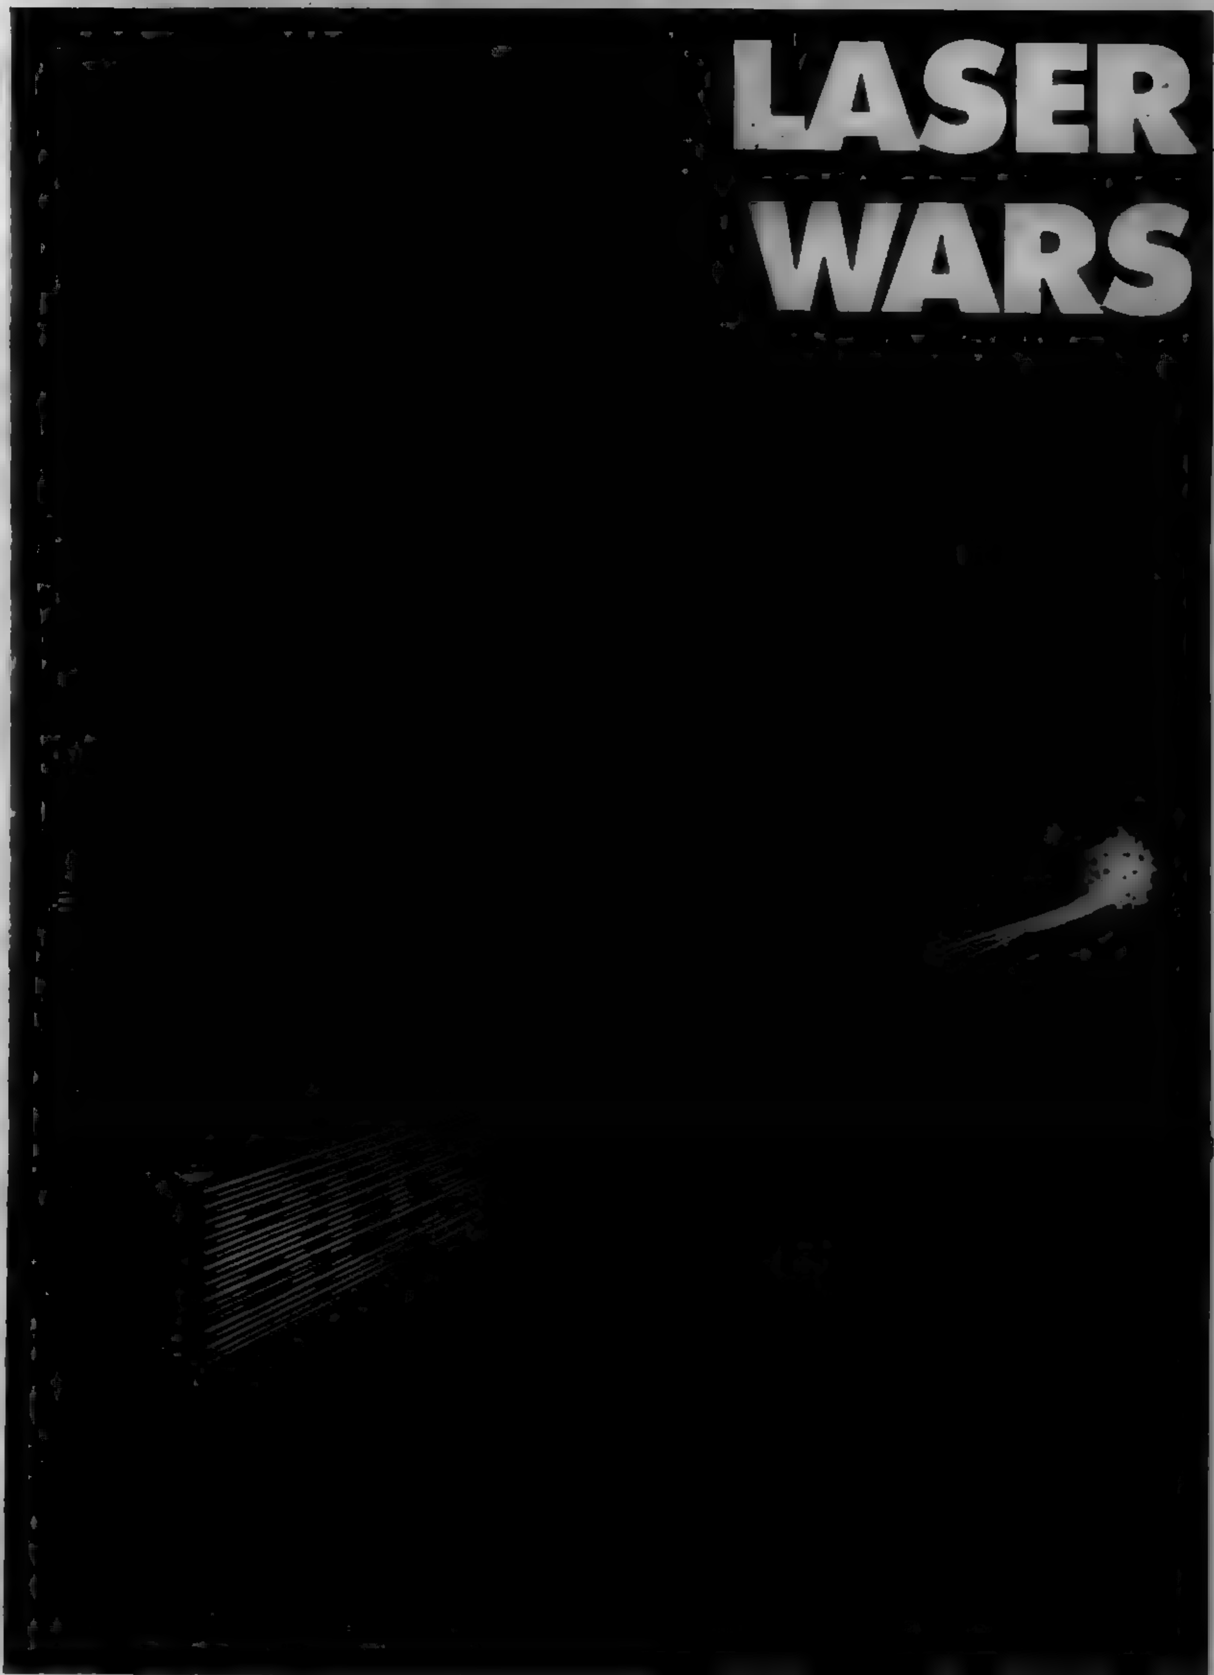
You said the chairman won't shoot product developers who don't embrace SNA. How does the process work?

Our job as architects is to try to anticipate the future needs of business and technology. As products near their announcement time, we have the opportunity to voice criticism of the product. If a product is to come out without SNA capability and the director of architecture thinks it should [support SNA], he would raise that to the executive in charge.

Turning from SNA, what are you involved with now as an IBM fellow?

As an IBM fellow, you have the opportunity to choose a project or projects of your liking and get a staff to assist you on it. I'm interested in high-speed communications. As you know today, telephone lines mostly communicate at 4.8K bit/sec., 9.6K bit/sec. or 56K bit/sec. In the U.S., Japan and some European countries, T1 speeds of 1.54M bit/sec. and 2.48M bit/sec. are starting to become prevelant.

In the future, when you begin to look at fibers, the numbers aren't one and two megabits; they're 100 and 200 megabits per second. . . . What in the world are we going to do with it and what does it do to our systems and what does it do the capabilities that computers can do for us? It is a fascinating business we are in, absolutely fascinating.



Alliant combines vector, scalar processing in releases

By Donna Raimondi
CW Staff

ACTON, Mass. — Alliant Computer Systems Corp. has launched two machines — an entry-level supercomputer and a superminicomputer — that combine both vector and scalar processing. The systems are geared toward the scientific and engineering fields.

The firm's FX/8 supercomputer is said to allow parallel processing, with up to eight processors working simultaneously on the same problem without programmer intervention. It is said to apply this parallel processing automatically to existing scientific and engineering software programs, including those that run on Digital Equipment Corp.'s VAX systems. The architecture bases the parallel processing control in dedicated hardware.

Each FX/8 CPU — which uses 8,000-gate Cmos gate arrays to implement a full scalar instruction set — also has an integrated vector instruction set, Institute of Electrical and Electronics Engineers, Inc. floating-point support, concurrency control and virtual memory management.

The company's FX/Fortran compiler is said to detect the potential for parallel and vector processing in standard Fortran programs. The C and Pascal languages are also supported by Alliant's Concentrix operating system.

The FX/8 — which costs from $270,000 to $1 million — starts with a base system that contains one CPU, 8M bytes of physical memory, one 64K-byte computational processor cache memory, one 32K-byte interactive processor cache memory, a 13-slot configurable Intel Corp. Multibus chassis, a 376M-byte Winchester-type disk, a tridensity start/stop tape drive, a 16-user Concentrix operating system license and an FX/Fortran license.

The system is reportedly expandable, without changes to existing software, to eight CPUs, which are called Computational Elements by the vendor; 12 I/O processors, called Interactive Processors by the vendor; 64M bytes of main memory; 128K bytes of I/O cache; and 128K bytes of cache memory.

In its highest expansion, the system is said to offer peak performance of 94 million floating-point operations per second (Mflops) or 35.6 million instructions per second. Running the Linpack benchmark from Argonne National Laboratories in full 64-bit precision, a fully configured FX/8 is said to deliver more than 12 times the performance of the DEC VAX 8600.

Concentrix, which is Alliant's implementation of the University of California at Berkeley 4.2 Unix operating system, is said to execute on the interactive processors while off-loading the computational complex for uninterrupted processing. The interactive processors handle all operating system tasks and device interrupts, freeing the computational complex for uninterrupted execution of compute-bound programs.

The system includes a diagnostic subset of Concentrix, called Diagnostix, which is said to support local and remote fault isolation and system configuration.

The Alliant FX/1 desk-high multiprocessing superminicomputer also incorporates vector processing, the company said. The system — which costs $132,000 — is said to be useful as a multiuser departmental system or as a computational server on a network of engineering workstations.

The FX/1 combines 8,000-gate Cmos gate arrays and vector processing to deliver peak performance of 11.8 Mflops. It includes a CPU to handle programs while the interactive processor executes user-intensive jobs, the operating system and all I/O, the vendor said.

The basic system includes one CPU, one I/O processor, 8M bytes of physical memory, a 32K-byte cache, a system floppy disk, a 67M-byte Winchester disk, a 5¼-in. cartridge tape drive, a six-slot Intel Multibus chassis, an 8-user Concentrix license and an FX/Fortran license. It can be expanded with an additional 8M bytes of main memory, one additional I/O processor and a full range of peripheral devices.

Both systems will be available in October.

Alliant is located at 42 Nagog Park, Acton, Mass. 01720.

Live Aid hunger fund profits from donated system's speed

By John Desmond
CW Staff

LONDON — The accountants for the Live Aid benefit concert for world hunger are being assisted in the quick collection of pledges — from some 180,000 donors in the UK — by a fourth-generation language and a Data General Corp. Eclipse MV/10000.

The computer system should allow the $5.5 million to $6.5 million in pledges in the UK to be charged to credit card accounts within a week, according to Bill Cadogan, region manager for Data General, Ltd. here. Estimates of worldwide pledges range up to $70 million from the 16-hour performance at John F. Kennedy Stadium in Philadelphia and Wembley Stadium in London.

According to Cadogan, the rapid processing will allow Live Aid to realize $350,000 in interest that would have been lost if collections had been processed manually.

Original projections were for 30,000 pledges. Cadogan said it would have taken 40 persons from three to five months to process that number manually. As it turned out, more than 180,000 pledges were received. "This place was a zoo," Cadogan said.

To process manually the number of pledges received would have taken well over a year.

The pledge processing program was written in three days using the Mephisto fourth-generation language from Interactive Computer Systems, Ltd. based here, Cadogan said. Just days before the daylong concert, he was approached about the computer processing by the accounting firm for the Band Aid Trust, which is overseeing fundraising from the Live Aid concert.

DG had 40 operators working the day of and the day after the concert to handle the pledges. Cadogan had four shifts of 70 persons each to wrap up the collections using an MV/10000 and an MV/8000. Each credit card company will be given a magnetic tape with a record of pledges charged to accounts.

DG donated the use of its equipment and its London office for the collections.

Encore seeks to get on supermini map with Multimax

By Tom Henkel
CW Staff

If the love of a challenge is the driving force behind the entrepreneur, Ken Fisher is in his glory.

Fisher's company, Encore Computer Corp., came to this month's National Computer Conference (NCC), with the sole intention of showing off its latest product: the Multimax, a superminicomputer based on a multimicroprocessor architecture that some industry observers believe will be widely incorporated in the next generation of scientific-oriented computer systems.

But the 10-CPU Multimax operating at the National Semiconductor Corp. booth, along with systems from other start-up vendors using National Semi's 32032 microprocessor, is more than another box on display for the hoards of NCC tire kickers. To Fisher, the system is vital to launching Encore and its product line from the ranks of start-up firms to the level of a real player in the highly competitive superminicomputer marketplace.

Even though Encore is currently singing the praises of its Multimax to anyone willing to listen, the product will not make its official debut — that is, complete with solid pricing and delivery dates — until the Federal Computer Conference in Washington, D.C., this fall. The company's presence at NCC, Fisher said, is an attempt to generate some interest in the Multimax CPU, the company's Hoststation line of workstations and its Ally software.

Fisher conceded that luring potential customers away from well-established supermini vendors such as his own former company, Prime Computer, Inc., will be difficult.

However, Fisher contended that the relatively new architecture employed by the Multimax and the highly scientific bent of Encore's target audience will help ease the economic and competitive obstacles.

"When I, and my associates, built Prime, we got it rolling in a recession," Fisher said, noting that there are always potential customers, regardless of the economic climate. In fact, Fisher said, a slow period in the market can sometimes be a benefit to a start-up firm because small firms do not have to sell large numbers of systems to turn a profit.

> ***'When I, and my associates, built Prime, we got it rolling in a recession.'***
>
> — Ken Fisher
> Encore Computer Corp.

But, Fisher said, the current downturn in computer sales is different from the 1974 recession during which Prime Computer was founded. This time, Fisher said, only the computer market is depressed. In 1974, the whole domestic economy was slow, consequently companies were freely spending money on computer systems believing that improving systems resources would generate a boost in corporate productivity.

"Everywhere I go I still find three-year backlogs," Fisher said, insisting that in spite of soft supermini sales during the past seven months, there are still potential customers who will jump at the chance to buy a system based on a relatively new architecture, such as the Multimax, if the company can prove the system offers better performance.

In fact, Fisher believes Encore will be able to convince enough users of the Multimax's performance advantages that the Wellesley, Mass., firm will be able to move a significant number of Multimax systems into the market in the next year.

Many of Encore's potential sales, however, may hinge on the firm's sealing a deal with Sperry Corp. to supply Multimax systems on an OEM basis. Encore and Sperry reached a tentative agreement whereby Sperry would have the option to buy up to 80% of Encore's first year's production of Multimax systems. Sperry's right to buy large numbers of Multimax systems would decrease in subsequent years.

But the tentative agreement has become snarled by details that are tying up its official signing. One of the details being debated is how many systems Sperry will buy on a volume basis.

"Sperry is a way to get a fast start, but it is not our only hope," Fisher said. "We would value Sperry as a customer, but it's not a determining factor [in Encore's success]."

Info center meet planned

NASHVILLE — More than 65 sessions on information center-related topics, including strategic planning, resource management, training and staffing, will be featured at the Second Annual Information Center Conference and Exposition to be held at the Opryland Hotel here Aug. 18-22.

The conference is designed for people who plan and manage end-user computing, including information center managers, MIS directors and other corporate directors. Scheduled speakers will include Shaku Atre, president of Atre International Consultants, Inc., and Larry English, senior consultant with Performance Development Corp. Author and futurist David Pearce Snyder is slated to give the keynote address.

Conference registration is priced at $580. More information is available from the Conference Registrar, Information Center Conference, Weingarten Publications, Inc., 38 Chauncy St., Boston, Mass. 02111.

WEST COAST UPDATE/JEFFRY BEELER

SACRAMENTO, Calif. — The state legislature is studying a proposal that would strengthen the warranty protection available to Californians who buy or lease computer products.

A.B. 1507 would require California-based hardware and software vendors to furnish with each of their products an implied warranty of merchantability — their ability to sell — and an implied warranty of fitness for a specified application.

The legislation would thus prohibit all advertising disclaimers to which such warranties have traditionally been subject, according to Alma Martinez, assistant to Assemblywoman Gloria Molina, the bill's sponsor.

A.B. 1507 would also require all California-produced hardware and software products to be accompanied by an express warranty that makes vendor advertising claims legally binding, Martinez said.

The provision referring to express warranties applies only to written, not oral, advertising claims. "I wish the bill did cover statements that are made orally because that's where most of the problems are," Martinez said. "But oral statements by advertisers would be almost impossible to monitor."

Under the bill, if a computer product fails to perform as advertised, a user would have up to six months to notify formally the vendor of the merchandise's shortcomings. The customer would then have the right to return the allegedly defective product to its developer and to demand a full refund.

California's hardware and software suppliers flatly oppose the bill. Through the Association of Data Processing Service Organizations, Inc., the vendors this month issued a statement criticizing the legislation, charging that it unfairly tries to make them the sole guarantors of a product's effectiveness.

Users as well as developers should bear at least part of the responsibility for ensuring that installations succeed, the statement issued by Adapso said.

Having recently passed the California Assembly, A.B. 1507 now goes to the state Senate's Insurance Claims and Corporations Committee. If the bill wins approval there, it would then move to the full Senate floor, back to the Assembly for concurrence on any interim amendments and on to the governor, who would have to decide whether to sign it into law.

■

HAYWARD, Calif. — Is bankruptcy contagious? Sleuths at the Center for Disease Control in Atlanta would probably scoff at such a notion. But executives at Viasyn Corp. here are taking no chances.

In early July, shortly after relocating to new corporate headquarters, Viasyn conducted a mock exorcism to rid the building of any troubled spirits that might have been left behind by its previous occupant.

As the multiuser microcomputer company's work force watched with varying degrees of amusement, a local entertainer masquerading as a medieval wizard launched into an elaborate ghost-busting routine that ended with the ritual banishment of an imaginary evil spook nicknamed "Bad Bit."

Viasyn's tongue-in-cheek housewarming was nothing if not unconventional. On the other hand, the firm's newly occupied headquarters has an unusual, even unsettling, history. The building's former tenant was none other than Osborne Computer Corp., which pioneered the portable microcomputer business and then, with equal fanfare, filed for protection under Chapter 11 of the Federal Bankruptcy Act.

DEC registers first new chip

WASHINGTON, D.C. — Digital Equipment Corp. last week registered its Microvax II chip set with the U.S. Copyright Office, becoming the first vendor to file a new product under the Semiconductor Chip Protection Act of 1984.

The Microvax II microprocessor chip is also the first 32-bit chip to be registered. Along with its floating-point coprocessor, the chip was developed in about 20 months to drive the Microvax II supermicrocomputer [CW, July 15].

Approximately 20 chips, including those from leading vendors like Motorola, Inc. and Harris Corp., have been previously registered under the act, according to Daryl Hatano, manager of government affairs for the Semiconductor Industry Association.

Those products had been commercially available before the law took effect last November and thus are only partially protected.

Protected for 10 years

The Microvax II chip's specific pattern of layered metallic, insulating and semiconductor materials will be protected from reproduction by other vendors, including those based in Japan and the UK, for 10 years.

Previously registered computer chips may continue to be imported or distributed by other organizations for an additional two years in exchange for royalties.

The protective legislation, signed by President Reagan last October, created the first new category of registered property since the Trademark Protection Bill of 1870. Lobbyists for the semiconductor industry had argued that, because of their unique nature, chips did not receive adequate protection under then-existing copyright and patent laws.

FCC to ease limits?

WASHINGTON, D.C. — The Federal Communications Commission last week proposed to relax existing structural separation requirements barring the seven regional holding companies and AT&T from combining computer-enhanced services to underlying communications offerings.

In opening a Third Computer Inquiry, the FCC is proposing to permit services like protocol conversion, co-location of computer processing equipment with transmission facilities and the provision of an integrated services digital network.

The Third Computer Inquiry, according to the FCC, will decide such questions as whether the divested Bell operating companies can provide data communications services and whether AT&T can offer an unregulated protocol conversion service.

ISDN

from page 1

bit/sec. link that is divided into two 64K bit/sec. channels for voice/data transmission and one 16K bit/sec. channel for signaling and low-speed data transmission.

To support interface if market need exists

Dick Snowden, director of service concepts for AT&T Communications, said, "We are prepared to support the basic interface if we find a market need for it. It is not something we see much of a need for."

Snowden added that he expects to see the divested Bell operating companies implement both the Basic Access and Primary Rate interfaces over time.

New York Telephone spokesman John Quinn said the company's test would begin in the laboratory in the first quarter of 1986 and would be extended to a field test at a later date.

Courses out for IBM systems

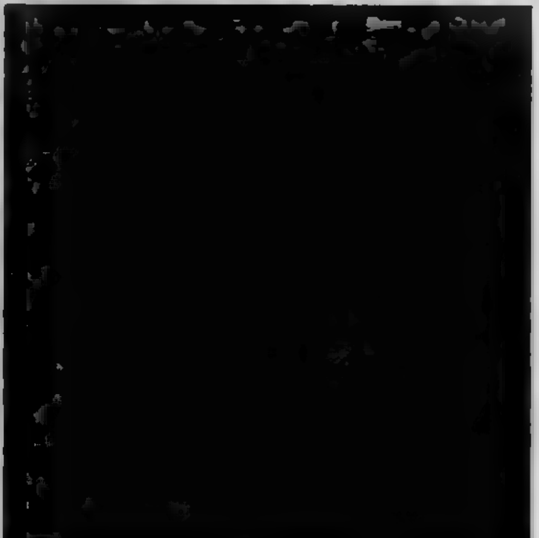
ARLINGTON HEIGHTS, Ill. — Advanced Systems, Inc. has introduced four computer-based training courses, two for the IBM Personal Computer and two for use on IBM mainframes. It has also introduced two management courses, which are presented on videotape.

Two of the computer-based training courses, MVS/XA: Basic JCL and MVS/XA: Production JCL, reportedly are for use on the user's IBM Personal Computer attached to a laser disk player, which is not included. The video portions of the course are recorded on the laser disk, which interacts with the software on the Personal Computer to provide the instructional program. The basic JCL course reportedly defines the role of JCL in job processing, among other features. The Production JCL course outlines advanced JCL techniques.

Another of the new computer-based courses is Xedit For New Users, which reportedly teaches Xedit commands needed to create a file and modify data. It runs under all IBM mainframe operating systems.

The IDMS/R Education Series and Reference Library, a 26-unit series of videotape lessons, was reportedly designed for data base administrators and information processing professionals. The courses reportedly teach the concepts of data base design and the Automatic System Facility of IBM's IDMS/R, among other topics. They are offered on ½-in. videotape and in ¾-in. tape. The MVS/XA: Basic JCL and MVS/XA: Production JCL courses are licensed beginning at $90/mo per module. The Xedit for New Users course is priced from $800 for a 3-mo license to $4,000 for a perpetual license. Modules in the IDMS/R Education Series and Reference Library are priced beginning at $50/mo.

Advanced Systems is located at 155 E. Algonquin Road, Arlington Heights, Ill. 60005.



Oregon VDT legislation vetoed

Governor cites existing means to ensure safety

By Maura McEnaney
CW Staff

SALEM, Ore. — The progress of VDT legislation in this state came to a grinding halt recently after Gov. Victor Atiyeh (R-Ore.) vetoed a bill establishing guidelines for the purchase and use of VDTs here.

In a July 12 letter vetoing the bill — which passed the Oregon Senate just one vote short of unanimous and later cleared the House of Representatives by a 31:28 vote [CW, June 24] — Atiyeh reiterated his long-held position on the issue.

Atiyeh said that while no safety and health risks have been connected to VDT use, "state government already has in place a means to monitor work sites and health and to enforce compliance when specific hazards are identified."

Legislation's requirements

The Oregon VDT legislation called for the development of purchasing specifications for VDTs and workstations for inclusion in bid proposals issued by public agencies.

The bill required the director of the state's Worker's Compensation Department to set up ergonomic guidelines for VDT users working at terminals more than four hours a day.

It also required the establishment of an education and consulting program about VDT health and safety issues.

Committee examined VDT safety

During the last biennial legislative session, the state established a committee to examine safety issues surrounding VDTs in the workplace.

That committee, made up of people both in support of and opposed to VDT legislation, recommended that the state introduce legislation addressing the ergonomics of VDT use, according to Chuck Mendenhall, government relations director for the Service Employees International Union (SEIU) Local 503.

The SEIU has been a proponent of VDT legislation throughout the country this year.

When the Oregon VDT legislation attracted national attention, heavy lobbying efforts got under way to kill the bill, Mendenhall said.

In June, the margin of approval was reduced in the House of Representatives on a vote of 31:28. Much of the lobbying effort came from the governor's own Washington County, Mendenhall said, and soon, "The governor was convinced that he would be the bottom line for the legislation."

Requiring safety and health guidelines as well as purchasing specifications for VDTs "only creates obstacles to a flexible enforcement policy which should be directed toward the greatest needs," according to the governor.

Issco revamps graphics aids for 32-bit units

By Jeffry Beeler
CW West Coast Bureau

SAN FRANCISCO — Integrated Software Systems Corp. (Issco), whose graphics programs have traditionally operated only on medium- and large-scale mainframes, is now reportedly making its full product line available on selected 32-bit workstations.

As part of an effort to broaden its target market, Issco has adapted its existing Tell-A-Graf, Tellaplan and Disspla software offerings to run on the Digital Equipment Corp. Microvax II. The programs also reportedly work with the Hewlett-Packard Co. HP 9000 and its Apollo Computer, Inc. rival.

Although all three packages can now reside on a single-user system, Issco claimed they provide the same functions as their mainframe-based counterparts. In addition, the workstation-resident products sell for less than one-tenth of what they would cost on a large-scale VAX machine, according to Issco's newly appointed president, Meldon Gafner.

Coupled with a 32-bit processor, the company maintained that the programs will allow users to create graphics locally, dump the results temporarily to a low-cost printer and later make any necessary revisions. Using the established communications links between, for example, a Microvax II and full-scale VAX system, users can upload the finished graphs to a central mainframe and take advantage of its shared, high-quality output devices, Gafner said.

In quantities of one to nine, the workstation versions of Issco's Tell-A-Graf business graphics package, Disspla technical graphics system and Tellaplan project management products are available immediately for a one-time fee of $3,600 per module. Each product also entails an annual renewal fee ranging from $288 to $3,600 per package.

Issco is headquartered at 10505 Sorrento Valley Road, San Diego, Calif. 92121.

Realia COBOL.
Migration without migraines.

Until recently, you had to abandon the business computer language when you developed microcomputer application software. The available micro COBOLs were inadequate—too limited, too slow. The best alternative—the XT/370 or AT/370 using IBM's COBOL—was very expensive and still too slow. To get acceptable performance, you had to retrain your programmers in Pascal or C.

Realia COBOL is the cure for such headaches.

Realia's compiler supports most IBM VS/COBOL and VS/COBOL II features, such as:

- COMP and COMP-3 data
- SELECT assignment names
- Multiple entry points
- GOBACK, EJECT, and SKIP statements
- Structured programming extensions of VS/COBOL II

You can download mainframe systems for development, maintenance, and testing. Productivity will soar.

You can compile faster with Realia COBOL than in most mainframe environments, even on floppy-based systems. Compile-time options allow cross-reference, brief and full code listings, and helpful features like subscript and decimal value checks.

Our interactive debugger lets you follow the program source, display and modify data, and set breakpoints using the normal optimized machine code.

The results are startling.

Our users report that their systems run up to 20 times faster when compiled by Realia COBOL. That's compared to our nearest micro competitor. The ratio is up to 100 times faster when compared to any of the others.

On the IBM PC AT, your programs can run at 370/148 to 370/158 speed. Realia's file system really makes your machine deliver, giving it a distinct edge over Pascal or C. Our indexed file system even has full key compression and buffer controls just like VSAM. The generated code is pure MS-DOS, so it can be run on most of the 8088/8086 machine family.

And you can sell your programs without paying us a royalty fee.

Realia COBOL is priced at $995, including one year of maintenance and upgrades. Subsequent maintenance and upgrade contracts are currently priced at $125/year/copy. Available for the IBM PC, PC XT, 3270 PC, PC AT, PC-compatibles, and the TANDY 2000.

Realia COBOL. What a relief.

IBM, IBM PC, PC XT, 3270 PC, XT/370, PC AT, and AT/370 are registered trademarks of International Business Machines Corporation. MS-DOS is a registered trademark of Microsoft Corporation.

Conference attendees eye optical disk technology

By James Connolly
CW Staff

CHICAGO — Optical disk storage was the hot technology, the products in demand were networks and the key issues centered on personal computer management.

Those were some of the points made by attendees at the recent National Computer Conference (NCC) here in conjunction with a *Computerworld* sampling of opinions. Questionnaires distributed at NCC and returned by conference attendees also revealed the following:

- The primary purpose for attending NCC was to learn about new technologies, followed distantly by equipment shopping and job hunting.
- More than half of the attendees representing user organizations said they plan to acquire mainframes or superminis in the next year.
- Interests in software focused on data base management and artificial intelligence, including expert systems applications.
- Attendees were split on whether the economy has impacted their hardware acquisition plans, citing more negative than positive results, but they felt strongly that software acquisition was unaffected by a national economy that they said will improve in the next year.
- Microcomputer acquisition was almost evenly divided among MIS/DP and end-user departments, with MIS/DP holding the slight edge in authorizing microcomputer purchases:

> *'It seems that optical disks would be superb for sending out data bases to our clients.'*
>
> — Bryan Kocher
> Digital Research, Inc./McGraw Hill, Inc.

- Dealing directly with the manufacturer is the preferred method of acquiring microcomputer software, as cited by twice the respondents than those who chose the second favorite source, retail stores.
- The preferred sources for system maintenance are vendors, followed by in-house and third-party maintenance firms.
- Most respondents have forsaken name-brand microcomputer software in favor of low-cost alternatives, while emphasizing the need for the alternatives to be reliable.
- Attendees feel software piracy is an overblown issue.

Optical disk storage systems and media were most commonly cited when attendees — including DP managers, computer users, vendors and consultants — listed the products and technologies that they wanted addressed in NCC technical sessions or displayed on the show floor.

"I think there was an adequate amount of technical information available regarding optical storage. Optical is pretty much coming out from under the covers," observed Bryan Kocher, a manager with Digital Research, Inc./McGraw Hill, Inc. of Lexington, Mass.

Kocher, who is exploring the possibility of moving Digital Reseach's economic data base to optical disk for use by existing time-sharing customers on personal computers, said that NCC '85 featured more optical media vendors than NCC '84 and that prices have dropped, in one case from $800 to $350 per 12-in. disk. He noted that at least one NCC exhibitor plans delivery of erasable 3½-in. disks within a year.

"It seems that optical disks would be superb for sending out data bases to our clients. We could put the data on at a central site and put the disks in express bags for overnight delivery," he added.

John R. Pearson of the State of Illinois Information Resource Management Office said of his interests, "Video/laser disks. There are no other new products or technologies."

Several attendees who expressed interest in optical storage also mentioned local-area networks for personal computers and laser printers.

A quarter of the respondents said they were looking at networking or personal computer communications solutions, while several more listed micro-mainframe links as their key interests.

Europe's micro purchases jump 57% in first half of 1985

By Clinton Wilder
CW Staff

The volume of microcomputers purchased by Western European users grew 57% in the first half of 1985, according to Intelligent Electronics Europe (IEE), a Paris-based market research firm.

In presenting its latest market figures and predictions, analysts from the 3-year-old firm contrasted the continued strong growth of the European market to flagging U.S. demand in the last year. "In Europe, we've been bombarded with news of the personal computer shakeout," IEE analyst Gordon Curran said. "But we can assure you that the European market is alive and well."

Curran predicted that the total sales of personal computers in Western Europe would increase from $2.9 billion in 1984 to $4.5 billion this year. He said four nations accounted for three-quarters of the sales in 1984, with British users buying 24% of the micros sold; West German users, 23%; French users, 17%; and Italian users, 10%.

The outlook through the end of the decade in Europe continues to be encouraging, according to IEE. The firm's projections show the current installed base of nearly 3 billion units growing steadily to 11.9 billion units by 1990.

The European market's relative infancy accounts for the growth potential, IEE analyst Brigitte Morel said: Less than 5% of Western Europe's white-collar work force currently use micros, but Morel predicted a 22% penetration rate by 1990.

Small business market share

Small businesses accounted for 37% of European micro sales in 1984, falling just short of the 39% share of the market held by large corporations. Morel said the vast number of shopkeepers and artisans on the continent represent vast growth potential in the single-unit, small business market sector.

"There are 50 million small shopkeepers in Europe, and these are people with a great need for help and assistance from computers," Morel said. She said such demand would be especially evident in less industrialized nations such as Spain and Greece. In Spain, IEE predicted shipments would nearly double this year from the 26,000 units purchased in 1984.

In IEE's vendor breakdown, the IBM Personal Computer continues to gain market share for Big Blue. IEE said IBM's domination will jump from 1984's 28% to a 36% market share this year. The firm predicted Italian vendor Ing. C. Olivetti & Co. will displace Apple Computer, Inc. for the No. 2 spot in 1985, its second year in the market.

"The strength of Olivetti's partnership with AT&T has helped them," Curran said. "And their growth is a good reflection of the strength of the market, because almost all of their sales are to new customers," he added.

Troubled Apple will see its share drop from 17% to 10% this year, IEE predicted. Although Apple continues to lead in the French market, Morel said, the firm has been badly hurt overall by the uncertain positioning of the Macintosh. "The price of the Macintosh has put it out of reach [for] many private users . . . and is clearly not accepted by medium- to large-size companies because of its incompatibility and lack of communications features," she said.

In micro software, Morel said, native firms in several non-English-speaking countries dominate the word processing market, but U.S. leaders such as Lotus Development Corp. and Ashton-Tate have maintained their stranglehold on other applications. Only three small European vendors sell data base management programs, for example, and no European vendor has a significant presence in spreadsheet or integrated packages.

Chip vendor representatives wield claims at NCC session

By Tom Henkel
CW Staff

CHICAGO — "My chip is better than your chip," was the thrust of a highly marketing-oriented session on up-and-coming microprocessors at the National Computer Conference this month.

Each of four panelists — representing National Semiconductor Corp., Zilog, Inc., AT&T and Motorola, Inc. — promised that firm is committed to providing the highest performance microprocessor on the market, and each either flatly stated or strongly implied that his microprocessor was better than that of his competitors.

Session leader Richard Mateosian, representing National Semi, set the tone for the session when, in presenting details of National Semi's 32332 microprocessor, he used several charts that claimed the 32332 was 1.06 times faster than Motorola's just-released 68020. Mateosian said the 32332 would be shipped to sample customers in December.

Clara L. Serrano, the panelist representing Motorola, disagreed with Mateosian's performance claims and said Motorola could produce similar charts that indicate the 68020 is faster than the 32332. She added that she did not come to the session with specific information comparing the 68020 with other vendors' microprocessors.

Serrano, in giving a general overview of the 68020, said the microprocessor offers at least four times the performance of the older 68000. She claimed the 68020 offers performance of roughly 2 to 3 million instructions persecond (Mips). She also pointed out that the 12-MHz version of the 68020 is available in volume quantities now and that the chip has already been shipped.

Benjamin Ng, one of the microprocessor architects at AT&T, presented details of that company's 32100 chip set. Ng said the CPU in the 32100 chip set offers roughly the same internal performance as the 68020, in the the 2- to 3-Mips range. He said the CPU is immediately available.

In presenting details of Zilog's Z80000 microprocessor, company representative Robert Anderson said that microprocessor will offer performance ranging from 1.1 Mips for a 10-MHz version to 4.7 Mips for the top-end, 25-MHz model. Anderson said sample quantities of the Z80000 will be available in the fourth quarter.

ORACLE

The portable version of IBM's DB2 and SQL/DS

COMPATIBILITY

The ORACLE relational database management system is fully compatible with IBM's SQL/DS and DB2. SQL/DS and DB2 represent IBM's latest generation of database management technology for IBM's largest computers. ORACLE's capabilities and user interface - the SQL language - are identical to those of SQL/DS and DB2. Programs written for SQL/DS and DB2 will run unmodified on ORACLE.

PORTABILITY

SQL/DS and DB2 run only on IBM mainframes; ORACLE runs on IBM mainframes, DEC, DG, AT&T, HP, STRATUS, and several other manufacturers' minicomputers, and on a wide range of microcomputers including the IBM PC/XT and PC/AT. All versions of ORACLE are identical and include a complete implementation of SQL – not a subset.

CONNECTABILITY

Having the same software running on your mainframe, minis, and micros greatly simplifies the task of connecting your machines into a network. ORACLE's network software allows microcomputer users to directly access data stored in the shared database on the mainframe or minicomputer, or copy that data into the database on their micros and operate independently.

Oracle introduced the first relational DBMS and the first implementation of SQL back in 1979. Today, eight of the ten largest U.S. companies use ORACLE. In fact, INC MAGAZINE ranks Oracle as the fastest-growing software company in the USA. Surprised? Don't be. ORACLE is the number one relational DBMS, with thousands of installations on IBM mainframes, DEC, DG, AT&T, HP, STRATUS and most other vendors' minis and micros. Even the IBM PC.

To attend the next free, half-day seminar in your area or receive additional information, write Oracle Corp., Dept. C4, 2710 Sand Hill Rd., Menlo Park, CA 94025, or call 415/854-7350. Following is the ORACLE seminar schedule:

ORACLE Seminar Schedule

Albany	Sept 19
Albuquerque	Sept 19
Anchorage	Aug 29
Atlanta	Jul 25, Sept 18
Austin	Aug 6
Boise	Jul 30
Boston	Jul 16, Aug 14, Sept 17
Chicago	Jul 17, Sept 19
Cincinnati	Sept 10
Cleveland	Aug 6
Dallas	Jul 16, Aug 8, Sept 11
Denver	Jul 18, Aug 13, Sept 19
Detroit	Jul 23, Aug 20, Sept 24
Greensboro	Aug 1
Houston	Jul 30, Aug 28, Sept 24
Huntsville	Jul 31
Indianapolis	Sept 17
Kansas City	Sept 12
Los Angeles	Jul 25, Aug 27, Sept 26
Minneapolis	Aug 1
New Orleans	Aug 13
New York City	Jul 31, Aug 14, 28, Sept 11, 26
Newport Beach	Aug 14, Sept 17
Oklahoma City	Sept 17
Omaha	Aug 7
Orlando	Jul 17
Philadelphia	Jul 18, Sept 18
Phoenix	Aug 6
Portland	Aug 6
Rochester	Jul 23

WORLD DIGEST

CW International News Network

TOKYO — At a recent press conference here, Fujitsu Ltd. announced that future production and development of its microcomputer systems will be converted from Digital Research, Inc.'s CP/M to Microsoft Corp.'s MS/DOS operating system. Fujitsu's line of 16-bit personal computers will continue to use the Intel Corp. 8086, 80186 and 80286 microprocessors but will now run MS/DOS Version 3.1 and compatible software. Fujitsu has also announced plans to incorporate Microsoft's Xenix on some hard-disk models in order to support environmental applications development.

DARMSTADT, West Germany — At a recent conference here, more than 300 members of Computer Professionals for Peace and Social Responsibility met to discuss the U.S.-planned Strategic Defense Initiative (SDI) and to propose resistance, much like their counterpart organization in the U.S., Computer Professionals for Social Responsibility in Palo Alto, Calif.

In a letter to West German Chancellor Helmut Kohl, the computer professionals explained that the security required for the SDI project could not be positively attained due to the magnitude and intended purpose of the project. The professionals, gathered from several European countries, also claimed that the drain on brain power and financial resources for SDI could not be justified.

MUNICH, West Germany — Members of the Open Unix Group — Groupe Bull, ICL Co., Nixdorf AG, Ing. C. Olivetti & Co., N. V. Philips and Siemens AG — who recently chose AT&T's Unix as the European Standard programming language, have summarized their efforts at standardizing Unix in a "Portability Guide," which should be available in September.

The reference work is based on AT&T's System V Interface Definition and will incorporate all the work the group has done since their founding in November 1984. The report will provide the suggested guidelines for future software development. Along with such problems as a common Unix floppy disk format, the group has tackled some problems typically not encountered in the U.S., such as the language — Unix is documented in English and the character set used is English.

STUTTGART, West Germany — IBM Deutschland GmbH here announced a major reorganization of its marketing sales divisions. Two areas that had been divided since 1981, Information Systems/Projects and Information Systems/Applications, have been rejoined; all dealer activities have been incorporated into the Dealer Marketing & Sales division; and there are now only five regional directors for West Germany — in Hamburg, Dusseldorf, Frankfurt, Stuttgart and Munich.

The reasoning behind this, IBM said, was to shorten the decision-making and reporting process. Industry insiders say that the measures reflect developments in the U.S., where the Personal Computer divisions, operating in the red, are being integrated into the rest of IBM — and kept on a shorter corporate leash.

SYDNEY, Australia — Repeat business, continuing for 15 years, has finally accumulated in an order worth $25.5 million for ICL Australia Ltd. The contract, signed by Woolworths Ltd., is for the supply of seven of ICL's Series 39 mainframes, formally released here two weeks ago, plus 150 supermarket scanning systems. It follows an initial order by Woolworth's last April for 50 of the same systems to be used in pilot sites. Woolworth's has been an ICL user since 1970.

CALENDAR

WEEK OF AUGUST 25

AUGUST 25-30, DALLAS — **Systems Development: Design Phase.** Contact: Arthur Young & Co., Arthur Young Education Center, 1950 Roland Clarke Place, Reston, Va. 22091.

AUGUST 26, NEW YORK — **CICS/VS Application Programming — Command Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Aug. 26-30 in Atlanta and Aug. 28 in New York.

AUGUST 26-27, DALLAS — **The Information Center.** Contact: Data-Tech Institute, P.O. Box 2429, Lakeview Plaza, Clifton, N.J. 07015.

AUGUST 26-27, ARLINGTON, VA. — **Networking the IBM Personal Computer.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 28-29 in Hasbrouck Heights, N.J.

AUGUST 26-27, SAN ANTONIO — **CICS/VS Performance and Tuning.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 26-27, ST. LOUIS — **Unix/Xenix.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held Aug. 28-29 in Philadelphia.

AUGUST 26-28, CHICAGO — **Audit and Control within IBM's VM Operating System.** Contact: MIS Training Institute, Inc., 4 Brewster Road, Framingham, Mass. 01701.

AUGUST 26-28, CHICAGO — **IBM's SNA: Security and Audit Concerns.** Contact: MIS Training Institute, Inc., 4 Brewster Road, Framingham, Mass. 01701.

AUGUST 26-28, CHICAGO — **Testing Computer Software.** Contact: U.S. Professional Development Institute, 1620 Elton Road, Silver Spring, Md. 20903.

AUGUST 26-28, HARTFORD, CONN. — **Office Automation.** Contact: The Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 26-28, LONG ISLAND, N.Y. — **PBX/CBX.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 26-28, MEMPHIS — **Data Communications Systems.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 26-28, MONTREAL — **Local-Area Networks.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705.

AUGUST 26-28, NEW YORK — **The IBM Personal Computer.** Contact: Data-Tech Institute, P.O. Box 2429, Lakeview Plaza, Clifton, N.J. 07015.

AUGUST 26-28, SAN DIEGO — **The IBM Personal Computer.** Contact: Center for Advanced Professional Education, Suite 110, 1820 E. Garry St., Santa Ana, Calif. 92705. Also being held in Cherry Hill, N.J.

AUGUST 26-28, PARSIPPANY, N.J. — **Vsam in Cobol.** Contact: Chubb Institute, P.O. Box 342, 8 Sylvan Way, Parsippany, N.J. 07054.

AUGUST 26-29, DENVER — **CICS/VS Application Design.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Aug. 27 and 29 in New York.

AUGUST 26-29, FORT LEE, N.J. — **IMS/DB (DL/1) Application Programming.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 26-29, FORT LEE, N.J. — **Vsam: Its Structure and How to Use It.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held in Los Angeles.

AUGUST 26-29, NORFOLK, VA. — **Using Microcomputers in Government.** Contact: U.S. Professional Development Institute, 1620 Elton Road, Silver Spring, Md. 20903.

AUGUST 26-29, SAN FRANCISCO — **Integrated Information Technology Conference and Exposition.** Contact: Jill Nieman, National Trade Productions, Inc., 2111 Eisenhower Ave., Alexandria, Va. 22314.

AUGUST 26-30, HOUSTON — **Analysts' Skills Workshop.** Contact: Elise Rabalais, Learmonth & Burchett Management Systems, Inc., Suite 405, 2800 N. Loop W., Houston, Texas 77092.

AUGUST 26-30, LOS ANGELES — **CICS Application Programming — Macro Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

AUGUST 27-29, HOUSTON — **SAS Basics Course.** Contact: SAS Institute, Inc., Box 8000, SAS Circle, Cary, N.C. 27511.

AUGUST 27-29, CARY, N.C. — **SAS Applied Time Series Analysis and Forecasting Course.** Contact: SAS Institute, Inc., Box 8000, SAS Circle, Cary, N.C. 27511.

AUGUST 28-29, SAN ANTONIO — **Recovery/Restart.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 5-6 in Fort Lee and Chicago.

WEEK OF SEPTEMBER 1

SEPTEMBER 3, NEW YORK — **VSAM: Its Structure and How to Use It.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 5, 10 and 12 in New York.

SEPTEMBER 3-4, CHICAGO — **CICS/VS Performance and Tuning.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 3-4 in Fort Lee.

SEPTEMBER 3-6, ATLANTA — **Vtam: From Start to Finish.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 3-6 in Denver.

SEPTEMBER 3-6, FORT LEE, N.J. — **IMS/Data Communications Programming.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024.

SEPTEMBER 3-6, SAN ANTONIO — **CICS/VS Logic and Debugging.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 3-6 in Fort Lee.

SEPTEMBER 4, NEW YORK — **CICS/VS Application Programming — Macro Level.** Contact: On-Line Software International, Inc., Fort Lee Executive Park, Two Executive Drive, Fort Lee, N.J. 07024. Also being held Sept. 6, 9, 11 and 13 in New York and Sept. 9-13 in San Antonio.

SEPTEMBER 4-6, LOS ANGELES — **Information Systems Architecture.** Contact: Software Institute of America, Inc., 8 Windsor St., Andover, Mass. 01810.

SEPTEMBER 5-7, SAN FRANCISCO — **Third Personal Computer Faire.** Contact: Computer Faire, Inc., 181 Wells Ave., Newton, Mass. 02159.

WEEK OF SEPTEMBER 8

SEPTEMBER 8-11, CAMBRIDGE, MASS. — **1985 Society of Manufacturing Engineers (SME) World Congress on the Human Aspects of Automation.** Contact: SME, P.O. Box 930, One SME Drive, Dearborn, Mich. 48121.

SEPTEMBER 8-12, BOSTON — **Managing the Explosion: End-User Computing and Emerging Technologies.** Contact: Kimberly Gandia, Society for Information Management, Suite 600, 111 East Wacker Drive, Chicago, Ill. 60601.

SEPTEMBER 9-10, ATLANTA **Principles of Prototyping.** Contact: Association for Systems Management, 24587 Bagley Road, Cleveland, Ohio 44138.

SEPTEMBER 9-11, VANCOUVER, B.C. — **International Communications and Computer Exhibition.** Contact: Tracon Exhibitions, 202-535 W. 10th Ave., Vancouver, B.C., Canada V5Z 1K9.

SEPTEMBER 9-11, WASHINGTON, D.C. — **Federal Computer Conference.** Contact: Federal Computer Conference, P.O. Box N, Wayland, Mass. 01778.

SEPTEMBER 9-11, WASHINGTON, D.C. — **The Data Entry Management Association's (Dema) Ninth Annual Data Entry Management Conference & Exhibition.** Contact: Marilyn S. Bodek, Dema, P.O. Box 16711, Stamford, Conn. 06905.

SAS Institute Inc. Announces

Lattice C Compilers for Your IBM Mainframe

Two years ago...

SAS Institute launched an effort to develop a subset of the SAS® Software System for the IBM Personal Computer. After careful study, we agreed that C was the programming language of choice. And that the Lattice® C compiler offered the quality, speed, and efficiency we needed.

One year ago...

Development had progressed so well that we expanded our efforts to include the entire SAS System on a PC, written in C. And to insure that the language, syntax, and commands would be identical across all operating systems, we decided that all future versions of the SAS System—regardless of hardware—would be derived from the same source code written in C. That meant that we needed a C compiler for IBM 370 mainframes. And it had to be good, since all our software products would depend on it.

So we approached Lattice, Inc. and asked if we could implement a version of the Lattice C compiler for IBM mainframes. With Lattice, Inc.'s agreement, development began and progressed rapidly.

Today...

Our efforts are complete—we have a first-rate IBM 370 C compiler. And we are pleased to offer this development tool to you. Now you can write in a single language that is source code compatible with your IBM mainframe and your IBM PC. We have faithfully implemented not only the language, but also the supporting library and environment.

Features of the Lattice C compiler for the 370 include:

- **Generation of reentrant object code.** Reentrancy allows many users to share the same code. Reentrancy is not an easy feature to achieve on the 370, especially if you use non-constant external variables, but we did it.
- **Optimization of the generated code.** We know the 370 instruction set and the various 370 operating environments. We have over 100 years of assembler language systems experience in our development staff.
- **Generated code executable in both 24-bit and 31-bit addressing modes.** You can run compiled programs above 16 megabytes in MVS/XA.
- **Generated code identical for OS and CMS operating systems.** You can move modules between MVS and CMS without even recompiling.
- **Complete libraries.** We have implemented all the library routines described by Kernighan and Ritchie (the informal C standard), and all the library routines supported by Lattice (except operating system dependent routines), plus extensions for dealing with 370 operating environments directly. Especially significant is our byte-addressable Unix®-style I/O access method.
- **Built-in functions.** Many of the traditional string handling functions are available as built-in functions, generating in-line machine code rather than function calls. Your call to move a string can result in just one MVC instruction rather than a function call and a loop.

In addition to mainframe software development, you can also use our new cross-compiler to develop PC software on your IBM mainframe. With our cross-compiler, you can compile Lattice C programs on your mainframe and generate object code ready to download to your PC.

With the cross-compiler, we also offer PLINK86™ and PLIB86™ by Phoenix Software Associates Ltd. The Phoenix link-editor and library management facility can bind several compiled programs on the mainframe and download immediately executable modules to your PC.

Tomorrow...

We believe that the C language offers the SAS System the path to true portability and maintainability. And we believe that other companies will make similar strategic decisions about C. Already, C is taught in most college computer science curriculums, and is replacing older languages in many. And almost every computer introduced to the market now has a C compiler.

C, the language of choice...

C supports structured programming with superior control features for conditionals, iteration, and case selection. C is good for data structures, with its elegant implementation of structures and pointers. C is conducive to portable coding. It is simple to adjust for the size differences of data elements on different machines.

Continuous support...

At SAS Institute, we support all our products. You license them annually; we support them continuously. You get updates at no additional charge. We have a continuing commitment to make our compiler better and better. We have the ultimate incentive—all our software products depend on it.

The competition...

If you would like to compare, the other vendors of 370 C compilers are: AT&T, Whitesmiths, Ltd., WATCOM Products Inc. (CMS only), Oracle Corp., Amdahl Corp. (UTS only), and IBM Corp. (VM/IX only). We think you will choose the Lattice C compiler from SAS Institute.

For more information...

Complete and mail the coupon today. Because we've got the development tool for your tomorrow.

SAS.

SAS Institute Inc.
SAS Circle, Box 8000
Cary, NC 27511-8000
Telephone (919) 467-8000 x 280

I want to learn more about

☐ the C compiler for MVS software developers
☐ the C compiler for CMS software developers
☐ the cross-compiler with PLINK86 and PLIB86

today...so I'll be ready for tomorrow.

Please complete or attach your business card.

EDITORIAL

The rollover in retrospect

Statistics and surveys are wonderful things. Datapro Reserach Corp.'s most recent statistical effort, for instance, produced some numbers that may help to shed light on what has been happening to hardware manufacturers' own numbers.

Each year for the past six years Datapro has canvassed the user community, and each year around National Computer Conference time, *Computerworld* has published charts and a story about Datapro's results.

And each year the headlines and stories recount user satisfaction with their systems. Despite the occasional piece of bad news, the numbers tend to confirm a long history of user satisfaction with their hardware systems.

But this year Datapro's statistical picture is significantly different in one key aspect. Although a clear majority of users surveyed continued to express satisfaction with their systems and had no reservations about recommending their systems to prospective buyers, one row of Datapro numbers changed dramatically. This, in turn, changed the story and changed the headlines. The row in question contained the average-age-of-system numbers and showed that the majority of respondents had obtained their systems during the past year.

The year 1984 appears to have been a very active one for Datapro's respondents — busy with trading, buying and upgrading of their systems. Of the more than 900 systems managed by the Datapro sample, the average system age was 9¼ months. A year earlier, the Datapro average-age-of-system row had shown that of 1,000 systems reported in the survey, the average age was more than 3 years.

Besides indicating that there was a widespread rollover in mainframe hardware last year, what else did the Datapro survey reveal?

- Systems overwhelmingly met user expectations. This indicates that the purchasers were generally well informed about their systems' capabilities, and the systems lived up to the sales departments' representations.
- Outright purchase was the preferred acquisition method.
- Respondents were generally willing to recommend their vendors' systems to others. The one dip below the 90th percentile occurred in the anonymous "other" column.
- The respondents, on the average, indicated that their systems performed well — not excellently, not poorly, but well.

How does all this stack up against previous years? About the same. There should be no great surprises involved in using mainframe systems, and the respondents indicated that there were none for them.

When combined with the fact that these appear to be new systems under review, the similarity of this year's responses with those of previous years, covering older systems, indicates that mainframe vendors have achieved a consistency of product quality. A good mechanic makes a good machine. The surveys show that user satisfaction decreases as system life cycles come to an end, but users' attitudes toward the vendors have remained consistent even as the systems changed with time.

One question remains, however. Is the massive rollover in systems that occurred in 1984 a cyclical phenomenon? The numbers for previous years back to 1980 revealed no similar pattern, but those years saw businesses in the U.S. emerge from a major recession. We'll just have to wait until the current systems are 3 years old. The year 1987 may be another boom year for the computer industry.

LETTERS

Copy protection seen as nuisance

The passing of Visicalc [CW, June 17] alerts us to the inherent hazard of copy-protected software: If my program diskette becomes unreadable, where do I go?

Whatever software I depend upon, I must be able to use it indefinitely in my own machine, without reliance on a vendor that may charge any price at any time or may cease to exist. Therefore, I treat my store-bought original software diskettes like photographic negatives — I only run from "prints."

Sometimes this requires a "copy-cracker" to circumvent vendor copy-protection schemes. I think this nonpiracy use of copiers is justified, but it is a big nuisance.

Copy protection is an expression of pernicious greed by vendors. I have no doubt that some software marketers would love to encrypt our very eyeballs and charge a pound of flesh royalty for every instance of use of their precious code. It needn't be this way. We can stop this nonsense if we all boycott copy-protected software.

VIEWPOINT

Customer satisfaction in the data business

THE DATA CENTER
John P. Murray

How many data center managers are really concerned about the perception of the value of their operations to their client community? Of those who do have such a concern, how many are actively engaged in measuring and improving their data center service levels?

I suspect the answer to the first question is "many." I suspect the answer to the second question may well be, "not very many." A number of data center managers seem to feel that if the phone is not ringing madly with complaints from clients, everything must be going fairly well. In fact, it may be that the clients have become so frustrated they simply no longer bother to complain about poor data center service. You can be certain, however, they are complaining to someone.

The data center, like it or not, is a service business. The continued good will and support of clients — its users — are key to both the acceptance of the data center effort and the career progression of the management team. Because the data center manager ultimately stands to gain or lose more than anyone else in the handling of this issue, the climate relative to the clients should be of paramount interest.

Some have taken steps to gauge clients' opinions of the data center service level. Some have used surveys designed to gather various types of data about the different aspects of the center's function. That data is then used to judge how well data center managers are doing and to identify those areas that may require additional attention to improve the overall service level.

Data base of survey results

Building a data base of survey results provides a means of developing trends that can highlight those areas that may be improving or deteriorating. Using that information can assist in building strategies that will effect improvements. It can also be used to refute arguments about the decline in service levels if such is not, in fact, the case.

So, the use of these surveys does help. The problem is that the process of sending out a data center survey to clients only can be rather one-dimensional. This is because these surveys only usually ask the clients to rate the current level of service from their particular perspective and are based on a narrow range of issues — these questionnaires often contain fewer than 20 questions.

Although a well-designed survey, even of this limited size, can provide significant information about the preceptions of the clients, they do have several faults when you think about it. In addition to asking specific questions, these surveys attempt to elicit only cursory information about additional changes or improvements clients would like to see. They usually do not provide any way to determine the perceptions of those who work in the data center relative to their view of the service level.

At least one organization has developed a method that can be used to provide a much more comprehensive approach both to judging and increasing client satisfaction levels. I became aware of this approach when I saw a presentation by Richard Mathews, president of Mathews & Co.

Improved communication between MIS, clients

It was Mathews' contention that use of his system establishes improved communication between MIS and its clients. He also stated that use of the process will assure increased quality of the MIS product. In fact, he maintained that his company "does not know of a single case where our system failed to improve dramatically [information systems] service to customers while producing significant savings in time and dollars."

There are two aspects of this system that set it apart and probably make it more effective than the "roll your own" survey many currently conduct. First, it is a comprehensive survey, consisting of more than 90 questions, conducted by a third party who can bring objectivity to the task. It also provides the basis for matching the results of the survey against the Mathews & Co. composite data base of other organizations it serves. This helps address the "Compared to what?" issue that can arise when surveys present information based upon one installation.

As I understand the process, the people who work in the data center are asked to rate the service they provide on the same basis as the clients. According to Mathews, sometimes the disparity between these two views of the service level can make a significant contribution to opening lines of communication. If nothing else, the data center employees can also fill out the survey the next time there is an in-house survey. The results of such an effort could prove interesting.

This is not necessarily an exclusive endorsement of Mathews & Co. — there may be other firms that provide such a service. The point is that we need to take advantage of every opportunity to improve our service in the customer's view.

Murray is director of management and information services for American Breeders Service, a DeForest, Wis., division of W. R. Grace & Co. and is the author of Management Information Systems as a Corporate Resource.

Controlling change from a practical perspective

READER'S PLATFORM
Brooks W. Johnson

Nearly everyone responsible for the development of systems has experienced the frustration associated with change during the development process. The inability to limit this change results in missed target dates, ineffective use of resources, reduced morale and cost overruns. It is imperative, therefore, to limit change wherever possible.

The classic approach to controlling change has been succinctly stated by the maxim "Freeze the specification." This approach dictates that after obtaining the necessary user sign-offs, the specifications are cast in concrete and cannot be changed.

If change is effectively outlawed, it cannot be a problem. However, in systems of only moderate complexity, many months may pass between these sign-offs and actual implementation. In these cases, freezing the specifications is not simple; it is simplistic. The specifications cannot be frozen any more than the business itself can be frozen.

Changes to the business during the development of large systems is inevitable. It is equally inevitable that some of these changes will directly affect the system.

Management will necessarily require that the changes be incorporated into the system, but not restricting change would be opening a Pandora's box making a successful implementation virtually impossible. The first step in limiting change is to classify each request as either a change *to* the specification or a change to the scope.

Changes to the specifications are those items that directly affect the logical design and viability of the system. These changes must be made for the system to remain functional.

Changes to the scope are those items that can be done independently of the system even though they may be dependent upon the system. This is not a contradiction; the distinction is whether the system is dependent upon the change or whether the change is dependent upon the system. Once this categorization has been made, the second step is to freeze the scope of the system.

The simplicity of freezing the scope is obvious, yet it is often overlooked. This is partly because changes to the specifications are usually imposed by the user, but changes to the scope are often initiated and condoned within the MIS department.

It is extremely tempting even in the early stages of development to expand upon the initial project scope. This is not to imply that the initial analysis be restricted to the original project definition.

This amplification of the scope of the analysis should not, however, be translated into a corresponding expansion of the project definition. If there are justified reasons for increasing the scope, all phases of the development need to be redefined. This includes new project definitions, resource requirements and schedules.

Changes during early phases

Changes in the scope during the early phases usually result in extended deadlines and additional resource requirements. It is those changes that occur later in the development process that present problems. These changes, or enhancements, are often the result of increased awareness of the system potential by the user. It is compounded by a corresponding increase of the user's needs by the MIS department.

These changes are often casually mentioned by the users and generally accepted into the specifications because they are easy to accommodate.

In many small shops where there is direct contact between programmers and users, the changes may even be incorporated without the knowledge of MIS management. Usually, however, the MIS management accepts the enhancements to improve the reputation of the department with minimal effort.

Although many of the changes can be easily accommodated, problems soon arise when what at first appeared to be simple, suddenly becomes complex. Because these enhancements rarely have the benefit of thorough analysis, it is often only after considerable resource expenditure that the complexity of the request is discovered.

The user soon becomes frustrated with the failure of MIS to accommodate what appears to be a simple addition. To save departmental reputation and to reap some benefits, additional resources are used to complete the change.

Expansion of the project scope, especially outside of the formal request procedure, is playing with fire. Changes to the specifications will provide more than enough complications to the project. In those few cases where the requirements are misjudged, the results will be disastrous.

The best course is to resist the temptation and treat all changes in scope as separate projects. This will allow both proper study and allocation of resources to each request. The way to ensure a positive perception of the MIS department is to provide systems that perform tasks as originally defined and to produce these systems within the budget and on schedule.

Incompatible systems exchange E-mail

Sears uses Disoss, Profs to network subsidiaries

By John Desmond
CW Staff

NEW YORK — At Sears Communications Network, Inc., users of two incompatible IBM office system software products, the Professional Office System (Profs) and the Distributed Office Support System (Disoss), are sending electronic mail to each other via a custom interface.

That method of overcoming product limitations is typical of the way Sears Communications is stretching the capabilities of IBM's office system software. The company is using Disoss in an electronic mail network that includes Sears Communications, the Allstate Insurance Co. and the Sears Merchandise Group.

Gerard R. Weis, vice-president of Data Communications and Software Service with Sears Communications Network of Arlington Heights, Ill., said, "From a standpoint of communications technology, the advantage of using Disoss is that it provides within the IBM product set a common denominator to facilitate the exchange of electronic messages and revisable form documents."

Speaking at a recent Yankee Group seminar on office automation here, Weis detailed how Sears uses the IBM hardware and Systems Network Architecture (SNA) network it has in place for electronic mail and library functions between its five business groups. Sears Communications provides communications services for Allstate; Coldwell Banker Group, a commercial and residential real estate firm; Dean Witter Reynolds, Inc., a brokerage and financial services company; Sears Merchandise, the retail and catalog merchant; and Sears World Trade, which is involved in international merchandise trade.

Combined, the network encompasses 110 mainframes; 137 IBM 3725-type communications controllers; 34,500 3270-type terminals; 28,500 point-of-sale terminals linked to IBM Series/1 minicomputers; 168,120 circuit miles of AT&T-type wiring; and a $50 million-plus annual operating budget.

Of the five, only Dean Witter currently has no plans to use Disoss. Coldwell Banker and Sears World Trade are just beginning to use the product. No corporate mandate requires use of Disoss or any other product; each business group makes its own buying decisions, Weis said.

Sears Communications' office automation strategy is to provide services for document preparation, filing and retrieval; messaging, document and file distribution; and professional support such as calendaring, Weis said.

Ramis II, Natural branching out

SOFTALK
John Desmond
CW Senior Writer

If fourth-generation languages are ever to outdistance Cobol, the products must be useful to a wider range of users than that third-generation mainstay.

For two major fourth-generation language vendors, the road to wider acceptance leads in opposite directions. Martin Marietta Data Systems has a loyal information center following for the former Mathematica Products Group, Inc.'s Ramis II fourth-generation language. The challenge for it is to have Ramis II accepted in mainstream DP shops, as opposed to end-user-oriented environments. Software AG has a loyal professional programmer following for its Natural fourth-generation language. The challenge for it is to tap the end-user applications development market.

Users in both environments would benefit from the two vendors' success in implementing their strategies. As information centers expand and become more closely tied to central MIS, end users need the ability to produce applications that support large numbers of users. The increasing power of personal computers is challenging software vendors to offer products such as full-function fourth-generation languages to satisfy end users.

MARTIN MARIETTA

software AG OF NORTH AMERICA, INC

Both companies contend that fourth-generation languages are being accepted in mainstream DP environments for developing production applications, not just ad hoc reporting or one-time applications. Richard Cobb, former president of Mathematica and now head of Martin Marietta's Information Technology Division and the acknowledged founder of nonprocedural languages, told Ramis II users at a recent meeting in Washington, D.C., that 95% of IBM sites are expected to have a fourth-generation language installed by 1989.

Martin Marietta research on how fourth-generation languages are used shows that 68% of users employ their

Programming teams: On the way out?

By Edward Warner
CW Staff

CHICAGO — Large programming teams composed of dozens of workers will in 10 years go the way of the steam engine and the nickel cigar, according to Nicholas J. Marselos, a consultant in AT&T's Network Software Center.

Marselos presented his thesis — that "programming teams are on the way out" — in a panel discussion on the future of programming teams at the recent 1985 National Computer Conference here. Software teams are threatened, Marselos explained, because of rising labor costs and the existence of fourth-generation languages that automate the production of code.

The situation, he observed, is analogous to that faced by the American auto industry. If automation advances, such as robots, are going to be used to produce cars because of high labor costs, "I say we are headed to where the robots manufacture software," Marselos said.

Litton, MSA ink accounting software marketing pact

WOODLAND HILLS, Calif. — Litton Computer Services has reached an agreement with Management Science America, Inc. (MSA) to market MSA's line of accounting software to Litton's remote computer services customers.

According to a spokesman, Litton will maintain most of the MSA product line, including accounts payable and receivable systems, fixed assets accounting, general ledger, purchasing, payroll/personnel, facilities for micro-mainframe links and MSA's Information Expert system.

Litton said it expects the MSA products to be available by the end of the year. Users will have two payment options: a base charge plus a 30% royalty or a one-time fee based on the client company's annual revenue. Companies with $20 million or less in revenue pay a 5% license fee, companies with $50 million or less in revenue pay a 10% fee, and companies with more than $50 million in revenue pay a 15% fee. Users who buy the MSA software outright would pay approximately $1 million.

Litton Computer Services, part of the Mellonics Systems Development division of Litton Systems, Inc., operates data centers in the New York, Los Angeles and Washington, D.C. areas.

Litton Computer Services can be reached through P.O. Box 4040, Woodland Hills, Calif. 91365.

Martin Marietta introduces optional Ramis II interfaces

PRINCETON, N.J. — Martin Marietta Data Systems has announced optional Ramis II interfaces to IBM's DB2 and SQL/DS data bases. Ramis II is Martin Marietta's fourth-generation language.

A spokesman said that the interfaces facilitate the automatic conversion of Ramis II nonprocedural requests into SQL commands. As with other Ramis II external file interfaces, identical Ramis II commands are used regardless of the data source. Initially, Ramis II support for DB2 and SQL/DS provides report generation, graphics and relational capabilities.

The DB2 and SQL/DS interfaces feature the following: automatically built dynamic SQL requests that prevent unexpected full file searches; a menu-assisted facility that extracts a table description from the DB2 or SQL/DS catalog where authorized, automatically generates an equivalent Ramis II external file description and permits modification to the description; and all Ramis II data analysis capabilities.

The Ramis II DB2 and SQL/DS interfaces will be available in September. Prices will range from $3,375 to $6,750, depending on host CPU.

Martin Marietta Data Systems, a branch of Martin Marietta Corp.'s Information Technology Division, can be reached through P.O. Box 2392, Princeton, N.J. 08540.

IBM systems monitor debuts

DAYTON, Ohio — Shopsmith, Inc. has announced Shopmon, a performance monitor for IBM and IBM-compatible MVS systems.

Shopmon uses cross-memory services to provide wait analysis, address space analysis, disk and tape analysis and systems analysis, including CPU plots, real storage usage, paging and swapping and master console support, according to the vendor.

With the product's optional interface to Cullinet Software, Inc.'s IDMS data base management system, Shopmon can gather information from the address space where IDMS is executing without signing on to IDMS. Active tasks, systems statistics and data base statistics can be viewed online and in real time.

Shopmon provides visual access to all areas available through the use of standard IDMS commands for data base areas, storage pools, program and reentrant pools, program definitions, memory displays and IDMS region maps.

Shopmon for MVS is priced at $15,500, and the IDMS interface is priced at $6,500, according to the vendor.

Additional information is available from Shopsmith, which is located at 6640 Poe Ave., Dayton, Ohio 45414.

Decision support tool bows

GREENBELT, Md. — Martin Marietta Data Systems has announced MAS-Decision Maker, software that provides decision support capabilities for the company's MAS-Manufacturing System software. The product runs in IBM's MVS and DOS/VSE environments.

MAS-Decision Maker runs with the company's MAS data bases, written in the former Mathematica Products Groupe, Inc.'s Ramis II fourth-generation language. MAS-Decision Maker is said to aid non-DP professionals in solving problems, answering ad hoc questions and anticipating changes on the shop floor without technical assistance.

MAS-Decision Maker is available for use with the six modules of MAS-Manufacturing, including the following: master production scheduling, inventory control, cost control, manufacturing control, engineering control and purchasing. The product will be integrated into all of Martin Marietta Data Systems' IBM-based MAS applications software products, including MAS-Financials, MAS-Payroll, MAS-Personnel and MAS-Material Lot Tracking.

MAS-Decision Maker is priced at $30,000.

Martin Marietta Data Systems is located at 6303 Ivy Lane, Greenbelt, Md. 20770.

SYSTEMS SOFTWARE

■ **Advanced Systems Concepts, Inc. has announced that its Status/38 resource accounting aid for the IBM System/38 has been enhanced with IBM's CPF operating system accounting code and the ability to produce invoices for chargebacks to user departments.**

Status/38 now runs independently of the system history file by making use of CPF journaling facilities. The product provides inquiries, reports, graphs and charts of data accumulated by itself and the CPF operating system.

The chargeback system, which allows users to be billed for use of system resources, allows variable rates based on job name and type. A series of fixed charges can be included, and charges can also be shared between several groups or individual jobs.

Status is available for a one-time fee of $1,500.

Advanced Systems Concepts, Suite 8, 1350 Remington Road, Schaumburg, Ill. 60195.

■ **Morino Associates, Inc. has announced the Mics Mazdamon Component for the MVS Integrated Control System network management product line. Mics Mazdamon Component runs in IBM MVS environments.**

The product supports Mazdamon, the Vtam network monitor developed by Mazda Computer Corp. of Ontario, Canada. The data summarization and processing capabilities of Mics allows users to summarize network data to the degree required for analysis. The product also provides access to high-volume network data.

The Mics data validation process is said to ensure the integrity of network data. Support of Mazdamon by the Mics Installation Accounting Component permits billing of network resources at the user and terminal level for IBM TSO sessions and at the terminal level for other interactive sessions. Mics Mazdamon data can also be used for network capacity planning.

Mics Mazdamon Component is priced at $3,900 for the initial year and $1,300 for the first renewal year. The standard license fee for the prerequisite Mics base set is $37,900 for the initial year and $9,800 for the first renewal year.

Morino Associates, 8615 Westwood Center Drive, Vienna, Va. 22180.

■ **Lawson Associates, Inc. has announced Access/38 and Access/DB systems software for IBM System/38 users.**

Access/38 allows users to define and execute their own on-line inquiries and to generate reports using standard System/38 data. Access/DB enables data processing professionals to create on-line interactive RPG-III programs allowing for additions, changes and deletions to the data base.

According to a spokesman, the two modules may be used separately or together, with Lawson and other types of software.

The Access/38 module is priced at $9,000, and the Access/DB module is priced at $4,000.

Lawson Associates, 2021 E. Hennepin Ave., Minneapolis, Minn. 55413.

APPLICATION PACKAGES

■ **Trax Softworks, Inc. has introduced Version 3 of its Electronic Spread Sheet (ESS) for IBM mainframes under IBM's VM/CMS and MVS/TSO.**

ESS Version 3 allows users to create a three-dimensional spreadsheet. Pages have been added and the spreadsheet size extends to the virtual storage on the IBM system, the vendor said.

ESS now includes a natural recal-

Continued on page 36

Uptime

Provide 24 hour CICS access

CICS Dynamic File Allocation is a must for effective CICS scheduling. It is the gateway to non-stop, round-the-clock CICS systems. It eliminates batch update constraints. It guarantees bullet proof restarts. It allows you and your batch jobs to add and remove CICS files at will, without disrupting your user community. Site license $4,000.

Read JES Reports from CICS

Give your CICS terminals and PCs access to JES reports. Let end users (1) browse time critical reports, (2) control report distribution, and (3) schedule and submit their own jobs. The CICS Queue Command Facility (CQCF) is an efficient, cost effective tool for producing and controlling JES II reports. Site license $3,000.

Netec International, Inc.
P.O. Box [illegible] • Dallas, TX [illegible]
214 [illegible] • Telex [illegible]

Continued from page 24

culation capability. The product can determine the order for recalculating the spreadsheet by analyzing the references in each formula, the vendor said.

ESS Version 3 is priced at $12,000.

Trax Softworks, 10801 National Blvd., Los Angeles, Calif. 90064.

■ **Tower Systems International, Inc. has announced Release 5.3 of Omnicalc, its electronic spreadsheet for IBM mainframes. The product runs in IBM's VM/CICS, VM/CMS and MVS/TSO operating environments.**

Release 5.3 features menu prompting for all spreadsheet commands. The feature allows for the execution of all Omnicalc commands from the menu. On-line Help screens are said to enable users to create spreadsheets without having to study the manual and memorize commands. The spreadsheet menu facility uses the same tree structure as Lotus Development Corp.'s 1-2-3 spreadsheet program.

Release 5.3 of Omnicalc also has enhanced its command structure to include cell range execution for most commands. Cell ranges can span through two or three dimensions. Release 5.3 allows a spreadsheet size of 255 columns, 32,767 rows and 25 planes.

Other features include three-dimensional modeling, multiple spreadsheet consolidation and on-line Help files.

For a two-year lease, Omnicalc 5.3 for CICS and CMS is priced at $1,995 each year; the TSO version is priced at $1,995 for both years.

Tower Systems, 19782 MacArthur Blvd., Irvine, Calif. 92715.

■ **Visual Engineering, Inc., has introducted three-dimensional scene modeling software for Digital Equipments Corp. VAX and Pyramid Technology Corp. superminicomputers running under the AT&T Unix operating system.**

Visual:Genisys includes a hierarchical data base and simulated camera and lighting control facilities. A rendering package allows 3D objects and scenes to be generated from 3D data, the vendor said.

Ray-traced images can be produced in constant time, and images can be computed using less powerful minicomputers or workstations. Visual:Genisys also offers wire-frame, facet-shaded and smooth-shaded rendering styles.

Visual:Genisys is priced from $10,000 to $75,000, depending on configuration.

Visual Engineering, Suite 200, 2580 N. First St., San Jose, Calif. 95134.

■ **Mass Systems Co. has announced a Lumber and Building Materials Distribution Management (LBM/DM) system for the IBM System/36 and the recently introduced System/36 Personal Computer.**

LBM/DM is designed for wholesalers and retailers of building materials and lumber. The LBM/DM comes with five modules: order entry, billing, inventory control, accounts receivable and sales analysis. The product includes point-of-sale support, such as price quotations, credit control capabilities and units of measure facilities. LBM/DM is priced at $10,000 for the System/36 Personal Computer and $16,000 for the System/36.

Mass Systems, 28 Edgehill Road, Waltham, Mass. 02154.

■ **Signal Technology, Inc. has announced Version 4 of its Smartstar development and information management software for Digital Equipment Corp. VAX processors.**

Smartstar Version 4 includes a Relational Query Processor interface to VAX RMS files. Smartstar consists of two components. The first component contains an application design interface, a data updating and retrieval interface and a general report writer. The second consists of Smartcall, which allows users to integrate screen-driven processes into applications, and Opal, an interface for relational queries and reporting to RMS and RDB files.

Smartstar options include Request, a relational report and query system for a nonprocedural Interactive Query Language. Request supports RMS file access and RDB/VMS relational data base access. Smartstar is priced from $3,500 for the Microvax to $25,000 for the VAX 8600.

Signal Technology, 5951 Encina Road, Goleta, Calif. 93117.

■ **Superset, Inc. has announced Postraster, a graphics image postprocessor, for its Professional Graphics Mainframe workstation.**

Postraster allows the user to produce special effects design work automatically. A color averaging feature controls components of the raster or pixels to create stylized graphics.

Other capabilities include texturing, overlay, image insertion, edge detection and nonproportional text and image scaling, the vendor said.

Postraster is priced at $3,000 until September 1.

Superset, 11025 Roselle St., San Diego, Calif. 92121.

■ **Gateway Design Automation Corp. and Elxsi International have announced a parallel processing version of Gateway's Aidsim concurrent fault simulation program for the Elxsi System 6400 multiprocessors.**

Aidsim-A operates on up to 10 processors and is said to provide an increase in processing speed. Aidsim-A is supported by up to 192M bytes of physical memory and provides speed and capacity for fault simulation of logic networks of more than one million gates.

Aidsim-A is priced from $100,000 for one CPU up to $350,000 for 10 CPUs.

Gateway Design Automation, 235 Great Road, Littleton, Mass. 01460.

■ **The Wheatley Group, Ltd. has announced an applications package for reinsurance companies that provides on-line calculation for reinsurance policies.**

Wins-RE for the IBM System/38 includes capabilities for processing claims, contract syndicates, quota share and treaty abstracts. The package includes on-line update and ad hoc reporting facilities. The system can calculate reinsurance, retrocession, reinstatement and conduct automatic currency conversions on-line, the vendor said.

Wins-RE is priced at $175,000.

The Wheatley Group, One Huntington Quadrangle, Melville, N.Y. 11747.

■ **J. L. Ham & Associates, Inc. has announced Release 3 of its Fixed Asset Control One System for the IBM System/38.**

According to a spokesman, features in Release 3 include expanded asset identification fields, a restructured calculation cycle, support for additional levels of totals, facilities to consolidate reporting from multiple companies, support for recording and reporting of asset transers and an additional set of reference fields.

Release 3 of the Fixed Asset Control One System is priced at $6,000 per CPU, including source code.

J. L. Ham & Associates, Maple Professional Building, 693 Maple St., Plymouth, Mich. 48170.

■ **Gary Brown Associates, Inc. has announced an on-line Accounts Receivable Management System (Arms/OL) for the IBM System/36.**

Arms/OL includes support for up to 999 divisions. A System Control File permits the specification of divisions, receivable classes and statement messages. Users can customize discount information and incorporate late charge restrictions and percentages and aging criteria for customers through a customer master file. The package allows credit memos to be posted to invoices by the system or by the user. Other features include monthly or daily late-charge posting and the ability to interface with invoicing systems through a batch-post input file.

Arms/OL costs $3,500.

Gary Brown Associates, Suite 2, 322-B Edwardia Drive, Greensboro, N.C. 27409.

■ **Cericor, Inc. has announced that its CDA-5000 software now runs on Data General Corp.'s Distributed Systems engineering workstations.**

Also available on a variety of workstations, including systems from Apollo Computer, Inc., Sun Microsystems, Inc. and Masscomp, the CDA-5000 software is a design automation package that can be used to create and simulate the operation of schematic diagrams.

Design functions include interactive logic design and simulation and design capture, which can be performed with menus, mouse controls and windowing functions.

The Cericor CDA-5000 products are priced from $15,000 to $19,900, depending on configuration.

Cericor, Lakeside Plaza One, 5225 Wiley Post Way, Salt Lake City, Utah, 84116.

■ **Kone Systems, Inc. has introduced a fixed asset tracking and accounting control package for Digital Equipment Corp.'s VAX processors.**

Maps/FA provides accounting control of acquisitions, maintenance and transfer and retirement of corporate assets, the vendor said. The product includes four depreciation methods and pro rata convention capabilities. Maps/FA can be

modified in accordance with changing business and regulatory requirements.

Maps/FA can be integrated with other Ross application packages, including its general ledger. By validating entries through Maps/GL, calculations and period-end depreciation entries are automatically posted. Pricing for Maps/FA ranges from $11,000 to $21,500, depending on the VAX model.

Ross Systems, Suite 210, 1860 Embarcadero Road, Palo Alto, Calif. 94303.

■ Xerox Computer Services, Inc. has announced Version 3 of its Accounts Payable system for the IBM 4300 series mainframes.

The enhanced version features expanded invoice entry and control options, an added invoice history file, improvements in batch numbering and the ability to identify accounts by purchase order number. The product also includes the ability to calculate due dates and discounts, the vendor said.

Accounts Payable Version 3 is priced at $25,000.

Xerox Computer Services, 5310 Beethoven St., Los Angeles, Calif. 90066.

■ Mentor Graphics Corp. has introduced simulation tools for use with its Idea series of engineering workstations for computer-aided engineering.

The Quicksim products allow users to perform logic and fault simulation and timing analysis from one application interface, the vendor said.

Quicksim for Logic Simulation gives users 12-state simulation capabilities. Simulation support includes 96 classes of models as well as the Mentor Graphics Hardware Modeling Library and Behavioral Language Models. It is priced at $14,500, according to the vendor.

Quickfault includes a concurrent algorithm that provides fault analysis and graphic display of fault detection as well as undetected faults and fault blockages. It is priced at $16,500.

Quicktime provides capabilities for worst-case timing modeling functions and allows users to incorporate the same display format as other Quicksim functions. Quicktime costs $14,500.

Mentor Graphics, 8500 S.W. Creekside Place, Beaverton, Ore. 97005.

■ Informatics General Corp. has introduced a Word Processing Interface (WPI) for use with its Basis data base management system on Wang Laboratories, Inc. VS systems.

Basis WPI, designed for use by law firms and corporate legal departments using Wang's word processing systems, allows documents compiled on the Wang system to be loaded into user-selected data bases. Word processing files that have been converted to data base files can also be retrieved and converted back into document form.

Basis WPI costs $15,000. The Basis data base management system is priced at $70,000.

Informatics, 21031 Ventura Blvd., Woodland Hills, Calif. 91364.

■ Tom Software, Inc. has announced that its line of accounting and vertical market business software now runs on Digital Equipment Corp.'s Microvax II.

The company also announced that its Tombasic Basic II language interpreter will run under DEC's Ultrix operating system.

Tom Software, 127 S.W. 156th St., Seattle, Wash. 98166.

■ Intergraph Corp. has introduced the Robot Modeling and Programming System for its Digital Equipment Corp. VAX-based computer graphics system.

According to the vendor, the product can be fully integrated with Intergraph software and includes project management capabilities as well as graphics libraries that allow users to link descriptive information and engineering data to individual components.

The software can solicit and store information, including the robot's coordinate system, motion type and degree of freedom. The Robot Modeling and Programming system costs $30,000.

Intergraph, One Madison Industrial Park, Huntsville, Ala. 35807.

■ Vertex Information, Inc. has announced Release 2 of Harvey, its on-line health insurance claims processing system for use under IBM's DOS/VSE operating system.

A flexible option file, extended claims processing capabilities and additional inquiry screens have been added to the release, the vendor said. Harvey 2 is written in Cobol and runs on IBM 4300 series mainframes running CICS.

Price of the product including source code ranges from $60,000 to $180,000.

Vertex Information, 2205 Fortune Drive, San Jose, Calif. 95131.

■ CAE Systems, Inc., a division of Tektronix, Inc., announced that its computer-aided engineering (CAE) design software is now available for Digital Equipment Corp.'s Microvax II.

CAE 2000 VAX/VMS is a hierarchical software system that incorporates schematic capture, logic and circuit simulation capabilities, the vendor said.

Prices begin at $16,000.

Tektronix, 1333 Bordeaux Drive, Sunnyvale, Calif. 94089.

You could win $1000 in the first international computer-generated art contest

CW Communications, Inc. — the world's leading publisher of computer-related newspapers and magazines — is proud to announce its sponsorship of the very first international computer-generated art contest.

All entries must be computer-generated, mounted, and suitable for display. Entries will be judged primarily on their artistic merit, but execution will also be taken into account. Two prizes will be awarded. The winning individual will receive $1,000 (U.S.). The winning organization will receive a trophy.

Winners will be announced during the First Pan Pacific Computer Conference (in Melbourne, Australia, this September 10-13). All entries will be put on display in a special exhibit at this conference.

Enter today. Send your entry to:
The First Pan Pacific
Computer Art Competition
P.O. Box 212 (11 The Avenue)
Hampton, Victoria; Australia 3188.

Entries must be received by August 23rd

FIRST PAN PACIFIC COMPUTER CONFERENCE / CW COMMUNICATIONS

Honeywell has better office integration than Wang or IBM.

That's right.

Introducing The Honeywell Office

Honeywell is about to change the way you think about office automation.

Because standalone and non-compatible product lines aren't enough to provide the most dramatic increases in productivity and corporate profitability.

The biggest increases in performance can only come from office automation capabilities like integration and networking that allow all systems to "talk" to each other—which is why we designed The Honeywell Office.

The Honeywell Office integrates office processing, data processing, networking and communications, and distributes these resources across a single, compatible product line of micros, minis, and superminis.

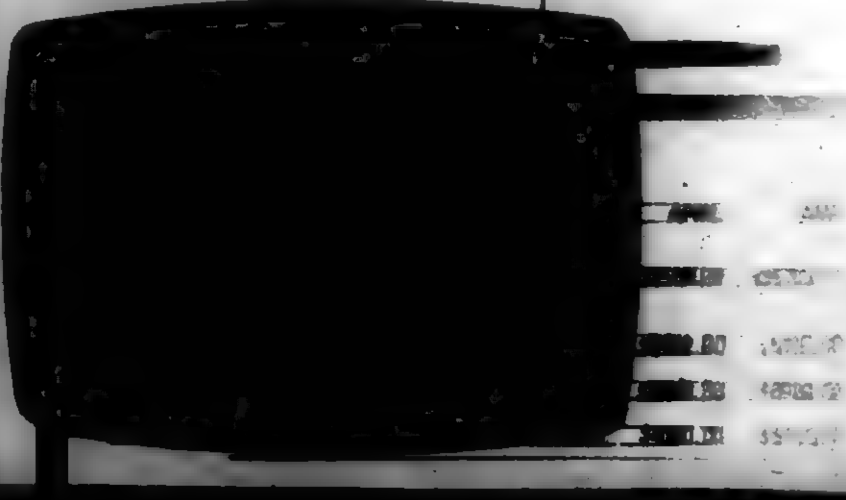
It's the reason why one customer credited our approach to office integration with helping to increase sales by 50%.

Here's how The Honeywell Office can help you manage and direct your information resources more efficiently.

Unsurpassed Office Processing

We started with competitive word processing in virtually every area and developed superiority in the crucial area of file management.

INFOCALC, our three dimensional spreadsheet, lets you merge financial data and text.



Honeywell ties PC processing and terminals into one departmental system.

But we didn't stop there.

We integrated decision support tools and distributed networking capabilities so that your departments can transfer, share, and combine office and data processing information with simple commands. Without unnecessary steps. Without costly duplication of efforts.

InfoCalc, our integrated spreadsheet, lets managers access information from the department across the country as easily as the sales office from across the corridor.

There is also a database management capability that allows professionals to set up their own departmental databases.

And that's only half of it.

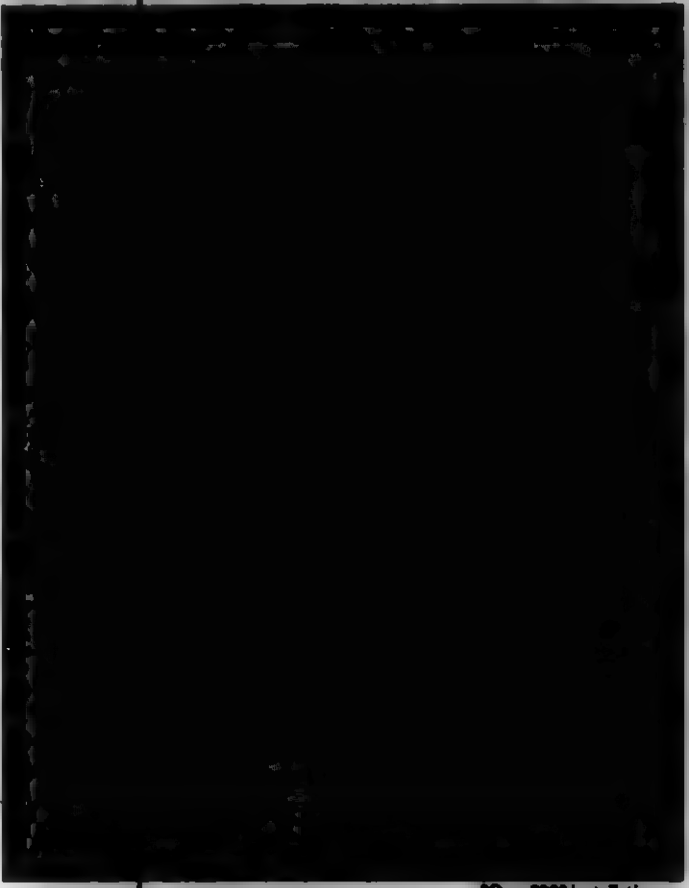
The other half is how *well* it integrates the office side of your business with the data processing side.

Flexible Data Processing

No word processing vendor can integrate the extensive array of data processing products you'll find with The Honeywell Office.

The Honeywell Office provides unrivaled flexibility by combining office and data processing into one distributed, departmental system. It supplies integrated transaction processing, database management, program development tools, query and report, data entry and specialized industry applications.

So now your accounting, marketing, and other departments can access and control their information.



*Over 3000 installations.

And when it comes to writing new applications, we offer a full complement of programming languages that include BASIC, COBOL, FORTRAN, ASSEMBLY, ADA, C, RPG, and PASCAL.

Quite simply, The Honeywell Office gives you a better growth path, stronger database management, and greater systems flexibility than our competitors.

Honeywell.

Advanced networking lets you connect all your departments.

Integrated Networking and Communications

Honeywell expertise in networking and communications helped the Metropolitan Life Insurance Company create one of the largest distributed branch office networks of its kind.

Over 1300 Met Life district sales offices in North America are automated using our DPS 6 minicomputers, linked through an SNA network that supplies reliable branch office-to-IBM host communications.

Unlike competitors who require mainframes for network control, we aren't limited to creating star networks. Our ISO based Distributed Systems Architecture (DSA), gives you the flexibility to configure ring, mesh, peer-to-peer, and other styles of networks.

For local and remote user-to-user communications, our integrated electronic mail helps minimize network costs by letting you route your mail and documents in economical quantities, and prioritizes transmission by time of day.

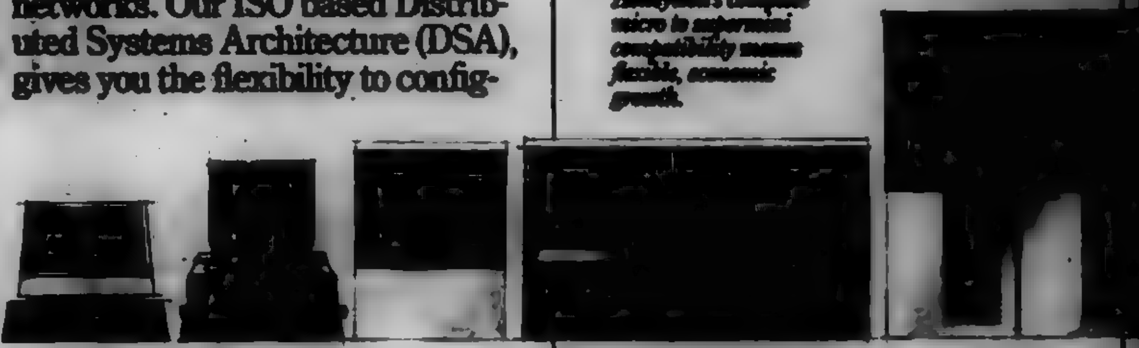
Finally, The Honeywell Office lets you access network services such as CompuServe, Dow Jones, The Source and Weslaw right from your desktop.

Complete Micro to Mini to Supermini Compatibility

From the very beginning, The Honeywell Office was designed for complete compatibility from top to bottom. Compatible hardware. Compatible software. And compatible communications facilities.

One consistent interface is presented to all systems, small and large, permitting the virtually limitless exchange of information. Standard menus and prompts provide major user training benefits. Upgrade options are more flexible and economical because all systems can be linked together.

Honeywell's complete micro to supermini compatibility means flexible, economic growth.



Service and Support that Make All Systems Go

The Honeywell Office is backed by TotalCare,™ our comprehensive nationwide support program.

Uptime, after all, is everything, and TotalCare™ provides everything you need in programs and services that can be tailored to help meet your requirements.

The Honeywell Office The Smarter Choice

The Honeywell Office reflects a strong commitment and adherence to a standard interface, state-of-the-art technology, and a modular, open ended design, so that your office can grow as your needs do.

For more information call 1-800-328-5111, Ext 2783. Or write:
Honeywell Information Systems,

Together, we can find the answers.

Honeywell

WE SERVE OVER 800 DATA NETWORKS WORLDWIDE.

NCR COMTEN ACCEPTANCE IS GETTING AROUND.

At this very moment, NCR Comten systems are helping to manage the massive flow of data between more than 400,000 terminals and host computers around the world. It's a growing acceptance that's uncommon in this young industry.

Gaining this acceptance hasn't been easy. We've had to prove our expertise, stability and reliability to 800-plus exacting data communications users. Every day. Every month. Every year.

But prove it we have. In industries ranging from aerospace to retailing. From government services to banking. Our responsiveness to their needs is just one reason why five out of six customers we've ever had are still our customers.

But there are other good reasons why we retain our customer base. They're outlined in our special executive briefing. Write "Data Communications Systems," NCR Comten, Inc., Department 8015, 2700 Snelling Ave. N., St. Paul, MN 55113. Or call 1-800-334-2227. In Canada, call 1-800-543-5713.

NCR COMTEN. KNOWN BY THE COMPANIES WE KEEP.

TOOLS from page 28

■ Independent Computer Systems, Inc. has announced the ICS Inventory Management system for the Honeywell, Inc. DPS 6 minicomputer.

ICS is an on-line, menu-driven application aimed at allowing non-data-processing users to manage and control inventory information, a spokesman said. The package assists in recording inventory movements and balancing carrying costs with the stock necessary to service internal or customer orders.

In the ICS system, inventory information is retained at the inventory item, location and detail transaction levels. The system supports various costing methods, including standard, average, last-in, first-out and first-in, first-out methods.

Optional interfaces to the ICS Order Entry, Purchase Orders, General Ledger and Preventative Maintenance Systems are supported.

The ICS Inventory Management system costs $14,500.

Independent Computer Systems, Suite A-201, 10640 N. 28th Drive, Phoenix, Ariz. 85029.

■ Mentor Graphics Corp. has enhanced the logic and fault simulators within the Quicksim family of simulation tools for its Idea series of engineering workstations.

The Quicksim packages offer design engineers logic and fault simulation, as well as worst-case timing analysis. The packages include the Quicksim logic simulation package, the Quickfault interactive fault simulation package and the Quicktime timing analysis package.

Quicksim provides interactivity of stimulus and probes and 12-state simulation for accurate MOS verification. Mixed-mode simulation allows switch, gate, functional, behavioral and physical models to be used by the simulator.

Quickfault's concurrent algorithm provides fault analysis and a graphical display of cumulative fault detection, undetected faults and fault blockages. Quicktime provides worst-case timing and timing using the same stimulus and display formats as all Quicksim family functions.

Customers who have Mentor Graphics' logic and simulation package will receive free upgrades. Upgrade options for the Design Station, including Quicksim logic simulator and Quicktime timing analysis, cost $14,500.

Quickfault fault simulation upgrades for the Idea workstation cost $16,500. All the Quicksim family products are scheduled for August availability.

Mentor Graphics, 10200 S.W. Nimbus Ave., G7, Portland, Ore. 97223.

LANGUAGE from page 23

fourth-generation language for ad hoc reporting, 67% use it for applications development by professionals, 53% use it for applications development by end users, 46% use it for information center purposes and 37% use it for decision support. Accounting, marketing, sales and personnel departments all employ the product, the company claimed.

But the major stumbling block to making Ramis II useful for production environments, according to users interviewed at the meeting, is the product's inability to support concurrent data base updates. The limitation makes use of Ramis II in large shops impractical. Aware that the restriction is hindering Ramis II's growth, the company promised an updated Data Base Manager for Ramis II, for fourth-quarter delivery, that supports concurrent updating.

Admitting past failures to meet certain deadlines, Martin Marietta adopted an apologetic stance at the users group meeting and promised to improve. "We are hopeful that problem is behind us. We're better organized and have increased staffing," Cobb said.

At Software AG's users group meeting in Nashville, Chairman of the Board John Maguire said, "More and more of our new products are moving into end-user areas." The big announcement at the meeting, the alliance of Software AG and Ashton-Tate, backed up that direction. The alliance is expected to tie Software AG's Natural/Connection micro-mainframe link and Ashton-Tate's Dbase II data base management system and Framework spreadsheet products.

Software AG's long-term strategy outlined by Maguire — a familiar one in the industry — is to provide "one-stop shopping for all software and information services needs." To be implemented over five years, the strategy will involve office systems, third-party agreements and customized applications.

From its established position in the MIS world with the Adabas data base management system, Software AG Executive Vice-President Peter Page argued that Software AG has an advantage in extending to end users, such as in offices. Stuart Miller, president and chief executive officer of Software AG, said the shift toward end-user computing is a natural one for the company. "People who've used our products have always been MIS people, technical people. But as the technology has advanced, and the availability of more comprehensive tools for end users has increased, this is a more appropriate direction for us to take," he said.

Which company is in the better position? Users would do well to compare their own needs with the traditional strengths of each product.

TEAMS from page 23

To build a programming team that works well together, Marcelos advised his listeners to do the following:

■ Provide team management that is neither too domineering nor too passive. To lean in the former direction will make the team too dependent, to lean to the latter will create a team with too many chiefs, he said.

■ Never give awards to only one team member. If the entire team does not share successes, individual rivalries will arise.

■ Choose team members who are competent but who do not aspire to superstar status. Programming superstars can be too individualistic, he said.

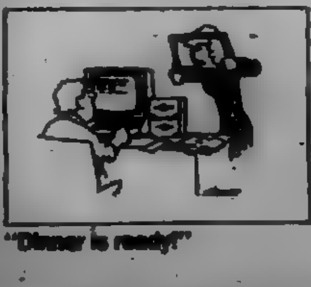
■ While teams composed of dozens of programmers will fade away, the small, specialized programming team will remain, Marcelos predicted. The small teams, he added, will be composed of a few highly skilled programmers who will work with sophisticated development tools to produce applications that are too complex to be created through automation advances.

While he did not agree with Marcelos' prediction of a limited, 10-year life expectancy for the programming team, co-panelist Prof. J. Daniel Couger, distinguished professor of computer and management science at the University of Colorado, noted that computer professionals' personalities make them unlikely candidates for membership in a team of any sort.

Pointing to research he conducted on what motivates computer professionals, Couger reported that computer professionals have a high need for career advancement and challenging work and a low need for social interaction on the job.

The need for growth, he elaborated, means that "they want measurement of their own progress. The ambiguity that occurs [in a group] is sometimes distasteful to them," he said.

Personality issues are one of the reasons that work groups will become an endangered species, Marcelos elaborated. Often the wrong people — people who are too aggressive or with skill levels that are too low — are chosen for team membership. "The whole human relationship system is often forgotten in team building," he said.



"Dinner is ready!"

Xerox
Telecopier 495-I

Xerox
Telecopier 295

In 25 seconds the Xerox Telecopier 495-I will deliver high resolution copies of your documents by telephone anywhere in the world.

It gets your whole message across. Signatures, graphics, charts, even photographs are handled by the Telecopier 495-I's digital technology—perfect for high volume centralized telecopier operations.

The 495-I can do even more. It can be linked to your Xerox or IBM PC via FaxMaster software. Together they are the ultimate time and money saver in facsimile communications.

The Xerox 495-I using FaxMaster is highly automated and simplifies distribution with a few

Around the world in 25 seconds.

25 seconds from
New York to Tokyo.

keystrokes. It stores documents electronically, can forward messages automatically, and acts as an electronic mail terminal. Remote users can even call a FaxMaster hub and retrieve documents stored in their mailboxes. And it keeps a meticulous accounting of every activity, delivery, and pickup, worldwide.

FaxMaster automatically dials the numbers. If it reaches a busy signal, it will continue down the distribution list, then redial until it gets through. It can even transmit to multiple locations at night or on the weekend when phone rates are lowest.

With the G1/G2 analog compatibility option, the Xerox Telecopier 495-1 can communicate with slower speed facsimile terminals. The RS-232-C option lets it convert and print ASCII encoded information from many other computers.

Xerox also offers a desktop digital facsimile terminal, the Xerox Telecopier 295. It's easy to operate, and will transmit your entire message in 25 seconds or less.

Both the 495-1 and 295 are compatible with other makes of facsimile terminals, and workstations that are part of Team Xerox.

To find out more about what Xerox Telecopiers and FaxMaster can do for your office, call us at 1-800-TEAM-XRX, extension 66, or fill in and send the coupon below.

We can make a world of difference.

SEARS

from page 23

"It was very natural for us to look at Disoss," specifically Disoss Version 3 Release 2, Weis said. Sears runs four copies of the product, two in the Sears Merchandise group. "With the architecture we have in place today, we can decide to run additional copies of Disoss if the network volume reaches a point where that's a good economic trade-off," Weis said.

The combined companies have more than 2,000 enrolled Disoss users. Of those, more than 700 are also users of Profs. Other external users, who are not enrolled with identifications on Disoss, are bridged to Disoss via custom interfaces.

Products the company supports with Disoss include the IBM Displaywriter, the 5520 Administrative System and 8100/Distributed Office Support Facility systems. The network supports approximately 215,000 Disoss transactions per month and has 45,000 documents stored in Disoss libraries.

Sears uses IBM's Application Program Interface (API), a tool provided with Disoss, to build bridges from Disoss to other programs or applications such as Profs.

API allows users to author CICS transactions such as those for fetching a document from a library, storing a document in a library and distributing a document.

Sears also uses API to link Disoss with an internal communications subsystem, dubbed Senden, used to send messages and collect and transmit data in bulk. The company has more than 6,000 Senden users, with many different types of hardware.

> **"**
>
> *'The general reaction with the business groups that have installed the product has been favorable.'*
>
> — Gerard R. Weis
> Sears Communications Network, Inc.

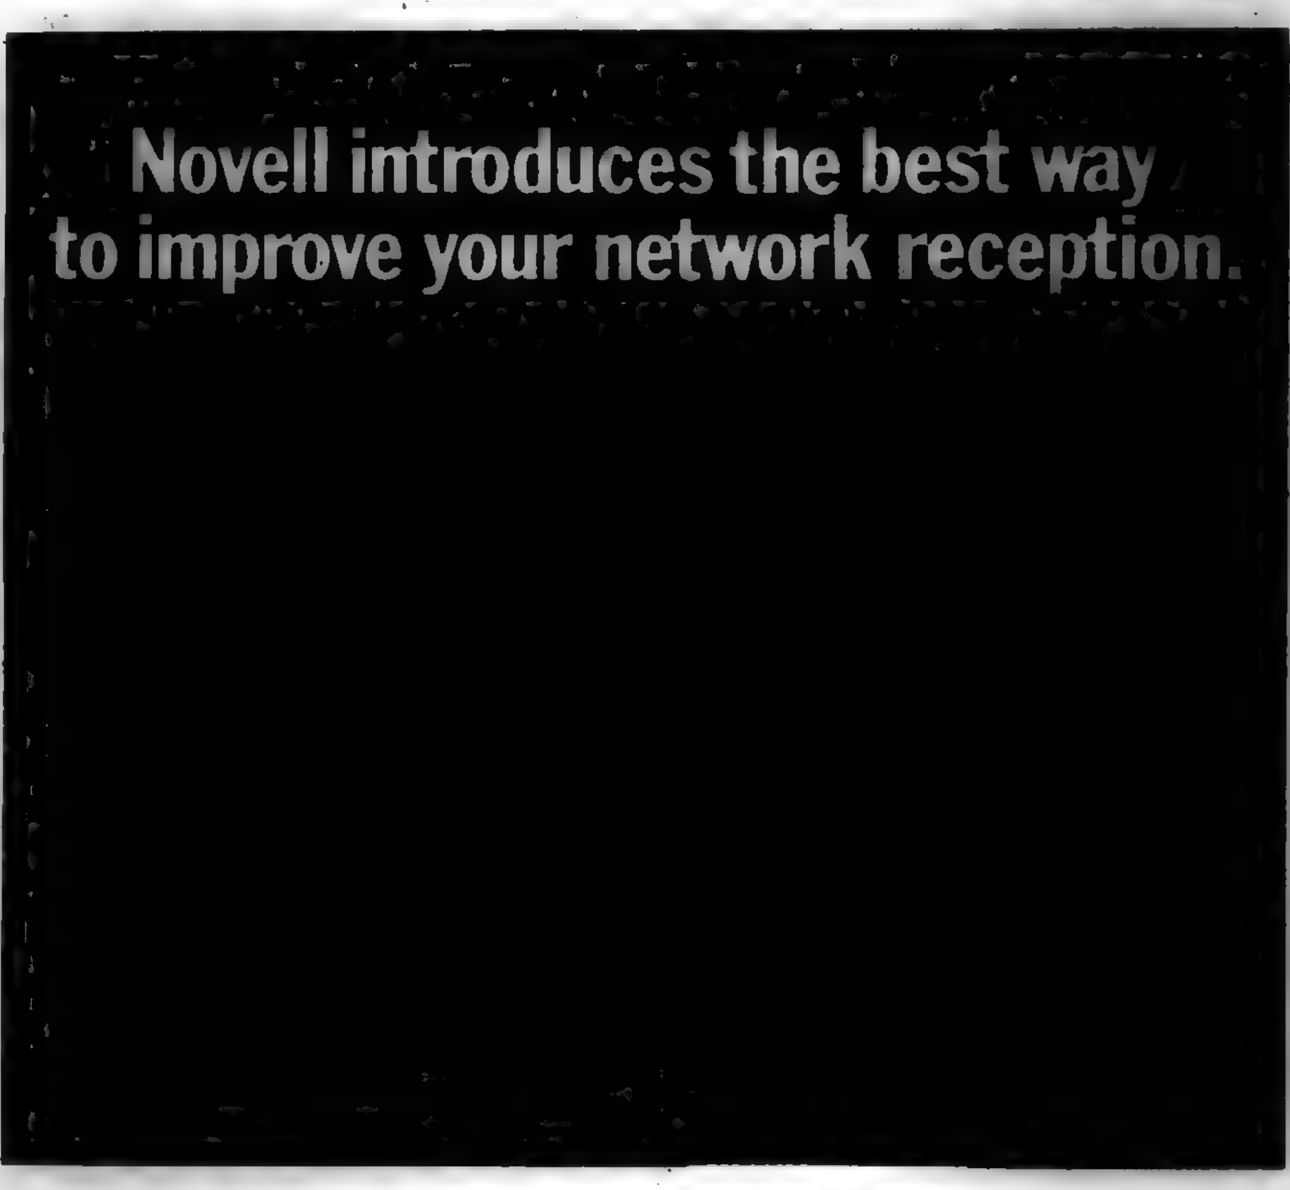
Weis said he plans to install Disoss 3.3 at Sears Communications when it becomes available, but he is not sure the IBM-coded connection between Profs and Disoss that the release would provide will meet all his requirements. He noted that the ability to send revisable text between Profs and Disoss is not being offered in the release.

For the future, Weis hopes IBM will offer Personal Computer/LU6.2 SNA support, improved systems utilities, cross-systems usability such as the Profs-Disoss link, a workstation strategy and a focus on strategic subsystems such as System/36.

A key consideration for companies considering widespread Disoss implementation is user training, Weis said.

"It is clearly a complex product, and it takes the right level of technical skills to install. All the business groups have found it requires an effort to train the users and enforce the discipline within their groups to effectively use the [Disoss] functions. There is no substitute for adequately planning" the implementation of Disoss, Weis said.

Characterizing his company's experience with Disoss, Weis said, "The general reaction with the business groups that have installed the product has been favorable. I think the resources it consumes are reasonable for the work people are getting done with it. Except for the usual types of problems you have with products, it's been a positive experience."

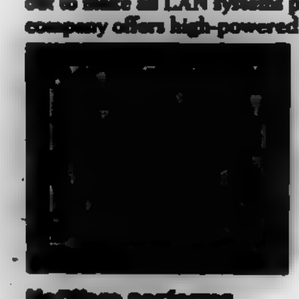


Novell introduces the best way
to improve your network reception.

In a relatively short time, the local area network (LAN) market has attracted a host of suppliers. Each has a LAN system to sell. And each is fighting for a proverbial piece of the LAN pie.

Amid all those LAN contenders, only one company is out to make all LAN systems perform better. Only one company offers high-powered LAN operating system software that improves the performance of every major LAN system on the market. Only one company is finishing the job the other LAN makers begin.

The company is Novell. The company's solution is NetWare.



NetWare performs.

How good is NetWare? In recent benchmark tests conducted by Novell as well as Belmont Laboratories, NetWare significantly improved the performance of every LAN system tested* In fact, NetWare currently runs on 24 different LAN hardware systems, outperforming the original software for every one.

Serving all LANkind.

Whichever LAN hardware you choose, NetWare is the LAN software designed to get the most out of your network. When it's time to improve the reception your network gets from those who use it every day, plug into NetWare. It's from Novell, the people dedicated to serving all LANkind.

For more information, call or write Novell, Inc.

*LAN Benchmark Report, May, 1985, Novell, Inc. and "Software, Not Hardware Key to LAN Performance," *PC Week* 1/15/85.

NOVELL

The local area network for companies with bigger things in mind.

How far do your communications needs take you?

The next building? The next city? The next continent?

With Codex, the answer is anywhere you want.

The Codex LAN offers you unmatched flexibility and efficiency.

It lets PC's not only share information, but expensive resources such as printers and disks.

It allows you to include minicomputers and mainframes from many vendors in your network, so everyone can share resources.

You can even tie one local area network in Boise to another local area network in Bangkok. Or Boston. Or both.

The Codex LAN is a complete systems solution. With software that allows sharing of peripherals. Capabilities for both baseband and broadband communications. Plus all the internetworking gateways you need to tie your LAN to other networks in your organization—whether it's our network or someone else's.

Then there's the advantage of Codex experience. For the past twenty-three years we've literally written the book on networking, statistical multiplexing, adaptive routing, protocol intervention, you name it.

If you're beginning to get the feeling that there's no end to what a Codex network can do for you, you're absolutely right. Our communications experts will work with you in mapping out a strategy that'll satisfy your needs today, and for years to come.

For more information about Codex's forward thinking networking solutions, write Codex Corporation, Dept. 707-261, 20 Cabot Boulevard, Mansfield, MA 02048. Or call **1-800-426-1212, ext. 261.**

Now all anyone needs to access your database is the ability to understand a few simple commands.

From now on your end-user won't suffer days of frustration waiting for you to get the time to handle a database query.

Because from now on he can do it himself. In minutes.

Introducing THORN EMI's Friendly Query System. It runs on your IBM mainframe, and it's menu-driven. It's so easy to use, you don't even need a user's manual.

All your end-user has to do is type his name and access code. The software itself tells him exactly what to do next. To retrieve any kind of information, for any kind of report. And the only computer language he needs to know is English.

Which means no more jumping through hoops to clear stacks of database information requests off your desk. Stacks that may be backlogged six weeks. Or six months.

FQS can be installed by your staff in under two hours—or about twice the time it takes to teach an end-user to master it.

So if you can still find your phone behind those stacks of database information requests, call THORN EMI for a 30-day free trial. Just ask for FQS, the software that teaches your end-users to fetch for themselves.

Call 1-800-525-4025.

MICROCOMPUTERS

Notes from a quiet NCC '85

SMALL TALK
Eric Bender
CW Senior Editor

Although any National Computer Conference (NCC) can generally be described as a bear of a show, this year's version was more like a giant sloth — big, slow and sleepy.

The busiest booth at Chicago's McCormick Place — IBM's — did not showcase any new products, and frequently, the action on the floor seemed as lazy as the sailboats idly tacking on the blue waters of Lake Michigan just outside.

Most major microcomputer hardware and software vendors were conspicuous by their absence.

Some interesting products — such as Plus Development Corp.'s Hardcard, a 10M-byte hard disk drive on an IBM Personal Computer expansion card — made their first appearance at a major trade show, and some significant communications products debuted, but that was about it.

The following are some notes and quotes from the Second City's latest NCC:

- "We expect to see prices of MS-DOS computers drop below $1,000 in the next year to year-and-a-half," accelerating the move toward local-area networks, said Eileen Easterbrook, Software Publishing Corp.'s product manager for new products.

Like other microcomputer software vendors, Software Publishing "is in the process of getting [its] ducks in a row" on network applications, with the most difficult questions centering on pricing. The company intends to emphasize technical rather than legal safeguards in future site license deals.

"We're not interested in contractual arrangements and enforcement, we're interested in shipping products," Easterbrook commented.

- David Melin, Microsoft Corp.'s product manager for MS-DOS 3.1 and Microsoft Networks, cautioned against expecting a "messiah-type product" such as [Lotus Development Corp.'s] Visicalc for networks. He also noted that plummeting costs of peripherals have

High-quality graphics devices land on desktops

Price drops aid spread of laser, ink-jet printers

By Edward Warner
CW Staff

Personal computer graphics users can expect 1985 to be the year that high-quality output devices, including laser and ink-jet printers, become inexpensive enough to be used on desktops, said graphics industry analyst Alan Paller in a presentation earlier this month at the National Computer Conference.

The accessibility of high-quality output, added Neil Kleinman, president of Pacific Technology Associates, will make the use of graphics for reports and meetings the dominant use of graphics within two years. Kleinman, a fellow industry analyst who spoke at that session, said that personal computer graphics currently are rarely used for reports and presentations because of low quality.

That will change, however, as desktop laser printers come into wider use, said Paller, the president of AUI Data Graphics/Isaco in Arlington, Va. Driving the spread of laser printers, he predicted, will be continuing price reductions — some now cost as little as $3,000 — and the fact that most computer graphics are reproduced onto paper. At present, paper is the medium chosen for output by 60% of graphics users, he said, adding that "I believe that is a figure that will go up. We're a paper society."

Laser printers will likely be bought for their ability to reproduce high-quality text, he explained, but once the laser printers are purchased, "it will be such a small, marginal cost to [output] graphics" that users will reproduce both text and graphics using them. Paller acknowledged that software that integrates both text and graphics currently causes a laser printer to run slowly, but, he added, that hurdle will be overcome as graphics software vendors recognize the spread of laser printers and enhance their products for greater speed.

Another output device set to make big strides in price and performance, Paller observed, is the ink-jet printer. Currently, he noted, one vendor, Hitachi Ltd., offers

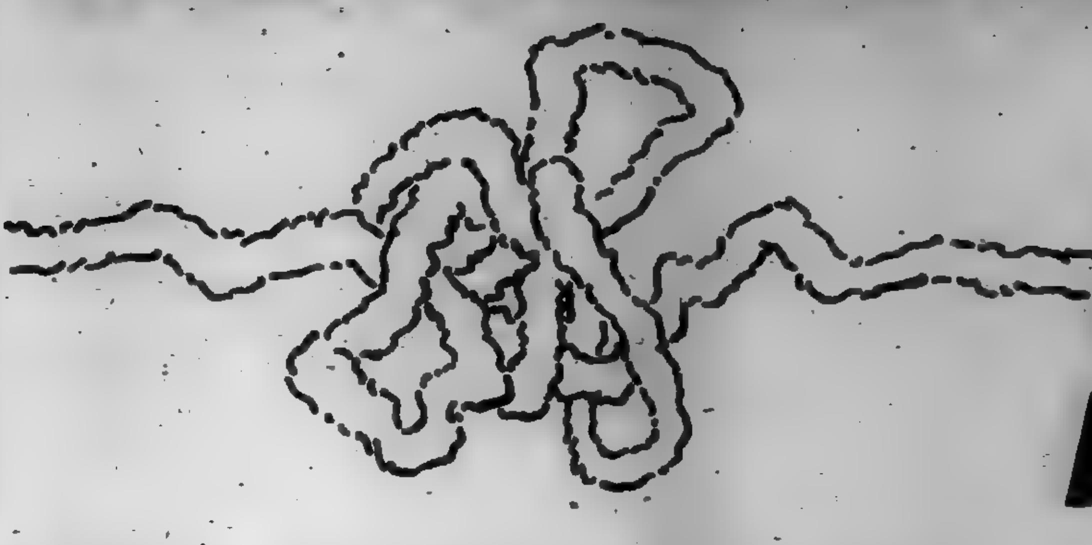
We Take The Kinks Out Of IBM Cabling.



Fact is, IBM's Token Ring baseband cabling system for local area networks is a terrific plan. But that's all it is right now. You're going to have to wait quite a while to connect your equipment to IBM cabling.

Unless you connect with NESTAR. We're the only ones now making IBM's local area network cabling actually work. Because we're totally compatible with their system. So you can get all the benefits IBM promises tomorrow from NESTAR today.

All of which isn't surprising. NESTAR has installed more large local area networks in large institutions in the last five years than any other vendor.

So if you want to make the right connections today for IBM cabling, you don't have to wait for IBM. Call or write NESTAR today for a copy of our "Facts Folder."

NESTAR SYSTEMS INC.

Local Area Networks For Large Organizations

NESTAR

OFFICE AUTOMATION. IT ALL COMES DOWN TO THE WIRE.

Without the right wiring system, well-planned office automation is nothing but a pipe dream. You'd have no way to integrate equipment. You'd be trapped in a maze of bulky incompatible wiring. Wiring that would restrict growth. And leave you tied in knots.

There's only one solution. The AT&T Premises Distribution System (PDS). Based on our Information Systems Architecture, PDS is an efficient, single-wiring distribution scheme. It gives you the foundation on which to connect all your workstations, LANs, PBXs, and hosts today. And lets you upgrade in the future.

PDS is the wiring system with the future built in.

A logical wire-once system

PDS is the only distribution system that ties together your voice, data processing and office equipment. PDS is based on a common distribution architecture, so it will support equipment from AT&T and other vendors. Including IBM.

PDS is modular in configuration. So it can be installed in any building—one-story offices, multi-building campuses, or high-rise towers.

And once installed, it will accommodate all system changes and future technological advances.

Six subsystems—five pertaining to wiring, one to administration—let you alter, upgrade and expand your system in easy cost-efficient steps.

This entire subsystem network can be managed from one central administration point. This allows you to easily control moves, changes and upgrades.

Growth without the pains

A unique design of twisted copper pairs and fiber optics gives you the flexibility to link multiple generations of equipment. And easily add on advanced applications as they emerge.

And all equipment—voice, data, video—connects to universal jacks that fit standardized wall outlets. To add or move equipment, you just plug it in wherever you want it. No rewiring. No tearing down walls. No confusion or delay.

We won't leave you at loose ends.

When you choose PDS, you can count on a total product and service package. All the products—from cables to cross-connects—required to install, maintain and upgrade your system are reliable, quality products from AT&T Information Systems.

And only AT&T works with you every step of the way. Whether you're involved in new construction, a renovation or installing a PBX or new data system, we give you end-to-end support. Planning, installing and maintaining your distribution system. If you need help, you know exactly who to call.

You've got good connections.

AT&T has a long history of experience in advanced communications research. PDS grew from this experience.

The Premises Distribution System represents our overall system approach to meeting your integrated voice and data needs. And it reflects AT&T's commitment to networking products that solve tomorrow's communications problems today.

And like all our products, we support PDS with the largest, professional sales and service team in the industry.

To learn why the AT&T Premises Distribution System is the right investment for your future, call your AT&T Information Systems Account Executive, or 1-800-247-1212.

AT&T
The right choice.

Choices limited for micro natural language interfaces

By Eric Bender
CW Staff

CHICAGO — "As micros proliferate, there are more and more people who need to access data bases without programming," but there is almost no choice among commercial products that meet this need, according to Martha Evens, a researcher with the Illinois Institute of Technology.

Evens, who chaired a session earlier this month at the National Computer Conference said that, among software vendors, "the cast of characters in this area is changing as quickly as the technology," with many firms apparently putting the brakes on their development efforts.

Among these, Evens mentioned Artificial Intelligence Corp., a vendor with a successful track record in natural language on mainframes. Last fall, the firm was enthusiastic about taking part in the session, but it canceled plans to participate after putting its micro project on the back burner. She also noted that one high-profile start-up, Symantec, Inc., has failed so far to deliver a commercial product.

The session, titled "Microcomputer Data Bases That Understand English," did feature a discussion of one natural language project that Evens described as highly promising. Frederick Thompson of the California Institute of Technology described the effort to move the Natural Access System software — developed by himself and his wife, computer linguist Bozena Thompson — from larger machines down to an IBM Personal Computer AT.

As Thompson outlined it, Natural Access System is a large and ambitious software system designed to integrate a natural language interface with text, graphics and image processing and to allow flexible extensions by end users and programmers.

The system has been compiled to approximately 1M byte of Pascal-code and is being ported to a Personal Computer AT with 640K bytes of internal memory through the use of an elaborate paging scheme tightly linked to the language processing, Thompson said. The version currently is being beta tested and will be demonstrated publicly in September.

Running on Motorola, Inc. 68000-based systems, Natural Access System software has demonstrated performance "that is very reasonable in terms of human response," with answers to some queries available in 3 or 4 seconds, Thompson said. Work to date suggests that use of the AT will cut response time by about one third, he added.

Thompson discarded the suggestion that the program falls under the heading of artificial intelligence. "We don't see ourselves as a part" of the artificial intelligence community, he said.

Erickson discusses Clout

Also at the session, Wayne Erickson, Microrim, Inc. chairman, discussed his firm's Clout software, a natural language package whose artificial intelligence capabilities were heavily promoted during its introduction last year. Erickson commented that some relatively simple features, such as a spelling checker, turned out to have a high payoff. "Little things like that can be really important to reduce the level of frustration," he said.

Another important feature is to let the user know, during a lengthy query, that the machine is still working on the request. "When people ask questions in natural language, they always expect to see the answer come back instantly," Erickson pointed out, so a screen display showing progress on the request is appreciated.

Erickson noted that many users would like to be able to update their data bases through a natural language interface. However, he pointed out that "updates have to be done with a lot more care" than queries in order to safeguard the data base's integrity. Additionally, he said, such queries might overload a micro's memory and processing capabilities.

Asked why there are so few choices in microcomputer natural language interfaces, Erickson responded that "natural language is nontrivial software." Most natural language systems, written in traditional AI languages such as Lisp and Prolog "end up requiring more resources than the [micro] has," he added. "We used Fortran and developed a lot of techniques to shoehorn our software into the [micro]."

WHAT TO WARE TO SURVIVE THE HIGH SEAS OF BANKING

Ware something extraordinary. Ware INFOPOINT™ banking software by UCCEL. The most complete, most proven line of integrated financial software on the market. The software that keeps you cool in calm waters no matter how turbulent the market gets.

With INFOPOINT's 21 major applications, you'll not only survive — you'll survive in high style. And continue to grow and prosper — even while others are going under. What's more, INFOPOINT costs less than ordinary software and can be implemented in less time.

Survive the high seas of banking in high style. Call UCCEL now at 1-800-UCC-1234.

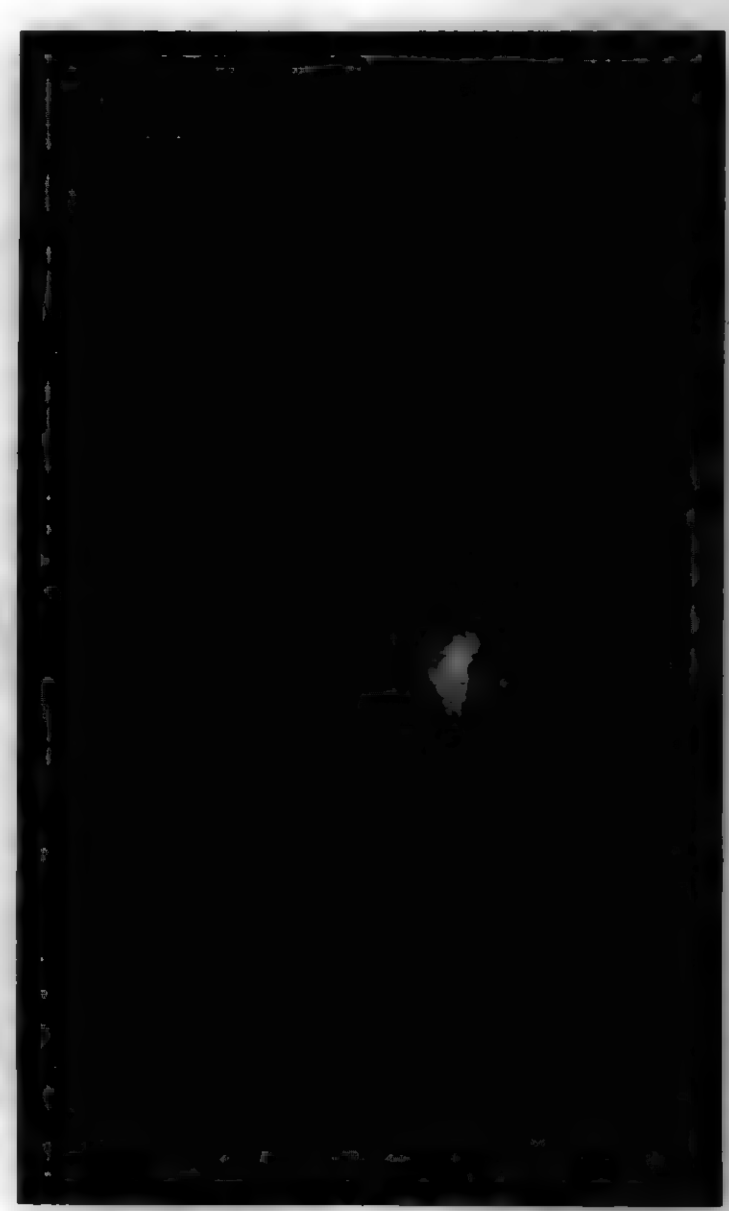
FUSION.

The time has come for straight talk about database management systems.

"The only reason to buy a database management system is to build better applications."



Throughout the history of the software industry, proponents of one database architecture after another have promoted their respective systems as the sole solution to a company's application backlog problem.

The early debate centered on hierarchical versus network architecture. Advocates of inverted file entered the argument in the 70's. And today, relational is the architecture of choice.

While this discussion about architecture is interesting, it's just not the issue.

Database management systems, beginning with the very first, were created to do one thing and one thing only —they were created to build better applications. *Building applications—efficient, online applications, faster, with fewer people—is the only real issue.*

Today corporations have a huge backlog to contend with. And the applications they need to develop have different characteristics. Some may be retrieval only. Some may be heavy on update. Some will run the company, and will require professional development. Some can be created by end users to satisfy their own needs.

It is extremely important to have a database management system that can handle all applications. *It is essential* that a database include tools rich and comprehensive enough to accommodate both the professional developer and the end user. It's the richness and power of these tools that's critical to the successful implementation of highly responsive fourth generation applications. What's demanded, in fact, is software that goes a *step beyond* today's conventional relational database systems.

With a comprehensive database management system and the appropriate tools like the kind I'm talking about, you'll make the data processing department a *strategic asset* instead of corporate overhead. You will make your company succeed in a highly competitive world.

In Cullinet's new Annual Report, Presidents and CEO's of major corporations speak about the positive impact Cullinet has had on their operations. For a copy that you might like to read and pass along to your company president, write to me. I'll see that you get one.

John J. Cullinane
Chairman of the Board

© [illegible] Cullinet Software, Inc., Westwood, MA [illegible]

The only database management system worth buying is one that meets these six requirements.

Stated simply, IDMS/R is a step beyond today's conventional relational DBMS because it meets these key requirements for building successful applications.

1. MIS Application Development Facilities

The application development system required to build high performance production applications requires more than a fourth generation language. Cullinet's ADS/OnLine is a comprehensive application development environment for the MIS professional combining fourth generation language with a menu-driven modular development approach. Integrated with the data dictionary, this minimizes not just the programming but the entire design, development and documentation of an application. Furthermore, this approach produces a dramatic reduction in maintenance and support.

2. End-User Application Development Facilities

Because Cullinet recognizes the difference between production and end-user applications, as well as the need for both to share common data, we provide an easy to use end-user oriented development and inquiry system. The Automatic System Facility of IDMS/R is a non-procedural, menu-driven tool designed for end-users. Once data tables are defined, an application is automatically generated. The query facility of IDMS/R provides menu-driven query capability and full online help, so end-users can build working applications in minutes and get reports easily and efficiently.

3. Relational Architecture

IDMS/R allows for the definition of databases using the relational data model. Data tables and associated user views are easily defined online. Additionally, any number of key fields may be defined. IDMS/R also supports advanced relational features including referential integrity and domain definition. This architecture provides the capability to address all application requirements.

4. High Performance Database and Application Tuning Facilities

IDMS/R is a full multi-tasking, multi-threaded system providing for concurrent processing of online and batch, update and retrieval applications. Additionally, tuning facilities provide efficient indexing techniques, space management, page management, and buffer management. No conventional relational DBMS has these capabilities.

5. Dictionary Driven DBMS

Data integrity and data independence are essential in a DBMS environment. The dictionary actively controls the source and use of all data. Data definitions, data validation criteria, data formats and security are all defined within the dictionary and exist only once, eliminating redundancy and ensuring integrity. This information is then automatically used throughout the system. Examples of the functionality of this facility include never needing to define output formats for query; never needing to define field attributes for screens; never needing to code validation and editing criteria when using ADS/OnLine. Only IDMS/R provides this level of dictionary integration.

6. Open System Architecture

With the unique Open System Architecture of IDMS/R you can maximize your investment in existing software. IDMS/R accepts data from outside the database environment with direct access to VSAM files. In addition, applications written to access other databases like IMS, DL/1, TOTAL, or VSAM can directly access IDMS/R without modification. IDMS/R is designed to work in virtually all IBM mainframe operating systems and teleprocessing monitor environments.

IDMS/R: More than a relational DBMS

Cullinet

[illegible] Drive, [illegible], MA [illegible]

Net, disk drive, board top NEC micro line additions

BOXBORO, Mass. — NEC Information Systems, Inc. has announced a local-area network, an external 20M-byte hard disk drive and the Software Library Expander, all for use with machines in its Advanced Personal Computer line.

It has also introduced two new printers and a product that reportedly provides color printing of output from an Apple Computer, Inc. Macintosh.

The Vianet local net reportedly supports up to 64 personal computers, peripherals and telecommunications devices communicating over twisted-pair wiring at a cost of $525 per node. The local-area network, a peer-to-peer network, handles all command interpretation, message routing, data formatting and error checking between the application program, the operating system and the local net protocol. Vianet is said to offer record locking but does not require a dedicated disk or file server station.

The 20M-byte, 5¼-in. hard disk, meanwhile, was introduced for use as a peripheral to the NEC Advanced Personal Computer (APC) III. Also announced for the APC III was the Software Library Expander, which reportedly permits users to run such software as Lotus Development Corp.'s 1-2-3 spreadsheet and Ashton-Tate's Dbase III. The Software Library Expander consists of a plug-in circuit board, software and documentation.

The new printers include the NEC Spinwriter, e.l.f. 360 for use with IBM Personal Computers and compatibles. The unit reportedly provides printing at up to 190 word/min. Also introduced was the Pinwriter Model P5, a dot matrix printer that reportedly operates at 53 db and offers letter-quality printing at 100 char./sec. and draft quality at 220 to 290 char./sec.

Also introduced was the Colormate software package for the Macintosh, a product that reportedly allows users to print in eight different colors. To print in color with Colorwriter, users need a NEC Pinwriter Model P2-6, P3-6, CP-2 or CP-3, priced at $795, $1,095, $1,095 and $1,495, respectively.

Vianet costs $525 for each interface board. The Software Library Expander is $150. The 20M-byte disk is priced starting at $1,495, without a controller. The Pinwriter Model P5 costs $1,445 and the e.l.f. 360 is priced at $545. Colorwriter consists of a diskette, interface cable and documentation and is priced at $99.

NEC Information Systems is located at 1414 Massachusetts Ave., Boxboro, Mass. 01719.

Reach over 35,000 Japanese computer professionals.

Advertise in CW Communications' Japanese publications and sell your products directly to one of the largest computer markets in the world, Japan.

35,000 MIS/DP executives read *Computerworld Japan*. It is modeled after its' sister publication in the U.S., *Computerworld*. Each week, *Computerworld Japan* covers the latest developments in the Japanese computer industry; new products and services, current applications, industry trends and international events.

Picking knowledge systems

High-payoff, low-risk applications ideal

By Eric Bender
CW Staff

CHICAGO — Getting started with knowledge systems "is not that tough, but it's not that easy either," according to John Spencer, vice-president for marketing and sales at Teknowledge, Inc., a knowledge systems software vendor.

Speaking here earlier this month at a National Computer Conference session on personal computer-based artificial intelligence, Spencer listed several recommendations for companies studying the potential payoffs of knowledge systems.

Heading the list, he said, is picking suitable early candidates for knowledge systems, and companies should look for high-payoff and low-risk applications.

"Don't pick some project that's going to take two years to pay off, because management will get very impatient," Spencer advised. He noted that most Teknowledge customers currently are building knowledge systems for tasks where there is a single correct answer rather than a range of responses.

Another important point, Spencer said, is "when you get into a jam, use some outside resources." He also suggested that companies focus on applying technology rather than developing it and to "expect that opportunities will far exceed your ability to respond."

Spencer added that "we spend a lot of time with people on what we call 'expectation management.'" For example, he said, Teknowledge cautions customers against expecting a system to be right 100% of the time, just as a human expert is not always right.

Another session panelist, Wanda Rappaport, director of software sales and marketing at General Research Corp., agreed with Spencer that some current packages are advanced enough to permit end users to generate knowledge systems.

Software can provide guidance for human experts who lack computer expertise to create knowledge systems, Rappaport said. "For most well-structured fields [of knowledge], that's not a problem," she said.

The panelists also agreed that personal computers will play useful roles in both developing and delivering knowledge systems.

"In the near future, personal computers probably will be used largely in experiments," predicted session chairman David Brodwin, a consultant with Arthur D. Little, Inc. "Ultimately, most of the activity will be in AI computing as part of larger systems."

Asked about limitations on microcomputers, Rappaport pointed out that "the primary limitations are size and speed — the size of the knowledge base and the speed with which you need an answer.

"A borderline case would be an expert system that held more than 500 rules," she suggested. However, she noted that 500-rule systems can be networked together to create a large system.

DCA introduces Smart Alec for IBM micro-mini emulation

ALPHARETTA, Ga. — Digital Communications Associates, Inc. (DCA) has announced a micro-to-minicomputer communications product that reportedly allows IBM Personal Computers, Personal Computer XTs and ATs to communicate with IBM System/34, 36 and 38 minicomputers.

Dubbed Smart Alec, the product allows Personal Computers to emulate an IBM 5251 Model 11 or 5292 Model 1 terminal. When used with a modem, the product can provide remote attachment to an IBM 5294 workstation controller or an IBM 5251 Model 12. Smart Alec comes bundled with file transfer software that allows users to transfer files between the personal computers and the IBM System/34, 36 and 38, the vendor said.

Smart Alec includes a printed-circuit board that reportedly can be installed into any full-length slot, a splice box that can manage the twinaxial cable connecting the personal computer and IBM minicomputers and bidirectional file transfer software for the Personal Computer and IBM minis.

The product reportedly allows users to run three simultaneous host sessions. Users can perform a file transfer, print session and host session at the same time. They can also send print jobs directly to the PC printer, by allowing the PC printer to emulate an IBM 5256 printer, the vendor said.

Smart Alec, including the file transfer software, costs $995. An enhanced version of the File Transfer software, which includes record and field selection capabilities, costs $1,295.

The product will be shipped next month.

DCA is located at 1000 Alderman Drive, Alpharetta, Ga. 30201.

"I'm feeling terribly nostalgic sir — may I go home and watch some late afternoon reruns?"

Get an IBM computer by Sept. 30 and save up to $16,500 on software.

There are a lot of good reasons to buy an IBM System/36 (5360 and 5362), IBM System/38 or the IBM 4361. Now there's a good reason to buy one quickly.

If you install any of these IBM computers or upgrade an IBM 4321 or IBM 4331 to a 4361 before September 30th, you can purchase up to $50,000 of selected IBM software at a 33% discount off the suggested retail price. So you can save as much as $16,500.

Whatever your business, an IBM Computer System can help you do what you do, better. To have an IBM Marketing Representative contact you about this offer, call IBM Direct at 1 800 IBM-2468, ext. 90, LU.

IBM

Tecmar unwraps modem

SOLON, Ohio — A 2,400 bit/sec. internal modem for the IBM Personal Computer has been introduced by Tecmar, Inc. The Phonegate 2400 modem, which fits into one of the Personal Computer's full-length slots, is priced at $789 and comes with two software packages.

The first package is Software Synergy, Inc.'s Respond data communications package, which offers file transfer and emulation of the Digital Equipment Corp. VT52 and VT100 terminals, as well as the IBM 3101 and Hewlett-Packard Co. 2621V terminals and standard TTY devices.

Also included is Tecmar Telephone Management Software, which reportedly causes a list of recently called numbers or a personal telephone directory to be displayed when the telephone's receiver is lifted from its cradle.

Phonegate is also said to offer Touch-Tone decoding, under which its software keeps track of all incoming and outgoing telephone calls placed from the user's telephone or the computer's directory.

Phonegate reportedly can communicate at 2,400, 1,200, 600, 300 and 110 bit/sec., according to Tecmar. It can display messages on the status of outgoing calls and permits the user to switch a person-to-person call to computer-to-computer status.

Tecmar is located at 6225 Cochran Road, Solon, Ohio 44139.

3Com boosts net server line with 70M-byte high-end unit

MOUNTAIN VIEW, Calif. — 3Com Corp. has introduced the 3Server 70, a high-end addition to its family of local-area network servers. It reportedly features a 70M-byte hard disk drive with a storage capacity expandable to 420M bytes.

Priced at $8,995 and available immediately, the system supplements 3Com's 3Server, which was introduced in January and which comes with a 36M-byte disk drive.

While both products reportedly can support up to 50 network users in productivity applications and up to 16 users in transaction processing applications, the 3Server 70 was designed for customers with higher storage requirements, according to 3Com. The 3Server 70's disk drive provides average access time of 28 msec, 3Com said.

3Com also introduced the 70M-byte Expansion Disk, an external disk drive that reportedly works with either server and costs $4,995. Up to five Expansion Disks can be added to the 3Server 70 for the 420M-byte total.

3Com can be reached through P.O. Box 7390, 1365 Shorebird Way, Mountain View, Calif. 94039.

Announcing

The one-stop, international advertising service for micro marketers.

You'll reach microcomputer buyers all over the world with *Computerworld's* International Marketing Service (CWIMS). Because we have the microcomputer market *covered* with an international network of publications. And what a market!

As the need for computerization in government, industry and educational systems all over the world becomes more acute, countries look to the cost-effective, adaptable microcomputer to bring them into the computer age. This means a very lucrative market for the U.S. micro marketer, since international product demand exceeds product supply.

Now, with the help of *Computerworld's* International Marketing Services, you can advertise in twenty magazines devoted exclusively to supplying information to microcomputer users in: Australia (*MicroWorld, Australian PC World*), Brazil (*MicroMundo*), Canada (*PC World Canada*), Denmark (*Micro Verden*), Finland (*Mikro*), France (*Golden, OPC*), Japan (*PersoCom World*), Mexico (*Compu Mundo*), Norway (*Mikro Data, PC Mikrodata*), Sweden (*MicroDatorn, Min Hemdator*), Spain (*Micro Sistemas*), Sweden (*Svenska PC World*), The Netherlands (*Micro/Info*), West Germany (*MicroComputerwelt, PC Welt, Run*). And your advertising message can reach buyers of microcomputer products and services around the world through special micro sections in any of over 40 publications in 25 countries.

Act now—and take advantage of this international demand for microcomputer products. Whether you want to test the market—or locate a distributor or representative—our publications will put you in touch with the right people around the microcomputer world.

For more information on getting international micro coverage, call Diana La Muraglia, General Manager, International Marketing Services, toll-free, at 800-343-6474. In Massachusetts, call 617-879-0700 or return the coupon below.

Analytica drops Reflex software copy protection

FREMONT, Calif. — Analytica Corp. has dropped the copy protection on its Reflex data base software for the IBM Personal Computer. It will also begin selling site licenses of Reflex through its dealers.

Removal of the copy protection will permit the software to be copied more easily and installed in hard-disk systems, Analytica said.

Registered Reflex users reportedly will receive the unprotected version of the software free in the mail. Unprotected versions of Reflex will be available in stores this month. The package remains priced at $495.

The Reflex site licenses will be sold in quantities of 100, 500 and 1,000 units, priced respectively at $30,000, $120,000 and $200,000. Users will be provided with several master diskettes from which they can copy the program up to the specified number of copies permitted in their license, the vendor said.

Documentation reportedly will also be included with each site license at a rate of 10 Reflex manuals for every 100 copies of Reflex permitted under the site license.

Analytica is located at 3155 Kearney St., Fremont, Calif. 94538.

SYSTEMS

- **Megadata Corp. has introduced its Model Seven, a portable supermicrocomputer based on the Motorola, Inc. 68000 microprocessor and running the AT&T Unix operating system.**

The latest addition to the multiuser 8300 series, the Model Seven reportedly includes 1M byte of memory, a 26M-byte hard-disk storage unit, a 1M-byte diskette drive and two RS-232 parallel ports. Weighing 18 lb, the Model Seven is field upgradable to a total of eight serial ports.

The expansion board costs $650 with 512K bytes of additional memory and $990 with another 1M byte of memory. The Model Seven costs $4,399.

Megadata, 35 Orville Drive, Bohemia, N.Y. 11716.

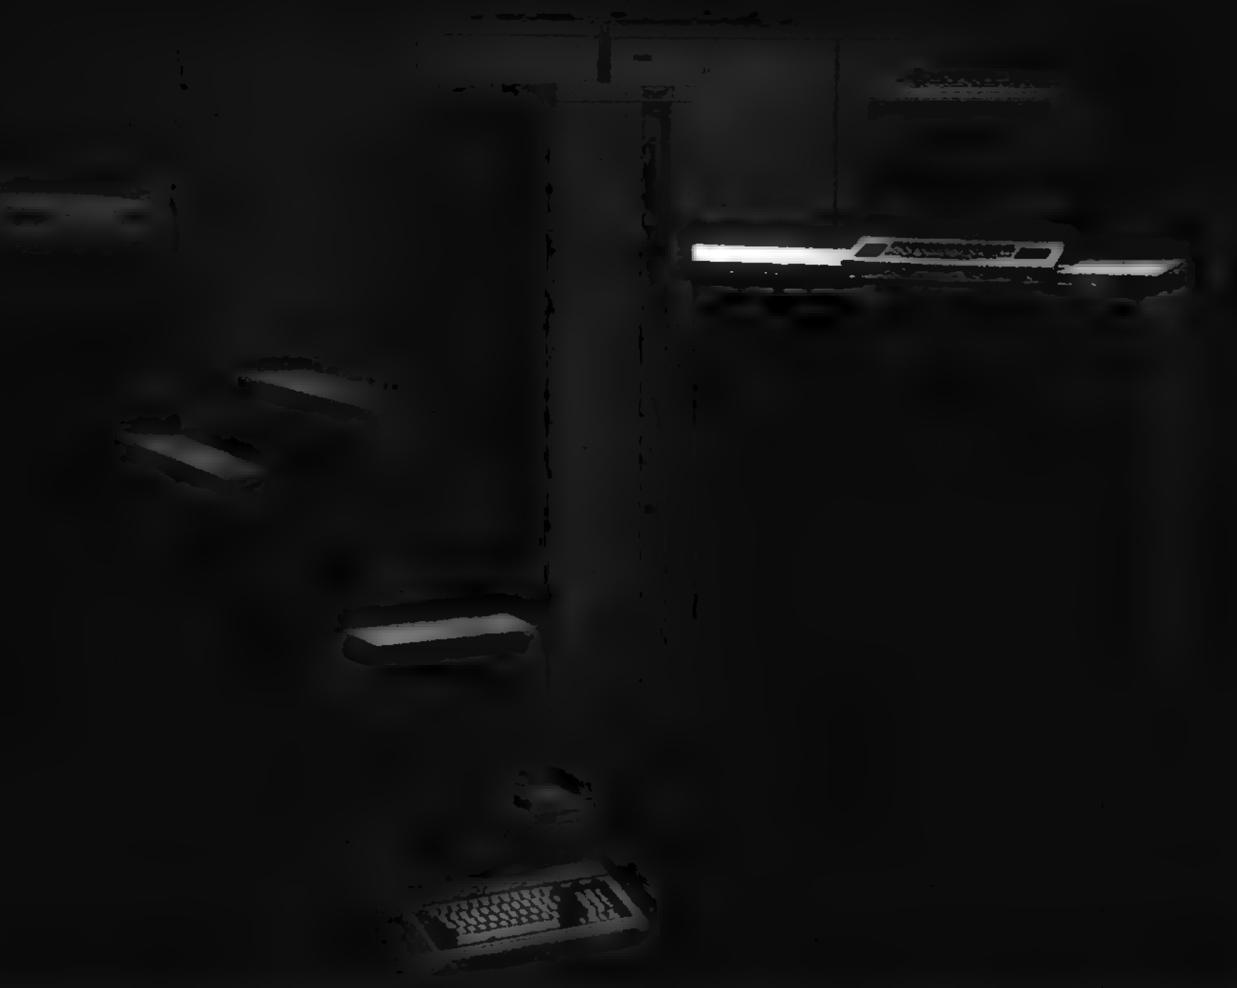
Announcing Version

TOTAL INTEGRATION FROM PC TO MAINFRAME. IT'S THE DIFFERENCE BETWEEN COMPUTERS THAT FUNCTION AND SYSTEMS THAT WORK.



In the time it takes to read this sentence, another Sperry computer system will go on-line. Joining what is already the world's largest installed systems base—save one. $17 billion worth of conviction that Sperry, *the systems integrator,* is the right choice.

What do customers see in Sperry?

Investment protection. Of the sort that lets a Series 1100 mainframe computer buyer increase his system's power 23 times. On a single operating system. Without a single software rewrite.

Compatibility. So Sperry systems talk to IBM and IBM-compatible hardware. And Sperry offers a complete PC to mainframe line based on the industry-standard UNIX™ Operating System, with hundreds of available off-the-shelf programs for everything from office automation to shop floor control.

Systems Integration. With a wide range of interconnectable information systems products for data entry, single or multi-user personal computing, integrated office automation, data communications and database management.

Research & Development. On projects for mainframe-to-mainframe communication, artificial intelligence, voice recognition systems and desk-top mainframes.

Sperry. We're not just anticipating the future of computer technology. We're creating it.

Sperry Corporation P.O. Box 500, Blue Bell, PA 19424-0024.

UNIX is a trademark of AT&T Bell Laboratories.

SPERRY

PRINTERS/ PLOTTERS

■ **Televideo Systems, Inc. has introduced a low-end terminal for use with personal computers.**

The Model 905 is a 14-in. terminal designed for office automation applications. It is reportedly compatible with the Televideo family of products and with the Applied Digital Data Systems Viewpoint A2 terminal.

It costs $1,495 and will be available in September.

Televideo Systems, P.O. Box 6602, 550 E. Brokaw Road, San Jose, Calif. 95150.

BOARD-LEVEL DEVICES

■ **Direct, Inc. has introduced the PC102 interface, which provides IBM Personal Computers with Digital Equipment Corp. VT100, VT52 or VT102 terminal emulation capabilities.**

The PC102 combines a display enhancement adapter card and software and reportedly provides the Personal Computer with the same video display capabilities as the DEC terminals.

The interface is said to provide the Personal Computer with 80- by 132-col. screen presentation, all DEC VT102 character sets and attributes.

The product costs $595, the vendor said.

Direct, 4301 Burton Drive, Santa Clara, Calif. 95054.

■ **Kamerman Labs has announced the Excelerator add-on board that reportedly increases processing speed of the IBM Personal Computer and Personal Computer XT four times.**

The product was designed around a 10-MHz Intel Corp. 8086 chip and includes up to 640K bytes of high-speed random-access memory (RAM).

Excelerator users can reportedly return to the machine's original speed with a manual hardware switch or through software commands.

The board includes an optional battery-powered clock and calendar, serial port and parallel printer port.

The board is priced at $1,095 for 128K bytes of RAM, $1,340 for 256K bytes and $180 for each additional 128K bytes. The other options are available for $295.

Kamerman Labs, 8054 S.W. Nimbus Ave., Beaverton, Ore. 97005.

■ **STB Systems, Inc. has announced Chauffeur, a video board for the IBM Personal Computer, Personal Computer XT and AT.**

The product is said to convert any IBM-compatible color graphics display into a full screen format compatible with the IBM monochrome monitor.

In graphics mode, the board reportedly supports IBM standard resolutions of 640 by 200 pixels with two monochrome shades and 320 by 200 pixels with four monochrome shades. The board includes drivers supporting high-resolution displays for Lotus Development Corp.'s 1-2-3 and Symphony and Ashton-Tate's Framework software.

In text mode, Chauffeur produces 80- by 25-line displays, according to the vendor. The product is said to provide 16K bytes of display memory in text mode.

Chauffeur is priced at $395.

STB Systems, Suite 125, 601 N. Glenville, Richardson, Texas 75081.

■ **Viasyn Corp. has introduced a color graphics board for its Compupro 286 multiuser personal computers.**

The PC Video board reportedly takes full advantage of the computer's Intel Corp. 80286 microprocessor and is said to be compatible with such software as Lotus Development Corp.'s 1-2-3 and Ashton-Tate's Dbase II. Up to eight of the boards can be daisy-chained to support a group of graphics users.

It costs $495.

Viasyn, 3506 Breakwater Court, Hayward, Calif. 94545.

SMALL

from page 37

tended to undermine shared resources as the driving force for buying personal computer nets. In one example, the typical price of a 10M-byte hard disk drive has slid 83% since 1982, while cost of a 3Com Corp. network card has dropped only 35%, he pointed out.

Bill Osborne, IBM's product manager for broadband network products, agreed with Melin that information sharing now provides a stronger rationale for acquiring a microcomputer network. He predicted, however, that "we'll see another class of expensive resources coming in," particularly high-end net servers. These new systems will help to support the trend toward larger nets, Osborne added. "[Personal Computer] nets grow as quickly as rabbits do, once you get them installed," he said.

■ Explaining why shipment of 3Com's Ethermac local-area network software has been delayed from June to September, product manager Derek Brown highlighted some of the frustrations in moving the Macintosh into a multiuser environment. "Spooling to the Laserwriter from the Mac is damn near impossible," he said.

■ General Research Corp.'s The Intelligent Machine Model (Timm) expert system shell is a spin-off from work on battlefield surveillance for the U.S. Army, and development of Timm/PC arose rather casually as the company prepared for an artificial intelligence conference, according to Wanda Rappaport, director of software sales and marketing.

"We found no way to use a terminal to our [Digital Equipment Corp.] VAX computer, so we put it on a personal computer," she said. "Most of the market research was done at the conference." There was talk of calling the new microcomputer version Tiny Timm, Rappaport said, but cooler heads prevailed in the end.

■ Among a host of optical memory devices on display, the most interesting was a prototype erasable 3¼-in. drive from Verbatim Corp. The company expects to begin volume production in fourth-quarter 1987, offering 40M-byte and 100M-byte models. Senior Vice-President Geof Bates said OEM costs will be approximately $300 for the drive and $30 to $35 for the removable disks.

■ Karl Sterne, senior vice-president for marketing at Viasyn Corp., had a quick explanation of why that company changed its name from Compupro Systems, Inc., last year: "There are 136 companies which start with 'Compu,' and we were always being confused with two or three of them in Chapter 11 [of the Federal Bankruptcy Act]."

PC2

from page 37

with limited expansion capabilities.

Separately, IBM announced a limited recall program for the Personal Computer AT's hard disk drive adapter card. "A random, intermittent type of problem" has cropped up.

Affected customers soon will receive a notification letter from IBM that includes a test diskette. If the system fails the test, customers should notify the vendor that sold them the machine, for free, on-site repair.

Serial numbers for the machines that may be affected are 5019001 through 5141250 for the base AT model and 0054001 through 0146900 for the enhanced version.

GRAPHICS

from page 37

an ink-jet printer with a resolution of 4,000 dot/line and a price of $15,000. Such resolution, he said, might previously have cost as much as $200,000. While even $15,000 is too much to pay for a stand-alone machine, he said, it is a reasonable cost for a printer that is to be used in a personal computer network.

As for the role of the mainframe in this new world of high-quality personal computer graphics, Paller said he does not expect large-scale processors to be completely supplanted. For one thing, the mainframe, not the personal computer, is the best machine on which to base a corporationwide, networked graphics application. In addition, the mainframe is attached to top-quality output devices that are too expensive for stand-alone use.

In that latter case, Paller predicted that the mainframe will become a "network peripheral." Under such a system, micro users could upload spreadsheet files to a mainframe-based graphics package, interact with the mainframe graphics software to produce a chart, then output the chart on high-resolution plotters and printers serving the mainframe.

WINDOWS ON YOUR MAINFRAME TERMINAL
CICS-WINDOWS

Windows are "mini-terminals" with full terminal capabilities

Up to 4 different window configurations can be opened on the same screen

Operates under CICS on DOS, OS, MVS, XA to window any application

Single key operation to instantly switch between full screen and window mode

- **Window facilities on every 327X terminal without any changes to your hardware or software**
- Work with 2, 3, even 4 transactions simultaneously without losing valuable time switching back and forth between applications
- Increase productivity by having needed information instantly available on the same screen, including: other applications, menus, help screens, prior transactions, editors, notepads, etc.

With more than 70
and enhancements,
complete solutions

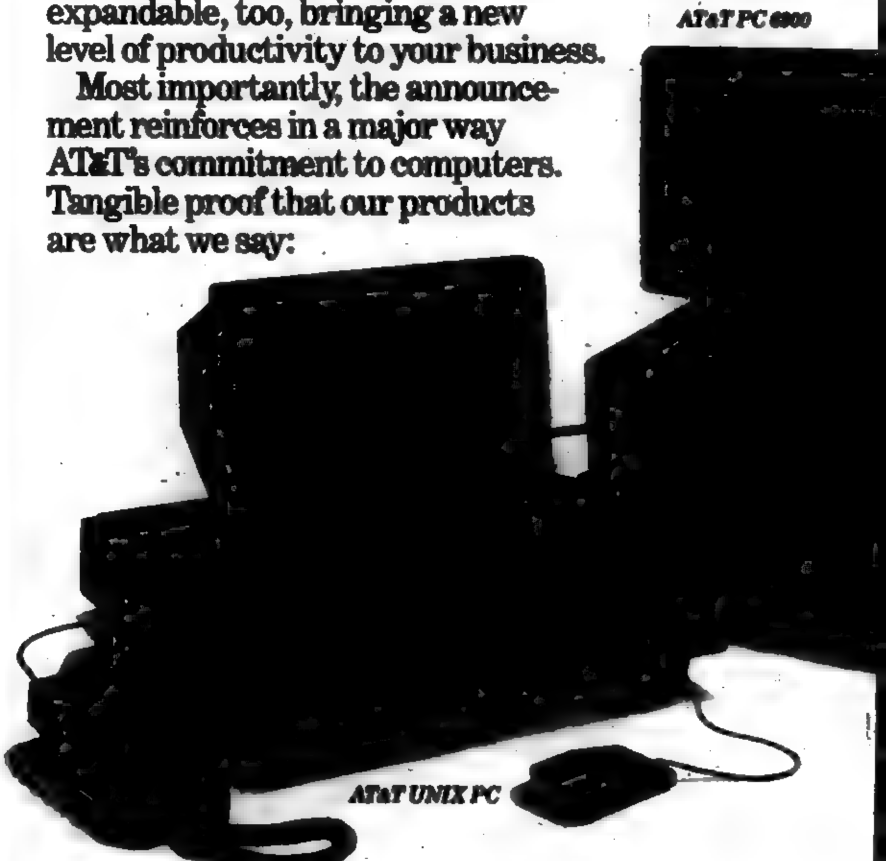
A few weeks ago, AT&T made a major computer announcement. Major in every way.

Certainly in the depth and breadth of the offering —which includes computers, peripherals, software, networking options, communications products and much more.

Major in terms of AT&T's growth as a force in the computer industry. Consider the new, enhanced and existing products. You'll find our line of integrated communications-based computers runs the gamut from PCs to superminis.

What's more, they can be connected easily to each other and to your mainframes. They're readily expandable, too, bringing a new level of productivity to your business.

Most importantly, the announcement reinforces in a major way AT&T's commitment to computers. Tangible proof that our products are what we say:



The Computers With The Future Built In. Our computer line now includes the following:

Computers: To serve an entire office, our recently enhanced line of AT&T 3B Computers puts the flexibility and power of the UNIX™ Operating System to work for you.

There are five models. Our new 3B2/400 can accommodate up to 46 different peripherals (terminals, printers, modems, etc.). The new 3B15 up to 128.

new computer products AT&T is now fully equipped to offer to your computer needs.

The 3B2/300 and 3B5 have both been enhanced with many features for better performance. The former can accommodate up to 18 different peripherals; the latter up to 128. The 3B20 has room for up to 256 peripherals.

The AT&T PC 6300 is for the single user in need of a superior MS-DOS* business computer. It can also run the Xenix* operating system.

For single or multi-user situations, the AT&T UNIX PC offers a unique combination of power, ease of use and advanced communications capabilities.

Communications: AT&T has always led the way in telecommunications. That leadership continues in computers. Our computers and communications products link together, allowing voice and data integration and shared information from PC to mainframe.

We now offer a complete line of low to high-end data communications products and service giving you complete control over the management of your data network.

Those with a major investment in mainframe computers can rest easy. Now you can enjoy complete end-to-end connectivity. We now support popular SNA and BSC protocols, which means our computers and systems can communicate and work with your mainframes. Your investment is protected.

Peripherals: We offer a full line of high-performance, highly reliable synchronous and asynchronous terminals and printers. They're highly compatible, too, with our own and other computers.

Software: Choose from a large and growing list of applications software based on UNIX System V. Some handle general business, such as word processing, financial spreadsheets, and business graphics. And some tackle specific needs of specific industries, including, accounting, automotive and retailing.

You'll also have the ways and means and tools to develop your own software.

THE COMPUTERS WITH THE FUTURE BUILT IN

The Future Looks Even Brighter

You'll find that all of these computer products are designed to work with your current system, while offering an almost unlimited variety and number of options for growth and change.

You know that when you buy an AT&T Computer product, you're making the right choice—and you're giving yourself more choice. Our flexibility gives you more options when the time comes to expand.

What's more, you'll find these high-quality products comparable, often superior, in price and performance. Which makes them an excellent investment.

AT&T also protects your investment by offering overall comprehensive service and support for computer hardware and associated software products.

This includes Customer Programming Services Centers, where we'll help you to develop your own software or customize existing packages. Implementation Services and Customer Training offer expert advice on the most efficient, productive use of your system.

Our National Software Support Center provides a 24-hour hotline for hardware and software support.

Our service options are another way we're working to help you pull the pieces together in a logical, coherent way.

In every way, we're working to make The Computers With The Future Built In work best for you.

For a more detailed look at what AT&T Computer products can do for you, just turn the page.

See how AT&T Computer products can make your system work as a system.

AT&T 4410 Terminal
AT&T 3B2/400 Computer

It's easy to get started putting AT&T to work for your business—in small easy steps or a complete system. These communications-based computer products are designed to work with each other, and with your existing system.

Start with the newly enhanced 3B2/300 or the new 3B2/400 to develop a distributed departmental system. Both are true 32-bit computers that run UNIX System V. The 3B2/400 offers full hardware floating point performance, streaming tape backup, and up to 4 MB of main memory. Supporting up to 10 or 25 users respectively, the 3B2/300 and 3B2/400 offer plenty of room for tape and disk storage growth.

For even higher storage capacity and performance, build your system around the enhanced 3B5 or the new 3B15 minicomputers.

The 3B15 is equipped with a high-performance WE™ 32100 microprocessor with main memory up to 16 MB. It supports up to 60 users on a number of configurations. Other features include demand paging memory management with file and record locking and standard floating point performance.

To over 500 tested software packages already listed in the AT&T Computer Software Guide, we're adding more applications programs, such as UltraCalc** and CrystalWriter.*** For systems developers, high level languages for 3B Computers such as UX-Basic† and Micro Focus Level II Cobol†† open the world to thousands of additional software applications running in the UNIX System V environment. And AT&T can address unique business needs with software solutions specifically for vertical markets such as accounting, real estate, and automotive industries. IBM††† mainframe VM users now have UNIX System V development capabilities through our System V-VM software.

AT&T 4410 Terminal
AT&T Model 4000 MODEM

AT&T 3B5 Computer
AT&T 4410 and 4425 Terminals

Dataphone I Modems

It should come as no surprise that AT&T is the leading producer of advanced data communications equipment. To our already large and growing list we've added DATAPHONE® I, a complete line of synchronous, private line, analog, non-diagnostic modems with speeds from 2400 BPS to 14.4 KBPS. Also available is DATAPHONE I Plus Service Management, which provides you with private line network management through AT&T, eliminating the need for an in-house staff.

DATAPHONE II is a family of digital and analog modems, multiplexers, and diagnostic control devices for multilevel network management and control. To the family we just added the DATAPHONE II Model 2600 Digital Data Service Unit, an integrated DSU and Channel Service Unit in one compact, easy-to-install and operate unit. Plus, it is fully compatible with the DATAPHONE II equipment you're using now.

Our 3B Computers work with your IBM mainframes through connectivity products that allow full interactive communication using BSC and SNA/SDLC protocols. The new host connectivity products include the SNA/3270 Emulator + software which emulates a fully configured SNA IBM 3274 controller, and the BSC/3270 Emulator + which emulates the BSC IBM 3274 Cluster Controller. And C language programmers can use a library of AT&T Application Program Interface access routines to communicate directly with a host computer in a 3270 mode.

Of course, one advertisement can't begin to do justice to the full line of AT&T Computer products. There's much more to talk about.

For more details, contact your AT&T Information Systems Account Executive, authorized AT&T Representative, or call 1 800 247-1212.

Do it today—and start building a completely integrated business communications system. With the one company that can pull it all together.

SNA architects outline probable enhancements

By John Six
CW Staff

A panel of IBM representatives outlined the future needs of the company's Systems Network Architecture (SNA) earlier this month at a National Computer Conference session called "IBM's SNA — Meeting the Challenge of Change," and discussed an existing product that can be used in network planning.

The session was chaired by Edward H. Sussenguth, who headed up IBM's SNA development team from the time of its inception in 1974 until last year, when he became an IBM Fellow. SNA is now used in more than 20,000 IBM 370-architecture host computers, Sussenguth said.

> *No one expected SNA to be accepted so quickly, nor did the architects anticipate that networks would get so large.*

No one expected SNA to be accepted so quickly, nor did the architects anticipate that networks would get so large. A large corporate network may have 12,000 to 15,000 terminals, 10 IBM 30 series host processors, 30 4300-type CPUs, 100 IBM Series/1 minicomputers and 30 to 100 front-end processors. A network supporting banking or point-of-sale terminals may have 60,000 terminals, Sussenguth said.

To accommodate the advent of such large networks, IBM was forced to increase network addressing from 16 bits to 23 bits, a modification that is representative of changes made to SNA to keep up with industry and network advances, he added.

Some of those changes were outlined by Robert J. Sundstrom, manager of communications systems architecture with IBM's Communications Products Division.

According to Sundstrom, the first SNA product was the 3600 banking system, supported with a CPU running Vtam with a channel-attached 3705 front-end processor running the Network Control Program.

Today Vtam networks serve as backbones, and Sundstrom said he can foresee the day when network addressing will have to be extended from 23 bits to 48 bits.

Other changes the manager anticipates include a reduction in required maintenance, reduced network definition procedures, the ability to support peer-to-peer communication among low-end processors, local network support and increased availability.

Reducing scheduled maintenance will enable 24-hour network availability, Sundstrom said. Similarly, the need to increase availability during working hours is encouraging development of alternate routing to bypass failed net components. Availability also forces the issue of dynamically changing networks.

Sundstrom noted that SNA will be upgraded to reduce the definition or system generation procedures required when systems are added or deleted from a network.

To support small systems outside the domain of the Network Control Program, IBM developed a node type called Physical Unit 2.1. This was complemented with the creation of Advanced Program-to-Program Communications or Logical Unit Type LU6.2. IBM will extend this support to many of its small systems, Sundstrom said.

As these small systems are supported on local networks, there is a growing need to modify SNA to support local network clusters, the architect said. Key to local network support is the ability to integrate network management with that of the backbone network.

Ideally, SNA will someday be able to use

See SNA page 60

Daniel Minoli

Planning cuts net setup costs

Effective planning and coordination between data communications network designers and implementation groups can reduce the overall cost of installing or modifying a network and increase end-user satisfaction and uptime.

Several tips based on experience are highlighted below to sensitize potential users and managers to some of the issues involved. These suggestions apply whether the implementation is carried out by a separate implementation group or is handled by a multipurpose corporate communications group.

It is important to avoid the situation known as "customer not ready," where a service supplier comes to install a circuit but is denied access or cannot pinpoint the location. These situations can also be encountered by a vendor trying to install data terminals or communications equipment upon finding that power, cabinet space or other prearrangements have not been made.

Surprisingly, customers often are not prepared to receive products and services. International record carriers, for example, average two to five such situations per installation attempt. This writer has seen a customer turn a vendor away seven times. Since rescheduling visits normally requires at least one week, this translates into delay.

See DELAY page 60

Minoli is an associate vice-president, systems planning and engineering, of Prudential-Bache Securities, Inc. in New York.

Indesys' one-way message service melds micros, radio

CHICAGO — Indesys, Inc. unveiled an electronic message delivery service here at the recent National Computer Conference that combines satellite distribution and FM radio delivery technology.

Indesys is backed by printer maker Epson America, Inc.; ABC Video Enterprises, Inc., a division of American Broadcasting Companies, Inc.; a venture capital firm called The Hillman Co.; and the Indesys Management Group.

The company will provide one-way message distribution services to personal computers equipped with an integral, proprietary Indesys receiver card or to specially equipped printers. An antenna will also have to be installed at each receiving site.

In practice, users create messages on a computer and, after finding the published address of the intended recipient, enter one or more addresses to which it is to be sent. The message is then transmitted at 300, 1,200 or 2,400 bit/sec. through a local ABC station, which routes the call to a computer at Indesys' headquarters in Mountainview, Calif.

Indesys' computer converts the public identification code into a private address code and forwards the message via a 38.4K bit/sec. microwave link to a satellite earth station. The earth station bounces messages off of a satellite down to affiliated radio stations.

These stations, in turn, broadcast the message on a subcarrier frequency along with their normal commercial radio broadcast. While largely unused today, FM subcarrier radio waves — which are not detected by common FM radios — are used to broadcast services such as Muzak of Philadelphia's subscription background music.

Indesys customers are assigned a unique address, and their receiving equipment collects only those messages addressed to it. Because FM subcarrier transmissions, like standard FM radio, blanket all receiving equipment in a given radius, only the receiver addressed can decode its messages.

For additional security, Indesys can change the private addresses of receiver equipment frequently. A receiver may have as many as 64 subaddresses to support multiple users. The computer stores incoming messages keyed to separate passwords for each subaddress.

The Indesys' receiving card for personal computers contains a decoder and a buffer. If the computer is turned off, the receiver can store and buffer up to 100 pages of text. The Indesys board is compatible with Epson's QX-16 micro or IBM's Personal Computer. Locations that do not have personal computers can use properly outfitted Epson smart printers.

Offering several services

Several service tiers will be offered, including Maxmail, guaranteed one-hour delivery at 20 cent/page; Digitext, same-day delivery (typically within four hours) at 15 cent/page; and Nitetext, guaranteed overnight delivery by 8 a.m. for 10 cent/page. There are no monthly minimum charges.

Indesys will initially transmit data to locations in New York, Los Angeles, Chicago, Dallas and San Francisco through these respective FM radio stations: WPLJ, KLOS, WLS, KTKS and KOME.

The company said it expects to support several other major markets beginning in 1986.

Indesys is located at 2425 Garcia Ave., Mountain View, Calif. 94043.

In a Control Data Computer System you're free to crunch anybody's numbers.

[illegible]

CONTROL DATA

SNA

from page 57

all types of communications facilities — including local networks, leased and dial-up lines and X.25 networks — regardless of node type.

Gauging effect on net operations

To help gauge how these new SNA capabilities will affect network operations, IBM offers the System Network Analysis Program/Simulated Host Overview Technique (Snap/Shot).

Snap/Shot is a discrete simulation modeling tool, according to Bud Gross. Gross is a manager of design and analysis tools with IBM's Telecommunications Products Organization.

Snap/Shot was developed in conjunction with SNA and was initially intended to show performance differences between SNA and IBM's Binary Synchronous Communication and start/stop protocols.

Used for benchmarks

Today, Snap/Shot is used in place of benchmarks to gauge how changes made to a network will affect net performance.

Benchmarks are time consuming and cost roughly $250,000, almost 20 times what it costs to model with Snap/Shot, Gross stated.

Snap/Shot is completed in a week and offers results that are said to be nearly as accurate as actual benchmarks.

Studying net changes

Snap/Shot can be used to study net changes on I/O, host processors or terminal populations and is recommended for use in capacity planning, in the consideration of data base management systems and configuration analysis.

It is not recommended for the analysis of batch-only applications or for determining factors such as the size of Vtam buffers, Gross said.

Model output is created in terminology and forms that users are accustomed to, the design and analysis manager noted.

John Link, a senior planner for communications programming with IBM's communications products division, concluded the session by saying that the overall intent is to increase the availability of SNA networks by reducing planned and unplanned outages.

The largest vulnerability of SNA nets — and thus the greatest need for enhancement — is in software, Link said.

DELAY

from page 57

Many customer-not-ready situations, particularly those related to access and awareness of the customer contact, can be avoided easily. The customer should know the service contact point locally, but more important at the remote site, where customer-not-ready situations are more common.

Second, the contact individuals should be clearly informed about the upcoming installation, the vendor, the desired location and the preliminary tasks to be performed.

Third, the approximate date of installation should be communicated to the contact individuals.

Customer-not-ready situations and ensuing delays can occur at all stages of a project.

In some cases, physical installation of the local loops and end-to-end testing are done in two phases, such as with installation of international circuits that require space segment allocation. A customer delay for such services may require having to back out of the satellite, again resulting in major delays.

Most vendors cancel an order after finding the customer is not ready a number of times, typically four, after which users must reenter the order.

Limiting problems

One way to limit this situation is to give vendors enough time to deliver the desired product.

A reasonable interval between the ordering date and the due date should be factored into the plan.

While users may occasionally be forced to push a vendor for early delivery of one or two units, if a large number of units is required, 45 to 60 days is reasonable.

High-speed digital services may, on the other hand, require three to 12 months to deploy; if the service is needed sooner bypass alternatives should be explored.

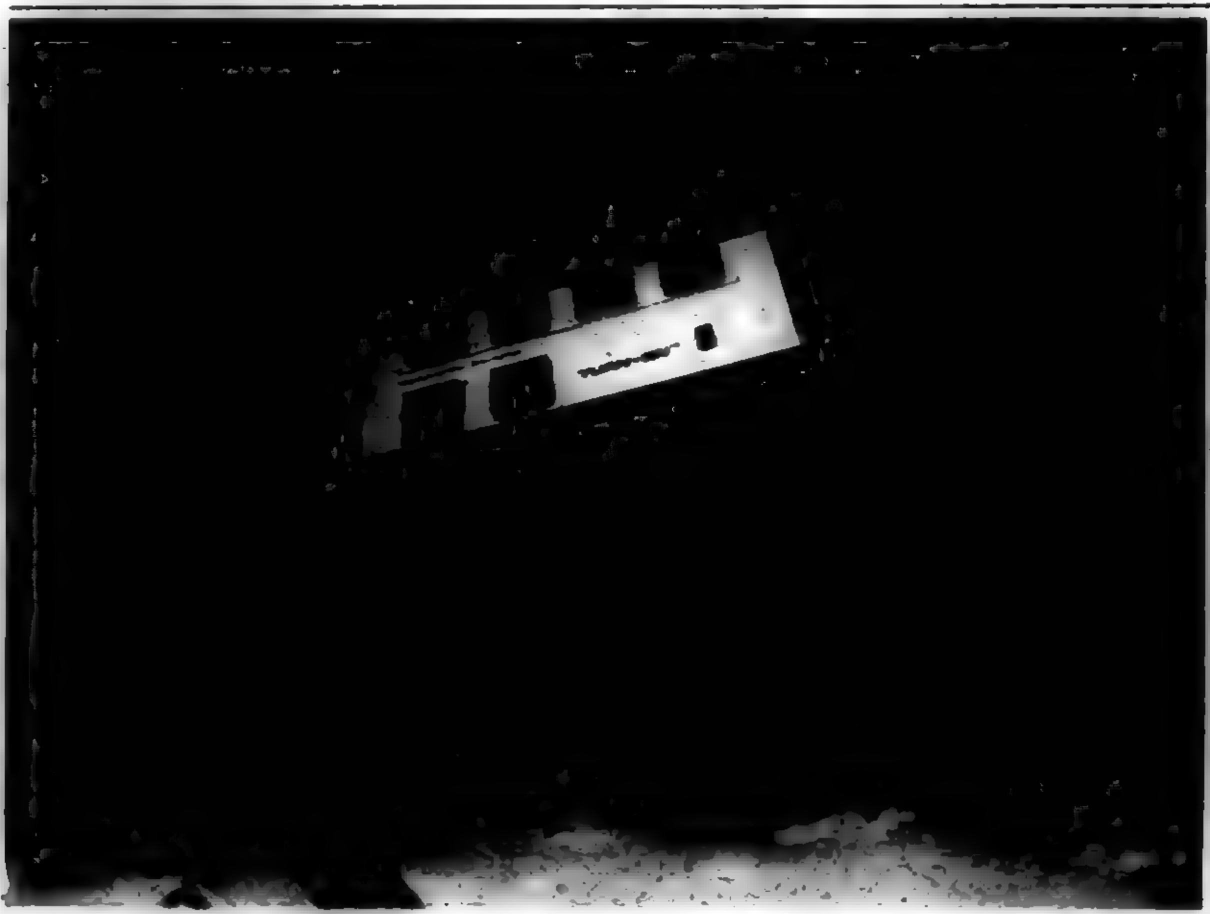
Allow enough time for unit and integration testing. Don't discount Murphy's Law.

One may buy a component that, according to specifications, should integrate into an overall system. But time and again the user finds himself chasing an unexpected bug. Even the most minute task can translate into a problem.

Pursue validation testing with the vendor before bringing the equipment in-house.

The system may have worked well at another installation, but how it will work in your application, which may have a different load, is another consideration.

The above are only a few examples of issues that must be properly addressed at planning and implementation time to achieve smooth and cost-effective network deployment and service initiation.



Turn on, access, and turn off your microcomputer. From anywhere.

PRESENTING TURN-ON™

TURN-ON is a totally unique intelligent power controller that provides unattended remote access plus power protection to your microcomputer. Now you can avoid arranging "call-in" schedules or peak hour overloading. When the phone rings at your powered-down micro, TURN-ON automatically powers-up the peripherals and then the computer, puts your program in operation, and upon completion powers-down the system, leaving a visual signal that remote activation has occurred. Your computer no longer needs to be left on or attended all the time.

THE MOST FULLY-FEATURED DEVICE OF ITS KIND

TURN-ON has all the finest available telecommunications features and much more. It is available as a turn-key hardware/software system that goes far beyond power strips and other remote access devices. TURN-ON gives you automatic log-on 3 phase security:
■ User ID ■ Password protection
■ Optional dial-back confirmation.
TURN-ON's file transfer program also provides transfer protection by file name.

The Dyna-talk software permits automatic recording of every incoming modem connection by user ID, tells you which program the user executed, and the time and date of the call. TURN-ON's software is very user-friendly, menu-controlled, easy to use, and PC DOS 2.0 and above compatible. AC line filtering gives complete power surge protection for all devices plugged into the six power outlets. No separate power strip is needed.

TURN-ON PUTS YOU IN CONTROL

Remote distributed micros are now available to you 24 hours a day for such tasks as electronic mail, transferring programs and data files, or the running of other application software. An optional 25 pin connector allows the computer to stay on past phone hangup or manual power-off, so any required processing can be completed.

With TURN-ON, you'll save time and money because you now control and manage the exchange of information with your computer in the fastest, most efficient way possible.

Call today for more information on how easy it is to Turn-On your computer system.

THE NEWSWEEKLY FOR THE COMPUTER COMMUNITY

6A12-81

How much System/36 is right for your business?

Now one of the most popular computers in business comes in the most popular business sizes. Small, medium and large.

Three processors. One Family.

Although there are three IBM System/36 computers to choose from, they're really a single family. All System/36 printers and displays are interchangeable.

So you can grow from one member of the family to another while protecting your system investment.

The integrated computer for any business.

Any of the System/36 models can be a standalone computer for a small company, a departmental system, or part of a distributed network for a larger company.

The System/36 is a well-rounded business and office computer system with a library of more than 3,000 proven applications covering a wide range of businesses.

For example, IBM software like DisplayWrite/36 and Personal Services/36 provides text processing, calendaring and scheduling, message and mail handling to help you create a hardworking office system.

PC Support/36 lets personal computers access System/36 disk storage and printers.

As a central processor, the System/36 can help pull a company together—it can connect PCs to mainframes. And the communications capabilities of the System/36 allow people throughout an organization to share information and resources to handle almost any job, anytime, from IBM Personal Computers or System/36 terminals.

In addition to its text and office function and its communications capabilities, each System/36 offers business graphics and general accounting applications, making it a truly integrated solution to the problems of running a business.

Introducing the IBM System/36 PC.

This new IBM computer marries the System/36 and the IBM Personal Computer to give you the best of both worlds. With a price starting at $5,995, the System/36 PC is an affordable standalone system for a small business. And it can be used in a larger company where multiple unit installations offer the best solution.

The System/36 PC is made up of a 5364 processor attached to an IBM PC, PC XT or PC AT. And you can connect up to three more of these personal computers. Or you can connect terminals such as System/36 printers or displays.

The System/36 PC comes with a 1.2 MB diskette drive and either 40 or 80 MB disk storage, depending on your information storage needs.

The System/36 model 5362.

The middle-sized System/36 processor, the 5362 can support up to 22 local IBM Personal Computer terminals and up to 64 remote terminals. With 1 MB of main memory and 120 MB of disk storage, the 5362 is powerful for its size—about as big as a two-drawer filing cabinet. And, you can add memory and additional features with plug-in modules for easy growth.

The System/36 model 5360.

The largest of the System/36 Family, the 5360 has 1.75 MB of main memory, with disk storage capacity up to 800 MB. Working as the computer solution for many businesses, the 5360 can support up to 36 personal computers or local terminals and up to 64 personal computers or terminals remotely.

Easy to use.

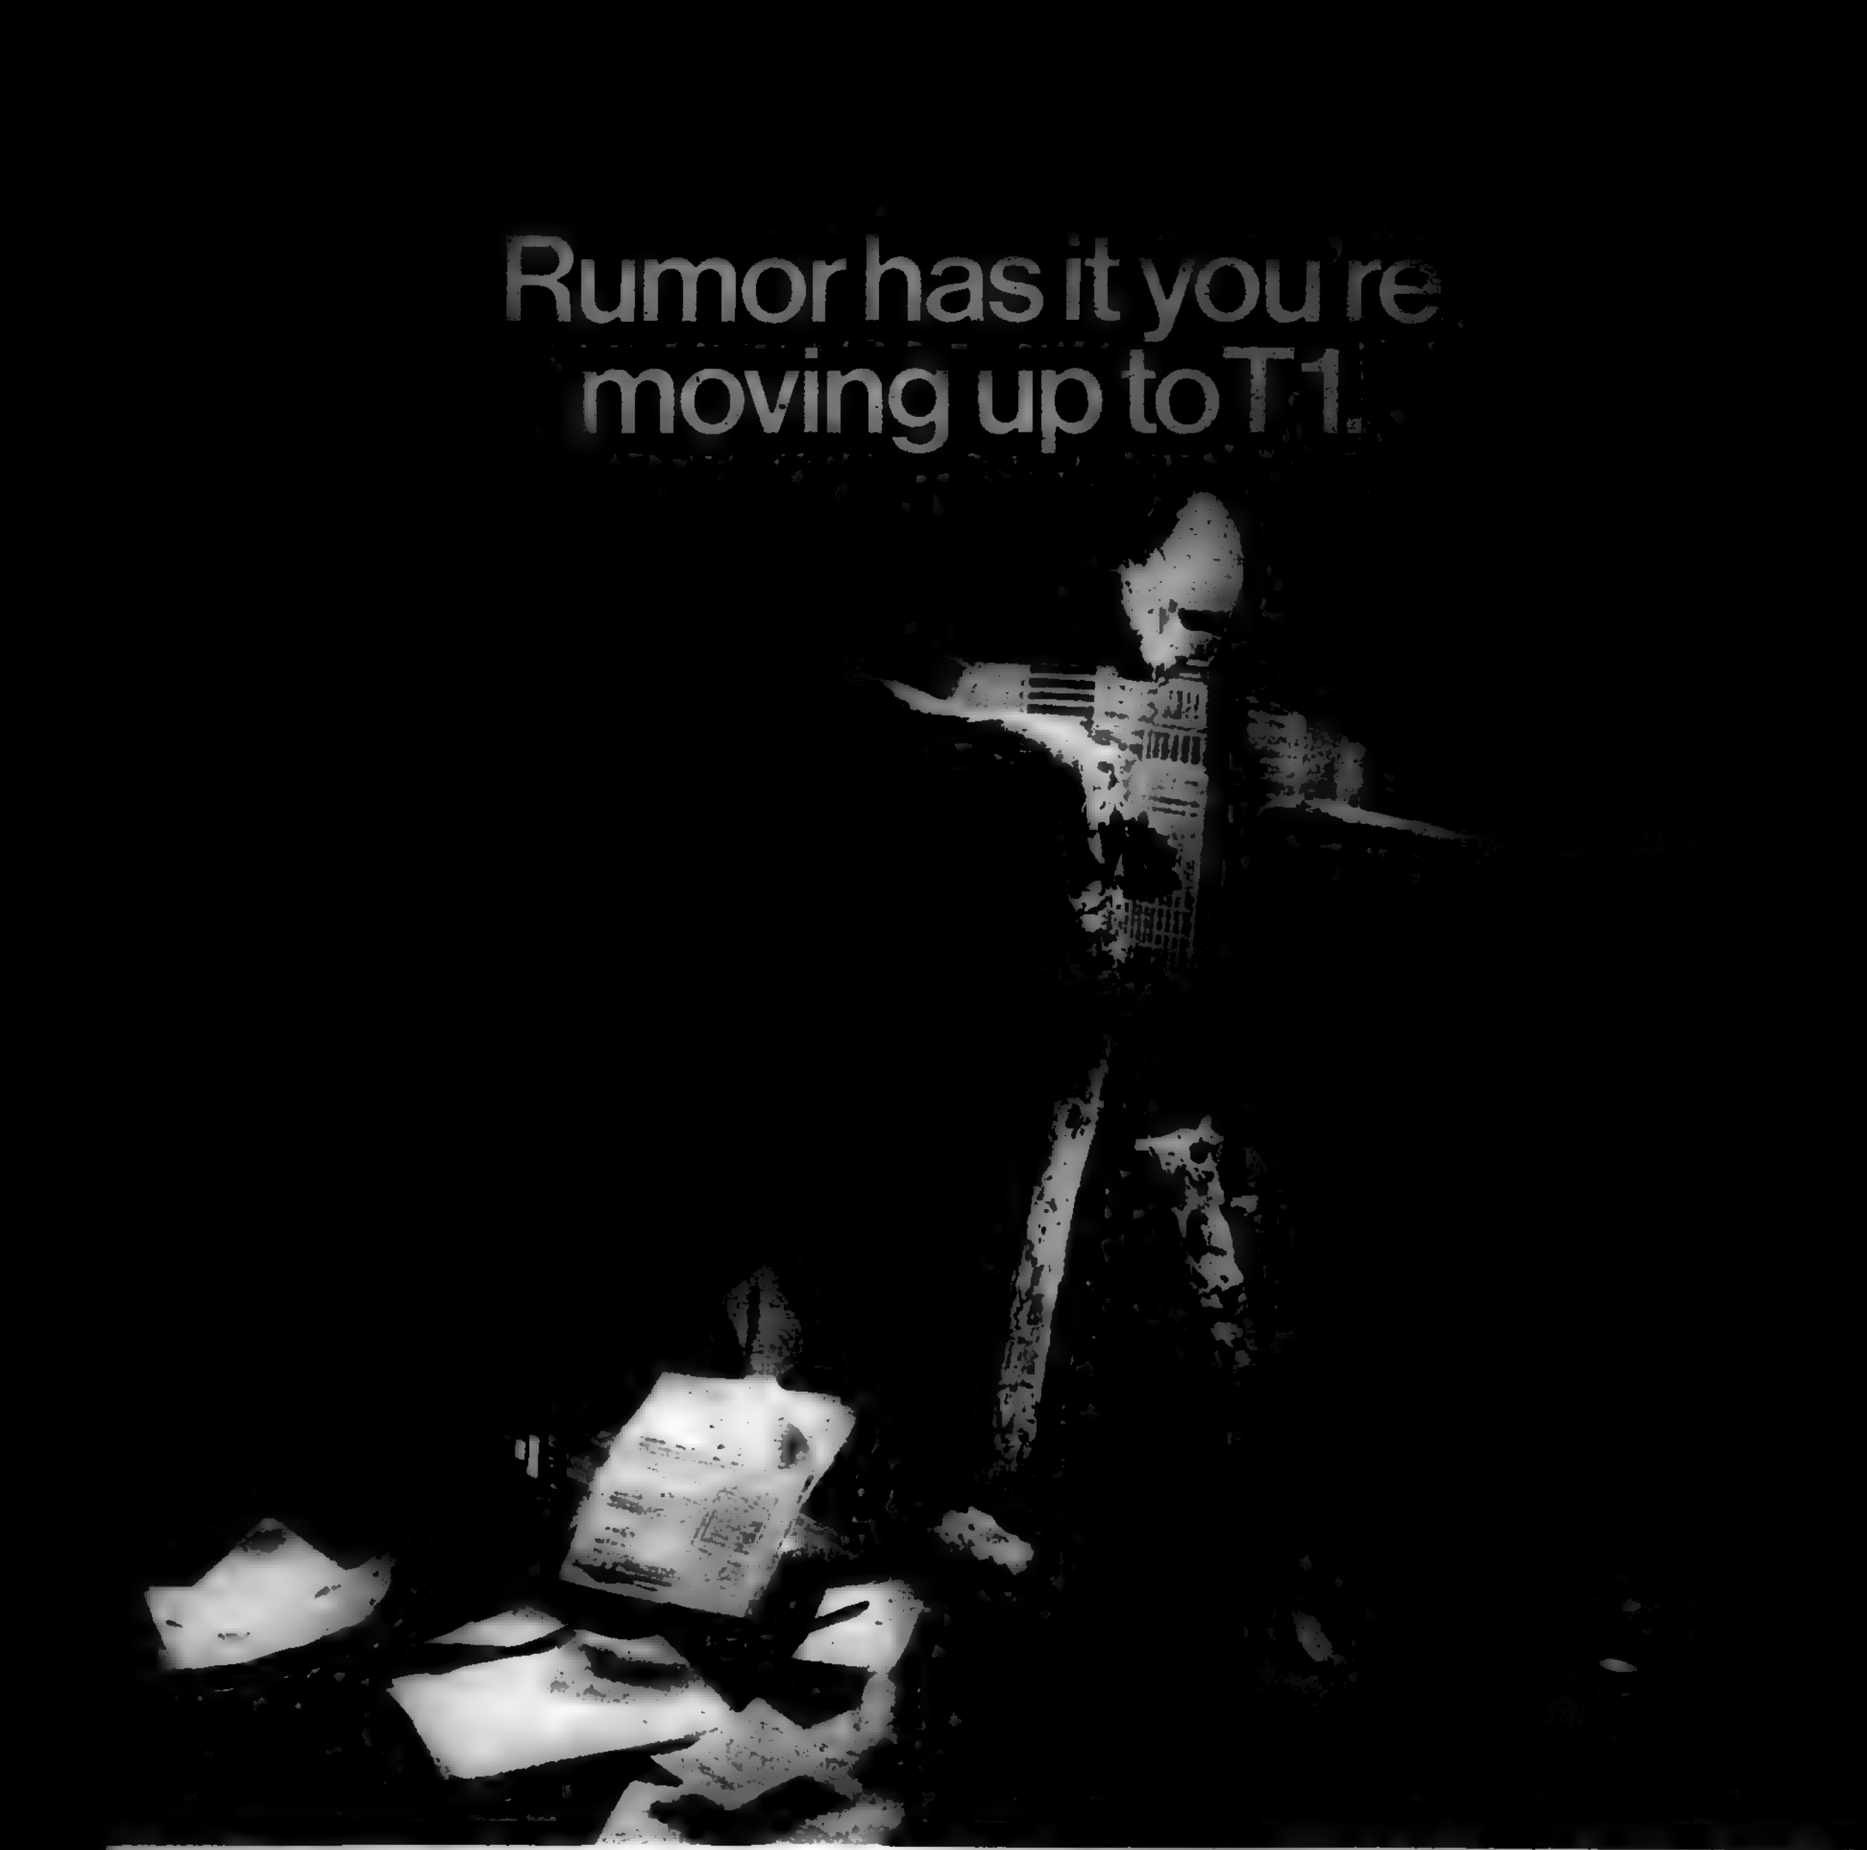
All IBM System/36's are easy to use. Over 2,800 "help" screens assist first-time users over any rough spots. They're also easy to install. And they need no special operating environment.

No matter what business you're in, the System/36 Family of processors offers a system that will fit, now and in the future.

To learn more about the IBM System/36 Family, call your IBM marketing representative. Or for the IBM Product Center or authorized IBM remarketer near you, call 1 800 IBM-2468, ext. 90, LM.

If you're shopping for a business computer, choosing the best system is easier than ever. The hardest part is deciding how much System/36 is right for your business.

IBM®



Come back.

T1 speed.

It doesn't have to be as scary a project as everyone thinks. Fact is, installing T1 can be a fairly simple chore.

We're Infotron.

We design, build, and install communications networks. Reliable. Compatible. Sophisticated T1 networks that support data and compressed digital voice.

Our newest system, InfoStream℠, introduces an open architecture to T1 networking based on Infotron's long-established strengths in multiplexing and switching.

We'll take care of you every step of the way. Before. During. And after the sale.

Calm down. Dust yourself off. Then call: 800-345-4636.

Honeywell true to CPUs

Exec reaffirms staying power in mainframe area

By Peter Bartolik
CW Staff

Despite its reliance on NEC Corp. for a high-end mainframe, Honeywell, Inc. has not reduced its commitment to mainframe technology, according to the top executive of the Information Systems division.

William Ray, who earlier this year was appointed executive vice-president of Information Systems, spoke with *Computerworld* during the recent National Computer Conference and directly addressed the company's staying power in the mainframe area.

The company's next generation of mainframes is currently in the research and development stage and will be made by Honeywell, Ray said.

Ray was appointed to his current position during a reorganization that saw Honeywell Vice-Chairman James Renier relinquish his position as president of Information Systems and move up to share the chief executive office with Chairman Edson Spencer. Like Renier, Ray moved over to Information Systems after heading the industrial controls groups.

That reorganization, Ray conceded, "did send a signal that some people interpreted to mean that Honeywell will emphasize controls over computers." But that is the wrong impression, he asserted.

Honeywell for too long operated its computer and controls divisions as separate companies. Integrating those businesses provides added strength, particularly in high-growth areas such as factory automation and networking, Ray said.

See CPU page 70

COM print system out

CHICAGO — Bell & Howell Co.'s Computer Output Microfilm (COM) Division introduced a COM print and duplicating system at this month's National Computer Conference here for medium- and low-volume DP centers.

The COM Print 6000 system for in-house fiche printing is said to cost about $80,000, according to the company.

The system, which receives input from IBM or IBM plug-compatible mainframe computers, looks like a printer to the host computer.

Job setup is performed on the host using Bell & Howell setup software for subsequent storage in the system library.

Effective image reduction of 48:1

The system has a 128-char. set; 105mm unsprocketed roll, emulsion-in, dry-silver film type; and a magazine capacity of 200 ft of master and 100 ft of duplicates. The effective image reduction is 48:1, according to Bell & Howell.

Ten copies of a 2,000 page report can reportedly be produced on the COM Print 6000 in less than an hour on eight fiche weighing less than two ounces per copy.

According to the vendor, the total cost for printing and duplicating that report would be $4.88.

More information can be obtained from Bell & Howell at the COM Division, 16691 Hale Ave., Irvine, Calif. 92714.

Elite supermicro unveiled

WICHITA, Kan. — Elite Computer Systems has announced the Expert 32, a supermicro based on multiple National Semiconductor Corp. 32032 microprocessors.

Users can attach up to six CPUs in a tightly coupled configuration. The system was designed to run the company's ECS PVS operating system.

A basic Expert 32 system, including a CPU, 2M bytes of main memory, 32K bytes of cache memory, a 60M-byte hard disk drive, a peripheral interface card, four RS-232 serial interfaces, a disk controller, a Centronics Data Computer Corp. parallel interface and 12 expansion slots, costs $18,900.

Elite Computer Systems is located at 4129 May St., Wichita, Kan. 67209.

The tangled web of micros, minis, mainframes

SHOP TALK
William Inmon

Ask DP managers if they know the difference between a mainframe and a microcomputer and the response will probably be: "Of course I know the difference. What a silly question!" Ask a salesman if an IBM 3081 is a mainframe or if an IBM XT/370 is a micro, and you will probably get the same response.

Indeed, the DP community has a strong intuitive notion of the boundaries that define a mainframe, mini or microcomputer. But upon even a superficial analysis, it is clear that the real differences between the types of processors are blurred. In fact, commonly used methods for differentiating between the various processor groups, such as the millions of instructions per second (Mips) measure, add to the confusion.

Classifying processors is important to many people. For example, market researchers must have a way to break down the marketplace for analysis. There are different forces which drive the mainframe, minicomputer and microcomputer marketplaces. Fundamental to understanding those forces is the ability to define solidly how the marketplace is segmented.

DP managers are also affected by the differences between processors because they have to make daily decisions on whether their companies are heading in the right direction.

For a long time, Mips was the primary

criterion by which the market could be divided. A mainframe was a processor with an instruction rate higher than N Mips, and a minicomputer was a processor that ran slower than N Mips. And for a while, this distinction had a certain amount of validity. It has rapidly become obsolete.

One reason for this obsolescence is that mainframe Mips are not necessarily equivalent to minicomputer Mips. For example, a mainframe is usually capable of accomplishing a task in a given number (N) of instructions, while a minicomputer takes more instructions (N+M).

A second factor that makes it difficult to compare minicomputer and mainframe Mips is that in certain environments, such as on-line situations, the capacities of the two machine types become saturated at different levels.

Another problem with Mips is that the criterion is often a moving target. In the early 1960s, a mainframe processor typically fell into the .04- to 1-Mips range. In the late 1960s and early 1970s, the mainframe range was between 7 Mips and 12 Mips. Now, mainframes generally fall in the 8- to 25-Mips range.

When the mini came on the scene in the mid-1970s, it created new types of processing and new markets. Digital Equipment Corp.'s first processor operated in the .05- to 1.5-Mips range.

By the early 1980s, minicomputer manufacturers introduced more pow-

Do you still think automatic configuration management is "pie in the sky"?

Think again.
It's here. Now. Proven.
Deliverable today!

With Softool's Change and Configuration Control (CCC™) tool, you will be in charge.

CCC Automates:
• management of changes and configurations • control over who makes what type of changes and where • tracking of trouble reports • reconstruction of previous versions • document control • management reports • archiving • and, much more.

CCC is Interactive And Friendly.
It supports all programming languages, and comes with on-line tutorials.

CCC is a Proven Product.
Over 1,000 Softool products are installed worldwide. CCC is supported on the Apollo, DEC VAX, DG MV, Gould S.E.L., Honeywell 6000 series (Level 66, DPS 8/88), HP 9000, IBM 370, 30XX & 43XX, and Sun computers.

CCC is the Solution for the 80's.
It resolves the most important problem facing the software industry today: configuration management. CCC offers true configuration control. . .where all components of a given release can be managed as a unit.

There is More.
CCC is a stand-alone component of Softool. An integrated Programming Environment (PE™) is also available.

Call today for more details or a hands-on demonstration.

Proven in MIL-STD Applications!

from page 69

erful processors, in the 0.7- to 1.5-Mips range. In the late 1970s and early 1980s, the microprocessor appeared on the scene. The first microprocessors were small machines operating at about .01 Mips. Today, more powerful ones have appeared.

The problem with using this moving Mips scale is that there are many overlapping areas.

Based on historical information, it is a safe bet that by the 1990s, a mainframe may be a processor operating at greater than 30 Mips; a mini will operate at between 5 Mips and 30 Mips; and a microprocessor will operate at less than 5 Mips.

It is also a good bet that if Mips is used as a dividing line, the distinction between processor classes will become even more blurred.

Another problem is IBM's coupled processors. IBM has developed dyadic processors, and the possibility exists that it could also bring out triadic or quadratic processors. Is a quadratic processor made up of four 10-Mips uniprocessors in a 40-Mips machine? Or is it four 10-Mips machines?

Consequently, any confidence the average DP professional can place in using Mips to distinguish between mainframes, minis and micros is not justified.

But the intuitive basis for system classification probably comes from more than just size. It also stems from historical market activity.

In the 1960s, IBM introduced the general-purpose 360 series, with a single instruction set usable on multiple models. As the demand for more processing power grew, IBM increased the size of its mainframe processors.

In doing so, IBM left a niche in the market that was filled capably by DEC, Data General Corp. and others. The real growth of the mini manufacturers did not come until the mid-1970s.

The minicomputer has grown in power since then and is projected to grow even more.

The intuitive basis for processor classification appears to be a combination of Mips, historical market activities, price and a series of other constantly changing factors. Consequently, the same criteria for classification are seldom defined the same way by any two sources.

Thus, the real differences between processors is in their use and the functions they perform. Admittedly, the differences in use are not as great between a mainframe and a mini as between a mini and a microprocessor. But there are significant differences nonetheless.

CPU

from page 65

According to Ray, Honeywell's "primary objective is to support its customer base." The company sees its role as implementing greater integration of equipment through distributed processing networks.

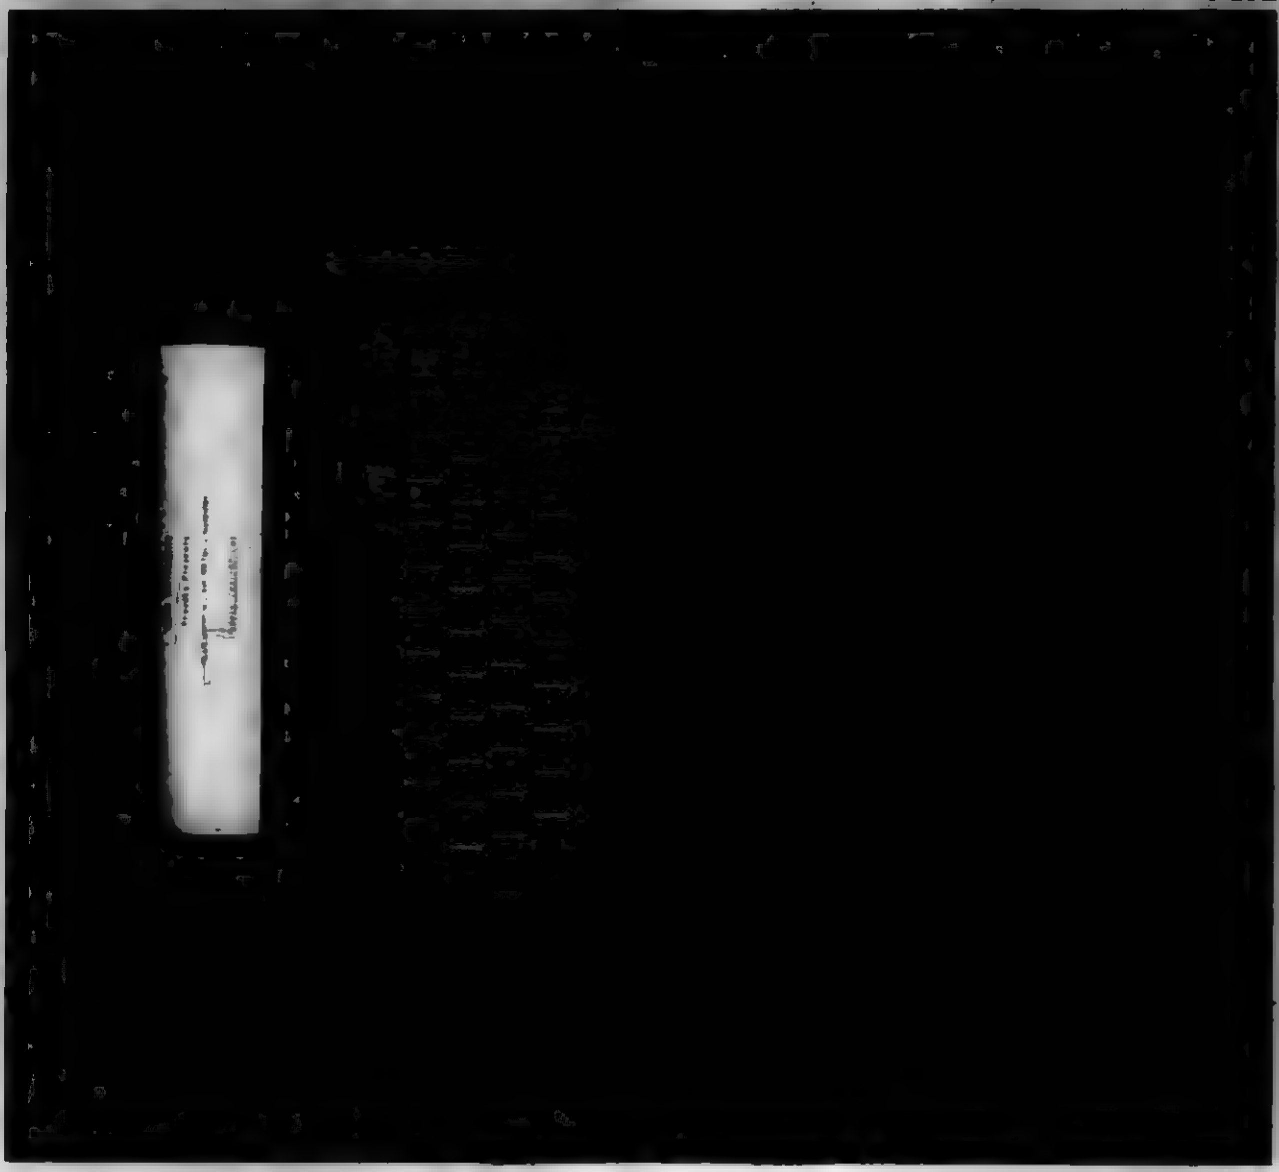
TERMINALS

■ **Lear Siegler, Inc. has unveiled the ADM 3E, a 14-in. CRT terminal.**

The unit is available with a green or amber screen and seven programmable keys that are shiftable for 14 nonvolatile functions. Other features include dynamically allocated function-key memory, basic editing capabilities and an optional bidirectional printer port.

The ADM 3E costs $399.

Lear Siegler, 901 E. Ball Road, Anaheim, Calif. 92805.



Only Texas Instruments packs more portable terminal into less space.

Here's a brief case for the Texas Instruments Silent 700™ Model 707 Portable Data Terminal. It's the latest and lightest in a long line of standard-setting Silent 700™ terminals. And it's the most versatile full-function portable anyone can pack into a briefcase.

By carrying TI's Model 745 one step further, we made the best even better. The 707's standard internal modem connects to any telephone network while the optional acoustic coupler and battery pack make it fully portable. The spreadsheet size 132-column printer is now standard. And TI's solid state plug-in cartridges can add functions for your current use and later expansion.

For the standard-setting terminal that packs more product into less space, get the TI Model 707. At only six pounds, it packs more full-size functions than any other portable ...all at a surprisingly low price. For more information contact: Texas Instruments Incorporated, P.O. Box 809063, Dept. DTB 1630W
Dallas, Texas 75380-9063.

COMPUTER INDUSTRY

Top spot at Wang eluded Cunningham

By Clinton Wilder
CW Staff

ROCHESTER, N.Y. — Wang Laboratories, Inc. and Computer Consoles, Inc. (CCI): a tale of two computer companies. A $2.5 billion office automation giant and a $130 million specialized minicomputer upstart, with nothing in common except rapidly declining profits — and John F. Cunningham.

Last week, the 42-year-old Cunningham put CCI on the industry map by becoming its chairman and chief executive officer, departing the presidency at Wang after a 17-year climb to almost the top rung of its corporate ladder. Make that "almost" with a capital A, because he clearly wanted to be the boss. That desire led Cunningham, who has been courted for presidential openings at Apple Computer, Inc., Prime Computer, Inc. and Apollo Computer, Inc., to choose a relatively obscure niche company with, in his words, "outstanding technology."

"The current industry slump presented an unusual opportunity," Cunningham said on his second day on the job at CCI here. "In the jobs that went to John Sculley at Apple, Joe Henson at Prime and Tom Vanderslice at Apollo, I essentially saw no real opportunity for real capital appreciation in the five- to 10-year time frame. The stock and equity [were] overvalued."

> *'I didn't want 35% or 40% shareholders looking over my shoulder. I wanted to run the show myself. It should be fun.'*
>
> — John Cunningham
> Computer Consoles, Inc.

Cunningham considered other small companies but found exactly what he wanted at CCI. "Not many small foundation companies have the technology behind them to be long-term survivors," he said. "[CCI] also presented an unusual opportunity because the current chairman, [Herman A. Affel Jr.], is 65, and there were no other major individual holdings in the company. I didn't want 35% or 40% shareholders looking over my shoulder. I wanted to run the show myself. It should be fun."

Ironically, Cunningham joins the company as it faces a smaller scale version of a major Wang problem: bloated expenses. CCI recently reported a second-quarter pretax loss of $12.4 million or 40 cents per share, on $35 million revenue, down from a $2.8 million profit on sales of $36 million a year ago. CCI spends twice as much — about 20% of its revenue — as the industry average on research and development, according to Omri Serlin, president of Itom International, a research and consulting firm in Los Altos, Calif.

Cunningham, who presided over the release of 1,600 Wang employees earlier this

Backlog-driven micro price slashing predicted

By Kathleen Burton
CW West Coast Bureau

An estimated inventory backlog of more than one million personal computers will cause prices to plummet by the year's end, according to microcomputer industry analysts.

Vendors and major retail chains denied an inventory problem, but the analysts predicted price slashing during the pre-Christmas sales season.

"Because of the excess inventory, plummeting prices will be widespread, and the consequences could be disastrous," said Ken Lim, an analyst with Dataquest, Inc., a market research firm in San Jose, Calif. Manufacturers and retail dealers will attempt to dispose of inventory through gray market discounters, initiating a price war later in the year, he predicted.

Lim said the industrywide inventory buildup is due to the deflated personal computer market, which is predicted to grow 23% this year, compared with 80% last year and 300% in 1983.

Brian. Jeffery, vice-president of research at International Technology Group in Palo Alto, Calif., asserted that the industry's total personal computer inventory runs into the millions of units.

Backlog running IBM micro strategy

Jeffery said that IBM's inventory of various models is currently over the half-million unit mark. "The inventory backlog is running IBM's personal computer strategy," Jeffery claimed, "and it could delay the introduction of IBM's PC2 computer." IBM recently denied the existence of a PC2 product.

IBM uses subcontractors for many of its manufacturing and assembly operations, said Michael Murphy, publisher of the "California Technology Stock Letter" in San Francisco. "This makes it difficult for IBM to turn down the manufacturing spigot, compared with other vendors like [Apple Computer, Inc. that] have total manufacturing control," Murphy said.

Besides IBM's backlog, Lim said there are also half a million personal computers stockpiled by Personal Computer-compatible manufacturers. According to Lim, the companies most affected include Corona Data Systems, Inc. in Westlake Hills, Calif.; Eagle Computer Corp. in Garden Grove, Calif.; ITT Corp. in New York; Wang Laboratories, Inc. in Lowell, Mass.; and Televideo Systems, Inc. in Sunnyvale, Calif.

The only major IBM Personal Computer-compatible vendor not affected by excess inventory, Lim said, is Houston-based Compaq Computer Corp. Compaq has not had sufficient production capability to

See BACKLOG page 73

Slump prompts belt tightening

With mid-year financial results demonstrating a continued sales slump, several companies have implemented a variety of cost-cutting measures in recent weeks.

Companies that have implemented actions ranging from layoffs to plant shutdowns represent a broad spectrum of the computer industry. In recent weeks the following measures have been announced:

■ Burroughs Corp. said some 300 middle-management and secretarial positions will be eliminated under a reorganization that places overall responsibility for development and implementation of all product business plans under a new Corporate Program Management Group.

The group, headed by company Vice-President Fred R. Meier, formerly of the Systems Products division, will absorb the company's various prod-

See SLUMP page 72

A few winners weather storm

Two software companies, a supercomputer vendor and a maker of engineering workstations were among those weathering the second-quarter storm of bleak computer industry news with recently announced profit and revenue gains.

■ Cray Research, Inc. of Minneapolis last week reported that second-quarter revenue almost doubled over the year-earlier period, and profits tripled.

Supercomputer manufacturer Cray said revenue for the quarter ended June 30 was $77.2 million, up from $42 million a year earlier. Profits were $13.6 million, or 90 cents per share, up from $4 million, or 27 cents per share.

Cray Research Chairman John A. Rollwagen said the company installed 13 new systems in the first half of the year and expects to install an additional 17 systems in the second half.

See WINNERS page 76

Chip makers post operating losses

Intel Corp. and Advanced Micro Devices, Inc. (AMD) both recently reported operating losses for the quarter just ended as sales slumped from the previous quarter.

Separately, Seeq Technology, Inc. announced the departure of two top officers and a third-quarter loss of $3.8 million.

Intel, of Santa Clara, Calif., reported a second-quarter operating loss of $8 million, although it was able to report net profits of $9 million, or 8 cents a share, by reversing a first-quarter tax accrual of $5 million.

That figure was down from year-earlier profits of $55 million, or 47 cents per share. Revenue for the quarter just ended was $360 million, down from $410 million a year earlier, the company reported.

For the first six months of 1985, Intel reported

Cash-short Digital Research cuts staff, seeks investors

By Kathleen Burton
CW West Coast Bureau

MONTEREY, Calif. — Digital Research, Inc. recently announced that it will lay off 25% of its work force and is seeking equity investment from two customers.

Chief Executive Officer John Rowley said the company is taking steps to increase its cash reserves, which have been depleted by the high costs of new product development.

Under an agreement presently being negotiated, Rowley said, OEM customers Northern Telecom, Inc., based in Ontario, Canada, and Motorola, Inc., based in Schaumburg, Ill., would acquire minority equity positions in Digital Research. The companies will launch several joint development projects over the next several months if the agreements are approved by Digital Research investors, Rowley said.

A spokesman for Northern Telecom said an alliance with Digital Research would benefit the company because it would enable Digital Research's Concurrent PC-DOS operating system and Graphics Environment Manager (GEM) software to be used with its multiprocessor Meridian DV-1 data/voice system. Motorola would not comment on a possible alliance with Digital Research.

Several top Digital Research executives have recently resigned from the financially beleaguered firm. Rowley took over the CEO title from company chairman and founder, Gary Kildall, who left the company on June 28 but remains chairman of the board. In other moves, Steve Maysonave, vice-president of marketing and world trade, and Bruce Cohen, vice-president of U.S. sales, also left the company at the end of June.

The layoffs will affect 75 sales, marketing, engineering and support workers at the company's headquarters here, said John Meyer, Digital Research's director of marketing.

Meyer blamed the layoffs on weakening orders from OEMs, which represent 80% of the company's sales. However, Meyer said, revenue from the sale of the GEM program and the Concurrent DOS and Concurrent CPM 86 operating systems will increase later in the year.

Over the past year, cutbacks have reduced the total number of Digital Research employees from over 600 last year to less than 300. But, analysts said, that even with these cutbacks, the company will need additional help from strategic partnerships to stay in business and will post annual revenue at least 30% below last year's $55 million.

"[Digital Research's] cash flow problems are severe," said Paul Cubbage, an analyst at Dataquest, Inc., a market research firm in San Jose, Calif.

However, Cubbage added, "Rowley is making all the right moves to keep the company afloat." Rowley is trimming expenses, negotiating with potential partners and focusing the company's product line on graphics applications and systems software, its strongest suits, Cubbage said.

Digital Research's troubles began three years ago when the company tried to enter too many diverse markets, said Richard Matlack, a vice-president at Infocorp, a market research firm in Cupertino, Calif. In 1983 and 1984 the company tried to market several new product lines. According to the analyst, "[Digital Research] just lost focus."

Lexisoft files bundling suit against Eagle

DAVIS, Calif. — Lexisoft, Inc. earlier this month filed a $100 million lawsuit alleging copyright infringement of its Spellbinder word processing program by Eagle Computer, Inc.

The Lexisoft suit charges that Eagle, a hardware manufacturer based in Garden Grove, Calif., continued to distribute Spellbinder with its computers after its contract to do so expired in February 1984. Since then, Eagle has continued to bundle the software without paying Lexisoft any licensing fees.

Filed in U.S. District Court in San Jose, Calif., the suit also named the Bank of America National Trust and Savings Association in San Francisco. Lexisoft claimed that the bank, an Eagle creditor, began administering funds for the financially troubled company last fall but did not ensure that its debts to Lexisoft were paid.

The Lexisoft suit also names Gerald L. Kappenman, Eagle president, and Ronald N. Mickwee and Charles Kappenman, past presidents of Eagle, for civil conspiracy and violation of California's Unfair Practices Act. This law forbids a firm from giving away another company's products.

A spokesman for Eagle denied the claims. He said the company has had an ongoing OEM arrangement with Lexisoft to distribute and bundle the Spellbinder program since 1981. According to the spokesman, Eagle has complied with the financial arrangements and has paid Lexisoft over $250,000 in royalty payments.

Advertise in the only computer publication written for the People's Republic of China — China Computerworld.

According to International Data Corporation, the world's leading information industry research firm, the Chinese computer market is growing at an annual rate of 30 percent. China is opening its market to foreign computer suppliers and annual DP expenditures are expected to reach the multi-billion dollar range by the end of the decade.

China Computerworld represents the first joint venture in the People's Republic of China between a foreign publishing company, CW Communications/Inc., and the government. *China Computerworld* is published twice a month and reports on computer hardware and software technologies. The total paid circulation is 66,000. Total readership is estimated at 2,000,000, with total distribution of 100,000 copies per issue.

China Computerworld, modeled after it sister publication in the U.S., *Computerworld*, is the best way for advertisers to reach top officials in foreign trade and financial departments responsible for purchasing China's computer and communications equipment.

CW International Marketing Services makes advertising your products in the People's Republic of China, and around the world, easy. We have over 50 publications in more than 25 countries. For more information on our wide range of services, complete the coupon below and mail today.

uct management functions, which are currently dispersed throughout Burroughs, according to Chairman and Chief Executive Officer W. Michael Blumenthal.

The company had earlier announced it had experienced a slight decline in profits from the year-earlier period.

■ Control Data Corp. said it will shut down six minicomputer assembly and test plants for 11 days later this year. The closings, scheduled for the end of August, end of November and end of December, will impact 4,000 employees of the company's computer systems group who are involved in manufacture of superminicomputer products.

"Because we do not see any immediate resurgence or strength coming from the computer industry, we are taking precautionary steps to ensure that our operations are in line with our markets," said L. E. Jodsaas, president of the computer systems group.

CDC, which later announced a $24.9 million operation loss for the group, said that the decision will balance inventories with projected sales.

■ Hewlett-Packard Co. said it will shut all U.S. manufacturing and administrative facilities for one or two days each month at least through October and that it has cut pay by 5% for 14,000 domestic sales and service employees and by 10% for 27 top management personnel. Additional production halts are possible during the Thanksgiving and Christmas holiday periods, according to the company.

"We hope we can return to a full schedule before the end of the year, but we are also prepared to continue expense-reduction measures beyond 1985," said Dean O. Morton, executive vice-president and chief operating officer.

■ Winchester disk drive manufacturer Computer Memories, Inc. of Chatsworth, Calif., said it dismissed 300 workers, or 29% of its domestic manufacturing work force. The company said the layoffs were a result of increased offshore manufacturing capacity; it employs 900 workers in Singapore.

■ Disk drive manufacturer Atasi Corp. layed off 62% of its work force, or 164 employees out of a total of 264. The company said that it is seeking a new lender because a $6 million line of credit was canceled earlier this year.

■ Semiconductor equipment manufacturer Varian Associates, Inc. instituted a six-month freeze on pay raises and terminated 300 contract workers and 60 permanent employees; the company had previously announced its intent to cut 1,700 jobs from its 15,500 work force and said it will reach that goal with an additional round of layoffs in September. The company also said it will shut down production for 10 days later this year and has eliminated incentive bonuses for top executives.

■ Microcomputer manufacturer Intertec Data Systems Corp. of Columbia, S.C., announced it has ceased all manufacturing and marketing activities and laid off about 40 of its 52 employees.

The company said it will concentrate its remaining resources on development of products and that it will continue to provide factory warranty repair service and that additional service will be provided through its dealer network.

Uccel acquires Corodale assets

DALLAS — Uccel Corp. announced recently that it has acquired for $10 million cash the assets of Corodale, Inc., a Boston-based vendor of IBM DOS/VSE systems software.

According to a Uccel spokesman, Corodale has some 1,200 U.S. installations of its products, designed for tape and disk management and job scheduling. The spokesman said the move strengthens Uccel's position in the DOS/VSE marketplace.

Corodale, which the spokesman said has experienced annual revenue growth of about 35% in recent years, will operate as part of Uccel's Systems Software Division.

[illegible]

Rolm Corp. announced the formation of Rolm Europe Ltd., a wholly owned subsidiary, and plans to establish a development and manufacturing facility in the UK.

The telecommunications products developed by Rolm Europe will meet European specifications, and Rolm will procure a substantial number of components and subassemblies from firms throughout Europe. Final assembly and testing will be done in the UK.

Frank Onians has been appointed president and managing director of Rolm Europe. Onians was the former managing director of Philips Electrical Industries in the UK.

■

Execucom Systems Corp. announced that it has joined Microelectronics and Computer Technology Corp. as an associate member of that group. Execucom is the first software company to join the research organization.

■

Members of the Central Office Machine Dealers Association and the Texas-Oklahoma-Louisiana-Arkansas Office Machine Dealers Association have approved a proposal to merge the two respective organizations.

Both groups are regional affiliates of the National Office Machine Dealers Association, the national organization of independent business equipment and systems retailers.

BACKLOG from page 71

build excess machines, Lim said.

The manufacturers themselves, however, deny there is an inventory problem. "Our inventory is manageable," an IBM spokeswoman said. Representatives from Digital Equipment Corp. in Maynard, Mass., Hewlett-Packard Co. in Cupertino, Calif., Televideo and Apple made similar claims.

"Earlier in the year, we had a glut of Apple II computers, but we closed production plants, laid off workers and brought our production in line with demand," an Apple spokeswoman said. A DEC spokesman said the firm has no backlog of its traditionally slow-moving Rainbow computer.

Retail chains and independent dealers contacted by *Computerworld* also denied there is excess inventory.

CHIP from page 71

revenue of $735 million, down from $782 million in the first half of last year.

According to Gordon E. Moore, chairman and chief executive officer of Intel, "OEM customers have reduced their semiconductor component consumption rates, which is stretching our original estimates of the time required [for those customers] to work off excess inventories."

AMD announced an operating loss of $14.4 million for the first quarter of fiscal year 1986. However, the company was able to post a net profit of $739,000, or 1 cent per share, due to $15.5 million in tax credits. Those results compared with year-earlier profits of $38.2 million, or 66 cents per share. In the fourth quarter of 1985, the company posted profits of $25.7 million, or 44 cents per share.

Sales for the semiconductor manufacturer tumbled to $150.5 million, compared with $234.2 million a year earlier and $201 million in the fourth quarter of fiscal year 1985.

"AMD is finally feeling the full impact of the recession that has afflicted our entire industry since last fall," said W. J. Sanders III, AMD's president and chairman. He added that the company does not expect any increase in demand during the current quarter and said AMD has preserved jobs while controlling expenses.

At San Jose, Calif.-based Seeq, a manufacturer of nonvolatile semiconductor memory devices, the company's president and chief executive officer, M. R. MacPherson, and chief financial officer, Donald T. Aanestad, resigned. The company announced the formation of an office of the president composed of acting CEO E. Floyd Kvamme, a Seeq board member and general partner with the venture capital firm of Kleiner, Perkins, Caulfield and Byers; Gerald A. Robinson, vice-president of operations; and J. Daniel McCranie, vice-president of sales and marketing. Named chief financial officer was Patrick B. Brennan, former vice-president and treasurer with National Semiconductor Corp.

Seeq announced that third-quarter revenue slumped to $8.1 million from $13.8 million a year earlier and from $9.1 million in the second quarter of the current fiscal year.

The loss of $3.8 million, or 33 cents per share, compared with year-earlier profits of $509,000, or 4 cents per share, and a second-quarter loss of $4 million, or 30 cents per share.

Selling systems software? In September Computerworld Focus targets your market.

When it comes to systems software, there are no easy choices. So in the September 18th issue of *Computerworld Focus* on Software: Systems, we take a good hard look at what's available now. And what's coming down the road in the near future.

Topics will include all the building blocks available for a fully integrated system. Like information center packages. Operating systems. Data base management systems. Productivity tools. Data dictionaries. Decision support systems. Even things like artificial intelligence and fourth generation languages.

We won't just look at the pieces. We'll also discuss how they work together to provide a completely integrated system for companies of nearly every size.

And we'll target right in on your market. 128,000 paid *Computerworld* subscribers. Plus thousands of attendees at the Software Expo in Dallas in September.

So if you've got systems software to sell, we've got the perfect place to do it. The September 18th issue of *Computerworld Focus* on Software: Systems. But hurry, closing is August 9th.

For more information, contact Ed Marecki, Vice President/Sales, *Computerworld Focus*,
375 Cochituate Rd., Framingham, MA 01701.
Or call (617) 879-0700.

DATA BASE FAT.

HOW TO AVOID IT, FROM THE LEADER
IN ON-LINE TRANSACTION PROCESSING.

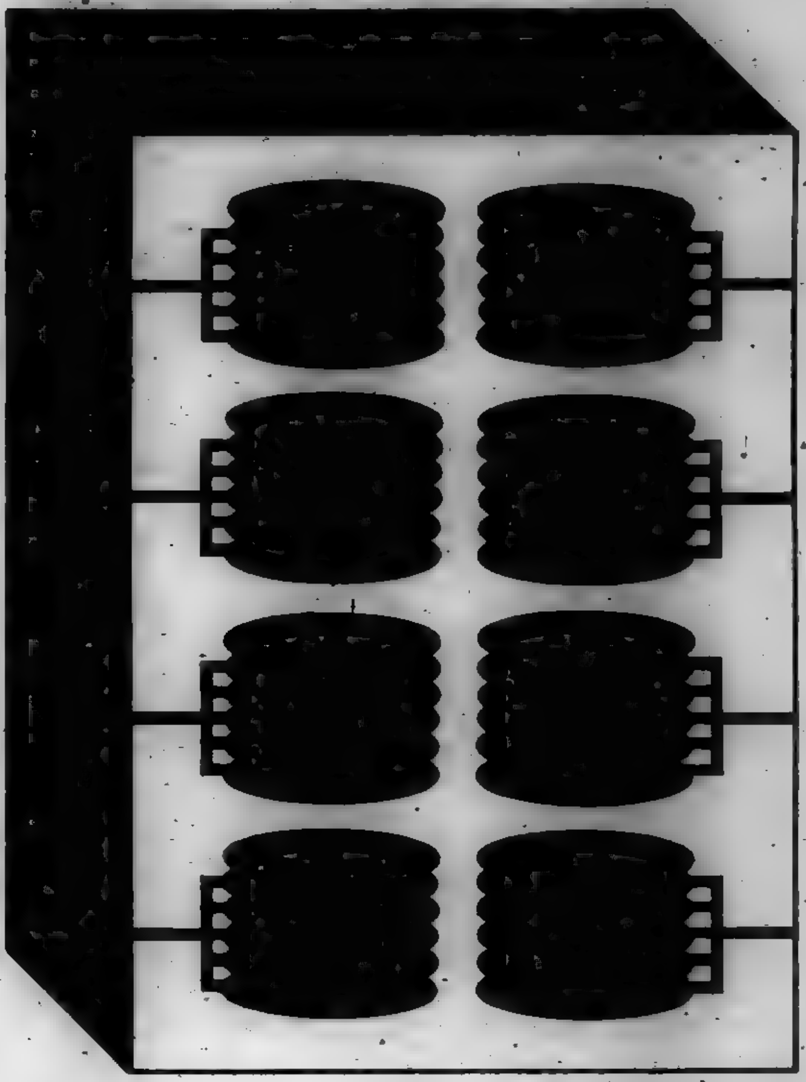
WHAT DATA BASE FAT IS.

It's a waste of time and space—the time it takes to access data and the space required for the storage. It's a hardware problem and a software problem and Tandem has solved them both.

NEW NON-FAT HARDWARE.

Introducing a new disc drive product called the Tandem V8.

The data base that would normally be stored on one large, conventional disc has been split up over eight small, high-density discs.



NEW TANDEM V8.
8 disc drives, 8 actuators in one cabinet.

Instead of one actuator handling I/O requests sequentially, eight actuators can now work simultaneously. No disc space goes unused.

The Tandem V8 gives you high throughput, stores 1.3 gigabytes of data, yet remarkably takes up only six square feet of floor space.

Maintenance is easy, too. Each disc drive can be removed and replaced in a few minutes. And the Tandem V8 can stay on line even while it's being serviced.

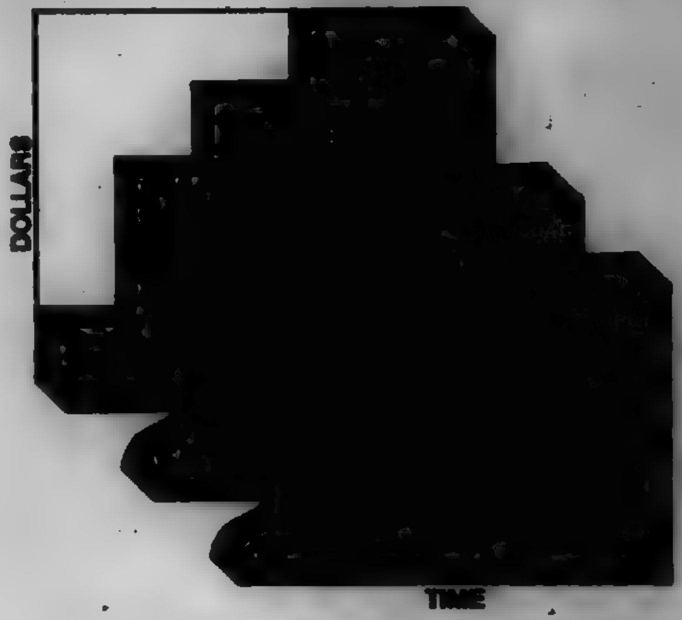
NEW NON-FAT SOFTWARE.

We've developed new data base software that allows our relational data base to operate 50% to 100% faster on the same hardware. That means you can boost your throughput without buying new hardware. Massive amounts of data can be made easily and instantly available to hundreds of users, even if they're geographically distributed over a worldwide network.

Parallel paths to the disc speed up data access.

TANDEM'S GROWTH ARCHITECTURE.

When you outgrow a Tandem system, you don't replace it. You just add to it. You can start with two processors in a local system and expand at any increment you choose, all the way to 4,080 processors worldwide. You never buy more than you need.



Tandem matches need. The competition overspends it.

With Tandem, your software expands, too. So you only write applications once. It's also a fault-tolerant system that stays on line without using idle backup components. Instead, each component has at least one identical copy with which it shares the workload. No single failure can shut you down.

LET'S CHEW THE FAT.

Tandem systems are already at work for FORTUNE 500 companies in banking, telecommunications, manufacturing, transportation, retailing and energy, as well as several branches of the U.S. Government.

To find out what we can do for you, call (800) 482-6336. Or write for our annual report. Corporate Headquarters: 19191 Vallco Parkway, Dept. 762, Cupertino, California 95014.

TANDEMCOMPUTERS

RESIGN

from page 71

year, may administer similar medicine to CCI. "One of my first goals is to get expenses in line with the current size of the business," he said. "There has to be belt-tightening across the board, and they haven't faced up to it yet. It will affect the employee side, because that accounts for 60% to 70% of expenses."

CCI is known as a technology company, Cunningham as a marketing man. "I think it's a perfect balance for my skill sets," Cunningham said.

Cunningham said he will try to focus CCI's direct sales force on turnkey office systems for such vertical markets as the legal and financial profession, while hoping to parlay his corporate contacts into big-ticket deals with large OEMs and value-added resellers. Other items on the Cunningham agenda include a potential move into the private branch exchange market to continue sales to the divested Bell operating companies, whose past purchases of CCI's Directory Assistance Systems fueled the company's growth in the 1970s. Cunningham will also be looking for other corporate partners — but for bigger fish than Boulder, Colo.-based NBI, Inc., whose announced merger with CCI collapsed earlier this year [CW, Feb. 18].

"I've spent a reasonable amount of time looking at foundation companies and concluded that not a lot would help us," he said. "But alliance with larger organizations is very possible."

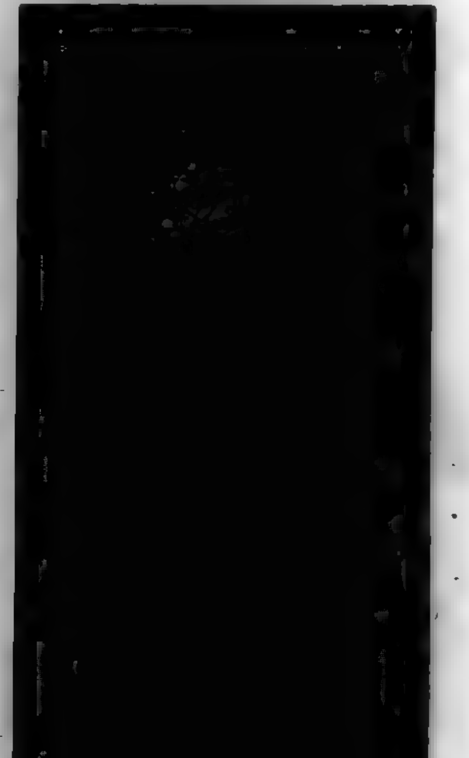
As the largest individual shareholder of CCI with 400,000 shares, Cunningham clearly has a vested interest in returning the company to profitability. The firm has already projected a substantial loss for 1985, and opinions vary as to when things will turn around.

"Cunningham is absolutely the best news CCI and its stockholders have had in at least three years," Itom's Serlin said, "but he can't do it by himself. Their problem is a lack of focus; they have four major product thrusts, all of them based on a different version of [AT&T's Unix], all of them really unrelated. There's no marketing structure that connects these things together."

While Cunningham replaces a 65-year-old chairman at CCI, another 65-year-old chairman, An Wang, has resumed the president's chair at the company he founded. Cunningham downplayed the rumored personality clashes among top Wang management prior to his resignation, stressing that the company had outgrown him.

"It was a difficult and emotional decision, and Dr. Wang was very supportive; he knew it was what I wanted," Cunningham said. "I think I enjoyed the 1973-81 period the most. One of the frustrations in a larger organization is losing contact [with employees] ... 30,000 is a tough number. There was less drama [to my departure] than people are writing into it. It was really a personal decision on my part."

Several observers of Wang feel many Cunningham loyalists will soon follow him out the door, perhaps not by their own choice, at the middle-management level. "Several changes have to be made at Wang, and this is just the first of them," said Vincent Flanders, associate editor of *Online Data Access*, an Austin, Texas-based independent magazine for Wang users.



4 out of 5 artists recommend Impressionist.™

Take it from the experts. When you have to impress the best, you need the very best impression. And the best impression comes with Impressionist, EXECUCOM's new business graphics software package. It can make anybody a presentation genius.

Impressionist is the only presentation graphics system designed to run on corporate mainframes, departmental minis and micro workstations—with the same commands and functions for each environment. Using Impressionist and a plotter, printer or high resolution camera, you can produce bold, imaginative graphics. Market trends, sales projections, inventory cycles, business strategies and financial forecasts will come alive before your audience.

Using Impressionist is as simple as putting brush to palette. It can be menu or command-driven for impromptu creations or automatically driven for production of frequently needed graphs. Draw upon the powerful graphics editor to draw *free-form*. Best of all, Impressionist's chartbook contains over 100 preformatted charts, and it's compatible with CueChart™ from ISSCO.

Impressionist can easily be accessed by both micro *and* mainframe users. It accepts data from any ASCII file as well as from other talented contemporaries. Like Lotus 1-2-3™ and Multiplan®. Or IFPS®, EXECUCOM's powerful Decision Support System.

Turn a few keyboard strokes into boardroom strokes of presentation genius. With Impressionist. From EXECUCOM, number one in decision support software, continuing a decade of excellence. For hardcopy samples, call or write: Phyllis Shockey, 1-800-531-5038 (in Texas and Canada call 512-346-4980): EXECUCOM Systems Corporation, 3410 Far West Blvd., Austin, TX 78731.

EXECUCOM

WINNERS

from page 71

- Apollo Computer, Inc. of Chelmsford, Mass., also reported an almost twofold increase in revenue. Apollo said revenue for the second quarter ended June 29 was $87.5 million, up from $46 million a year earlier. Profits were $7.3 million, or 21 cents per share, up 43% from year-earlier profits of $5.1 million, or 17 cents per share. In the first quarter of the current fiscal year, Apollo reported revenue of $118 million and profits of $44 million.

Apollo President and Chief Executive Officer Thomas A. Vanderslice expressed caution about prospects for the remainder of the year due to concern about the flow of orders from OEM and system builder customers. "Our ability to maintain present levels of profitability in the second half of 1985 will depend on the overall state of capital spending," Vanderslice said.

- Lotus Development Corp.'s second-quarter profits jumped 40% from the same period one year ago. The Cambridge, Mass.-based micro software leader earned $10.7 million, or 65 cents per share, compared with $7.6 million, or 48 cents per share, one year ago. Revenue soared 82% to $59.3 million from $32.6 million in the year-earlier quarter.

Lotus Vice-President of Finance and Administration Mead Wyman attributed the increase to continued strong demand for the firm's IBM Personal Computer-based products, 1-2-3 and Symphony. The first shipments of Jazz for the Apple Computer, Inc. Macintosh were also strong, but Wyman said it is too early to judge the product's market success.

- Management Science America, Inc. (MSA) announced that net income from continuing operations more than quadrupled from $717,000, or 4 cents per share, a year ago to $3 million, or 17 cents per share, in the second quarter of this year. Atlanta-based MSA had posted an actual loss of $1.6 million in the second quarter of 1984, reflecting the $2.4 million divestiture of its Peachtree Software division to Intelligent Systems Corp.

MSA's revenue in the recent quarter climbed 34% to $38.1 million, up from $28.5 million a year ago. A spokesman said the introduction of MSA's fourth-generation language-based Information Expert helped spur a 44% gain in revenue from support agreement fees during the quarter.

SPECIAL REPORT

Software Productivity Packages

August 26

If you sell software or related products, tell Computerworld's 687,000 readers in the August 26th Special Report. We'll examine three aspects of software productivity . . .

First, we'll look at the maintenance tools that keep software packages working.

Second, we'll investigate how managers help programmers increase their productivity . . . as well as how managers determine whether an application is "productive."

And third, we'll explore how MIS/DP personnel implement the latest productivity aids — such as 4th-generation languages, applications generators, report writers, and data dictionaries.

As the chart below shows, many of our subscribers are personally involved in the purchase of software productivity tools and related products:

Type of software	Percent of subscribers at user organizations	Percent of subscribers at vendor organizations
Applications	82	58
Data Base Management	79	57
Graphics	69	30
Decision Support	71	46
Systems & Utility	78	54

So reserve space for your ad today. Fill out the coupon below and return it today to reserve space for your ad. Or call Ed Marecki, Vice President/Sales, at (617) 879-0700. Call now.

Advertising close: August 9

☐ Yes, I want to reach the professionals who buy software and related products. Reserve space for my ad in the August 26th Computerworld Special Report.

☐ Please have a sales representative call me.

POSITION ANNOUNCEMENTS

Join Our Dynamic Investment Systems Team And Make A Development Impact

Bank of America's Investment Systems supports our Investment Securities Division and Capital Markets Group which are involved in investment banking activities around the world. As the technical entity behind these global money market organizations, Investment Systems is engaged in a series of sophisticated development projects that are vital to our competitive advantage in the securities processing and trading arena.

Currently, Investment Systems supports over 30 applications and is comprised of a variety of processing environments including mainframes, microcomputers and minicomputers. Our exciting and fast-paced atmosphere requires technically proficient professionals with excellent interpersonal and motivational skills. Candidates should have experience in one or more of the following environments and languages: MVS/OS, VM/CMS, OS/JCL, COBOL, NOMAD 2, and FORTRAN. A knowledge of investment banking products would be a definite asset.

Team Leaders

You will lead 2–8 professionals in developing our Global Strategic Automation Project which includes an on-line Trading and Decision Support System. In addition to providing technical guidance, you will oversee system enhancements and maintenance activities and act as a primary client liaison in determining user needs. You should have 3+ years of lead experience on complex development projects with an extensive background in structured systems analysis, design and programming. A strong knowledge of relational data base theory and the normalization process is required. A familiarity with realtime/on-line processing and telecommunications applications preferred.

Technical Support Staff

You'll participate in the development, enhancement and maintenance of systems supporting our Capital Markets Group. Candidates should have at least 2 years experience in structured analysis, design and programming; a familiarity with text video switching systems would be a plus. We also have a specific need for a PC expert who'll respond to PC-related client requests, including funding acquisition and software development/customization. Applicants responding to our PC position should have 2 years of PC application development experience with a technical knowledge of IBM-PC hardware and communications configurations and peripherals, as well as software packages.

Successful candidates will initially join us at our San Francisco facility and will later move with us to our new custom designed technology center in suburban Concord, less than 30 miles east of San Francisco. In addition to a state-of-the-art environment that features faster development capabilities and the latest productivity tools, you'll be provided with an attractive salary, relocation and benefits package.

Interested candidates should send a detailed resume, indicating salary history and position of interest to: Bank of America, Investment Systems, Staffing Specialist, 3228-CW729, 150 Spear Street, San Francisco CA 94105. Only direct applicant inquiries will be considered at this time. An equal opportunity employer.

Share Our Strategy, Strengthen Our Team.

Bank of America

We believe in Lasting Relationships

With a proven record of successful placements in the disciplines of data processing, accounting, finance and banking, that spans nearly two decades, ROMAC® has earned a reputation for producing effective and enduring results.

We go beyond just matching resumes with job openings. We take the time to know our clients. This is the important first step towards helping you realize your personnel needs.

Our consultants have first-hand experience working in the fields they represent. Working on a one-to-one relationship, your ROMAC® consultant can analyze and evaluate each candidate's special strengths and skills. When we make a recommendation you can be certain the individual meets your specifications.

Meet with Success.

WE'VE GOT YOU COVERED

with opportunities to match your ambitions

Fireman's Fund, a major financial services organization, has terms broad enough to meet your professional goals. We're one of Northern California's largest IBM shops and we're embarking on numerous new application development projects for our state-of-the-art, multiple IBM 3081 MVS/XA shop which includes DB2, IMS, CICS, TSO and VTAM.

This growth, in the high visibility setting of our Marin County Office, combines with room for achievement and an easy commute to round out our base of opportunity. The result is a company wide enough — and flexible enough — to keep the professional ambitions of goal-oriented, self-motivated individuals covered.

We have the following openings:

Lead Systems Analyst

We are seeking a Lead Systems Analyst who will provide technical design consulting to multiple project teams to develop an integrated systems architecture using mainframes, minicomputers and intelligent workstations. Candidate should have 8+ years of progressive application development experience preferably in insurance or financial services systems. (Respond to LG1-LM)

Sr./Lead Data Analyst

We are seeking a Sr./Lead Data Analyst to support major development projects. Must be familiar with entity/relationship data modeling and logical data design. Experience in supporting application development by working with conceptual data model through logical data design preferred. (Respond to LG1-AP)

Sr./Lead Data Base Analysts

We are seeking Sr./Lead Data Base Analysts to support a variety of new applications development projects. Must have 3+ years experience in application and physical data base design. (Respond to LG1-TT)

Sr./Lead Systems Programmers

We are seeking Sr. and Lead Systems Programmers with problem determination/resolution performance analysis/tuning, and software installation experience. Lead positions require planning and leadership skills. TSO, JES2, DFHSM, SMPE and Security knowledge are desirable. (Respond to LG1-SA)

We offer an excellent salary and benefits package. For immediate consideration, please send resume with salary history to: Fireman's Fund Insurance Companies, Property & Liability, Systems Division, Personnel Dept. LG1, 1600 Los Gamos Road, San Rafael, CA 94911. An equal opportunity employer.

ASSISTANT DIRECTOR

The Computing Services Office at the University of Illinois is seeking an Assistant Director to take responsibility for management of basic campus services. The office has several large CDC and IBM machines as well as a variety of medium scale systems. Together they support about 600 simultaneous users. The Assistant Director will be responsible for systems operations, programming, user services, and other aspects of support. Approximately 30-40 people report through this position.

CSO also has groups responsible for campus data networks, personal computer support, operational support of a national supercomputer facility based on a CRAY X/MP, and several facility management services. Total staff is in excess of 100.

Computing is a major and growing activity at this campus. It supports a research program in excess of $100 million per year and a student population of 35,000. This position requires good management skills, a familiarity with instructional and research use of computers, and the ability to deal imaginatively with a diverse and rapidly changing environment. University experience and/or an advanced degree are desirable. Starting date is as early as possible. Salary will be competitive, based on qualifications. To assure full consideration, resumes should be sent by September 1, 1985 to Joyce McCabe, Computing Services Office, 150 Digital Computer Laboratory, University of Illinois, 1304 W. Springfield, Urbana, Illinois 61801.

The University of Illinois is an Affirmative Action/Equal Opportunity Employer.

SENIOR SYSTEMS PROGRAMMER DATA COMMUNICATIONS

Our expanding IBM data communications environment requires an experienced senior level data communications systems programmer. If your background includes good *ACF/VTAM, ACF/NCP* and SNA technical skills, we'd like to talk with you.

We offer a challenging opportunity to improve your technical skills in an expanding IBM 3080 MVS environment. Our current division communications network links 26 manufacturing plants and seven sales offices to our Hazelwood data center utilizing SNA and digital circuits. Plans include the implementation of a backbone network connecting the division's data center to other major installations within the corporation, development and implementation of formal network performance monitoring and capacity planning functions and participation in corporate-wide network administration.

This position requires a four-year B.S. degree and a minimum of three years data communication experience in an MVS environment, with solid knowledge of IBM SNA architecture, protocol, and troubleshooting techniques. Demonstrated skills with *ACF/VTAM, ACF/NCP* and 3725 hardware internals are also required, as is experience with MSNF.

As the key data communications specialist with the division, you will install and support all data communications software, troubleshoot network problems and develop necessary support utilities. You will also actively participate in network hardware/software/topology planning, evaluate new technologies, prepare strategic recommendations to management and participate in inter-divisional networking projects.

Boise Cascade Composite Can Division manufactures composite cans and plastic bottles. Our division headquarters is conveniently located in northwest St. Louis County, which offers excellent schools, a comfortable suburban lifestyle and a friendly midwestern atmosphere which is second to none. We offer a comprehensive benefits package including relocation assistance and the opportunity to work with a superior group of EDP professionals.

This position offers the *right* candidate an outstanding opportunity for technical and professional growth in an exciting, state-of-the-art environment. For consideration, please forward your resume, including salary history, in confidence to:

MIS OPPORTUNITIES

Carolina Freight Carriers Corporation is seeking qualified MIS professionals for our expanding Data Services Division. Headquartered in Cherryville, North Carolina, we are the largest subsidiary of Carolina Freight Corporation which is a $400 million dollar per year motor transportation company listed on the New York Stock Exchange.

Due to our continued growth and leadership in the motor transportation industry, we currently have openings in the following areas:

COBOL PROGRAMMERS	– The ideal candidate will have a minimum of 2 years of solid COBOL programming experience.
PROGRAMMER/ANALYSTS	– The qualified individual should have a minimum of 4 years of COBOL programming experience with 50% of the last two years' work experience devoted to analysis.
SYSTEMS ANALYSTS	– The successful applicant should have a minimum of 5 years' experience in systems and programming with the last 2 years devoted to systems analysis.

On-line experience is desired, especially on a Honeywell system running GCOS. We offer an excellent benefits package. For confidential consideration, please send letter or resume, including salary history and willingness to relocate to Cherryville, NC, to:

Mac Beasley
Director of Personnel
Carolina Freight Carriers Corporation
